Although scholars of Roman international relations have only recently begun applying imperialism theory to their subject matter, it has never been in serious doubt that the Romans practiced—for good or ill—some form or forms of imperialism at different points in their history. The discussion began in antiquity itself, specifically in the work of the second-century BCE Greek politician and historian Polybius of Megalopolis, whose 40-book *Histories* charted the rise of Rome to world power during the late third and early second centuries BCE. In his work, Polybius credited the Romans with a “plan of universal aggression” (1.3.6, 3.2.6), an appetite for power that escalated as Roman victories over the Italians, the Carthaginians, the Celts, the Greeks, and the Hellenistic kingdoms mounted up. On the other hand, Polybius also identifies crises on Rome’s periphery as responsible for Roman expansion. So, for example, a request for Roman intervention against Hiero II of Syracuse by the Mamertines of Messana in 264 BCE led to war with Carthage and, eventually, a Roman province of Sicily. Moreover, despite Polybius’ thesis that the Romans had a “plan of universal aggression,” in terms of the specific causes of major wars, throughout his narrative Rome’s rivals are usually the aggressors. Thus, famously, “the wrath of the Barcids”—the anger of the father and brother-in-law of Hannibal over the Roman defeat of Carthage in the First Punic War, followed by the Roman seizure of Carthaginian Sardinia—was passed on to Hannibal, which, together with the success of the Carthaginian empire in Spain, drove the Carthaginians to provoke a major war with Rome in 218 BCE (Polybius 3.9.6–12.7). (It is unclear, however, whether the Roman seizure of Sardinia or the Carthaginian *reaction* to it was a major cause in Polybius’ mind; if the

former, then the Romans were at least partly responsible and rather aggressive, but the text is ambiguous: compare Polybius 3.10.1–5 and 13.1 with 3.30.4.)

The ancient analysis of Polybius set the terms of the modern discussion of Roman imperialism. For decades, this discussion revolved around the issue of “defensive” vs. “aggressive” imperialism. The defensive imperialism hypothesis filtered the Roman acquisition of an empire through the lens of a particular thesis about the British Empire—that it was acquired in “a fit of absence of mind,” to quote historian and classicist Sir John Robert Seeley. The aggressive imperialism thesis appeared in its extreme form in *War and Imperialism in Republican Rome, 327–70 BC* (1979) by William Harris, where the author argued that the internal characteristics and pathologies unique to Roman society (a fetishization of victory, a cult dedicated to the goddess Victoria, an aristocratic moral code based on *virtus*, a political economy based on success in war) made the Romans exceptionally aggressive and bellicose compared to their system competitors. Although the Harris thesis remains influential, it has been successfully challenged by scholars who adopt a pericentric perspective (emphasizing the passive and reactive nature of Roman Republican imperialism), or an international systems approach (emphasizing the brutality of the Mediterranean interstate system as the driving force behind Roman behavior).

No unified theory of Roman imperialism can possibly begin to explain Rome’s every (re)action in the international sphere, much less the evolution of the nature of Roman imperialism over the long term. The early republican period (509–264 BCE) is dominated by the story of the gradual (and not uncontested) expansion of Roman power (by diplomatic as well as military means) throughout the Italian peninsula. The era of the middle Republic (264–133 BCE) is marked by a sudden projection of Roman power overseas during the relatively short time-span of 53 years between 220 and 167 BCE, which was identified by Polybius as an unprecedented achievement in human history. There followed long periods of contestation of Roman power throughout the Mediterranean (in Spain, Greece, Asia Minor, and North Africa), and, in the Late Republic, the rise of the military dynasts, who pursued opportunities for war as a personal rather than a state endeavor. The classic example of this latter phenomenon is Julius Caesar’s self-assigned 10-year command in Gaul during the 50s BCE.

Under the emperors, Rome’s foreign policy focus shifted from imperial

expansion to consolidation. The process of “provincialization,” the regularization of Roman administration in the formally annexed portions of the empire (the provinces), accelerated, and “Romanization,” the urbanization and acculturation to Roman ways of Rome’s provincial subjects, began in earnest. Territorial expansion did not cease altogether, however, the emperor Augustus and several of his successors continued to pursue opportunities for aggressive expansion, particularly against the Germanic tribes (Augustus, Domitian) and on the eastern frontier (the Flavian emperors, Trajan). Roman wars of expansion were effectively over by the mid-second century CE, and imperial priorities would soon shift toward self-preservation as competition between rival claimants to the throne intensified, and the empire began the slow process of disintegration and reformation into distinct eastern and western halves.

Imperium

Imperium was the power to command vested in a Roman magistrate or governor, and during the Principate, in the emperor and his provincial governors. In the traditional Republic, dictators, consuls, and praetors held

imperium. Proconsuls and propraetors, as governors of *provinciae*, held *imperium* only within the bounds of their *provinciae* and laid it down as soon as they crossed the borders. Lesser magistrates, such as tribunes of the plebs, quaestors, and aediles, did not have *imperium*. *Imperium* was conferred by the Senate on magistrates and promagistrates, originally for only the year of office.

The conventional view is that as legitimate political authority, *imperium* was distinct from purely military command; it was exercised both at home (*imperium domi*) and in the field (*imperium militiae*). Commanders-in-chief (dictators, consuls, or praetors) had *imperium*. Their senior officers, even legates and tribunes, did not have *imperium*; nor did low-ranking officers such as centurions. (For the view that *imperium* applied only *militiae*, in war, Drogula 2015.)

In the conventional view, *imperium* conferred on a magistrate *coercitio*, the right to compel citizens and punish disobedient citizens. However, at Rome citizens were protected from magistrates' unjust use of *imperium* by the right of *provocatio*, appeal to the Roman people. Citizens who faced summary judgment from a magistrate could appeal to the Roman people for a fair trial. They could also appeal to the tribunes of the plebs. In contrast, a commander's *imperium militiae* was unrestricted, according to Cicero; soldiers in the field ideally did not have the right of *provocatio* against their commanders (Cicero, *Laws* 3.3.6). Cicero may have been mistaken. In some instances of military indiscipline in the middle Republic, the cases were referred to the Roman people for trial (for example, Valerius Maximus 6.1.11). During Rome's Italian Wars, this was still practical. By Cicero's day, Roman armies often served for long periods outside Italy; cases could not easily be referred to Rome, and military discipline became harsher, exacerbated by the drop in common soldiers' social status. Commanders might be prosecuted at Rome for abuses of *imperium* on their return, when they laid down their *imperium*.

Imperium ceased to apply within the Roman private household (*domus*) where the *paterfamilias*, the oldest living male ascendant who headed the household, had summary judgment over his descendants. In theory, the *paterfamilias* had power of life and death (*vitae necisque potestas*) over his descendants, though the power to inflict death was almost never used. The *paterfamilias* and other respected adults in the family formed a *consilium* for judgment. In the Republic, women who committed crimes were typically

handed over to their *paterfamilias* for judgment.

A trend in the late Republic was for grants of *imperium*, by the Senate or by public law, to have a wider geographic or temporal scope for particular purposes. An example is Pompey's special *imperium* to combat Mediterranean piracy, extending over many traditional *provinciae* (covering their coastlines as well as the Mediterranean Sea) and granted for three years. *Imperium* also came to be granted to promagistrates for more than one year at a time. Caesar received *imperium* for the Gallic Wars for five years at a time. These prefigured the emperor's greater *imperium*.

Augustus was granted proconsular *imperium*, enabling him to override his governors (*legati Augusti pro praetore*) in imperial provinces. His *imperium* extended over all the imperial provinces (provinces with an active military presence) and was granted for 10 years at a time. His *imperium* was then made *maius* (qualitatively greater), enabling him also to command within the city of Rome and intervene in public (termed "senatorial" in earlier scholarship) provinces governed by proconsuls.

From Augustus onward, the emperor's *imperium maius* enabled him to campaign in person in the provinces (though before Domitian and Trajan, with the exception of the civil war of 69 CE, emperors very rarely campaigned in person). More importantly, the emperor's *imperium* enabled him to intervene with or overrule his governors, and to hear legal cases on appeal, as well as to delegate authority to important administrators such as the praetorian prefect. The emperors' *imperium* was conferred by the Senate on accession and renewed automatically, though fragments of a law, the *lex de imperio Vespasiani*, survive, conferring the imperial powers on Vespasian (emperor 69–79), who as the victor of the war of 69 CE was a successful usurper in need of legitimacy. *Imperium maius* might also be granted to members of the imperial family who served as commanders-in-chief (e.g., Germanicus' tour of inspection in the eastern empire in 17–19 CE).

The use of *imperium Romanum* to mean "Roman empire" is not entirely historical. *Imperium* connotes political authority, rather than the geographical extent of such authority, so that terms such as *imperium Romanum* were abstract, suggesting "Roman dominion" rather than geographical "empire."

Inscriptions

Greek and Latin epigraphy, or inscriptions cut into stone, is a major source for the documentary history of the Roman army and its personnel, as well as Roman elite careers and treaties between communities. Epigraphy is also the study of such inscriptions, including their reconstruction, transcription, and publication in academic collections. Many thousands of inscriptions have been transcribed and published. They must be reconstructed by scholars because the ancient stone cutters used many conventional abbreviations and because many stones have weathered away or are otherwise damaged.

Stone inscriptions are a formal documentary source, representing the statements that relatively privileged inhabitants of the Roman Empire wished to preserve for posterity. As such, they tend not to depict conflict, or only its triumphant resolution (for instance, commemoration of a victory). Less formal types of inscriptions, such as graffiti scratched on walls, are also studied by epigraphers.

The early Roman inscriptions from the last two or three centuries of the Republic include the Scipionic funerary epitaphs from the family of the Cornelii Scipiones, whose descendants included Scipio Africanus and Scipio Aemilianus. These epitaphs are from earlier generations of the Cornelii Scipiones and attest the military virtues that motivated the Roman elite during the mid-Republic. Other inscriptions from the Republic commemorate the victories of generals. However, inscriptions from the

Republic are relatively thin on the ground compared with inscriptions of the imperial era.

Latin inscriptions sometimes document the civil wars of the late Republic. One of the most famous, the *Laudatio Turiae*, dates from the period of the triumviral wars (44–31 BCE) and records how the dedicator's wife, Turia, exerted herself to save her husband when he was exiled during the proscriptions. Another very famous inscription, the *Res Gestae Divi Augusti*, "The Deeds of the Deified Augustus," survives from various locations and in Greek translation; it was erected in many cities around the empire at Augustus' posthumous order. In the first person, Augustus narrates his rise to power and his deeds as Rome's first emperor.

The epigraphic habit, or practice of erecting inscriptions, underwent a boom in the early Empire, displaying great sophistication in Rome and Italy itself and filtering to the provinces. A wider social range of individuals erected inscriptions. In the vicinity of military bases, typical inscriptions include victory monuments, career inscriptions of commanders (legates) and high-ranking officers, epitaphs of ordinary soldiers, inscriptions recording voluntary associations of military personnel, and religious dedications by personnel. Career inscriptions (often, not always, epitaphs) list the ranks and occupational specialties held by individual Roman military personnel. Such inscriptions have enabled scholars to reconstruct promotion patterns in the imperial Roman army. For examples of epitaphs of officers, see *Illustrations*: tombstones of centurion Marcus Caelius and of tribune Sextus Adgennius Macrinus.

A modestly well-off individual according to the economic baseline of the empire, such as a legionary common soldier (*miles gregarius*), veteran, or his heirs could afford a gravestone with an epitaph. Common soldiers are approximately the lowest social stratum commemorated in Latin epitaphs in the frontier provinces along the Rhine and Danube and in North Africa. This practice reflects acculturation to Roman ways and the diffusion of Latin-speaking culture. The soldiers probably spoke Latin and if they were not literate in Latin, they and their heirs knew people who were literate who could draft an epitaph. In Italy, the epigraphic habit has a different pattern: slaves and former slaves erected large numbers of epitaphs, though the military units based in Italy, the praetorians, urban cohorts, and fleets, also produced epitaphs. Many praetorians, recruited from more rural areas of Italy, seem to have died young in the city of Rome's crowded, unhealthy

conditions, where malaria and other infectious diseases often felled newcomers.

Soldiers formed voluntary associations (*collegia*, clubs or guilds), often grouped by rank or military occupational specialty. *Collegia* collected and pooled donations from members to fund feasts and funerary arrangements. Many civilians belonged to similar associations.

Religious dedications are another common type of inscription at military sites. These inscriptions record vows to gods, often erected when the vow had been fulfilled; in the inscription, the dedicator expressed his gratitude to the deity. Religious inscriptions show that soldiers worshipped both local gods and deities that were popular throughout the empire. Some gods, such as Mithras and Jupiter Dolichenus, were particularly popular with military personnel.

Some instances of corruption and abuses in the imperial army are known to us from inscriptions from the second and third centuries CE. Soldiers traveling on duty in the Balkans and Asia Minor abused the requisition of transport and lodging, seizing provincials' animals, and failing to compensate home owners for food and board. The victimized local communities petitioned the emperor in the hope that he would check the abuses. When the communities received a favorable answer from the emperor, they commemorated it by inscribing the petition and response on stone.

The epigraphic habit began to fall off in the third century CE, probably due to economic hardship. It was revived somewhat in the later Empire (284–476), but not on so large a scale. The disappearance of inscriptions does not necessarily mean that the social practices they represent ceased or that illiteracy increased on a large scale. Texts formerly inscribed on stone could have been painted on walls (examples are preserved at Pompeii and Herculaneum, buried by the Vesuvian eruption in 79 CE) or on less expensive and more perishable materials such as wooden boards.

Isthmian Declaration (196 BCE)

As a result of the Roman victory over Philip V of Macedon at the battle of Cynoscephalae (197 BCE) in the Second Macedonian War (200–197 BCE), Titus Quinctius Flamininus made a statement at the Isthmian Games in 196 announcing “the freedom of the Greeks” (Polybius 18.46). He did so without the permission of the Roman Senate and needed to persuade the Senate to accept his statement. Flamininus was idolized in Greece for supporting the freedom of the Greeks from Macedon, but it is possible the Romans were willing to support Greek freedom as a partial rationale for aggressive imperialism against the Hellenistic monarchies.

Ius Fetiale

Ius fetiale, or fetial law, was a code by which the fetial priests ritually guaranteed that the Romans waged just wars. This code demonstrates the importance the Romans placed on divine approval of military matters. The code developed under the Roman kings Tullus Hostilius and Ancus Marcius in the seventh century BCE. A pair of fetial priests traveled to enemy territory, where they announced Rome's grievances and demands, repeating them a ritual number of times. The repetition both ensured that the demands were heard by a large number of people and also compelled the enemy to offer redress on the threat of war. If the enemy did not meet the demands within a month, the fetiales called upon Jupiter, the god who guarantees laws, and Janus, the god of beginnings, and all other gods to witness the injustice. Then the Roman state made a formal declaration of war, which the fetiales announced to the enemy by casting a bloody spear across the border between Roman and enemy territory.

When Rome's enemies were across the sea and no longer shared contiguous borders with Rome, a captive was forced to purchase a symbolic piece of land near the Temple of Bellona in Rome into which the fetiales cast the spear. Fetiales also investigated allies' claims of abuse by Romans; if substantiated, the fetiales delivered the men accused to the injured parties. Dionysius of Halicarnassus (2.72) attributes the Romans' military success to their following the *ius fetiale* and to their only engaging in divinely sanctioned wars.

J

Janus, Temple of

A small shrine to Janus Geminus (Twin) was located near the Basilica Aemilia in the Roman Forum. The Romans closed the Temple of Janus on the rare occasions when they were completely at peace, thus ritually marking the lack of military activity. Janus was depicted in this shrine as a god with two bearded faces looking in opposite directions. In addition to protecting entrances, Janus was the god of beginnings and endings. As such, he lent his name to January, the first month of the Roman calendar (after 153 BCE). He was also invoked first in Roman prayers, for example, when Decius Mus dedicated himself to the gods before battle in 340 BCE. Janus' oldest shrine was a bridge (*ianua*) along the *sacra via*, the sacred road through the forum. Construction of this shrine is attributed to King Numa Pompilius (715–673 BCE). The shrine boasted two sets of doors that were kept open during war and closed when Rome was completely at peace. The Roman poet Ovid (43 BCE–17 CE) writes that the doors were closed to keep the goddess Peace within the city. Due to the high level of military activity during the Roman monarchy and Republic, the doors were closed only once during the reign of King Numa and once again in 235 BCE after the consul Titus Manlius Torquatus celebrated a triumph over the Sardinians. Augustus, Rome's first emperor, boasted that he closed the doors three times in his reign. The exact location of the Temple of Janus Geminus in the Roman forum is unknown, but a coin dating to ca. 65 CE (under the emperor Nero) shows the imperial reconstruction of the arch and bronze-decorated doors.

A second Temple of Janus stood in the Forum Holitorium (the vegetable market between the Capitoline Hill and the Tiber River) in Rome. The

general Gaius Duilius vowed this temple during the First Punic War (264–241 BCE) after the Romans defeated the Carthaginians at Mylae in Sicily in 260 BCE. There were three small victory temples in the Forum Holitorium, the northernmost of which is most likely the Temple to Janus. These victory temples served as political propaganda to advertise the generals' success in battle and assist them in their next political campaign. Augustus restored the Forum Holitorium temple when he renovated the city; Tiberius rededicated it in 17 CE. Janus' two temples represent two ways military men might interact with the gods. The arched temple in the main forum was opened and closed in accordance with a customary public ritual, while the Forum Holitorium temple advertised an individual general's military success and piety.

Sestertius of Nero, depicting the temple of Janus (ca. 66 CE). The temple of Janus was closed only during times of peace—a rare event. Ironically, this coin was issued

during the year of the outbreak of the Jewish War (Judaea's revolt against Rome). Located in the Museo Bottacini, Padua, Italy. (DeAgostini/Getty Images)

Jerusalem, Siege of (70 CE)

The siege of Jerusalem began in the spring of 70 CE and ended in September, effectively finishing the Jewish War. Following his victory in the War of Four Emperors in 69, Vespasian ordered his son Titus, the Roman commander in Judaea, to take Jerusalem, providing the Flavian dynasty with the victory over foreign enemies needed for legitimacy. Jerusalem was held by three competing factions led by Eleazar ben Simon, John of Gischala, and Simon bar Giora, respectively.

Titus surrounded Jerusalem with four legions in the spring of 70. Jerusalem was divided among three factions, which were sometimes able to cooperate against the Romans. The food supply was under great pressure. By the beginning of summer, Titus breached the third and second walls, and then turned to take the Antonia Fortress, overlooking the Jerusalem Temple and the Temple Mount. In surprise sallies, the Jews were able to hinder the Romans and destroy their siege equipment. Tightened security and a wooden wall placed around Jerusalem stopped these assaults. By the summer, the Jews were running very low on food. By August, the Romans had captured the Antonia Fortress and broken into the Temple, burning it down on the ninth day of Av, the Jewish day of mourning for the

destruction of the First Temple. From there, the Romans moved into the rest of the city. In a month, they had subjugated it and destroyed all resistance. Most of the inhabitants of Jerusalem were killed or enslaved. Titus returned to Rome in 71 for a triumph, bringing with him huge amounts of slaves and treasure.

Jewish War (66–70 CE), Causes

The Jewish War took place between 66 and 70 CE, in Roman Judaea. It began as a small-scale rebellion, but the defeat of a Roman army transformed it into a larger war. It was interrupted by an empire-wide civil war, following the death of the emperor Nero in 68 CE. After 69 CE, Vespasian was emperor. His son Titus, now the Roman commander in Judaea, renewed the war, destroying Jerusalem in 70 CE and crushing the remaining pockets of Jewish resistance by 73 CE.

Though nominally under Roman rule from 63 BCE on, Judaea was integrated into the empire under the rule of the client monarch Herod the Great. Herod had allied with Mark Antony and Octavian, and was declared king of the Jews in 40/39 BCE. Herod conquered Judaea in 37 BCE, repressing dissent, and establishing a kingdom that lasted in various manifestations to the early second century. Herod's son Archelaus was deposed in 6 CE and a Roman governor was put into place. This governor was at first called the prefect of the Jews, and later a procurator. The Roman governor had a small military force at his disposal, five cohorts of infantry and one of cavalry, recruited from Greek cities in the province. He was based in the capital city of Caesarea, and was responsible for taxation, building projects, and maintaining order. The governor inherited the machinery of government

from the Herodian state. The governor coexisted with the Jewish Herodian kings, who had managerial power over the Temple in Jerusalem. The Roman governor of Syria was the final administrative piece in this system. He had authority over the local Roman governor and the Herodian client king.

The province of Judaea was managed on a day-to-day level through the Jewish priestly elites of Jerusalem. The High Priest managed the Temple; he was appointed at first by the governor, but eventually by the Herodian king. Following Herod's renovation of the Temple and creation of larger ports, Jerusalem had been enriched by a pilgrimage economy. This benefited the Jewish elites, making Temple service quite lucrative. Such riches led to increasing aristocratic competition for positions in the Temple during the first century. These overlapping areas of jurisdiction and the failure of these shared sovereigns and groups to collaborate in putting down the rebellion played an important role in the revolt's outbreak.

Economic anxieties may have been an important cause of rebellion. Archaeological evidence suggests that the population increased in this period, as did the urbanization of Palestine. Increased population pressure put a strain on the system. Cities were home to urban elites who owned estates in the countryside, who displaced or acquired the lands of traditional middling and poor rural farmers.

The cultural clash between Rome and Jerusalem was also an important cause of rebellion. Jewish culture in this time period was focused on the Temple; it framed most of its cultural production and institutions through this Temple and Jewish allegiance to an aniconic, monotheistic God. It is hard to convey how bizarre Judaism seemed to the rest of the ancient world. Romans regularly ridiculed the Jews, joining their contempt to a long-standing Greek tradition of anti-Judaism. Jews, because of their singular and exclusive religion were unable to take part in the traditional governing systems of the Roman world. They could not acknowledge the divinity of the emperor or Rome, nor could they display loyalty to the symbols of Rome, because their religion preached a strict aniconism. Furthermore, they misconstrued the traditional Roman practices of euergetism and patronage. Roman governors were probably deeply confused, when Jews reacted to Roman benevolence with riots, as during the governorship of Pontius Pilate, when he sought to build an aqueduct using the Temple's money and in return for his benefaction, reaped a harvest of riots.

Jewish War (66–70 CE), Course

During the procuratorship of Gessius Florus (64–66 CE), tensions built up. Florus had little respect for the Jewish elites. Florus also favored the Greeks of Caesarea, in their struggles with the Jews. This led to an incident in Caesarea which is considered the cause of the war. In Caesarea, a Greek sacrificed a bird outside of a synagogue, setting off a riot. This incident incited the Jews of Jerusalem. When Florus entered the city, a group of young priests paraded around, asking for money to give the governor as if he were a beggar. In a rage, Florus ordered his troops to attack the city. However, the Jews drove him and his troops out of the city. Then, Eleazar ben Anaias suspended the sacrificial service for the emperor, openly declaring rebellion.

At this point, two anti-Roman parties existed in Jerusalem, the Zealots, led by Eleazar ben Simon, and the Sicarii, led by Menahem ben Yair. In Jerusalem, they slaughtered the Roman troops. The Zealots turned on the Sicarii, slaying Menahem and driving his followers out of the city. Throughout Syria, Jews attacked Greek cities. In response, many Greek cities slaughtered their Jewish inhabitants. All of this disorder impelled the governor of Syria, Cestius Gallus, to march on Jerusalem. He reached Jerusalem, but for an unknown reason turned back and was ambushed by

the Jewish forces. His army was routed at the battle of Beth Horon. The emperor Nero directed Vespasian to suppress the revolt.

On a political level, the Roman regime had failed remarkably. A tense relationship between the elites and the Roman procurator led to increased violence. The Syrian governor had failed to effectively intervene. Meanwhile, the Herodian king Agrippa II had the means to intervene in elite competition based on the Temple, but no formal jurisdiction. He and the procurator Florus were also at odds. The entire machinery of Roman governance failed to prevent revolt.

Jerusalem was controlled by Ananus ben Ananus, the leader of the faction that had come to power following the defeat of Cestius Gallus. Ananus and his allies dispatched generals to various regions of Palestine. One general led a failed attack on the port city of Ashkelon. Another, the historian Josephus, attempted to organize Galilee to resist the Roman assault. Josephus ran afoul of a local magnate, John of Gischala. When the Romans arrived in 67, Galilee was divided between Josephus, John, and Roman loyalists, such as the city of Sepphoris.

In the spring of 67 CE, Vespasian landed at Ptolemais and led his army into Galilee. Many Jewish cities capitulated on his arrival; he besieged others, putting the inhabitants to the sword. At the siege of Jotapata, a minor fortified town, the historian Josephus went over to the Roman side. Josephus' rival, John of Gischala, fled with a band of followers to Jerusalem. By 68, Vespasian and Titus had subdued the north and moved down the coast, setting up a base in Caesarea.

In Jerusalem, John of Gischala joined Eleazar ben Simon's faction. They butchered Ananus ben Ananus and his allies. John of Gischala emerged as a faction leader, after defecting from Eleazar. While this civil war in Jerusalem was taking place in 68–69 CE, Vespasian conquered the district of Judaea, subjugating everything but Jerusalem. Vespasian's movements forced Simon bar Giora and his army into Jerusalem. Jerusalem was divided among Eleazar ben Simon and the Zealots, John of Gischala, and Simon bar Giora.

Meanwhile, the Roman Empire had fallen into chaos. In the middle of 68 CE, Nero was deposed. Galba, Otho, and Vitellius came to power successively during 68–69 CE. In the spring of 69 CE, the legions of the Danube, followed by those of Egypt and Syria declared Vespasian emperor. In the winter of 69 CE, Vespasian's forces defeated and killed Vitellius. Vespasian left for Rome in the summer of 70, but instructed his son Titus to

destroy Jerusalem and suppress the Jewish Revolt.

In March of 70, Titus arrived at Jerusalem. The defenders, weakened by internal strife, had some initial success in hindering the Roman siege equipment. In response, the Romans encircled Jerusalem with parapets. Food ran out in Jerusalem and the people starved. In August, after many attempts, the Romans captured the Antonia fortress above the Temple. By mid-August they had broken in to the Temple, and burned it. By September, they had destroyed the city of Jerusalem, captured and killed thousands of Jews and effectively ended the war. Roman casualties were unusually heavy, because Titus was under pressure to capture Jerusalem as soon as possible, to shore up the legitimacy of his father's reign by triumphing over a foreign enemy.

Mopping up operations continued in 71. The last pocket of Jewish resistance was crushed during the siege of Masada in 73, when the leader of the Sicarii rebels in the fortress, Eleazar ben Yair, convinced his followers to commit suicide, an act that has since become heroic and iconic. This was the end of the First Jewish War.

Jewish War (66–70 CE), Consequences

In scale, the Jewish War was a minor revolt in an obscure corner of the Roman Empire. Resistance was never particularly serious and its conclusion was inevitable. However, it occurred during a period of dramatic instability for the Roman Empire. Following Vespasian's triumph in his war with his competitors for the empire, he needed a way of reframing the civil war to

legitimize his seizure of power. The Flavians cloaked their seizure of power in the language of legitimate war against an outside enemy. Thus, they sought to magnify the level of Jewish resistance, connecting their rise to their victory in a foreign war. The Flavians imposed a tax on the Jews, in lieu of the two shekel tax that was traditionally paid to the Jerusalem Temple. This tax went to the Capitoline Temple of Jupiter Optimus Maximus, which was damaged during the Flavian capture of Rome. This tax symbolized the punitive subjugation of the Jewish people. The Flavians also rebuilt Rome, using the spoils of the Jewish War to adorn Rome with monuments such as the Arch of Titus and the new Coliseum.

The Jewish War also had important consequences for the nascent Christian community in the province of Judaea. By 70 CE, Christians were spread throughout the Mediterranean. A Christian community persisted in Jerusalem until the outbreak of the revolt in 66. It is in this period after 70 CE that Christianity seems to have separated from Judaism. Romans such as Pliny the Younger were able to recognize Christianity as something distinct from Judaism. Christians also believed that the Jewish War validated their theology, considering the destruction of the Temple punished Jews for their rejection of Jesus.

The province of Judaea changed in fundamental ways following the war. In 70, Judaea was annexed directly to the Roman Empire. The Roman annexation meant the province was governed by Roman law, meaning that traditional Jewish laws were no longer enforced. This probably led to the decline of Jewish practice. Jews had to make an effort to practice Judaism, but the evidence from cities suggests that much of the province chose to practice Greco-Roman civic paganism.

For the Jews, the Jewish War created a profound dislocation in their society. Much of the Jewish economy of the Second Temple period was focused on the Jerusalem Temple. The pilgrimage economy, which brought a massive influx of wealth into the city, ceased to exist. The lands of the Jerusalem priestly elite were confiscated and with their connection to the Temple severed, their main claim to preeminence was destroyed. For the Jewish religion, the destruction of the Temple was catastrophic. The apocalyptic writers from this period, 2 Baruch and 4 Ezra, counsel hope and preach the eternity of the Jewish covenant, despite the loss of the Temple. Both argue that the Torah, the written body of Jewish law, remained valid. The destruction of the Temple also was the beginning of the rabbinic

movement, the form of Judaism that is practiced today. The rabbis root their foundational moment in 70. The Jews in the postdestruction period had to formulate ways of practicing Judaism without the Temple.

Johannes (Emperor). See Fall of Roman Empire; Galla Placidia; Honorius

Josephus (37–ca. 100 CE)

Titus Flavius Josephus, born Yosef ben Mattiyahu, was a member of the priestly elite of Jerusalem and served as a commander of the Jewish resistance in Galilee during the Jewish War of 66–70. In 67, after the siege of Jotapata, Josephus defected to the Romans and served as a translator and aide to the Roman generals Vespasian and Titus, who later became emperors and founded the Flavian dynasty. Josephus was particularly close to Titus. After the war, Josephus went with the Flavians to Rome and witnessed their triumph. While in Rome, Josephus wrote a history of the Jewish War and several other works, including the *Jewish Antiquities*, making him the primary source for Jewish history in the Roman period. As a writer, Josephus is biased and clumsy, he adapts sources poorly, and he provides inconsistent versions of the same events, especially those that involve himself.

Josephus was born in 37 CE in the city of Jerusalem. His father was

Mattathias, a member of the priestly elite. Through his mother, Josephus was descended from the old Jewish ruling family, the Hasmoneans. Josephus had a traditional Jewish education in Jerusalem and studied with the different sectarian movements centered on the Jerusalem Temple. From 64–66 CE, Josephus came to Rome as part of an embassy that sought to free several priests who were on trial before the emperor Nero for causing disturbances in Judaea. Josephus' embassy was successful, because of the Jewish sympathies of the empress Poppaea Sabina.

Josephus returned to Judaea in 66 CE, at the outbreak of the Jewish Revolt. After defeating the Roman governor Cestius Gallus in 66 CE, the Jews formed a revolutionary government in Jerusalem. They dispatched Josephus to organize Jewish resistance in Galilee, the northern region of the province of Judaea. It is difficult to interpret Josephus' report of his actions in Galilee. His autobiography, the *Vita*, and his history, the *Jewish War*, contain different versions of the same events. In the *Jewish War*, Josephus portrays himself as a general, with formal institutional military powers and support from the population. In the *Vita*, Josephus appears to be one of several military adventurers based in Galilee, attempting to consolidate his own power.

Josephus' mission to Galilee, if its success is to be judged on the basis of Galilee's readiness for war with the Romans, must be considered a complete failure. He hurried back and forth from village to village, barely able to hold onto his life and command. Josephus also ran afoul of John of Gischala, a local warlord, who later emerged as a major leader of the revolt. The local power struggle between Josephus and John of Gischala was unresolved at the time of the Roman invasion in 67 CE.

The Roman army, under the command of Vespasian, gathered in Ptolemais (present-day Akko) and met little resistance in Galilee. They besieged several small fortified towns, butchered the inhabitants, and suppressed rebellion in the major city of Galilee, Tiberias. The other major city, Sepphoris, had already allied with the Romans. The Romans then besieged the city of Jotapata, trapping Josephus inside. When they captured the city, Josephus and 40 comrades hid in a cave under the city, where they decided to commit suicide. Josephus avoided this fate by being the last one to survive the successive drawing of lots for the mass suicide (Josephus, *Jewish War* 3.8.7). This episode has inspired a mathematical problem, the "Josephus Problem." Afterward, Josephus defected to the Romans.

Announcing that he was a messenger from the Jewish God, he predicted that Vespasian would become emperor.

When Vespasian was proclaimed emperor in 69, Josephus was freed from captivity. When Vespasian left for Italy in 70, his son Titus took over command of the Roman army in Judaea. Josephus attained relatively high status as a Roman collaborator. As the Roman campaign progressed and culminated in the siege of Jerusalem, Josephus had a variety of roles, translator, spokesman, and advisor to the Roman general Titus. Josephus, because of his role as a collaborator, was able to provide some benefits to his friends, rescue captured holy books, and free captives. He also received some land in Judaea. At the end of the war, Josephus came to Rome with the Flavians, receiving Vespasian's old house as a gift. There, Josephus began his history of the war. As a client of the Flavian dynasty and a new Roman citizen, Josephus changed his name to Titus Flavius Josephus.

Josephus was tasked with writing an official history of the Jewish War. His first effort was in Aramaic, which he then translated into Greek. This was the *Jewish War*, which was considered the official history of the Jewish War by both the Flavian emperors and their local ally, the Jewish king Agrippa II. Later in life, Josephus also wrote a long history of the Jews, called the *Jewish Antiquities*, which was dedicated to a patron named Epaphroditus. In it, Josephus treats Jewish history from the Creation to the Jewish Revolt. Appended to this work is the *Vita*, a description of Josephus' early life and activities in Galilee before the Roman invasion. This work is apologetic and polemical, refuting the accounts of Justus of Tiberias, who had become the secretary of King Agrippa II. Josephus believes that Justus of Tiberias has vilified him. Unfortunately, Justus of Tiberias' history has not survived. Finally, Josephus composed *Contra Apion*, which refuted a well-known attack on the Jews and the Jewish religion written by Apion, a first-century Greek intellectual in Alexandria. Josephus probably died around the year 100.

The Christian textual tradition preserved Josephus' works. Josephus argued that the tragic outcomes of the Jewish War were a result of God's abandonment of the Jewish people and the sins of the Jews. These explanations played an important role in shaping Christian theological understandings of the supersession of the Jewish faith by Christianity. Christians saw the Roman destruction of the Jerusalem Temple as God's repudiation of the Jewish people in response to their murder of Christ.

Josephus' works were also preserved among the Jews, but in a medieval Hebrew adaptation called *Sefer Yosippon*.

Jovian (Emperor) (363–364 CE)

Jovian was a Roman emperor who ruled between June 27, 363 and February 17, 364 CE. Born at Singidunum (Belgrade), Jovian was the son of the senior imperial commander Varronianus. Prior to his accession, Jovian served as commander of the palace guard. When Julian died during the Persian campaign without nominating a successor, Jovian was proclaimed emperor by the army. Jovian was either forced upon the army by a small group of officers, or was a compromise candidate acceptable to both the eastern and western factions of the army and imperial hierarchy (Ammianus 25.5.4; Zosimus 3.30.1). Jovian subsequently negotiated a humiliating peace treaty with Sassanid Persia before returning to Roman territory, ceding to them the areas west of the River Tigris that had been won by the emperor Galerius. Jovian died in his sleep at Dadastana the following year (364) without naming an heir. The cause of his death was not known; he may have died of natural causes, or suffocated from the fumes of a charcoal brazier. (Ammianus 25.10.13–16; Eutropius 10.18.32). He was succeeded by Valentinian I (364–375), also the choice of the officers' council.

Judaea

The term “Judaea” signifies two distinct geographic regions. Judaea primarily indicates the district surrounding the city of Jerusalem, now east central Israel and a large part of the West Bank. The geographical designation Judaea also came to signify the Roman province that consisted of most of present day Israel, the West Bank, and the East Bank of the Jordan River. This Roman province was formed from the domains of the Jewish client king Herod, who ruled from 39 BCE to 4 BCE. In 6 CE, after the banishment of Herod’s heir, Archelaus, the kingdom became a Roman province with an equestrian governor. Judaea, however, retained its association with the region around Jerusalem.

The ancient boundaries of the district of Judaea are described by the historian Josephus. It stretches from the Jordan River to the port city of Jaffa on the Mediterranean coast. The northwestern boundary is the port of Akko and the southern boundary is the Negev Desert. Much of Judaea is in the hill country. It has little rainfall and the land is relatively arid.

In the Biblical period, the district of Judaea was the home of the Israelite tribe of Judah, who presumably settled there during the Israelite conquest. A consistent Israelite presence was maintained until 586 BCE, when the Babylonian Empire overran the province and deported the inhabitants. In the Persian period, a renewed Jewish presence was established around the temple-city of Jerusalem.

The Hellenistic period of Judaeon history began with the conquest of

Alexander the Great. In 301 BCE, Judaea was incorporated into the Ptolemaic province of Coele-Syria. Then in 200 BCE, the Seleucids conquered Coele-Syria. An internal Jewish civil war of 167 BCE, drew in the Seleucid king Antiochus IV. A local priestly family, named the Hasmoneans, came to power. Following the implosion of the Seleucid Empire, Judaea emerged as a regional power and an ally of the Romans. The Hasmonean dynasty conquered the neighboring peoples, especially during the reigns of John Hyrcanus (134–104 BCE) and Alexander Yannai (103–76 BCE). They ruled modern day Israel and its territories, as well as the East Bank of the Jordan River.

Civil war broke out in 67 BCE between Aristobulus and Hyrcanus, the two heirs to the Hasmonean throne. Hyrcanus was supported by the Idumean Antipater, the father of the future king Herod. The arrival of Pompey Magnus in Judaea in 63 BCE led to the resolution of the civil war in Hyrcanus' favor, but the Mediterranean coast was detached from the kingdom of Judaea. Hyrcanus and Antipater supported the Caesarians during the Caesarian-Pompeian civil war. After the murder of Caesar in 44 BCE, they first supported the "Liberators," then Mark Antony. In 40 BCE, the Parthians invaded, restoring Aristobulus' son, Antigonus to the throne. At the same time, the Roman Senate, at the recommendation of Mark Antony and Octavian, made Herod, the son of Antipater, king of Judaea. From 39–37 BCE, Herod fought Antigonus and the Parthians, driving them out of Judaea. After the battle of Actium in 31 BCE, Octavian confirmed Herod as king of Judaea once more. After Octavian became emperor, he attached the mountainous regions of Southern Syria, Trachonitis, Batanea, and Auranitis to Herod's kingdom. Herod settled veteran soldiers and mercenaries in these areas to repress banditry and stabilize the regions.

Herod ruled both Greek and Jewish subjects, maintaining peace and stability in a multiethnic kingdom. He rebuilt the Second Temple, making it into a massive pilgrimage center for the Jewish Diaspora. He also sponsored building projects in Greek cities throughout the Mediterranean, as well as creating the city of Caesarea, which became the new capital of Judaea.

Herod's rule lasted from 39 BCE to 4 BCE. After his death, the peace imposed by Herod unraveled, as rebellions spread throughout the province. These rebellions were crushed by the governor of Syria, Publius Quinctilius Varus. Herod's son Archelaus was made ethnarch of a reduced kingdom, while two of Herod's other sons ruled in Galilee and Southern Syria.

Augustus stripped Archelaus of his throne in 6 CE and Judaea became a Roman province, governed by an equestrian prefect and under the jurisdiction of the proconsular governor in Syria. The prefect was supported by a small military force, recruited from the surrounding Greek cities.

Judaea briefly returned to Herodian rule at the beginning of the reign of the emperor Claudius in 41 CE. The grandson of Herod, Agrippa I, ruled southern Syria. A close friend of Claudius, he helped raise Claudius to the throne in the aftermath of Gaius' assassination. In recompense, Claudius added Judaea to Agrippa's kingdom. Upon Agrippa's death in 44 CE, Judaea reverted to Roman rule. During Roman imperial rule from 6 to 66 CE, Judaea had an anomalous provincial status, since much of the ruling machinery of the Herodian state was left in place. The governor was based in Caesarea, the old Herodian capital, and the military force at his disposal was originally the nucleus of the Herodian army.

After the revolt of 66–70 CE, Judaea was annexed as an imperial province. Its governor was a former praetor and the Tenth Legion was stationed at Jerusalem. In the 130s, another legion, the VI Ferrata, was settled in Palestine, in Southern Galilee at Legio. The outbreak of the Bar Kochba revolt in 132, and its quelling in 135, led to the effective extinction of the Jewish inhabitants of Judaea. The emperor Hadrian in 136 renamed the province of Judaea, Syria Palaestina after its ancient Philistine inhabitants. Palestine has been the term employed for the region until the founding of the modern nation of Israel in 1948.

Jugurtha (ca. 160–104 BCE)

The main source for the life and career of the Numidian king Jugurtha (reigned 118–105) is Sallust's (ca. 86–35 BCE) *Jugurthine War*, written a little more than 50 years after the end of the war of the same name (112–105 BCE). Plutarch's *Lives* of Marius and Sulla also provide some indirect information. Livy and Cassius Dio survive only in epitomes for this period. Appian's *Numidian Affairs* has been largely lost, though a few fragments referring to Jugurtha do survive. Among the lost sources for the life of Jugurtha should be counted Sulla's *Memoirs* and the writings of Juba of Mauretania.

Jugurtha was the illegitimate son of Mastanabal, and grandson of Masinissa, king of Numidia and *amicus* of Rome from the end of the Second Punic War almost to the beginning of the Third. Though excluded from Masinissa's will on account of his birth, Jugurtha was adopted and raised upon his father's death by his uncle, Micipsa, on a level with Micipsa's two sons, Adherbal and Hiempsal.

His popularity, appearance and athletic successes, according to Sallust, roused the envy of Micipsa, who feared the development of rivalry between Jugurtha and his younger cousins that might lead to a civil war. Micipsa therefore sent Jugurtha with a Numidian force of infantry and cavalry to Spain to assist Scipio Aemilianus in the Numantine War, hoping that Jugurtha would be killed in battle (133 BCE). Sallust may be exaggerating Micipsa's concerns, but a rivalry certainly did exist between the cousins by ca. 118 BCE. At any rate, Jugurtha earned the praise and respect of Scipio Aemilianus for his conduct during the war, and that of other members of the Roman aristocracy, whose support and corruption would later enable Jugurtha to persist in his war against Rome.

When Jugurtha returned to Numidia after the war, he was warmly received by Micipsa, who perhaps now recognized the value of Jugurtha and his Roman contacts. Sallust claims to quote a letter from Scipio Aemilianus to Micipsa praising Jugurtha, which has suggested to some scholars that Jugurtha was becoming Rome's preferred "candidate" for the Numidian throne upon Micipsa's death.

When Jugurtha became one of Micipsa's official heirs is unclear; Sallust reports that it occurred just after the Numantine War (late 130s), and just before Micipsa's death (early 110s). Sallust's uncertainty is likely due to disputes over the throne and territory which followed Micipsa's death. In

the ensuing struggles for dominance in Numidia, Jugurtha and his cousins must each have had to justify his claims to primacy during arbitration by the somewhat disinterested Senate. Initially, the Senate supported a tripartite division of the kingdom, but when Jugurtha assassinated Hiempsal in 116, a senatorial commission led by Lucius Opimius simply split the kingdom of Numidia between Adherbal and Jugurtha.

Dissatisfied with this settlement and motivated by his own ambitions, Jugurtha abandoned the long-standing cooperative mien that Masinissa and Micipsa had maintained with Rome, ignoring Opimius' decision as well as a second minatory delegation. When confronted by this second delegation, Jugurtha emphasized his friendly disposal toward the Senate, claiming that Adherbal had prompted the renewal of hostilities by an attempted assassination. The Senate as a whole appears to have taken little interest in the ensuing civil war until 112. Until that year, it could be argued that Jugurtha maintained Numidia's status as an *amicus* of Rome, but in 112 even his contacts with the Roman aristocracy could not maintain that status. Jugurtha had by this point driven Adherbal out of most of his half of the kingdom and besieged him in the city of Cirta. A number of Roman businessmen in the city prevailed upon Adherbal to surrender himself to Jugurtha on the strength of the Numidian *amicitia* with Rome. Jugurtha, however, executed his cousin, and in the confusion of the captured city, a number of Roman citizens were killed. Jugurtha's deception of Adherbal at this point forced a break with Rome, since he had infringed upon Roman *maiestas* and *fides*: he had ignored Adherbal's appeal to the name of Rome, and he had killed Roman citizens. The latter action was exaggerated in Rome by one of the tribunes of 112 BCE, until the Senate named Numidia as one of the consular *provinciae* for 111 BCE, and war was declared.

In the course of the resulting war (112–105 BCE), termed the Jugurthine War, Jugurtha proved himself to be an active and energetic commander, displaying a talent for strategy and guerrilla-type tactics, as well as cleverness and deception, to maintain his position against the consular armies sent against him. Sallust's Jugurtha is not unlike Rome's later enemy, Mithridates VI of Pontus, in his charisma, duplicity, and resiliency after serious defeats, but he was never the threat that the Pontic king was. Jugurtha availed himself of Roman susceptibility to bribery and corruption, rivalries within the Senate and Rome, and, perhaps, incompetence and ambition among the aristocracy to maintain his position in Numidia.

Jugurtha was thus able to defy consular armies longer than he should have been able to in later Roman eyes, repeatedly violating truces in the first two years of the conflict. The Roman effort intensified under Caecilius Metellus Numidicus (consul 109) and Marius (consul 107). Metellus conducted the war for two years, during which period he won a number of successes, even driving Jugurtha out of his kingdom. Nonetheless, Marius secured the command of the war for himself by emphasizing Metellus' failure to end the war and capture Jugurtha. Marius' campaigns, beginning in 107, culminated in the capture of Jugurtha by Marius' quaestor, Sulla.

At any rate, Jugurtha was betrayed by Bocchus, the king of Mauretania, in 105 to Sulla, Marius' quaestor. Numidia was divided between Bocchus and the new province of Africa Nova, while Jugurtha himself was taken to Rome to appear in Marius' triumph at the beginning of 104 BCE. He was forced to die of starvation in a dungeon in Rome.

Jugurtha himself is often overshadowed by the aftermath of his war on Rome: the rise of Marius and his growing rivalry with Sulla. At the same time, the subsequent careers of these two men enhance Jugurtha's own status. Sallust contributes to this distortion of the Numidian king, largely because he wished to depict the low-born Marius triumphing over an incompetent, arrogant, and corrupt aristocracy that was no longer able to rule its empire or effectively wage wars. He presents us with a Jugurtha who is almost more Roman than the aristocracy (he is handsome, intelligent, popular, modest, and averse to luxury and idleness), and so a greater enemy for Marius to suppress. At the same time, contending groups in Rome itself at the time emphasized the danger posed by Jugurtha as a way of advancing their own political interests and rivalries, perhaps none more so than Marius.

Jugurthine War (112–105 BCE), Causes

The causes of the Jugurthine War lay in a complex series of events surrounding the usurpation of power by Jugurtha of Numidia. This conflict arguably originated a century earlier, when the king of the African kingdom of Numidia was Masinissa. The whole kingdom of Numidia did not belong to Jugurtha by right, and so the history of how it came into his hands begins with Masinissa. As king of Numidia, Masinissa was a friend of Scipio Africanus and a close Roman ally.

When Masinissa died, he left his son Micipsa as sole heir, since his other sons Gulussa and Mastanabal had died from illness. Micipsa had two sons, Adherbal and Hiempsal, who were brought up in the palace, along with their cousin, Jugurtha, who was the son of Mastanabal. Jugurtha turned out to be a prodigious hunter and warrior, and won the hearts of the Numidian people with his exploits of bravery and his humble nature. His uncle Micipsa even sent him to fight for Rome against the Numantines, where, due to his display of skill, he was heavily relied upon by the Roman commander, Scipio Aemilianus for difficult operations. Having come out of this war a hero of Rome, Jugurtha was adopted by Micipsa, much to the disappointment of Adherbal and Hiempsal.

When Micipsa died in 118 BCE, the three brothers could not agree on how to divide the kingdom among themselves, which in turn led to scheming on Jugurtha's part. Hiempsal was the first to be killed by Jugurtha's agents, which gave Adherbal advance warning to prepare troops for a battle and send word to Rome regarding the turn of events. Though Adherbal had a superior force in terms of numbers, Jugurtha rallied several cities to his cause and defeated his adoptive brother in their one and only engagement. Thereafter, Adherbal fled to Rome for protection.

Jugurtha had thus, through treachery and force, become ruler of Numidia. At this time, according to Sallust—the main historian of the Jugurthine War—Jugurtha made sure to secure the loyalty of Rome by sending envoys with gold and silver to the Senate. Adherbal, however,

having fled to Rome, appeared before the Senate at this time and begged them to see Jugurtha as a cruel man, having unjustly seized the throne, and further beseeched them to take action against him. However, because half the Senate had been bribed by Jugurtha, the Senate decided simply to split the kingdom between Jugurtha and Adherbal.

In 112 BCE, Jugurtha, unhappy with the Senate's decision, plundered and raided Adherbal's territory, and then retreated to entice him into retaliating and starting a war. Adherbal, knowing he was not capable of defeating Jugurtha in war, fruitlessly attempted negotiation with him and eventually surrendered. Jugurtha had Adherbal tortured to death.

When the Senate had heard of these unjust actions, they declared war on Jugurtha and sent an army to Africa. Due to the usurpation of power on Jugurtha's behalf, and his ruthless methods of maintaining that power, including the bribery of Roman officials and the murder of their allies, he brought war with the Romans to his kingdom.

Jugurthine War (112–105 BCE), Course

The Jugurthine War was a conflict involving the Roman Republic and the Numidian kingdom, taking place between 112 and 105 BCE. It began with the usurpation of power by Jugurtha, and the killing of Roman allies and Italian citizens on his orders. It took several Roman commanders and seven years of campaigning and negotiations to ensure peace in Numidia.

Though the Roman Senate declared war on Jugurtha in 112 BCE, the

army they subsequently sent to Africa in 111 made little impact before Jugurtha surrendered to the consul Lucius Calpurnius Bestia and his legate Marcus Aemilius Scaurus. It was not until Jugurtha had his cousin Massiva, another claimant to the Numidian throne, killed in Rome, that the Senate declared war once again in 110 BCE. This war would last until Jugurtha's final defeat and capture.

The consul of 110 BCE was Spurius Postumius Albinus, and he led this second invasion into Numidia. This invasion, however, was late in the season, and Albinus was forced to return to Rome for the elections, leaving his brother, the praetor Aulus Postumius Albinus, in charge of the military affairs in Africa. The historian Sallust tells us that in January of 109 BCE, Aulus took it upon himself to try to finish the war quickly, though he failed and Jugurtha was able to negotiate harsh terms of peace, forcing Aulus out of Numidia.

Responsibility for Numidia then fell to one of the consuls for 109 BCE, Quintus Caecilius Metellus (who later received the agnomen Numidicus from his command in Numidia). Metellus invaded Numidia marching in battle-ready formation with his legate Gaius Marius holding the rear of the column. When they reached the merchant town of Vaga Jugurtha sent envoys suing for peace, but Metellus turned his envoys against him, and sent them home without a reply for the king.

Though Metellus never openly refused peace, Jugurtha also realized that the Numidian people favored the Romans at Vaga, and that the Roman army was not only becoming dangerously more familiar with the territory of Numidia, but also that they were prepared for war, rather than peace. As a result, Jugurtha decided to engage the consul's forces in battle.

At the River Muthul, the Romans won a close and costly victory. After this, Metellus decided to conduct a campaign of raiding in Numidia, rather than one of pitched battles. Jugurtha responded by attacking Roman stragglers when they least expected it, thus countering Metellus' "guerilla"-type warfare with his own.

Though the Romans gained some territory over the course of a year, Metellus' forces soon found themselves disadvantaged by Jugurtha's greater knowledge of the terrain. By 108 BCE, Metellus, seeing that further war with Jugurtha would be a costly and protracted affair, decided to use negotiation as his main weapon. With the promise of recompense from Rome, Metellus then convinced Jugurtha's closest confidant and general, Bomilcar, to

encourage Jugurtha to surrender. Bomilcar did so successfully, but Jugurtha reneged on his promise when the time came to face up to his crimes, and so he renewed the war. By this time, Metellus had already returned to Rome's province of Africa, and had left several garrisons behind in Numidia to hold the territory gained. Jugurtha reignited hostilities by ambushing a Roman garrison at Vaga in Numidia. Metellus managed to defeat him at Vaga within two days.

At this time, things did not bode well for Jugurtha, he faced internal treachery (i.e., namely from Bomilcar), and when he found out, he quickly dealt with those who plotted against him. This nevertheless caused him great anxiety. He engaged in sporadic marches and indefinite attacks, occasionally skirmishing with Metellus' forces, then disappearing again. Metellus faced a change of fate, however, as Marius pursued the consulship in Rome and won it, taking over command in Numidia for 107 BCE.

When the campaign season began in 107 BCE, Marius had won the consulship as a "new man"—a politician with no ancestors who had ever held the consulship. This lack of consular lineage aided Marius' rise to power, since the nobility and their oligarchic grip on political power had become associated with corruption and oppression of the masses. As consul, Marius took over Metellus' army and began raiding Numidian territory.

Marius captured many towns in Numidia, as well as Jugurtha's fortress at the River Muluccha, which held much of his gold. He then approached Cirta, where Jugurtha and Bocchus fell upon his marching army from all sides. The battle was hard-fought, and a near loss for the Romans, who prevailed in the end.

At this time, Marius sent his legate Sulla (quaestor under Marius) to negotiate peace. Sulla persuaded Bocchus to accept terms on his own behalf and to surrender Jugurtha later. Marius then settled his army in winter quarters until 106 BCE, and later that year, the Senate officially pardoned Bocchus, who then formally joined forces with Marius and Sulla, the latter escorting Bocchus back from Rome through Numidia.

In the course of their travels, they ran into Jugurtha's forces, who then sent envoys to negotiate peace. Bocchus betrayed Jugurtha's trust, as per the negotiations with Sulla, and had him captured by the Romans at the peace meeting. This took place in 105 BCE, and at the beginning of 104, Marius returned to Rome to celebrate a triumph over Jugurtha, who was eventually killed in Rome.

Jugurthine War (112–105 BCE), Consequences

The beginning of the Jugurthine War revealed the ethical and moral corruption of many Roman politicians of that time. The fact that Jugurtha was able to buy his way out of warfare in 112 BCE highlights the issue of individual greed in Rome over the welfare of the Roman state and their allies. This decline in political ethics arguably caused the Roman people to seek to change the traditions that put such corrupt noblemen in power. This desire culminated in the election of Gaius Marius to the consulship.

The rise of Gaius Marius is perhaps the most important consequence of the Jugurthine War. During the war, he acted as legate to the consul Metellus, and proved himself a highly skilled and trustworthy commander. As a result, he managed to win the consulship in 107 BCE. His ascension to the consulship was unprecedented due to his nonnoble lineage and his status as a “new man.” His rise also came at a time in Roman history where the common people were seeking to advance such men from the “popular” class, perhaps with the hope that these politicians would support their interests. Indeed, Marius was part of the populist political alliance known as the *populares* within the Roman Senate. Populist politicians might have found greater public support over the wealthy politicians known as the *optimates*, who had, up until that time, had the greatest influence and power in Roman politics. Thus, Marius aided in furthering the cause of both populist politicians and of “new men.” Famous politicians from the late

Republic such as Cicero (also a “new man”) and Caesar (a leading member of the *populares*, though not a “new man”) arguably owed some debt to Marius’ political accomplishments.

When Marius replaced Metellus as commander of the war in Numidia, he successfully ended the war with the capture of Jugurtha. This marked the beginning of a meteoric, high-profile political career, including a totally unparalleled (until the imperial period) seven consulships. He is also well known for the military reforms of the Roman army that are termed “post-Marian.” This includes the elimination of the tripartite division of the infantry (i.e., *hastati*, *principes*, *triarii*), and making the cohort the primary organizational and tactical unit of the legion. Perhaps most significantly, these reforms also included Marius’ recruitment of the *capite censi* into the army. These men owned no property and as a result were previously exempt from military service. Marius’ change in the recruitment policy transformed the nature of the army, and the nature of the relationship that generals had with their armies. These reforms led to the emergence of career soldiers and this, in turn, led to the recruitment of large armies funded by wealthy politicians in the late Republic, such as Pompey, Crassus, Lucullus, and Caesar. The long-standing nature of these essentially private armies had a significant influence on the power struggles that would lead to the fall of the Roman Republic.

Another consequence of the Jugurthine War was the subsequent rise of another politician, Lucius Cornelius Sulla. The capture of Jugurtha was negotiated by Sulla, who was quaestor under Marius, and he accompanied him on campaign. Sulla’s skill in negotiation and his performance under Marius brought him to the forefront of Roman politics, which would culminate in his consulship in 88 BCE, his unprecedented march on Rome in the same year, and his dictatorship in 82–81 BCE. Sulla’s leadership saw great public unrest and eventual civil war with Marius that came within the gates of Rome and intensified a period of extra-legal violence, the proscriptions (or political purges), which undermined the Republic’s political stability and credibility.

Thus, the Jugurthine War was the catalyst for major change in Roman politics and Roman military history, and it could be argued that the immediate consequences of the war were the first steps on the path that led to the eventual decline of the Roman Republic and transformed it into the Roman Empire.

Julian (Emperor) (361–363 CE)

Flavius Claudius Julianus (331–363 CE), who is best known as the last pagan emperor of Rome, became Caesar in 355 and sole Augustus from 361–363. Heavily influenced by Greek culture and philosophy, Julian was also a talented general. He met his death at a young age attempting, like many Roman leaders before him, to subdue the Sassanid Persian Empire.

Born in 331 at Constantinople to Julius Constantius, half brother of Constantine I, and Basilina, Julian became the last male descendant of the dynasty of Constantine. His grandfather was Constantius I. He had an older half brother, Gallus, and several cousins, including Constantius II. When Constantine died in 337 and Constantius II became co-Augustus in the east, he ordered the purge of Julian's family. All of Julian's direct relatives, except Gallus, were murdered. Julian and Gallus became Constantius' prisoners and lived secluded lives for many years. Julian was raised as an Arian Christian in the care of Eusebius of Nicomedia, and it was during his exile in Cappadocia that he was first introduced to the Greek classics. In 351, Julian began his study of Neoplatonism and soon after secretly converted to paganism. His brother, Gallus, became Caesar in 351 only to be executed in 354.

Aureus of the emperor Julian, ca. 361–363 CE. Brought up as a Christian, Julian converted to pagan polytheism, influenced by Greek philosophy. Distinguishing himself from his clean-shaven Christian predecessors, Julian affected a philosopher's beard. Campaigning against the Persian Empire, Julian died from a battle wound. Located in the Yale University Art Gallery, New Haven, Connecticut. (Yale University Art Gallery)

In November 355, Constantius named Julian his Caesar, married him to his sister, and sent him to face the growing Germanic threat in Gaul. Julian's campaigns in Gaul proved highly successful and made him a popular general. He retook Cologne in 356 and crushed the German confederation under King Chnodomarius at the battle of Strasbourg in 357. After the battle, Julian's soldiers attempted to acclaim him Augustus, which Julian immediately refused (Ammianus 16.12.64). Julian spent the next few years reestablishing Roman control of the Rhine frontier.

In 359, Shapur II renewed war against Rome in the east. In February 360, Constantius ordered a large portion of Julian's Gallic army to move east in support of his campaign. The soldiers rebelled and at Paris again proclaimed Julian Augustus; this time he could not refuse (Ammianus 20.4.14). Once he had settled matters in the western empire, Julian marched east against Constantius in early 361. Yet the empire was spared another civil war when on November 3 Constantius died of illness in Cilicia.

Julian openly declared his paganism and turned his thoughts to a campaign against the Sassanid Persian Empire. After a tumultuous stay in Antioch, where Julian clashed with the city's Christian population, he moved his army against Shapur in March 363. With 65,000 Roman troops, plus additional auxiliaries, and a fleet of 1,100 ships, Julian's campaign experienced initial success. By May, the Romans had reached the Sassanid capital of Ctesiphon and defeated a Sassanid army. However, Shapur's arrival with a sizable force made a siege of the city impractical. In a fateful decision, Julian burned his fleet. The Romans soon found themselves isolated and outmaneuvered. The Sassanids then harassed the Roman withdrawal. In one of the engagements, Julian was fatally wounded in the liver with a spear thrust; he died on June 26, 363.

Much of Julian's youth was spent studying Greek classics and philosophy. Julian was a bright student with a facility for rhetoric and writing. He wrote several works on a variety of subjects, including panegyrics, philosophical treatises, satires, and religious discourses. He became highly influenced by Neoplatonism. As an adolescent, Julian rejected Christianity and returned to traditional pagan beliefs. As emperor, Julian attempted with little success to reestablish traditional Greco-Roman polytheism. He advanced the interests of Hellenism, and followed a policy of pagan activism. Julian did not persecute Christians. However, he removed many of the Church's privileges and subsidies, while heavily favoring pagan interests. He attempted to restore and rebuild the ancestral cults and temples of Roman traditional religion. The brevity of his reign meant that nearly all his religious measures were short-lived. Ammianus Marcellinus is our main source on the life and reign of Julian, as are Julian's own writings.

Julius Civilis (Gallic Leader). See Gallic Revolt

Julius Nepos (Emperor). See Fall of Roman Empire

Julius Vindex (d. 68 CE)

Julius Vindex was a Gallic nobleman and Roman senator who rebelled against Nero in the spring of 68 CE. Vindex came from a family that received Roman citizenship under Julius Caesar or Augustus and senatorial status under Claudius. As governor of Gaul, Vindex raised an army of over 20,000 men against Nero. Though the ancient accounts conflict, Vindex apparently sought the aid of Servius Sulpicius Galba, governor of Hispania Tarraconensis, but Galba himself was acclaimed as emperor by his own army (Plutarch, *Galba* 4–5; Suetonius, *Galba* 9–11; Dio 63.23.1). Vindex himself was not a credible imperial candidate in this period, in contrast with Galba, a patrician Roman senator of ancient family. According to Suetonius, Nero 40–42, Nero ignored the rebellion of Vindex as insignificant until he heard that Galba had joined the rebellion.

However, the governor of Germany, Verginius Rufus, marched against Vindex, perhaps interpreting Vindex's rebellion as a Gallic uprising against Rome, rather than a revolt against Nero. His army laid siege to Vesontio (modern Besançon), whereupon Vindex marched to relieve Vesontio. Dio

says that while the two commanders were reaching an agreement to act in concert against Nero, the Rhine legions massacred Vindex's army. The loss of his army so distressed Vindex that he committed suicide.

L

Lactantius (ca. 240–320 CE)

Lucius Caecilius Firmianus Lactantius was a Christian apologist and rhetorician whose most important historical work is *On the Deaths of the Persecutors* (*De mortibus persecutorum* [DMP]), a narrative of the “Great” Persecution (303–311) and of the Tetrarchic civil war and rise of Constantine I (306–337).

Born in Roman North Africa, Lactantius distinguished himself as a Latin rhetorician. Though later termed the “Christian Cicero,” Lactantius may not have been a convert at the time when he accepted the position of teacher of rhetoric at Nicomedia, the capital of the emperor Diocletian (284–305). During the “Great” Persecution, Lactantius lost his position and was forced to flee into exile. He was later reinstated as teacher of rhetoric at Constantinople.

DMP was composed ca. 317–318. Despite a brief rundown of the previous emperors, focusing on those who previously persecuted the Christians, Lactantius emphasizes contemporary affairs. He describes Diocletian’s secular policies, though in the tradition of Latin invective he presents them in the worst possible light. Lactantius starts his main narrative with the Persian War of 296–299, of which Diocletian’s Caesar Galerius was the victor, to vilify Galerius, whom Lactantius regards as the main author of the “Great” Persecution. In Lactantius’ view, Galerius became arrogant from his victory and gained undue influence over Diocletian. Lactantius describes the course of the persecution, which began with relative moderation (Christian meeting places were disbanded and sacred books were confiscated) in early 303 and proceeded to harsher edicts through the course of the year.

Lactantius describes the dissolution of the First Tetrarchy in May 305, when Diocletian and Maximian abdicated in favor of Galerius (Augustus in the eastern empire) and Constantius I (Augustus in the western empire). Modern scholars often regard the Tetrarchic succession as a planned system, but Lactantius depicts the abdication as unplanned, motivated by Diocletian's severe illness in 304–305 and by Galerius' pressure. According to Lactantius, Galerius pressured Diocletian into agreeing to the elevation of Galerius' nephew Maximinus II Daia and friend Severus as Caesars, instead of Maximian's son Maxentius and Constantius' son Constantine.

Constantius died in 306, resulting in the elevation of Constantine to emperor by his father's soldiers at York. This revolt began the Tetrarchic civil war and the ultimate victory of Constantine over his rivals, for which *DMP* is an important narrative source. Lactantius describes Constantine's victory over Maxentius in the battle of the Milvian Bridge (312) and the downfalls of the other emperors. Galerius expired in 311 from an unpleasant, painful illness. The treacherous Maximian was captured by Constantine and either hanged or forced to commit suicide in 310; going to war against Licinius, Maximinus died of another unpleasant disease in 313. Licinius became co-Augustus with Constantine for some years, downplayed by Lactantius; he and Constantine would eventually go to war, Licinius being defeated in 324.

Due to the polemical nature of the *DMP*, Lactantius should be compared with Eusebius' *Church History* (part of which covers the same period) and *Life of Constantine*, with the surviving Latin panegyrics to Maximian and Constantine, and with the nonsectarian Latin epitomes, as well as surviving official documents.

Lake Regillus, Battle of (499 or 496 BCE)

The battle of Lake Regillus took place in 499 or 496 BCE. The ousted Tarquinius Superbus had gained the support of the other Latin communities, which joined against Rome. The Romans met the Latins in battle and defeated them. Tarquinius Superbus fled south, taking refuge with Aristodemus, the tyrant of Cumae. As a result of the battle, Rome and the Latins made a treaty, the so-called *foedus Cassianum*.

This period is dimly illuminated and even the date of the battle is uncertain: 499 according to Livy 2.19–20; 496 according to Dionysius, *Roman History* 6.2. The description of the battle in Livy 2.21.3–4 and Dionysius 6.17 is legendary, representing the continuing struggle of the newborn Republic against tyranny. In Livy the account is also anachronistic, since at this early time the Roman army employed the hoplite phalanx.

Lake Trasimene, Battle of (217 BCE)

The battle of Lake Trasimene was fought on June 21, 217 BCE, between a Roman army led by the consul Gaius Flaminius and a Carthaginian army commanded by Hannibal. It was an important battle of the Second Punic War and one of a sequence of defeats suffered by the Romans in the years 218–216 BCE. Hannibal was attempting to further his strategy of destroying Roman ties with her allies in Italy, and was thus making for the south of the Italian peninsula. Polybius' account of the battle credits Hannibal with superior skills as a general, able to anticipate Flaminius' actions and provoke him into pursuit by marching his army past the Roman camp and laying waste to the countryside. Hannibal marched south through Etruria burning crops, while Flaminius and his army followed. The road Hannibal

chose took him around the side of Lake Trasimene, and there he found that the mountains came down almost as far as the lake, leaving a narrow path in between, beyond which the path led out into a wider plain flanked by extremely steep hills. It was here that Hannibal set up his ambush, building his camp in the open on the far side of the plain protected by his Spanish and African infantry, and concealing other cavalry units behind some hillocks at the plain's entrance. Hannibal planned to trap the Roman army in the pass between these two forces, while other contingents of Celtic and Numidian light and heavy cavalry he placed on the hilltops where they would be able to descend upon the legions as they were spread out on the march.

When Flaminius arrived at Lake Trasimene he ordered the army to proceed, and, led by the *extraordinarii*, men hand-picked from the allies and representing about a third of the allied cavalry and about a fifth of its infantry, the Roman army entered the pass. They were completely surprised by the ambush, suddenly finding cavalry in their rear, infantry in front, and both cavalry and infantry descending from the hills above them. Of the Roman soldiers, 15,000 lost their lives in the ensuing slaughter, among them Flaminius himself, and 10,000 were taken prisoner. Flaminius, alleged to have ignored advice from his senior officers, is blamed for the defeat by both Polybius and Livy. The classical historical tradition, however, is clearly hostile to Flaminius, who was a popular plebeian consul who had championed the people's rights. His decision to follow Hannibal's army into the plain was probably not the result of imprudence caused by anger over the destruction of crops, as alleged, but part of a plan of cooperation with the other consular army led by Gnaeus Servilius Geminus. This army lay on the other side of the Carthaginians, and the plan had most likely been to trap Hannibal between them. Hannibal, however, must have anticipated the move, and determined to destroy Flaminius' army before help could reach him.

Lanciarii

The *lanciarii* were soldiers in the later Roman army who were predominantly armed with light javelins, or the *lancea*. We have evidence for soldiers using the title on their tombstones from the early third century CE. This evidence comes from tombstones of the soldiers from Legio II Parthica, stationed in Apamea, Syria. There are three tombstones depicting *lanciarii*, although only two use the title in the inscription. All three monuments date from between 215 and 218 CE, and as such are some of our earliest evidence for *lanciarii*. The iconography on the monuments depicts each man holding a handful of spears in his right hand, with a round shield in his left. On the tombstone of Aurelius Mucianus (*L'Année Épigraphique* 1993, 1575) we can also make out a cloak, *cingulum*, and sword belt, worn over the right shoulder. The number of javelins each man carried (between four and five) suggests that these were missile weapons, rather than stabbing spears. Mucianus' tombstone inscription also notes that he was a *lanciarus* in training or an "instructor" (*discens*). This suggests that the position of *lanciarus* was a specialized one which required additional training.

Lanciarus appears more frequently on tombstones from the early fourth century CE. Thus, this type of soldier seemed to have evolved beginning in the third century, finally becoming more regular by the beginning of the fourth century CE. By this time, we have epigraphic evidence of vexillations of *lanciarii* in the provinces. Funerary inscriptions also make note of *lanciarii* being promoted to the Praetorian Guard in the late third and early fourth centuries.

In the second half of the third century, we also hear of a special guard unit that included *lanciarii* known as the "sacred retinue" (*sacer comitatus*). This was the personal field army of one of the emperors of this time, probably Diocletian.

By the time of the late Roman army, *lanciarii* formed the core of one of the elite palatine legions, indicating a gradual rise in their status from the early third century.

Latin, Latins

Latinus refers to both the ethnic group *Latini* (sg. *Latinus*) or the inhabitants of Latium, and to the status “Latin,” which became differentiated from ethnic Latin identity and refers to an intermediate status between full Roman citizen and ally.

In the early Republic, down to 338 BCE, the Latins (*Latini*) were the inhabitants of Latium, a region of central Italy south of Rome, bounded by the Tyrrhenian Sea to the west, the Apennines to the north, and Campania to the south. The Latins had a similar culture and shared Latin rights: *conubium*, the right to intermarry; *commercium*, the right to trade among each other and recognize contracts; and *ius migrationis*, the right to change residence among each other’s communities. At the start of the fifth century BCE, as Rome’s closest neighbors, the Latins formed a Latin League in response to the threat posed by the new and aggressive Roman Republic. The League backed Tarquinius Superbus, who had escaped the overthrow of the monarchy, and was defeated in the battle of Lake Regillus (496 or 499 BCE). As a result of this defeat, the Latin League was forced to ally with Rome, providing troops.

Due to the growth of Roman territory in central Italy, the Latin League communities revolted from Rome in 341 BCE, allying with the Volsci. The Romans crushed the revolt in the so-called Latin War (341–338), dissolving the Latin League.

After the dissolution of the Latin League, the status “Latin” became

differentiated from ethnic Latins. “Latinus” might denote a juridical status inferior to a Roman citizen (*civis Romanus*) but with privileges that mere allies (*socii*) lacked. Individuals of Latin status could not vote as Roman citizens, but possessed *conubium*, *commercium*, and *ius migrationis* with Romans. If they settled permanently at Rome, they could receive the Roman citizenship. These collective rights were termed “Latin rights” or *ius Latii*. However, many Latin colonies were quite far from Rome, so these rights were difficult to use. Though Latin cities were internally self-governing, the citizens were also liable to Roman taxation and military service. Though these communities typically enjoyed strong ties with Rome, the rebellion of the town Fregellae in 125 BCE presaged a fuller revolt a generation later.

The grievances of the Latins and allies motivated the Social War (91–87 BCE), as a result of which Latins were granted the Roman citizenship. After this period, Latin status became obsolete, except as a juridical status for informally manumitted freed persons (Junian Latins).

Latin Colonies

Colonization is attested from the very early history of Rome. Settlers were sent from their home town, sometimes to a new city built for the purpose; in other cases a captured city was colonized by Roman citizens. The practical aspects of the settlement of a colony were organized by a committee, usually consisting of three men: they selected the colonists, measured and allotted the land, established boundaries, and so on. Each settler received a piece of land as their private property; colonies also

received some land as common land belonging to the colony, to be used by all inhabitants. If the distributed land covered a large area, villages were established away from the town, so that not every colonist lived in the city. The foundation of a colony was celebrated with religious rituals, and its foundation was a source of pride for the town; the date was still commemorated centuries after the event.

Between 510 and 383, 13 “Latin colonies” were founded, most of them in Latium itself. These colonies most likely included both Romans and inhabitants of the Latin cities. The practice was established to enable the Romans and their allies to receive an equal share of any land that was taken as booty acquired in wars fought together. These older colonies were usually settled in already existing towns, rather than *ex novo*; often the local inhabitants were also accepted as settlers. After the foundation of Sutrium and Nepes in 383 colonization ceased, perhaps because of growing tension between Rome and the Latin allies, culminating in the Latin War of 341–338 BCE.

From the Latin War in 338 onward two kinds of colonies existed: Roman and Latin. Latin colonies were so named because they enjoyed the so-called Latin rights. They were independent of the city of Rome and had their own government; their only obligation to Rome was furnishing soldiers for the Roman army. The colonists were both Roman citizens and Latins, that is, people from the old Latin towns, or people who had received Latin rights earlier; Roman citizens who moved to Latin colonies lost their Roman citizenship. In exchange, these colonies received certain privileges in their contacts with Rome, which were not available to other allies: *commercium*, the right to acquire property in Roman territory and make business contracts protected by Roman law; *conubium*, the right to marry Roman citizens; and the *ius migrationis*, the right to move to Rome and receive Roman citizenship there, as long as they left a son behind to keep up the colony’s strength. They had limited voting rights in the Roman assemblies: all Latins were gathered in one *tribus*, so their actual influence was negligible.

The number of settlers, when attested, was 2,500, 4,000, or 6,000; this most likely included only the adult male settlers sent out to the colonies, to which women and children should be added. Between 338 and 241, 23 colonies were founded, which accommodated a total of about 85,000 male settlers. The colonists received considerable plots of land; amounts between

15 and 50 *iugera* (3.75 to 12.5 hectares) are attested, at least after the Second Punic War. It may be that these large plots were a reflection of the large amount of land available in this period, and that earlier settlers received smaller plots.

After the Second Punic War a new wave of colonization occurred; new colonies were founded and old ones received new settlers. This was necessary to emphasize the Roman presence in the whole of Italy to prevent new defections such as those that had taken place in the war, and to secure the newly conquered territory in Gaul. However, the Romans now preferred to found colonies with Roman citizenship rights, rather than Latin ones; the last four Latin colonies were founded between 192 and 181, and catered for about 15,000 men.

Several considerations were important in the foundation of colonies. The most important was the stabilization of newly conquered territory to discourage defeated enemies from revolting against Rome, and to serve as bridgeheads for further conquests. They were often located in very strategic locations, from where it was possible to supervise large amounts of territory and to control the most important communication routes through Italy. The settlers in Latin colonies were veterans of the Roman armies; these colonies were often located in areas close to enemy territory, and therefore needed experienced soldiers to fulfill their military function.

An additional purpose of colonization was to reduce the pressure on Roman land by providing additional territory for Rome's growing population. When colonization ceased in the second century, population pressure led to economic and social problems only a few decades later, leading to the Gracchan land reform in the 130s BCE.

It is clear that due to their sheer size, the changes to the landscape, and their strategic functions of watching potential enemies, the colonies had a great impact on many areas in Italy. Almost all regions in Italy received colonies, so that a Roman presence was never far away. It is often argued that colonies were one of the most important instruments of the "Romanization" of Italy. Of course, it is important to emphasize that this process was not straightforward, and that the Italian peoples were not simple recipients of a "Roman culture" spread by the colonists; the Italians were active agents in creating a new identity in changed circumstances. Nevertheless, there was much contact between the colonists and the inhabitants of the surrounding territory. They were often the largest

population centers in the area, and thus served important economic and administrative functions. Italians were free to migrate to a colony, to visit colonies for trade and other purposes, and to live in the surrounding countryside; the close contacts between them and the colonists made them familiar with Roman culture and the Latin language, so that the colonies played an important role in the spread of urbanization, a “Roman” lifestyle, and the integration of Italy into the Roman political and cultural framework.

Latin Wars

Rome’s wars against the Latins stretch back into her mythical past and form the backdrop for most of early Roman history. Beginning with Aeneas’ clash with Turnus and continuing on through Rome’s conflicts with Alba Longa under the *reges* and later the wars between the Latin League and the emergent Republic, Rome was regularly at war with some, or all, of the

Latins until her final conquest of the region in the fourth century BCE. The nature of the conflicts, however, changed over time as Rome's social, economic and military institutions changed.

The earliest conflicts with the Latins were not wars of conquest. Instead, local elites led small-scale raids. Warfare during this period was largely conducted by the mobile, warlike, aristocratic clans that dominated the region (led by so-called *condottieri*) and the style of warfare represented an extension of their very personal clan-based politics. Communities, when they did engage in warfare, seem to have either been led by a clan leader (for instance the *rex* of Rome) or waged defensive conflicts, protecting their land and wealth from raiding tribes and warbands.

The Latin wars of the early Republic continued this trend, although changes were occurring. The main battle between Rome and "the Latins" during this period, the battle of Lake Regillus c. 499 BCE, supposedly formed part of the conflict with Tarquinius Superbus as he attempted to regain his property and throne. This battle, however, also marked the beginning of Rome's ascendancy in Latium and precipitated the signing of the *foedus Cassianum*. This treaty between Rome and the Latins represented a general peace that also included mutual defense and commercial clauses, laying the groundwork for a more direct alliance system in later years.

The *foedus Cassianum* did not prohibit warfare by Rome against individual Latin communities, and *vice versa*, as Rome fought regular wars against various Latin communities (Fidenae, Ardea, and others) in the fifth century BCE. Toward the end of the fifth century BCE changes in Latium's economy, most notably a decline in trade and advances in agriculture, led to an increased focus on land as an objective in war, although this did not seriously change Rome's attitude toward warfare with the Latins. During the fifth century BCE, with a few notable exceptions (the problematic acquisition of land from the Hernici in 486 BCE being the most prominent, Livy 2.42), land was only taken as a second choice, in instances where no movable plunder was available, and was generally distributed to soldiers.

A key problem of the "Latin Wars" is the identification of "the Latins" in each instance. The *nomen Latinum*, representing the totality of the Latin people, was a cultural designation associated with a shared language and culture, and was likely based ultimately on notions of kinship. But within this large cultural group were countless smaller units, including both tribes and communities. The *prisci Latini*, or "ancient Latin peoples," would meet

together at the festival of Jupiter Latiaris on the Alban Mount (later at the *Lucus Ferentinae*) each spring to arrange marriages, seal bargains, and make military alliances. This meeting of the *prisci Latini*, supposedly always 30 in number, formed the basis for the Latin League: a confederation of Latin communities which is recorded during the regal period and persisted until their ultimate conquest by Rome in the second half of the fourth century BCE. At the yearly festival the League would elect magistrates and decide on any joint military ventures. Although each member of the *nomen Latinum* was supposedly present at the meetings of the League, attendance and membership probably varied significantly each year. As a result, it is likely that “the Latins,” as embodied by the army led by the *dictator Latinus*, usually represented a much smaller subset of the *nomen Latinum*. This would explain how Rome was able to defeat “the Latins” at the battle of Lake Regillus in the early fifth century BCE. Indeed, the myth of archaic Roman superiority in Latium has rightly been discarded in recent years. Instead, during the fifth century BCE, Rome still represented merely one of many burgeoning communities in Latium—although her key location on the Tiber, along with access to a range of natural resources, did mean that her growth soon outstripped that of her peers.

The situation in the fourth century BCE, however, was different. The Gallic sack of Rome at the start of the century (ca. 390 BCE) created a phobia of the Gauls (*metus Gallicus*) that the Romans would not fully dispel until Julius Caesar’s conquest of Gaul in the first century BCE. It is clear that this threat did not affect all the Latin communities equally, but the existence of a military force which could conquer even the most powerful Latin city created an impetus toward unification for defensive purposes which had not existed previously. The economics of warfare in the fourth century BCE were also changing. Warfare in Latium during the sixth and fifth centuries BCE had been focused on raiding, and so the long term impact of military “conquest” on a defeated community was usually minimal. This changed during the late fifth and fourth centuries BCE as land became increasing valuable—a development driven by a combination of economic changes, migration, and agricultural developments. By taking land the victors changed the underlying economic and political framework of warfare by imposing long term conditions on the vanquished. This shift in economy and military practice also increased the Roman impetus toward control and unification of the geographic region of Latium and seems to have fueled

Rome's early push toward empire. The conquest of Latium by Rome can therefore be seen as the culmination of a series of military, political, and economic developments in central Italian society which dramatically changed Rome's approach to warfare and captured communities.

The means by which Rome unified the region of Latium, as detailed by Livy in Book Eight of his history, are also revealing. Instead of using the preexisting structure of the Latin League as a model, Rome instead dealt with each conquered community individually. Many captured communities were simply integrated into the Roman state by becoming *municipia*. The inhabitants of these communities acquired Roman citizenship and were therefore subject to conscription into the Roman army. Other communities seem to have been incorporated but granted a limited form of citizenship, *civitas sine suffragio*, which made them eligible for military service but without the power to vote. Still others, most notably Velitrae, were virtually destroyed and their land given over to Roman settlers. Overall, however, the approach of Rome to the Latin communities in 338 BCE supports the idea that Rome was primarily concerned with increasing her military manpower and removing any possible threats to military unity and cohesion. This shift in the power balance in Latium, coupled with Rome's increasing unilateral approach to wielding it, eventually led to war. In 341 BCE, while the Romans were also engaged with the Samnites, "the Latins" revolted against Rome in an attempt to stop her inexorable rise and reaffirm the old status quo among the Latin peoples. The Latins failed. In 338 BCE Rome defeated the Latins and established a new system of alliances which would become the pattern for future Roman expansion in Italy. Instead of dealing with the Latins as a League, Rome dealt with the defeated communities individually, dissolving all previous unions and directing foreign policy through the Roman state.

The Latin wars also left an indelible mark on the Roman army. Rome had allied herself with various Latin communities off and on for centuries through the mechanism of the Latin League, and the equality of Roman and Latin units in joint military ventures (at least in terms of access to spoils and booty) had been established as early as 493 BCE with the *foedus Cassianum*. But early allied armies seem to have been largely *ad hoc*. With the settlement of 338 BCE Rome became the master of a regularized Latin army. This massively expanded her manpower reserves and gave all subsequent Roman armies a characteristic Roman/allied composition. Rome's Latin allies (*socii*), unsurprisingly, seem to have been equipped and

fought in the same manner as the Romans, although they were raised and deployed in their own units and had their own commanders under the aegis of a Roman general. This situation represents a standardized version of the ad hoc model deployed by the army of the Latin League. The most important consequence of Latin wars, however, was the precedent set in how Rome approached conquered communities. During the course of the fourth century BCE, Rome had experimented with a number of different approaches to vanquished communities in an effort to find one which allowed her to extract key resources: military manpower and long-term military security. The settlement of 338 BCE represented the culmination of this period of experimentation and set the model for Rome's later conquest of Italy in the subsequent century.

Law, International

Although there were no international institutions (equivalent to the modern International Criminal Court or the United Nations) to police state behavior in the ancient world, there did exist a set of almost universally recognized, divinely sanctioned norms of international conduct that were regarded as binding. As early as Homer, for example, the sanctity of ambassadors and the right to give the war dead a proper burial were considered to have the force of divine sanction, if not of the law as such.

At Rome, at the latest by the mid-first century BCE, there had developed

the concept of *ius gentium*, “the law of nations” (as opposed to *ius civile*, “civil law,” which only applied to Roman citizens). According to Cicero, *ius gentium* had greater moral obligations attached to it than did *ius civile* (*On Duties* 3.17.69). By the second century CE, the jurist Gaius established the principle that civil law is the law that individual peoples establish for themselves while the law of nations is the law that derives from natural reason (*naturalis ratio*) and is observed by all mankind (*Institutes* 1.1.1). The Digest of Justinian (sixth century CE) indicates that Roman jurists at some earlier point established the principle that a state that is not in a state of friendship and alliance with Rome is not automatically considered an enemy (Digest 49.15.5.2), which is a considerable advance from the more ancient principle that whoever is not a friend is a (potential) enemy.

The Romans participated in a pan-Mediterranean customary framework that today would be categorized as “international law,” but that Mediterranean peoples regarded as overseen and enforced by the gods themselves. This collection of ground rules, customs, and taboos (mostly governing conduct during wartime) mandated the sanctity of oaths to the gods, conducting negotiations of disputes in good faith, and respect for the inviolability of diplomats, priests, suppliants of the gods, sacred places and structures, and neutral states (though the same cannot be said for noncombatants and civilians). Any and all of these could be (and often were) violated according to the criteria of state self-interest and security, but the general principles were widely understood and respected.

In addition to these, the Romans (or perhaps the Italians more generally) had developed additional divinely sanctioned constraints on their own international conduct. The most important of these—the fetial and *deditio* (surrender) rituals—had exclusively wartime applications. The college of fetial priests was initially responsible for all aspects of beginning and ending wars. When a perceived violation against Rome had taken place, they sought satisfaction from the offending state (*rerum repetitio*); consulted the gods as to the justice of Rome’s intention to declare war (to ensure a “just war,” *iustum bellum*); declared war after a 30- or 33-day “cooling off” period had passed, and a formal vote by the Roman people had taken place; and ritually declared the gods’ judgment in favor of Rome to the offending state, and cast a spear into its territory (*indictio belli*). After the enemy state surrendered (performed *deditio* to a Roman commander in the field), and a battlefield truce (*sponsio*) was made and ratified by the Roman people, the

fetials would assist in drawing up and overseeing the popular ratification of the formal treaty of peace. It is not known when the fetial ritual and priesthood declined in importance, but they probably did so when Rome's international relations expanded beyond Italy into the wider Mediterranean, encompassing peoples who had no comparable ritual traditions. The *deditio* ritual, on the other hand, persisted well into the historical period (to the first century CE at least). The ritual involved the Roman commander extending to the surrendering party the Roman state's *fides*, which probably implied a pledge of mercy.

The Romans were also unique in their institution, in 242 BCE, of a special annually elected magistrate, called the *praetor peregrinus*, whose sole function was to manage disputes between non-Romans (resident aliens) and between them and Roman citizens. It was probably from the edicts (declarations of legal beliefs and intentions) of successive praetors that the concept of *ius gentium* developed, at the heart of which was the uniquely Roman concept of *fides* ("good faith").

It is unknown how the Roman version of the main instrument of international law—the formal treaty (*foedus*)—developed. The earliest example we possess—the treaty between Rome and Carthage, dated to 509 BCE and recorded by Polybius (3.22)—is mainly concerned with commerce, and so may reflect Carthaginian rather than Roman treaty forms. The evidence of later treaties inclines most scholars to believe that the fully developed Roman international treaty was based primarily on Greek models. Most Roman peace treaties and treaties of alliance, for example, contain versions of the Hellenic treaty formulae concerning the pledging of friendship and mutual assistance in wartime (if possible); the promise to have the same friends and enemies, and to not make separate (and secret) peace treaties with common enemies; and the sanctifying of the treaty by mutually sworn oaths. A Roman innovation, however, was the *maiestas* clause, according to which the treaty partner promised to respect "the majesty of the Roman people," thus indicating some form of subordination to Roman will and power in perpetuity. The most famous example of this is contained in the Roman-Aetolian treaty of 189 BCE (Polybius 21.32, 22.13; Livy 38.11). This does not mean, as is sometimes argued (but on very weak evidentiary grounds), that Roman treaties were formally and legally divided into *foedera iniqua* and *aequa*, "unequal and equal treaties."

Legate

A legate (Latin singular *legatus*, pl. *legati*, lit. “chosen”) was a senior military officer in the Republic, but a provincial governor or a commander of a legion in the Principate. Legates first appear in the period of the Second Punic War, when the consuls needed to delegate command of legions; the six military tribunes per legion apparently had insufficient authority. Republican legates were appointed by the Senate at the time of the Second Punic War; by the late Republic, they were appointed by the general. The republican legate ranked above the military tribunes but was still the subordinate of the commanding magistrate (consul, praetor, or promagistrate). At this time (from the early second century BCE) there was no fixed number of *legati*. As the general’s picked men, *legati* began to dominate elite command in the late Republic.

Legati were typically the commander’s social peers, often wealthy equestrians, sometimes senators, but who might lack military experience. Caesar depicts some of his *legati* early in the Gallic Wars as panicking at the prospect of fighting the German Ariovistus (Romans had had a phobia of Germans since Arausio). Caesar emphasizes that it was the role of the commander to plan for the whole army, but the role of *legati* to obey orders (Caesar, *Gallic Wars* 1.39–40, *Civil War* 3.51). Some of Caesar’s *legati* distinguished themselves, such as Quintus Tullius Cicero, the brother of Cicero the orator, who commanded the resistance to a Gallic ambush, or Titus Labienus, Caesar’s most trusted legate, who eventually defected to Pompey. However, *legati*, as part of the commander’s *consilium* or advisory

council, brought other useful administrative or legal talents to the task of governing a province. *Legati* were also deputized as envoys.

In the Principate *legatus* acquired new meanings, displaying the tendency of Romans to adapt old titles to new institutions. Most governors were now termed *legati Augusti pro praetore*, despite the fact that many governors had already held the consulship as well as the praetorship when they were appointed. The *legati Augusti pro praetore* governed imperial provinces with active military fronts. The governors of public provinces, which did not have active fronts or (with the exception of Africa), legions, were termed proconsuls. In the rare instance that there was only one legion in a province, the governor also commanded the legion. There were some exceptions to senatorial governors: the governor of Egypt, the *praefectus Aegypti*, was an equestrian, and the commanders of the two legions in Egypt were also equestrian prefects so as not to outrank the *praefectus Aegypti*. In Africa, the commander of the one legion (legio III Augusta) was an equestrian. When Septimius Severus created the three *Parthica* legions, he gave them equestrian commanders, and he appointed an equestrian to govern the new province of Mesopotamia. Some small or recently formed provinces also had equestrian governors.

A younger man of senatorial status who had only held the praetorship was more likely to be a *legatus legionis*, commander of a single legion. Legionary legates held their commands for a short time, no more than three years; governors held their posts for a year. These short tenures of office prevented any one senator from building a center of power in any one province and thus discouraged usurpation. Some senators, however, built up careers with numerous military commands in multiple provinces; they tended to be “new men,” municipal Italians or provincials without consular ancestors, again to discourage usurpation.

The inexperienced (first-time) legionary legate may have depended for assistance on the narrow-stripe tribunes, equestrians with more military experience, and on the *praefectus castrorum*, a long-serving former legionary chief centurion who was responsible for logistics. The lack of experience reflects the decreasing military participation of the Roman senatorial order in the Principate.

In the mid-third-century CE equestrian military men took over legionary commands and provincial governorships. The term *legatus* was superseded in the later Roman Empire due to Diocletian’s reorganization of the

provinces and Constantine's reorganization of the army. Terms such as *comes* and *dux* were used instead.

Legion, Organization of

In the early Republic, the legion was originally organized according to the Servian census classes: the upper two classes provided heavy-armed hoplite troops and cavalry. The strict relation of the census classes to military recruitment is debated due to inconsistent evidence; the upper three classes may have provided heavy-armed hoplite troops and cavalry, or all five propertied classes, termed collectively *classis*, may have provided troops, the unpropertied *capite censi* or *infra classem* providing none. In any case the direct relationship of the Servian constitution to recruitment was later superseded, and the *dilectus* (levy) was conducted according to the tribes that citizens belonged to. Down to the late second century BCE, soldiers had to meet a minimum property qualification for service: 11,000 *asses*, lowered in the second century BCE to 4,000 and then to 1,500 *asses*. Though the *as* coin was retariffed in the late third century BCE and its value is debated,

these minimum figures probably corresponded to a small amount of property, five *iugera* or less, meaning that ordinary legionaries were recruited from subsistence farmers. The lowering of the requirement reflects difficulties with recruitment; its exact relationship to Italian demography is also debated.

In the middle Republic, before the Punic Wars, each consul commanded two legions, meaning that Rome normally fielded four legions of citizens, plus at least that many allies. At this time legions were not commanded by legates. Each legion had six military tribunes, meaning that at the *dilectus* 24 military tribunes were selected. Sixteen of these tribunes were elected by the *comitia tributa*, and eight were appointed by the consuls. Fourteen of the military tribunes were required to have at least five years' military experience, and 10 were required to have at least 10 years' experience. Below the tribunes, the centurions (60 per legion) commanded field operations.

In the middle Republic (ca. 264–133 BCE) legions were organized into maniples, the basic tactical unit of the legion. Livy's evidence (8.8.5–8) reflects a somewhat earlier stage than Polybius. According to Livy, the legion consisted of 15 maniples of *hastati*, the front line of battle; 15 maniples of *principes*, the second line of battle; and 15 *ordines*, the third line, comprised of *triarii*, *rorarii*, and *accensi*. Livy (59 BCE–17 CE) wrote centuries after the period which he describes and approximately a century after maniples became obsolete, so it is likely he did not fully understand what he describes. The *rorarii* were skirmishers and should have been deployed ahead of the *hastati*; *accensi* are military servants. Livy 8.8.5–8 describes a deployment of the maniples termed by modern scholars *quincunx*, resembling a checkerboard, in which as front line maniples tired, they retired and ones to the rear moved up to replace them.

Polybius describes the manipular legion ca. 220–170 BCE, as he was a contemporary of the manipular legion, and sets greater store by accuracy. According to Polybius (for example, 6.21.7–23.6), there were 30 maniples per legion: 10 maniples of *hastati* in the front line, young soldiers armed with *pila* (javelins); 10 maniples of *principes*, the middle line, consisting of mature and more heavily armed men; and 10 maniples of *triarii*, the rear line, consisting of older men (relatively speaking) who were expected to fight most doggedly: "it has come to the *triarii*" was a proverb for being in desperate straits. These three lines formed the *triplex acies*. Individual

maniples could maneuver more readily than the phalanx on an uneven battlefield. Ahead of the legion ranged the *velites*, lightly armed skirmishers.

The Second Punic War, which nearly annihilated the Roman Republic, caused many changes in military organization. The mass mobilization of citizens and allies meant that as many as 22 legions were fielded. Consuls needed to delegate the command of individual legions so they created the rank of legate, a commander of a legion, at this time appointed by the Senate. The first use of cohorts also appeared during this time, in Spain (probably adapted from local practice).

In the last two centuries of the Republic, the manipular organization was superseded in favor of cohorts, and was discarded entirely with the Marian reforms of 107 BCE. The distinction of *hastati*, *principes*, and *triarii* by age and equipment was abolished. Lighter troops such as the *velites* were likewise superseded in favor of additional allied units that provided the same function. The structure of the old levy process (*dilectus*) was largely ended, and legions became a volunteer force that developed into a paid, professional long term fighting force, rather than a citizen army called to arms for relatively short periods. The most important change was to the command structure of the imperial legion, which placed senatorial aristocrats in short-term officer posts, preventing them from developing bonds with their armies that might threaten the emperor's power.

Replacing the earlier republic's manipular system, the late republican and imperial legion was organized into 10 cohorts. Each cohort comprised six units of 60 to 80 men known as centuries. Each century was composed of 10 *contubernia* ("tent squads") of six to eight men apiece. This organization may have persisted when legionaries were housed in permanent barracks, as was increasingly the case during the Principate. Each squad was led by a *decanus*. A centurion commanded each century, assisted by a handpicked second known as an *optio*. Six centuries made up a cohort of 360 to 480 men, and 10 cohorts formed the legion itself. Centurions of senior rank commanded the cohorts. The most senior centurion, the *primus pilus* (first spear) normally commanded the first century of the first cohort, and led the entire first cohort when in battle. Ranking below the *primus pilus* were 10 *pilus prior* (first file), who commanded the first centuries of each of the 10 cohorts and likewise each of the other cohorts in battle.

Compared to the manipular system, cohorts provided the legion with much greater tactical flexibility. Maniples had given the republican legion

excellent maneuverability in combat, shown by the flanking move against the Macedonians at Cynoscephalae in 197 BCE, but cohorts provided a more tightly focused use of force. They could maneuver more effectively and efficiently. Cohorts, being larger than maniples, could also operate independently with greater efficiency. Separate cohorts could secure strategic points ahead of the main legion or be used to counter an enemy's flanking movement.

The most significant change to the legion's organization in the Principate was the command structure. Augustus appointed senators as legionary legates or provincial governors for short periods (usually a year), preventing them from developing a deep relationship with any one army that might encourage them to revolt. A *legatus legionis* (legionary legate) commanded a single legion, while a *legatus Augusti pro praetore* (governor of a province) commanded two or more. In provinces where only one legion was stationed, the legionary legate might also serve as governor.

Below the legates were military tribunes, six per legion. These officers were distinct from the military tribunes of the classical Republic, who had been elected by the *comitia tributa* and who often had many years of military experience. The highest-ranking tribune was the *tribunus laticlavus* or broad-stripe tribune, named for the broad stripe of a senatorial tunic, who served as the second in command. The laticlavian tribune was a young man, from a senatorial family but under age 25 so not yet a senator. His position was a high honor but involved little real responsibility. A legion also had five *tribuni augusticlavii* or narrow-striped tribunes, who were normally from the equestrian order and served in an administrative capacity. All these military tribunes also were posted for a short time (six months to a year). Individuals who showed military talent were promoted to different legions to avoid the risk of revolt.

A legion was also assigned a *praefectus castrorum* or camp prefect, who was a former *primus pilus* (chief centurion) who had completed his 25 years of service. He served as third in command of the legion and oversaw its logistics and internal operations. As an officer with long experience, the camp prefect was probably the expert consulted by the relatively inexperienced legates and tribunes, though they formally outranked him.

In addition to the 3,600 to 4,800 combat troops, imperial legions were assigned 120 cavalrymen, though they were lightly equipped and used more for scouting, carrying dispatches, and pursuit rather than full-scale combat.

In addition, legions contained a unit of about 60 engineers, who employed various supporting weapons such as ballistae and the heavy “scorpion” crossbows. Along with the cavalry and engineers, each legion also contained a sizeable number of slaves, used as baggage handlers, so the actual number of men in an imperial legion averaged between 5,000 and 6,000 men. The legion employed many of its men as artisans and other specialists, attested in numerous inscriptions and producing whatever the unit needed. However, it is likely that these specialists were also expected to fight; there were no noncombatant support personnel. A legion was normally supported by an equal number of allied *auxilia*. The most important function of these units was to provide cavalry and skirmishers to support the heavy infantry.

Legions remained the mainstay of the Roman army throughout the empire, though *auxilia* largely outnumbered them in the field. As Roman territory expanded, legions became increasingly stationary, though detachments (*vexillationes*) and entire legions might still be transferred to different regions during wartime, though raising new legions was an alternative. In the later empire, this led to a split between the empire’s mobile and stationary forces, with the best troops being detached from their legions as *vexillationes* to be sent where they were needed, while the remainder stayed in place as a defense force. However, the persistence of legions, much reduced in size, is attested in the *Notitia Dignitatum*, a list of civil and military offices from the early fifth century.

Libius Severus (Emperor). See Fall of the Roman Empire

Licinius (Emperor) (308–324 CE)

Licinius (emperor 308–324) was originally one of the Tetrarchs, recruited to fill the gap left by Severus (305–308), and later co-emperor with Constantine the Great (306–337). A friend of Galerius, Licinius was elevated to the rank of Augustus at the conference of Carnuntum, held in November 308 to resolve the conflicts among the Second Tetrarchy's emperors. Licinius was loyal to Galerius and did not overstep his sphere of influence in the Balkans until after Galerius died in 311.

Licinius then allied with Constantine and married Constantine's half-sister Constantia in 313. Maximinus II, who controlled Syria and Egypt, now invaded Asia Minor and Thrace, challenging Licinius, who defeated him in a battle near Adrianople. After Maximinus' death, Constantine and Licinius established an uneasy partnership, lapsing into civil war (316–317) as a result of which Licinius agreed to occupy the eastern empire and Constantine the European part of the empire. Having previously agreed with Constantine to tolerate Christianity, Licinius began persecuting the Christians in Asia. Constantine declared war on Licinius in 324 and defeated him in another battle at Adrianople. Licinius fled to Byzantium; when Constantine besieged it, Licinius fled again to Nicomedia and surrendered to Constantine. Licinius was exiled to Thessalonica, where he was put to death in 325.

Licinius Mucianus (ca. 19–74/7 CE)

Gaius Licinius Mucianus was a Roman general, statesman and scholar who served as the right-hand man of Vespasian during the civil war termed the War of the Four Emperors. During Nero's reign, Licinius Mucianus served as *legatus legionis* under Domitius Corbulo, suffect consul ca. 64 and was twice granted a propraetorian governorship—once in Lycia-Pamphylia ca. 58–60 and once in Syria ca. 67.

In 69, Mucianus conspired with Titus to support Vespasian's bid for power. In August, having declared his allegiance to Vespasian, Mucianus led a Flavian force through Asia Minor with the objective of capturing Rome from Vitellius. However, the Flavian general Antonius Primus and his Danubian legions arrived first in Italy. Primus defeated the Vitellians at the second battle of Bedriacum and captured Rome, concluding with Vitellius' downfall and lynching in December of 69.

Mucianus arrived at Rome in January of 70. As Vespasian and Titus were still occupied in the eastern half of the empire, Mucianus took personal charge of the capital as well as the responsibility for the behavior of Vespasian's younger son, Domitian. In his capacity as de facto head of state, Mucianus appointed officials, signed decrees and resolved disputes in the Senate. His authority over the capital ceased upon Vespasian's arrival in late 70.

Tacitus accords Mucianus an ambiguous portrayal in the *Histories*. He admires Mucianus' capabilities as an administrator, orator, diplomat, and a scholar. However, he is critical of Mucianus' greed and penchant for luxury (Tacitus, *Histories* 1.10).

Limitanei

In the aftermath of the various foreign incursions and civil wars of the third century and Tetrarchic period, the Roman army institutionalized a number of changes by the early fourth century. Rather than an army of 33 legions, of roughly 5,000 men each, generally posted in the frontier areas, and supported by a similar total of soldiers in separate units of auxiliaries, a new system evolved in the late third and early fourth centuries. Leaving aside barbarian federates and aristocrats' armed retainers, the Roman army now consisted rather broadly of two classes of troops organized into a greater number of units which typically numbered no more than 1,000 soldiers each. The *limitanei* were territorial forces usually posted to the frontier areas, while the *comitatenses* were the more or less permanent central mobile field armies.

By the early fourth century, frontier forces began to be organized under the command of officers known as *duces* whose authority was purely military and whose zones of control might extend across several civil provincial boundaries. Organizationally, the *limitanei* included new types of formations in addition to earlier ones organized in new ways. Forty-two, presumably smaller, legions are attested among the *limitanei* of the early fifth century, of which 17 garrisoned more than one location. Such a

dispersal of forces indicates something other than a purely offensive posture. Additional infantry might be organized into old-style cohorts or units termed variously, *numeri*, *milites*, and *auxilia*. Despite often having ethnic names, there is no sure indication that the *auxilia* were any less Roman in composition than the other units. Cavalry in the *limitanei* was organized into *alae*, *cunei equitum*, and units simply referred to as *equites*. Much of this terminology appears to have been rather imprecise, especially in the major literary sources for the period which were not particularly interested in the often mundane operations of the *limitanei*. Fortunately, the *Notitia Dignitatum* gives a good idea of the ducal commands' order of battle in the early fifth century.

Although there is evidence that at least some of the *limitanei* received land to farm and modern scholars have sometimes regarded them as an ineffective hereditary peasant militia, there is evidence to the contrary. It should be noted that all service was generally hereditary, and the government's provision of salaries, rations, and retirement allotments is incongruous with the notion of an entirely landed, self-sustaining militia.

Operationally, in addition to policing the frontier regions and providing the first line of defense against barbarian incursions, the *limitanei* were effective enough to operate in cooperation with the field armies and might even absorbed into them as "*pseudocomitatenses*." Even as late as the sixth century, Justinian considered them useful enough to order new units of *limitanei* organized in the reconquered provinces of Africa. There is no reason to suppose that they did not persist as an important feature of the Roman army into the seventh century.

Livius Drusus the Younger, Marcus (ca. 124–91 BCE)

Marcus Livius Drusus the Younger was a Roman politician from a plebeian family, known for his radical activity as tribune of the plebs. Accounts of his life are vague and inconsistent but his father, of the same name, was a consul, his mother belonged to the patrician family of the Cornelii, and he was uncle to Marcus Porcius Cato Minor (Cato the Younger). With such associations, it was predictable that Livius Drusus would enter politics. Although never achieving the rank of consul, he started up the ladder of office (*cursus honorum*) becoming a military tribune in 105, quaestor in 102, and aedile in 94. He also became tribune of the plebs before his death in 91.

In the turbulent world of late Roman Republican politics, Livius Drusus is remembered for his populist legislative proposals, which came to nothing but which triggered civil conflict. He wanted to benefit the poor citizens of Rome by distributing free land to them, renewing the Gracchan land program. He also proposed reforms to the juries of the criminal courts. Finally, Livius Drusus proposed to offer Roman citizenship to all Italians. However, his propositions were disqualified on a technicality; they contained too many provisions per law, since legislative procedure allowed for one bill per law. The consul Lucius Marcus Philippus led the opposition against Livius Drusus and his Italian supporters. His laws were thus declared invalid and in the ensuing violence, Livius Drusus was killed in his own home in 91.

Livius Drusus was an ambitious politician who drew on his powerful connections and popular legislation to further his own political advancement. In the world he lived in, influential individuals frequently played this game and risked success or failure in the increasingly turbulent world of Roman politics. Drusus' proposal to enfranchise the Italians and his murder kindled the Social War (91–87).

Livy (59 BCE–17 CE)

Titus Livius is the most famous Latin historian of the Roman Republic, author of the *Ab urbe condita* or “From the Founding of the City,” usually called in English the *History of Rome*. Livy was from Patavium (modern Padua) in northern Italy; his life may be recorded in *ILS* 2919, a Latin epitaph. Livy’s life spanned the civil wars of the end of the Republic and the reign of Augustus. Allusions show that Books 1–5 were written ca. 27–25 BCE.

As sources, Livy employed Polybius for the Punic Wars and Greek affairs in that period, and otherwise employed Latin annalists, early Roman historians who followed a strict year-by-year arrangement, listing magistracies, major events, and religious events (including expiation of portents). He also appears to have employed documentary sources, such as treaties and decrees of the Senate. However, Livy is also a highly dramatic and rhetorical author who imaginatively expands his accounts of remote periods, such as the early Republic, for which there can have been little or no contemporary information. Livy’s level of detail may thus be unreliable or anachronistic, requiring literary as well as historical analysis. He particularly dramatizes the overthrow of the monarchy and establishment of the early Republic, and conflicts between the patricians and plebeians in the early Republic.

The *Ab urbe condita* is by convention divided by modern critics into

“decades” of 10 books. This division is based on medieval manuscript conventions and may not reflect Livy’s own arrangement.

Though the *Ab urbe condita* followed the Republic down to 9 BCE, the *Ab urbe condita* is not extant in full after ca. 167 BCE. Originally with 142 books, the surviving *Ab urbe condita* contains Books 1–10 (from earliest Rome to the Samnite Wars) and 21–45 (the Punic Wars period through the Third Macedonian War).

Livy’s *History of Rome* is also preserved in epitome form. An epitome is an abbreviated and condensed work, which may keep the arrangement of the original but summarizes it. The *Oxyrhynchus Epitome* (ca. early third century CE) abbreviates books 37–40 and 48–55. The *Periochae* (“Summaries”) from the fourth century CE summarize all of Livy except books 136–137. Their content may not accurately reflect Livy’s. Livy was also used as a source by the minor historians Florus and Eutropius, and the chronicler Julius Obsequens.

Logistics

The Romans had a highly developed system of logistics, within the constraints of ancient technology, employing human and animal power, roads, and water transport to move men, food supplies, and other military supplies with relative efficiency. Vegetius wrote that “hunger is more deadly to armies than the sword” (*Military Affairs* 3.3.1), but famines were relatively infrequent in the Roman army. The Roman army suffered from famine in the Spanish Wars of 154–153 BCE because the campaign was too

far inland and could not be supplied by water (Appian, *Spanish Wars* 54). In the Caesarian-Pompeian civil war, the Pompeian army depleted the Thessalian countryside of supplies, leaving the Caesarian army short of grain (Caesar, *Civil War* 3.47–8). In these cases, the army was able to rely on meat, but Antony's army, returning through the desert from his failed Persian expedition, starved, desperately ate poisonous plants, and ran short of water (Plutarch, *Antony* 47–9).

Securing logistics could be essential to victory, as could damaging the enemy's supply lines. For campaigns, the Romans established supply depots that were reachable by water, and maintained supply lines from these locations to the main body of the army. Strategy might feature cutting off the enemy's access to food and water, as Caesar did to the Gauls at Uxellodunum and to the Pompeians in the campaign of Ilerda (Caesar, *Gallic Wars* 8.40, *Civil War* 1.66–8). Where possible, transportation was expedited by using water routes, including the Mediterranean Sea, the Rhine and Danube rivers, the Euphrates River, and other rivers. Barges could transport troops and supplies more efficiently than land transport, as a baggage train itself needs additional food and fodder for its human handlers and animals. The Roman naval fleets assisted with military transport, as did private shippers.

In the earlier Republic, supply was probably less organized because the Roman army did not campaign far from home. The allies were also required to supply their own troops, at least for the first part of the campaign. Nevertheless, by the mid-Republic Roman generals built roads, beginning with the Via Appia of Appius Claudius. The roads expedited the conquest of Italy, where rivers are often intermittent in the summer months. The traditional rations of the Roman soldier consisted of unground grain (wheat), which is less inclined to spoil than ground flour or bread. The soldiers could cook this wheat as a kind of porridge or grind it to make bread. Supplementary items such as meat, legumes, cheese, olive oil, and sour wine or vinegar (mixed with water to make a drink) were subject to more ad hoc supply.

It was possible for soldiers to supply themselves in the field by pillaging, but pillaging and foraging are not very reliable means of logistics, dependent on the time of year, the extent of agriculture, and the reaction of the inhabitants. Living off the land is not feasible in mountainous, desert, or uncultivated areas. Foraging soldiers are liable to being attacked by the

enemy and even by subjects/allies. An oath from the mid-Republic prohibited pillaging (presumably of Romans and allies), restricting the items that a soldier was permitted to take to a spear, spear shaft, wood, fruit, fodder, a bladder (for water), a bag, or a torch (Gellius 16.4.24).

By the period of Rome's overseas wars, a large contingent of merchants and other service providers, including bakers, prostitutes, and entertainers, followed the army. Roman generals and modern scholars often despised this "tail" of "camp followers," but the merchants must have provided many of the supplementary items needed for a balanced and palatable diet. The disposal of booty added to the challenge of logistics. Roman commanders sold captives, often on a vast scale, to the merchants who followed the army, and also sold material plunder.

Nonetheless, because unnecessary baggage added to the logistic costs of moving the army, Roman commanders from time to time ejected the camp followers, soldiers' servants, and excess baggage (for example, Appian, *Spanish Wars* 85; Sallust, *Jugurthine War* 45). Marius emphasized that his soldiers should carry all their baggage, devising a wooden fork that his soldiers carried on their shoulders to balance the load; in return his soldiers called themselves "Marius' mules."

In the Principate, the logistics of the Roman army comprised a major responsibility of Roman administration. It may not be an overstatement to say that the financial system of the Roman Empire was organized to supply the army. Logistics were organized chiefly at the level of provincial governors, who authorized the collection of taxes and their redistribution to the army as supplies. Logistics were often simplified by collecting taxes in kind, especially from the third century CE onward.

The logistic needs of the imperial army were enormous. Assuming an army of about 450,000 (all forces, including legions and *auxilia*), Peter Kehne (2007) estimates that about 154,395 tons of wheat and 108,770 tons of supplementary food were needed a year for the human personnel, while 244,550 tons of barley and 401,500 tons of hay, and other fodder were needed for animals (cavalry mounts and transport animals). To this must be added the pay for the soldiers.

As in the Republic, civilian merchants supplemented the official provision of rations and other supplies. These merchants now set up shop in the *canabae* or *vici*, civilian settlements that grew up in the vicinity of military forts. These merchants, and soldiers' game hunting, were probably

the suppliers of the far wider range of foodstuffs attested in the archaeological excavation of military sites, including relative “luxury” foods. The merchants are also attested in documentary sources such as ostraka (potsherds, used as writing material) and wooden tablets at Vindolanda.

Logistics could be a source of civil-military conflict. The army might acquire supplies below market price or even without payment, but the requisitioning of food does not seem to have produced as much provincial resentment as the requisitioning of transport, that is, individual animals or vehicles, from provincial subjects. From the viewpoint of military personnel in charge of transport, if an animal died or a cart broke down, a new animal or vehicle was needed immediately. Provincial subjects who felt that their animals or vehicles had been unjustly seized petitioned governors and emperors; the emperors repeatedly issued edicts against the abuse of requisitioned transport. Another practice that simplified logistics was billeting, in which soldiers were lodged in civilian homes and their hosts were responsible for providing food and drink. This practice, more common in the eastern empire than in the west, was also abused and much resented.

Low-Intensity Conflict

Low-intensity conflict may be defined as combat that lacks extended duration and consistency of intense effort, as commonly found in pitched

battles, for example. Modern low-intensity conflict has frequently been characterized as “guerrilla warfare” or “asymmetric warfare,” typically waged by relatively weak forces against an invasion or occupation, often ideologically opposed to the aforesaid invasion or occupation. Asymmetric warriors may be characterized as “terrorists” and make use of decentralized economic instruments and propaganda to make up for their lack of overwhelming force.

Some modern scholars have attempted to identify a similar model of low-intensity conflict in the Roman world, which appears anachronistic because many of its peoples (particularly in northern and western Europe) were traditional warrior societies that practiced low-intensity raiding as a way of life. For these peoples to continue similar military practices, now inflicting them on the Roman invaders, did not require ideological motivation. Raiding and “guerrilla” tactics were a pragmatic way of fighting the Romans, since these peoples from less organized societies had little chance of sustaining a pitched battle with the Romans’ professional armies.

Furthermore, even Roman warfare with other professional armies involved some degree of low-intensity conflict, between and leading up to pitched battles. Our sources focus on pitched battles because the Greeks and Romans regarded pitched battles as producing the most decisive and honorable outcomes in warfare. However, our sources tell us of many skirmishes and small-scale engagements that took place during continuous campaigning (that is, low-intensity conflict). Pitched battles usually occurred when neither side felt at a disadvantage, and so this dependence on a degree of mutual consent might require extended periods of campaigning to reach such a state.

The Roman political elite also favored pitched battles with decisive victories and mass enemy casualties as most likely to win the highly prestigious triumph. As a result, Republican Roman generals were motivated to represent low-intensity conflict as greater than it actually was to qualify for a triumph. A conclusive victory was more prestigious than low-intensity conflict that sputtered on. Nevertheless, during the Republic, there were significant periods, such as 167–91 BCE, with a relatively low level of military activity. The first and second century CE also saw significantly fewer pitched battles than the two preceding centuries. Nevertheless, Roman military forces were consistently maintained and constantly trained for combat, which was likely expected to occur at any given time. This combat

may have included ambushes, skirmishes, small-scale operations, and street fighting in siege warfare, particularly in provinces with persistent hostility to the Romans, such as Spain in the 150s–130s BCE, imperial Roman Britain (ca. 40s–80s CE), or Judaea. The nature of this combat often precluded traditional heavy infantry tactics, favoring more mobile light infantry or cavalry, especially auxiliary units. Combat may have been more fluid and involved missile weapons rather than hand-to-hand combat.

Low-intensity conflict also gave individual Roman soldiers the chance to display *virtus* (“courage, bravery”). One way of displaying the soldierly quality of *virtus* may have been through leadership. In a skirmish, a soldier might choose to lead a small group of comrades against one or two opposing skirmishers so that they might concentrate their missile shots and thus increase the probability of a hit. This would not only result in the increased combat effectiveness of a skirmish, but also provide the leading soldier with the opportunity to prove his leadership qualities to his officers. Polybius tells us that *velites* commonly wore some sort of animal skin on their helmets so that their commanders might recognize such efforts and displays of *virtus*. He also goes on to say that, rewards for combat were only distributed during skirmishes, rather than during pitched battle combat. Though Polybius is probably wrong about the decorations, his account of the *velites* highlights the importance of low-intensity conflict for the Romans. By the time of Marius, the *velites* were superseded, but soon replaced by the light cavalry *auxilia*.

Low-intensity conflict continued in the empire, often represented as banditry or brigandage. The persistence of low-intensity conflict (demonstrating the continued resistance of hostile conquered peoples to Roman rule) challenged the image of the emperor as the guarantor of peace. Therefore, low-intensity conflict might be either minimized as banditry, or inflated (as in some republican triumphs) into larger victories over the enemy. This makes it difficult to estimate the scale of emperors’ military activities from panegyric sources when a more objective historical account is lacking.

Loyalty (Republic)

In the early and middle Republic, the Romans ensured the loyalty of their soldiers and allies both through reward and through coercion and severe punishment. Legionaries took an oath, the *sacramentum*, upon enlistment, and also swore other oaths as needed. They were subject to severe military discipline, though the anecdotes or legends that emphasize this may be overstating the severity. Titus Manlius Torquatus, consul in 340 BCE, put to death his own son for disobeying orders and leaving the line of battle to fight a duel with the enemy. The context was the Latin War (341–340), in which the Romans put down a revolt of their Latin and Italian allies, so Torquatus' discipline was intended to speak to the allies as well as to the Roman army. Otherwise, discipline often varied with the commander.

Severe punishment of disloyal allies was a consequence of the practice of *deditio in fidem*, unconditional surrender, in which the surrendering community became totally subject to Rome. Those undergoing *deditio* to a Roman commander were at his mercy; their treatment was up to his discretion.

The outcome of the Latin War, however, did not punish the Latin communities harshly. The Latin League was dissolved, and Rome made alliances with individual Latin communities, affirming their status. Latium was closest geographically and culturally to Rome, as the "Latin rights" of intermarriage and trade with Roman citizens showed.

More usually, Rome punished harshly those allies who revolted, sending a message about loyalty to the rest of her allies. In the Second Punic War (218–201 BCE), Hannibal's invasion of Italy sought to detach Campanian and south Italian communities from alliance with Rome. Capua and other

Campanian and south Italian cities revolted. Despite Rome's recent severe losses at the battle of Cannae (216) and the danger of the Carthaginian army, Roman commanders prioritized suppressing the Campanian and south Italian revolts.

At the time of the Third Punic War (149–146 BCE), the Achaean Revolt (146–145) broke out in Greece, led by Corinth and the Achaean League. Again, because Rome was waging a separate war, this revolt was put down brutally. The Achaean League was dissolved, and the Roman consul Lucius Mummius destroyed the city of Corinth, taking the title Achaicus. The destruction of a major Greek city shocked the Greek world as much as the destruction of Carthage.

The Roman repression of the Sicilian Slave Wars and the revolt of Spartacus (73–71 BCE) were particularly brutal because the rebels in these instances were slaves. Marcus Crassus destroyed the army of Spartacus and crucified many of the slave fighters.

In the Social War (91–87 BCE), Rome's Latin and Italian allies in central Italy revolted. They had long borne the burden of military service in Rome's wars with relatively little reward. The immediate consequence of the Social War was favorable for the Latins and allies, who received the Roman citizenship. However, in the subsequent conflict of the followers of Marius and Sulla, the Marians had strong support in central Italy, particularly Samnium. As a result after his victory over the Marians, Sulla took reprisals on the Samnites, slaughtering 8,000 Samnite prisoners (Appian, *Civil Wars* 1.82.375; Plutarch, *Sulla* 28) and sending his army into Samnium to extirpate the survivors.

The revolt of Asia of 88 BCE allegedly killed 80,000 Romans and Italians in Asia Minor (Appian, *Mithridatic Wars* 22). The Romans sought vengeance thereafter in the Mithridatic Wars, which took many years.

In the civil wars of the late Republic, however, loyalty acquired a different significance. Soldiers and officers might change sides, taking the *sacramentum* to a different commander, and escaping punishment for disloyalty. Commanders in the triumviral wars even tried to persuade each other's soldiers to defect to the other side; such defection was no longer viewed with contempt.

In 32 BCE, as his victory over Mark Antony drew near, Octavian sought to reinforce loyalty to his own cause. He imposed a loyalty oath on the entire population of Italy, claiming that they swore to him of their own free

will (*Res Gestae* 25, *iuravit in mea verba tota Italia sponte sua*). The precise form of the oath is no longer known, but it was probably based on the military oath. From that time onward, loyalty to the emperor became an unconditional requirement.

Loyalty to Empire (Civilian)

Modern features of national identity and civic participation include legal status, language and education, material culture, participation in the political process, political symbolism, and consent to the state's monopoly of violence, including obedience to and recourse to law. Most modern nations make an effort to promote these features across the board. This was not the case with the ancient Roman Empire, even at its height (first through early third centuries CE). It is probable that soldiers' loyalty was far more actively promoted than civilian citizens' loyalty to the empire.

First of all, many subjects of the empire were not Roman citizens. Before the early third century CE, the franchise was not given to Italians until after the Social War (91–87 BCE). The citizenship was not given to all subjects of the empire until 212 CE, with the passage of the *Constitutio Antoniniana*,

which still excepted *dediticii* (surrendered enemies). Local identities remained strong due to the many small urban or tribal communities throughout the empire.

Participation in the Republic's political process was limited even by the late Republic, when the growing number of Roman citizens in Italy and abroad could not easily travel to Rome to vote. In the Principate, the withering away of the republican political system (the Senate now voted magistrates into office, and the emperors assigned the consulship as an honor) meant that only elites or very talented individuals who rose from poor origins participated in imperial government as its functionaries. The most numerous and lowest status participants in politics were soldiers (300,000 to 400,000 men) (see: *Army in Politics*). The masses, even in the city of Rome, were reduced to chanted acclamations to express political opinions.

Perhaps the most essential feature of national loyalty is consent to the state's use of force, taxation, and the rule of law. A modern state empowers law enforcement organizations (and if necessary the military) to impose coercion on disobedient subjects. Its military defends its subjects from external aggression. It also imposes obligatory taxation to fund its activities. In the Roman Empire, civilian police forces were sporadic (some Greek cities had them) and most policing was done by the Roman army. Subjects who resisted the "Roman order" would encounter repression by the army; texts from these groups, such as the Jews in Judaea, show fear and dislike of Roman soldiers. Subjects were also forced to pay taxes, or face coercion.

Laws of Julius Caesar and Augustus emphasized the rule of law by prohibiting private citizens to hoard weapons or carry them in public for offensive use. The literary elite supported and praised the "Roman peace." But the *Pax Romana*'s extent was patchy, especially in rural and remote areas of the empire, where travelers might need to carry weapons to defend themselves from bandits. When the empire's regressive taxation imposed too heavy a burden on the poor, or when soldiers and other imperial functionaries abused civilians, provincials were liable to resist or revolt, rejecting the legitimacy of at least the local authorities of the empire.

Citizens of the empire also endorsed the rule of Roman law through the use of legal process. Roman law applied wherever Roman citizens resided, though before the third century CE, a defendant who sought trial as a Roman citizen needed to travel to the city of Rome. Subjects might even affirm the

imperial system's legitimacy by appealing to higher authorities, such as provincial governors or emperors, against abuse by lower authorities such as soldiers or tax collectors. The Roman government promoted a consciousness of the benefits of law by publishing its edicts.

Roman political symbolism was more diffuse than modern nations' focused political symbols (such as flag or anthem). Modern Hollywood symbols of "Rome," such as lictors, fasces, purple, or eagle standards, were more closely associated with the consulship, the triumph, or the army. However, visual representations of Roman leaders and of Rome's historical achievements were widespread at least in large cities such as Rome and the provincial capitals. The most widespread symbol was the image of the emperor, in statues, stone reliefs or paintings, and coins. The imperial cult promoted veneration of the emperor. Such veneration persisted even after the conversion of Constantine and the Christianization of the empire. Though the later Roman emperor was not worshipped as a god, he was still regarded as a sacred being. However, compulsory tests of loyalty to the emperor or worship of the emperor were rare. They occurred in the Christian persecutions under Decius and Valerian and under Diocletian and the Second Tetrarchy (303–311).

Loyalty to the idea of the empire might prevail over loyalty to an existing emperor in times of crisis. Tacitus says of the civil wars of 69 CE (the "War of Four Emperors") that citizens learned for the first time that "emperors could be made elsewhere than at Rome" (*Histories* 1.4). In times of crisis, whether due to foreign invasions or civil warfare, peripheral regions of the empire showed a tendency to devolve, elevating their own emperors, who from the viewpoint of the center were usurpers. A successful usurper, such as Vespasian (69–79) might defeat his rivals and become legitimate ruler of the entire empire. However, in 69 and other civil wars (193–197 CE and especially in 235–284) the regional rulers or usurpers were still regarded as Roman emperors; the idea of the empire persisted.

The conclusive test of subjects' loyalty to the Roman Empire came in the mid-fifth century CE, as the western empire broke up. In 476 Odoacer, usurping the last Roman emperor (Romulus Augustulus), chose to become king of Italy rather than another Roman emperor. Other parts of the western empire had reached the same decision earlier in the fifth century. The western empire had shown itself unable to defend its subjects from invasion; the invaders, now "barbarian" kingdoms, were better able to do so.

Lucan (39–65 CE)

Marcus Annaeus Lucanus (Lucan) was a notably young poet of Neronian Rome who is best known for the *Pharsalia*, a lurid epic of the Caesarian-Pompeian Civil War (covering 49–48 BCE). Lucan was a kinsman of Seneca, one of Nero's mentors, and began to publish the *Pharsalia* in 62–63. However, Lucan turned against Nero and was punished by being forbidden to present his work in public or speak on his own behalf. Lucan then joined the Pisonian conspiracy in 65. When the conspiracy was exposed, Lucan accepted the option of suicide. The *Pharsalia* dramatizes the Caesarian-Pompeian Civil War in epic fashion, and dwells upon the horrors of civil warfare.

Lucius Verus (161–169 CE)

Co-emperor (161–169 CE) with Marcus Aurelius (161–180), Lucius Verus, born in 130, was the son of Hadrian's heir Lucius Aelius Caesar, who died prematurely in 138 CE. Lucius Verus was then adopted by Hadrian's second heir and eventual successor, Antoninus Pius, along with Marcus Aurelius. Verus and Marcus were brought up in the imperial household, tutored by the famous orator Cornelius Fronto. When Antoninus Pius died in 161 CE, Marcus Aurelius and Lucius Verus succeeded to the throne, although only Marcus held the office of *pontifex maximus* or chief priest. The emperors were jointly awarded the title of *patres patriae* ("fathers of the fatherland") in 166 CE. Verus married Marcus' daughter Lucilla in 164 CE.

The most pressing concern for the new emperors was the situation on the eastern frontier. War had broken out with the Arsacid Persian Empire over the client kingdom of Armenia, and Lucius Verus set out for the east in 162 CE. Verus preferred to remain in Antioch, so most of the actual fighting was done by his officers, who reclaimed Armenia in 163 CE. In 165–166 CE, the general Avidius Cassius captured Seleucia and Ctesiphon, bringing the war to a successful conclusion. Verus and Marcus Aurelius celebrated a joint triumph upon his return to Rome in 166 CE. The emperors embarked on a second campaign against the northern tribes in 168 CE, and spent the following winter at Aquileia. However, the camp was assailed by the plague that the soldiers had brought back from Persia. As the imperial retinue returned to Rome, Verus had a stroke and died.

Sources for Lucius Verus' life are Cassius Dio and the unreliable *Historia Augusta*, which contrasts the playboy Lucius with the philosophical Marcus.

Lucullus (117–57/56 BCE)

Lucius Licinius Lucullus, born ca. 117 BCE, was a prominent politician and

general of the late Republic who distinguished himself in Rome's wars against Mithridates, but who was eventually betrayed by his soldiers. Lucullus first served in the Social War (91–87 BCE) under Sulla, holding a quaestorship in 88; he was aedile in 79, praetor in 78, then governor of Africa, and consul in 74. In 74 he received command of the Mithridatic War in the eastern Mediterranean and attacked corruption in Roman government in Asia. Aggressively pursuing the campaign against Mithridates, he forced Mithridates to take refuge in Armenia. When Mithridates allied with King Tigranes of Armenia, Lucullus invaded Armenia and defeated Tigranes, capturing his capital of Tigranocerta. However, due to his severe discipline and arrogant behavior, Lucullus did not command the loyalty of his troops. His troops abandoned him, and his command was whittled away by his detractors at Rome. The command of the Mithridatic Wars was eventually given to Pompey. Lucullus returned to Rome to live in a degree of luxury that became proverbial at Rome. He died in 57/56 BCE.

M

Macedonian War, First (214–206 BCE), Causes

The First Macedonian War was fought between the Roman Republic and Philip V, king of Macedon, and ended inconclusively at the Peace of Phoenice. While Roman involvement in Illyria was an underlying basis of the conflict, the alliance between Philip V (b. 238, r. 221–179) and Hannibal Barca was the immediate cause of the war. As will be shown below, Philip's concerns over Illyria motivated him to ally with Hannibal to secure the Macedonian frontier there. Rome, on the other hand, perceived Philip's overture to Hannibal as aggressive and as proof of Philip's intent to join Hannibal in Italy. In response, the Romans launched a small-scale campaign (drawing largely on Greek allies) to contain Philip within Macedon. At all times, however, Rome's effort in Macedon was overshadowed by the more pressing demands of the Second Punic War. Thus, the First Macedonian War largely resulted in a stalemate, but Rome's enmity toward Philip V marked the two states' relations for the remainder of the Macedonian kingdom's existence.

After defeating Queen Teuta in the First Illyrian War (229–228), the Romans recognized Demetrius of Pharos as their client-ruler in Illyria. While Demetrius dominated Illyria for a time, he also eventually lost Roman support and was expelled in the Second Illyrian War of 219, but took refuge at the court of Philip V (Polybius 3.16, 18–19). After Philip learned of the Roman defeat at Lake Trasimene in 217, Demetrius immediately encouraged Philip to end his current war with the Aetolians, the Social War of 220–217 (not to be confused with the Roman-Italian war of 91–87 BCE), and turn his attention to Italy while the Romans were vulnerable (Polybius 5.101–102). Although Polybius believed that Philip truly desired world

domination, an end to the Social War (which Philip was already winning) also enabled him to retaliate against recent Illyrian raids upon Macedon, which were led by Scerdilaidas, Demetrius' former ally. Philip constructed a fleet of 100 *lemboi*, small ships intended to transport troops quickly, and prepared to attack several Illyrian coastal cities. Meanwhile, Scerdilaidas sent a desperate appeal to Rome, no doubt exaggerating Philip's threat. Hearing a rumor that the Romans had sent a squadron of ships to Apollonia to investigate Philip's actions, the king feared that this was the vanguard for an entire Roman fleet and retreated in a panic (Polybius 5.108–110).

Seeing the Roman response to Illyrian appeals may have finally convinced Philip to ally with Hannibal in 215. According to Polybius, the treaty between Philip and Hannibal (Polybius 7.9) included promises of mutual aid and the establishment of Carthaginian and Macedonian spheres of influence. The Romans intercepted Philip's delegation as it returned to Macedon, however, and discovered the treaty along with several Punic ambassadors. Livy reports that the prospect of an alliance between Philip and Hannibal panicked the Romans, leading them immediately to dispatch forces under the command of Marcus Valerius Laevinus to guard the southern coast of Italy and contain Philip in Macedon (Livy 23.38.5–11).

Macedonian War, First (214–206 BCE), Course

Meanwhile, Philip resumed his Illyrian campaign in 214, captured the city of Oricum, and began to threaten Apollonia. In response, Laevinus easily recaptured Oricum, then reinforced Apollonia and launched a surprise attack on Philip's camp. Philip was forced to flee, while nearly 3,000 Macedonian troops were killed or taken prisoner (Livy 24.40). For nearly three years after the victory at Apollonia, the Romans left Philip unchecked. By 211, Laevinus enlisted the aid of the Aetolian League (Livy 26.24.1–14), stipulating that the Aetolians receive the land of any conquered territories, while the Romans claimed any movable plunder (such as slaves). While the terms of the alliance favored the Aetolians more than the Romans, the treaty required the Aetolians to carry out the more difficult land campaign, while Laevinus pledged the support of the Roman navy. Although the initial Roman and Aetolian advance was successful, Laevinus retired to Corcyra after capturing several cities, feeling that this effort tied down Philip enough to keep him out of Italy. This further demonstrates that the Roman goals in the war were limited to the containment of Philip, and not imperialistic expansion. Philip, on the other hand, also campaigned energetically and secured his frontiers in Illyria, Thrace, and Thessaly (Livy 26.24.15–16).

By 210, Laevinus was elected consul in Rome, and Publius Sulpicius Galba was sent to take over the command of the war in Macedon (Livy 26.26.1–4). Although Laevinus ordered Galba to disband the legion stationed in Macedon, some Roman land forces remained, since Livy records that Philip faced a combined Roman, Aetolian, and Pergamene army at Lamia in 209. Philip's army defeated the allied forces twice, killing over 1,000 men in each engagement. Philip then moved to Phalara, where he met envoys from Ptolemaic Egypt, Rhodes, Athens, Chios, and King Amyntander of Athamania (representing the Aetolians), who appealed to Philip to end the war for the general welfare of Greece. The rumor of approaching Roman reinforcements, however, led the Aetolians to make irrational and arrogant demands to Philip, causing hostilities to continue (Livy 27.30).

The years 209 and 208 proved difficult for Philip, attacked by his enemies and effectively trapped in Macedon. The Romans and Pergamenes advanced in Euboea, the Aetolians ravaged Macedon, the Achaeans were hard pressed by the Spartans, and the Illyrians raided Macedon from the north. Philip calmly promised aid to all of his allies, focused on defense, and sent

detachments to various regions (Polybius 10.41–42). Galba captured Oreus in Euboea through treachery and tried to take Chalcis, but the city's defenses held out until Philip could arrive. The city of Opus marked the turning point of the war, despite changing hands several times between Philip and the Pergamenes. After first capturing, then losing the city to Philip, Attalus was compelled to withdraw from the war and return to Pergamum to defend his kingdom against Prusias of Bithynia, which in turn prompted Galba to remove his fleet to Aegina. With the Roman and Pergamene threats alleviated, Philip promptly set out to recover lost cities and answer appeals from Greek allies (Livy 28.5–7).

After two further failed attempts at mediation in 208 and 207, the Aetolians finally agreed to a cessation of hostilities in 206. The Aetolian League felt abandoned by their Roman allies and had effectively fought on their own for five years, failing to drive away Philip (Livy 29.12.1–2). Perhaps hearing of this, the Romans finally sent 11,000 troops to Greece under the new commander, Publius Sempronius Tuditanus. The Romans were angry with the Aetolians for making a separate peace with Philip, in violation of their treaty in 211, but could not persuade their former allies to return to the war. After a brief standoff at Apollonia, envoys from Epirus approached Sempronius and Philip with offers of mediation (Livy 29.12.3–9).

The treaty that ended the war in 205, the Peace of Phoenice, largely restored Greek affairs to the *status quo* before the war (Livy 29.12.10–15). A two-month armistice was declared, during which time the Senate ratified the terms of the peace. The Romans specified cities in Illyria and Greece under their protection, as did Philip in regards to his Greek allies. While the treaty only slightly benefited either side, a consideration of both Rome and Macedon's original purposes in the war makes the treaty seem more significant. From the beginning, Philip's activity west of Macedon retaliated against Illyrian aggression. Although Philip did not gain much territory in the Peace of Phoenice, the Roman presence in Illyria simultaneously secured the Macedonian frontier, thus alleviating Philip's concerns there. The Romans, on the other hand, never sought to gain territory from the First Macedonian War, but only to keep Philip from joining Hannibal in Italy. The organization and Macedonian recognition of an informal Roman protectorate in Illyria provided the buffer between Macedon and Italy that the Romans wanted. Most importantly, the theater of the Second Punic War was shifting to Africa, and the Romans needed all available troops

(including the legions in Macedon) for the coming assault on Carthage (Livy 29.12.16).

Macedonian War, First (214–206 BCE), Consequences

Since the Romans agreed to the Peace of Phoenice largely out of necessity, it did not mean that they had absolved Philip, and many historians believe that the Romans never desired peace with Philip and had fully intended to return. As a result, the Romans continued to suspect Philip, and certain aristocrats wanted to continue the conflict when it became possible. Rome used its Greek allies as a way to monitor Philip's activities, and many of these allies eagerly brought accusations against him. This hostile stance toward Macedon is apparent in the Roman tradition, as seen in Livy in a dubious anecdote: envoys from Greece complained of Philip's aggression and alleged that the king had actually sent money and 4,000 troops to Hannibal in 202. In response to this, Livy says that the Romans immediately dispatched a delegation to reprove Philip for violating the terms of the treaty (Livy 30.26.3–4).

In 201, envoys from Carthage and Macedon supposedly arrived in Rome

requesting an audience with the Senate. The Macedonian envoys refuted the accusations from Rome's Greek allies and further accused one of the Roman representatives sent to Macedon, Marcus Aurelius, of raising native levies of Greeks to fight against Macedonian troops. Aurelius sent his own delegate back to Rome to counter the Macedonians' claims, asserting in turn that he was only defending Roman friends against Philip's aggression. Moreover, the Macedonians demanded the release of the 4,000 troops and their commander, Sopater, who were suspected of fighting alongside Hannibal at Zama. The Senate responded to the Macedonian envoys that "the king [i.e., Philip]... was looking for war, and if he kept on doing so, he would find it all too soon" (Livy 30.42.1–8). It is unlikely that Philip sent these troops to Hannibal, probably not having the manpower to do so. The story nevertheless shows that the Romans did not trust Philip, and that relations between Rome and Macedon were far from amiable.

An undetermined number of Greek and Illyrian cities allied with Rome, despite many being listed explicitly in the Peace of Phoenice. With the Peace, however, the Romans became more involved in diplomacy with Greek cities and also maintained a firm presence in Illyria. The Romans also formed a permanent amicable relationship with Attalus in Asia Minor, as the diplomatic mission to Pergamum led by Laevinus in 206 demonstrates (Livy 29.11.1–9). On the other hand, the Aetolian League's relationship with Rome was far less harmonious, and the Romans never forgave what they saw as a betrayal by the Aetolians' separate peace with Philip. Roman and Aetolian tension and distrust deepened in the coming years. Lastly, Rome's willingness to answer appeals in Greece and Illyria set a powerful precedent and subsequently encouraged an endless stream of petitions from Greek states for over 50 years.

And so, as a direct result of Philip's decision to seek an alliance with Hannibal, the Romans had permanently turned part of their attention to the east. For the remainder of its existence as an independent kingdom, Macedon was a potential enemy in Rome's eyes. Beyond this, Rome was now permanently involved in Greek affairs, even if indirectly so. While the Romans previously had few contacts in the Greek world, their diplomatic reach now stretched from Italy into Asia Minor. Indeed, the First Macedonian War was the first time that affairs in Italy, Africa, and Greece were intertwined, what Polybius called a *sympleke* (Polybius 5.105.4). Many of Rome's future wars, annexations, and diplomatic stances had their roots

in the relationships formed during the First Macedonian War.

Macedonian War, Second (200–197 BCE), Causes

The Second Macedonian War was fought between the Roman Republic and Philip V, king of Macedon, and ended as a decisive Roman victory after Philip's defeat at the battle of Cynoscephalae. The war began with Rome's overt suspicion and hostility toward Philip (b. 238, r. 221–179). Though Philip complied with the Peace of Phoenice, which ended the First Macedonian War (214–206), the king turned east and began a new ruthless campaign in the Aegean. Under Macedonian pressure, the Rhodians, Pergamenes, and Athenians sent several delegations to the Romans requesting aid against Philip. The Romans, freed from the Second Punic War and still resenting Philip for his aggressive alliance with Hannibal in 215, demanded that Philip stop expanding in the Aegean or else fight a war with Rome. Philip, choosing war with the Romans, at first fought vigorously but was eventually crushed at the battle of Cynoscephalae in 197. Subsequently, the Romans faced the burdensome task of restoring order to Greece, while the Seleucid king Antiochus III's ambitions posed a new threat.

After the end of the First Macedonian War in 206, Philip did not wish to

antagonize Rome and turned his attention eastward in 204–202, focusing on strengthening Macedon's position in the Aegean Sea. Exploiting current Ptolemaic weakness, Philip and Antiochus formed an alliance to divide the Ptolemies' possessions in the Mediterranean and Egypt (Polybius 15.20.1–8). Philip would operate against Ptolemaic possessions in Thrace, the Cycladic islands, and Asia Minor, while Antiochus would invade Palestine. Neither the Rhodians nor the kingdom of Pergamum wanted to risk a joint Seleucid-Macedonian force forming in the eastern Mediterranean, leading both states (traditional rivals) to join together and attack Macedon in defense of their Aegean allies (Polybius 15.23, 16.1–10).

After defeating King Attalus of Pergamum and the Rhodians twice at sea, Philip began to campaign in Caria (in Asia Minor). In late 201, envoys from Attalus, Rhodes, and Ptolemaic Egypt came to Rome officially to protest Philip's activities. The Senate listened to their complaints and immediately deputized three senators to journey through Greece and to Ptolemaic Egypt to convey Roman disapproval of Philip's aggression (Polybius 16.24.3; Livy 31.2.1–4). Even before the Roman delegation departed, however, much of the Senate had already decided upon war with Philip and put the decision to the centuriate assembly (*comitia centuriata*). The assembly voted down the war declaration, forcing the prospective consul, Publius Sulpicius Galba, to convince them of the necessity for the war (Livy 31.6.3–8.7).

By 200, the Roman envoys arrived in Athens shortly after both Attalus and forces from Rhodes defended the Athenian seaport, the Piraeus, from a Macedonian attack. With diplomatic help from Attalus, the Roman ambassadors established an alliance between Rome and Athens and offered aid against Philip's aggression (Polybius 16.25–27; Livy 31.14–15). The Aetolian League also appealed to Rome for aid, but was rejected because they had abandoned the Roman cause during the First Macedonian War. Upon intercepting Philip's general Nicanor, who was then approaching Athens with an army, the Romans instructed him to deliver an ultimatum to Philip, that he ceases attacking all Greek cities and compensate Attalus for the damages his kingdom had suffered. If Philip failed to comply, he would risk war with Rome. Shortly afterward, Marcus Aemilius Lepidus, one of the Roman senators on the way to Egypt, met Philip at Abydos, which the king was then besieging. Lepidus announced to Philip the same demands as at Athens, also ordering Philip to cease from attacking both Ptolemaic and

Rhodian possessions. Philip rejected the Roman ultimatum, demanded that the Romans themselves respect the Peace of Phoenice, but pledged to defend Macedonian interests by force if necessary (Polybius 16.34.1–7; Livy 31.18). Philip then returned to Macedon, where he learned that Galba had crossed over from Italy with his legions and was wintering near Apollonia.

Macedonian War, Second (200–197 BCE), Course

The Second Macedonian War began with the Romans capturing and destroying Chalcis in Euboea. After unsuccessfully attacking Athens, Philip proceeded to Argos where he tried to maintain his alliance with the Achaean League. In the meantime, Galba gained the allegiance of the Illyrians and King Amyntander of Athamania, and attended a conference of the Aetolian League, enlisting their aid against Philip after a lengthy debate (Livy 31.28–32). Although the Romans pushed forward into Macedon, Philip aggressively checked invasions from both the Illyrian Dardanians and the Aetolians. Galba campaigned continuously, capturing several cities, but by the end of his consular year he failed to win a decisive victory, resulting in a stalemate. The consul for 199/198, Publius Villius, was even less successful during his term.

The new consul for 198/197, Titus Quinctius Flamininus, felt that the key

to winning the war was in detaching Philip from his Greek allies (Livy 32.7.13; Plutarch, *Flamininus* 2.3–4). Philip tried to offer terms of peace to Flamininus because of the long period of inactivity, but was unsuccessful. Subsequently, Philip's severity and Flamininus' simultaneous moderation won many Greek and Macedonian communities to the Roman cause, including many Epirotes, several Thessalian cities, and most importantly the Achaean League. In early 197, Philip again attempted and failed to make peace with the Romans, even though he sent envoys directly to Rome. With his attempt at diplomacy rejected, Philip realized that the war could only be decided in battle and began an intense period of recruitment and training, conscripting men from the age of 16 to 60.

Once their armies were fielded, the Romans and the Macedonians maneuvered for a time until both armies finally met at the hills of Cynoscephalae (the "Dogs' Heads"), near Scotusa. Initially, the Macedonian phalanx held its ground well and drove back the Roman advance, but Flamininus' troops exploited a gap in the Macedonian line, quickly routing Philip's entire army, while the king himself fled north to collect survivors. Polybius reports that 8,000 Macedonians were killed in the battle with 5,000 captured, while the Romans lost only 700 men (Polybius 18.19–27; Livy 33.3–10).

At the subsequent negotiations in Thessaly, Philip agreed to all of the Roman demands and offered to submit completely to the will of the Senate (Polybius 18.38–39; Livy 33.13). The Senate agreed to the proposal for peace and granted Flamininus the power to facilitate the terms, also organizing a commission of ten men, known as the *legati*, to aid Flamininus. Philip was required to abandon all of his garrisons in Greece and turn the cities that he held over to Rome. The king was forbidden to make war outside of Macedon, was ordered to disband the majority of his navy, and was allowed to maintain an army of no more than 5,000 men. Lastly, Philip was instructed to pay an indemnity of 1,000 talents and to turn over several hostages to Rome, including his younger son, Demetrius (Polybius 18.44; Livy 33.30).

Macedonian War, Second (200–197 BCE), Consequences

Flamininus' chief responsibility, even before the Second Macedonian War ended, was the settlement of Greece. A quarrel immediately broke out between the Romans and the Aetolians when Philip surrendered at Thessaly, undermining claims of Greek "freedom" and Rome's intentions. The Aetolians urged Flamininus not only to drive Philip from Greece, but either to kill the king or depose him. Flamininus realized, however, that the death or removal of Philip would only create an even more dangerous power vacuum north of Greece, subject to barbarian invasion and Aetolian expansion. Therefore, Flamininus replied to the Aetolian League that it was not Roman custom to kill the defeated, but rather to spare the conquered (Polybius 18.36.5–37.12). The tension between Flamininus and the Aetolians continued after the Senate's ratification of Philip's surrender. The Aetolians remarked that Rome's promises of freedom were empty words and that Flamininus clearly intended to maintain garrisons in many Greek cities previously held by Philip, particularly the "fetters of Greece," Demetrias, Chalcis, and Corinth (Polybius 18.45; Livy 33.31). Despite the looming threat of invasion from Antiochus III, Flamininus compromised, resolving to evacuate all of Greece, but to maintain garrisons in Demetrias, Chalcis, and the citadel of Corinth, as Roman outposts against the Seleucid threat.

In July 196, Flamininus addressed the Isthmian Games in Corinth. He

officially announced his resolution to evacuate Greece, leaving cities free and under the governance of their own laws (Polybius 18.46.4; Livy 33.32.5–6). The crowd roared with praise and approval for Flamininus, almost rioting in celebration. Immediately after the Isthmian Games, the *legati* confronted ambassadors from Antiochus III, whom the Romans instructed not to make war on any Greek city, nor to attack any of the possessions of Philip or the Ptolemies. Beyond restricting Antiochus' activity, the Romans also addressed disturbances arising from within Greece, including defeating the king of Sparta, Nabis, in 195 for his attempts to expand Spartan authority in the Peloponnese. In the public evacuation of the Roman army from Greece, Flamininus' troops were cheered as they marched out of the Acrocorinth, while Chalcis and Demetrias were evacuated days later (Livy 34.49–51). In their settlement of the Greek communities and intimidation of Antiochus, Flamininus and the *legati* demonstrated that, while Greece was free and autonomous, it was under the protection and guidance of Rome.

Philip, on the other hand, was completely humbled at the end of the war and became a dutiful client of Rome for a time. When the *legati* dispersed throughout Greece in 196 to implement the Roman treaty with Philip, the king was advised to follow Rome's commands, seek out an alliance, and clear himself of any suspicion of colluding with Antiochus (Polybius 18.48.3–4; Livy 33.35.2–7). Philip even attempted on his own to cultivate good relations with Rome and sent troops to Flamininus without request before the siege of Sparta in 195. Years later, when Antiochus III was preparing for his war against Rome, Philip made sure to absolve himself of any suspicion by rejecting Antiochus and pledging his allegiance to Rome (Polybius 21.3; Livy 36.4.1–3, 10.10, 37.7.16).

Rome's suspicion of Philip and the king's own aggressive resolve had led to the Second Macedonian War. The Romans had then rallied their Greek allies under the slogan of liberation from Macedonian hegemony, though historians continue to debate Rome's true intention in Greece after the war. On the one hand, the Roman slogan of "freedom" for the Greeks was not mere propaganda. At the Isthmian Games in 196, and following Nabis' defeat in 195, Flamininus demonstrated that the Romans fully intended to evacuate Greece as promised. On the other hand, the Romans clearly illustrated on several occasions that the liberation of Greece was dictated by Rome on Roman terms, and that Rome would not tolerate any disruption from within or outside Greece. In any case, with the reduction of

Macedon and the victory of Rome, the first stage of the power transition in the eastern Mediterranean was complete. Although Flamininus had evacuated Greece in 195, the subsequent war against the Aetolian League and the Seleucids (192–188 BCE) would once again bring Roman legions into the east for the next contest over Mediterranean hegemony.

In the end, the Second Macedonian War was a major turning point in both Roman and Greek history. The Romans had decisively defeated a full Macedonian army for the first time, liberated the cities of Greece from Macedonian domination (though this issue is hotly debated even today), while the flood of Greek appeals to Rome confirmed Rome's role as the new arbiter in Greece and the Mediterranean, with only the Seleucids as an apparent rival.

Macedonian War, Third (171–168 BCE), Causes

The Third Macedonian War was fought between the Roman Republic and Perseus, king of Macedon, and ended shortly after Perseus' defeat at the battle of Pydna. While Polybius claimed that the war resulted from the long standing hatred of Rome on the part of Philip V and his son, Perseus (b. 212,

r. 179–168), the truest cause was Rome's own continued suspicion of Macedon (Polybius 22.18.10–11). Despite accusations from his enemies, Perseus did not seek a war with Rome, but in fact did all that he could to avoid it. His greatest mistake was his ambition and success in restoring Macedonian strength and influence in Hellenistic politics, coupled with his refusal to accede to Roman demands. Though, like his father, Perseus campaigned energetically against Rome, he was decisively defeated at the battle of Pydna in 168. The aftermath was more extreme than Philip's wars with Rome, however, as Perseus' surrender to Rome resulted in the dissolution of the Antigonid dynasty and the partition of Macedon. The most lasting consequence, however, was that the victory over Macedon confirmed Rome as the sole arbiter of eastern Mediterranean affairs.

The final years of Philip V's reign revived tension between Rome and Macedon, but also intrigue between the king's sons, Demetrius and Perseus. Though Perseus was the eldest of the two, rumors abounded that he was the son of a prostitute and therefore an illegitimate heir to the Macedonian throne, while his younger brother Demetrius' influence grew through both popular acclaim and support from Rome, which in turn aroused Philip's suspicions (Livy 39.53.1–9). Subsequently, Perseus was anxious to secure his ascension to the throne and accused Demetrius of treason, culminating in Philip's reluctant order to execute Demetrius in 180 (Polybius 23.3.9; Livy 40.24). Perseus seized the throne after Philip's death in 179 and, though he asked the Senate to renew the treaty made with Philip, Perseus' problems with Rome began almost immediately. By 176, Dardanian and Thessalian envoys in Rome accused Perseus of using Bastarnae mercenaries to expand his authority in Illyria and Greece. Although Perseus sent his own ambassadors to answer the accusations, the Senate only sternly reminded the king to adhere to his treaty with Rome. After increasing his influence in Greece and inviting exiles to return to Macedon, Perseus roused serious Roman suspicion when he reportedly opened communications with Carthage and began attacking Greek cities near Thessaly. When Perseus then reopened relations with the Achaean League in 173, a Roman delegation investigated the king's actions in Greece and reported that Perseus was preparing for a war with Rome.

King Eumenes of Pergamum, a traditional enemy of Macedon, soon arrived at Rome to confirm the Senate's fears, warning the Romans of Perseus' talent as a general and Macedon's renewed strength (Livy 42.11–

13). Eumenes further alleged that Perseus had already allied with several of his stronger neighbors, confirmed old alliances with Bithynia, married the daughter of Seleucus IV, and gave lavish gifts to the Rhodians. When Perseus' own ambassadors arrived at Rome to speak in their king's defense, the Romans were already convinced by Eumenes' account, ignoring the Macedonian envoys' retorts. In the same year, a final Roman envoy delivered an ultimatum to Perseus, which he angrily rejected. The Romans then returned and announced Perseus' response to the Senate, but also reported that the king was preparing for war in Macedon. Thus, the Romans had found sufficient justification for marching against Macedon and began their own preparations for war. Perseus did make another attempt at peace, but the Senate only replied that the king should answer for the charges made against him. When the Macedonian ambassadors could not answer, the Roman Senate cut off negotiations abruptly and ordered the ambassadors to leave Italy, while around the same time an advance force of over 5,000 Roman troops occupied forts in Epirus and Illyria (Livy 42.36).

Macedonian War, Third (171–168 BCE), Course

In 171, the consul Publius Licinius Crassus was given command of the Macedonian war with an army of 16,000 infantry and 800 cavalry (Livy 42.31.2). A Roman delegation crossed into Greece and Asia to gather allies for the coming war, while Quintus Marcius Philippus opened diplomatic

talks with Perseus under the pretense of negotiating a peaceful settlement. In reality, the negotiations provided Marcius with a plausible opportunity to declare an armistice and allow the Roman army time to assemble. Perseus himself sent representatives to several Greek and Asian cities, as well as to Rome, to announce his desire for peace with Rome, though the Senate quickly rejected his Roman envoys. Initial operations then commenced on both sides, as the Romans gathered their fleet at Cephallenia, while Perseus assembled an army of 43,000 men (Polybius 27.7.1; Livy 42.46–51).

After a minor victory at the battle of Callinicus (Livy 42.58–62), Perseus again offered peace, but the Romans replied that they would only accept his complete surrender. Crassus in turn won a costly battle near Phalanna, but failed to advance the war further during his consulship, nor did the following consul in Macedon for 170/169, Aulus Hostilius Mancinus. In 169, Philippus was elected as consul and given Macedon as his province with a fresh levy of 5,000 troops. Near the end of his term as consul, envoys from Bithynia and Rhodes went to Rome to mediate an end to the war with Macedon. Livy reports that the Rhodian delegation spoke indignantly and disrespectfully to the Senate and that the Romans began to question the loyalty of Rhodes. In 168, two new consuls were elected, and Lucius Aemilius Paullus was granted command of the Macedonian War (Livy 44.17.4–9). During this year, Perseus aggressively sought further support in Greece, Illyria, and Asia, starting with the Illyrian king, Genthius, who was quickly defeated, captured, and sent to Rome. Perseus also capitalized on the tension within the kingdom of Pergamum and negotiated with its king, Eumenes, asking the king to mediate an end to the war on behalf of Macedon.

By the spring of 168, Paullus had reached Macedon, and Perseus began to fortify his positions in anticipation of the Roman advance. The two armies met at the small village of Pydna, and, following a brief standoff, a skirmish culminated in a full battle (Polybius 29.15–16; Livy 44.36–41). Livy reports that the Macedonian infantry was forced to enter the battle hastily, was not able to deploy their phalanx formation, and was significantly outflanked by the more maneuverable Roman troops. Perseus panicked and fled shortly after the battle's inception, and the majority of his cavalry followed him unscathed. The Romans were so preoccupied with annihilating Perseus' infantry that they did not pursue the fleeing cavalry. The battle was a devastating defeat for the Macedonians, with 20,000 dead

and 11,000 more captured (Livy 44.42.7).

After hiding for a brief period, Perseus proceeded to the royal capital of Pella and then to Amphipolis to rally support, before finally seeking asylum on the island of Samothrace. A Roman delegation went to Samothrace to capture Perseus, and, after a failed attempt at escape, the king surrendered himself to the Roman delegation. Perseus was thereafter sent to Paullus' camp, where Paullus reproved him for entering into such a disastrous war with Rome, but nevertheless assured him of his safety. Although Perseus' fate was yet to be decided, Polybius and Livy state that, with the conclusion of the war with Rome, the Macedonian kingdom had been destroyed (Polybius 29.22.4; Livy 45.9.2).

Macedonian War, Third (171–168 BCE), Consequences

The aftermath of Rome's war with Perseus permanently changed the Macedonian and Greek political landscape, leaving Rome as the indisputable hegemon. After Perseus' capture, Paullus met with 10 commissioners, the *decem legati*, sent from Rome to aid him in the settlement of Greece and Macedon (Polybius 30.13.1–6; Livy 45.17–18). Paullus and the *decem legati* then announced the Roman settlement: the

cities and inhabitants of Macedon were to be considered free and independent from the Antigonid monarchy, the Macedonians would pay to Rome half the tribute previously paid to Perseus, and, most importantly, Macedon would be partitioned into four independent republics, each with its own government. The new republics were forbidden intermarriage, gold and silver mining, and cutting timber to build ships; only those states adjacent to barbarian territories could maintain armed forces (Livy 45.29; Plutarch, *Aemilius Paullus* 28.6). After similarly settling affairs in Illyria, Paullus and a colleague, Lucius Anicius, moved south, where they conquered and plundered the cities of Epirus which had supported Perseus, looting 70 cities and carrying away 150,000 captives (Polybius 30.15; Livy 45.34.1–9).

Regarding Greece, the Romans viewed states that attempted to maintain even a stance of neutrality with suspicion, while pro-Roman factions gained influence. Two Roman legates were sent with the Achaean statesman, Callicrates, to visit the Achaean assembly, where they accused several leading men of colluding with Perseus. After a lengthy debate, the Romans decided to send 1,000 Achaeans to Rome as hostages, including the historian Polybius, where they remained for 16 years (Polybius 30.13.9–11; Livy 45.31.6–10; Pausanias 7.10.7–12). Eumenes, king of Pergamum, had aided the Romans so little that rumors of his complicity with Perseus began to spread. In reaction to this, the Roman government officially shifted their political support to Attalus, Eumenes' younger brother, and launched an investigation of Eumenes.

The relationship between Rome and Rhodes also deteriorated significantly. A Rhodian envoy arrived at Rome in 168 in an attempt to mediate a peace between Rome and Macedon, but had not yet heard of Perseus' ultimate defeat at Pydna. Upon hearing of Rome's victory, the embarrassed Rhodian envoy tried to convince the Senate that Rhodes had always supported Rome and had desired to mediate an end to the war in favor of the Romans. The Romans refused to believe this claim, however, and instead alleged that the Rhodians had always supported Perseus, leaving the Rhodians fearful of a war with Rome. Although the Rhodians later begged forgiveness for their perceived transgressions, the envoys received a worse reply than before, with one praetor actually proposing a declaration of war against Rhodes. After a short debate, the Rhodians were spared from war only by the intercession of Cato the Elder, and the Senate

opted instead to strip the Rhodians of key territories in Asia Minor and to terminate their alliance with Rome (Polybius 30.19, 31; Livy 45.3, 25.1–7).

Some states, however, benefited from Perseus' defeat, or at least avoided Roman retribution. The Senate forgave the Thracian king Cotys, an ally of Macedon, and restored his son, formerly a hostage at the court of Perseus. The Romans awarded to the Athenians control over the islands of Delos and Lemnos, an act that economically weakened Rhodes, since the ports at Delos deprived the Rhodians of their tax revenue (Polybius 30.20.7–9).

Paullus' victory was celebrated in an elaborate triumph upon his return to Rome in late 167. Perseus himself was led in chains in front of Paullus' chariot, while his children and friends proceeded before him (Livy 45.40–41; Plutarch, *Aemilius Paullus* 32–34). Anicius, the conqueror of Illyria, also triumphed in the following days, during which the Illyrian king Genthius was similarly led before Anicius' chariot. The plunder from the Third Macedonian war was such that Romans of Italy were liberated from the *tributum* tax for a very long time (Livy 45.40.1–3; Plutarch, *Aemilius Paullus* 38.1), perhaps even until the early fourth century CE.

While the collective fates of Macedon, Illyria, and the Greek states differed, they all became subject to the authority and arbitration of Rome. The Romans attempted to permanently neutralize Illyria and Macedon by the partition of their kingdoms. The inhabitants of Macedon and Illyria were declared free, but the stipulations of this liberty were explicitly defined by Rome. In Greece, the Romans laid low all political dissidents and elevated pro-Roman factions. Despite future (and unsuccessful) resistance at the hands of Achaean revolutionaries and the Macedonian pretender, Andriscus, the dissolution of the Macedonian kingdom marked Rome's ascension as the indisputable leading power in the eastern Mediterranean.

Macrinus (Emperor) (217–218 CE)

A Roman emperor (217–218 CE), Marcus Opellius Macrinus, an equestrian from Mauretania, became Caracalla's praetorian prefect in 212 CE. He accompanied Caracalla on his travels throughout the empire, including the Parthian campaign. In 217 CE, Macrinus formed a conspiracy to murder Caracalla, and was subsequently proclaimed emperor in his place, the first equestrian to hold the office. Macrinus concluded peace with the Parthians in 218 CE, but his regime came to an end when relatives of the Severan dynasty fomented a revolt in Syria. He was killed in June 218 CE while trying to evade capture in Asia Minor.

Maelius, Spurius (d. 439 BCE)

Spurius Maelius was a wealthy Roman equestrian who tried to make himself king in 439 BCE and was executed for treason. In 440 Maelius purchased large amounts of grain from Etruria, which, when a famine devastated Latium, he sold at a low price and as a result gained much popularity. The sources claim that he tried to use this support to become king and sought the backing of the grain merchants.

In the most common account, this scheme was discovered by Lucius Minucius, *praefectus annonae*, and in response the Senate appointed a dictator, Lucius Quinctius Cincinnatus. He selected Gaius Servilius Ahala as

magister equitum, ordering him to summon Maelius to answer charges. According to Livy, Ahala then executed Maelius for refusing to accompany him. In an alternative tradition, Ahala was a private citizen who murdered Maelius on his own initiative with senatorial approval.

The story as reported is clearly not accurate, since the *praefectus annonae* did not exist during the early Republic. The account is also used to explain the existence and etymologies of several elements of subsequent Roman topography. Finally, the story closely mimics the actions of the Gracchi and Lucius Appuleius Saturninus from the late second century BCE. That said, the execution of Maelius was considered by the elite of the late Republic as an important precedent and moral justification for the use of violence against popular demagogues.

Magister Equitum

The *magister equitum*, in English “master of cavalry,” was a magistrate who assisted the dictator, whose duties could be military or civil in nature. According to tradition, the title derives from the office’s role as commander of the cavalry in early republican armies, when a dictator was appointed; the dictator controlled the infantry and was commander-in-chief. In most cases, the first action taken by the dictator was to appoint his *magister equitum*.

According to tradition, the first *magister equitum*, Spurius Cassius Vecellinus, was appointed in 501 BCE by the first dictator, Titus Larcus Flavus. While in some instances the *magister equitum* commanded the

cavalry personally, his military role was more extensive. Most often, a *magister equitum* served as second-in-command of a dictatorial army, placed in temporary charge of the military camp when the dictator was absent. This meant that *magistri equitum* could occasionally engage in battle, though in many instances, dictators explicitly commanded their subordinates not to fight during their absence. The most famous example is Quintus Fabius Maximus Rullianus, who in 325 BCE ignored the dictator's orders and defeated the Samnites. Despite his success, his superior, Lucius Papirius Cursor, sought his execution for insubordination and Rullianus was only saved by the combined appeals of the Senate, people, and tribunes of the plebs (Livy 8.30.1–35.9). As the office existed as an assistant to the dictator, *magistri equitum* rarely fought independently and none qualified for a triumph.

In 217 BCE, in the aftermath of Lake Trasimene, the Senate took the unprecedented step of having dictator and *magister equitum* elected, with Marcus Minucius Rufus selected as assistant to his political opponent Fabius Maximus (later termed Cunctator). After winning a victory in Fabius' absence, Minucius had his *imperium* elevated by a tribunician law to equal status with the dictator. After becoming trapped by Hannibal and rescued by Fabius Maximus, Minucius voluntarily renounced this status and returned to his former rank.

The *magister equitum* was able to summon the Senate and the assemblies. The official rank of the office is still debated: current orthodoxy claims that *magistri equitum* ranked as praetors, though Livy states that they equated military tribunes with consular power. Whether the position had *imperium* is also disputed, though this seems to be the case, as they were preceded by six lictors. By the late third century, the office had some prestige: between 216 and 202 BCE, six out of eight *magistri equitum* were elected to the consulship in the following year.

The office fell into disuse alongside the dictatorship after 202 BCE but was revived with the dictatorship in the late Republic, first by Sulla in 81 BCE, then by Caesar from 48 onward. These late *magistri equitum* had more obvious power than their predecessors. After the assassination of Caesar, his *magister equitum*, Marcus Aemilius Lepidus, played a leading role, and according to the sources, had the right to take charge of the state, though in fact he ceded this to the consul, Mark Antony. After Caesar's assassination, the office of dictator was abolished, having fallen into opprobrium, and with

it the *magister equitum*.

In the imperial period, the title of *magister equitum* was reintroduced by Constantius II (337–361 CE), alongside that of *magister peditum*, to undertake the duties of the praetorian prefect, commanding the relevant body of troops. Later these were recombined into the office of *magister militum*.

Magister Militum

Generally translated as Master of Soldiers, the *magister militum* (pl. *magistri militum*) was a senior commander of Roman field armies. The position of *magister militum* dates from the reorganization of the Roman military and civilian administration by Constantine (306–337). In this reorganization, the emperor remained the theoretical commander-in-chief. Emperors in the fourth century (before 395) usually took the field in person. However, the emperor could not be everywhere, so some devolution of authority was necessary. Furthermore, Diocletian's and Constantine's administrative reforms separated military and civil authority. The praetorian prefects, once commanders of the Praetorian Guard, were divested of their military duties and became civil administrators of large areas, the prefectures. The military rank of *magister militum* was created to command regional forces on a similar scale. *Magistri militum* were responsible for Gaul, Italy, Illyria, and the eastern frontier. Under each *magister militum* were two subordinate commands, the *magister peditum*, or master of the infantry, and the *magister equitum*, the commander of the cavalry.

Generally *magistri militum* answered to the emperor, but on some occasions emperors created a supreme command, usually titled *magister utriusque militiae* (literally “Master of Both Services”) or *magister militum praesentalis* (“Master of Soldiers in the [Imperial] Presence”).

The *magistri militum* commanded field armies, the *comitatenses*. These armies were mobile striking forces and took their name from association with the court (*comitatus*). Roman border forces (*limitanei*) were commanded by *duces* (singular *dux*, leader), and were expected to maintain a Roman presence on the borders and contain local raids. When the forces of a *dux* were not strong enough to contain foreign incursions, a regional *magister militum* would deploy his forces. Under these circumstances, a regional *magister militum* may have had command not only of his own forces but also those of the *dux*.

Magister Peditum

The *magister peditum* or “commander of infantry” was a commander of the later Roman field army (*comitatenses*). His peer was the *magister equitum* (commander of cavalry). Both are termed more generally *magistri militum*. These commands and titles originated with Constantine I (306–337). The *magister militum* who had precedence and attended the emperor was termed *magister militum praesentalis*, and might be the same as the *magister utriusque militiae*, “commander of both forces,” or commander-in-chief. However, these titles were not always used consistently.

Southern, Pat, and Karen R. Dixon. 1996. *The Late Roman Army*. New Haven, CT: Yale University Press.

Magister Utriusque Militiae

Magister utriusque militiae is generally translated as “Master of Both Services.” As the *magister militum* held command over both infantry and cavalry, the *magister utriusque militiae* presumably commanded both the field armies—the *comitatenses*—and the *limitanei*. This effectively made the *magister utriusque militiae* the supreme commander of forces, subordinate only to the emperor. Because of the close relationship of the *magister utriusque militiae* to the emperor, the position is frequently referred to as *magister militum praesentalis* or *magister utriusque militiae in praesenti*, the “Master of Both Services in the Presence [of the Emperor].”

The *magister utriusque militiae* was a position largely restricted to the western Roman Empire. In the eastern Roman Empire, a large and well-organized civilian bureaucracy tended to limit the influence of the *magister utriusque militiae*. In the western empire, however, powerful generals were able to use the position of *magister utriusque militiae* to dominate weak or underage emperors. The *magister militum* Arbogast, for instance, in effect ruled the western Roman Empire during the minority of Valentinian II (375–392), born in 371. On Valentinian’s death Arbogast promoted his friend Eugenius as emperor, an act that led Theodosius I (379–395) to invade Italy, leading to Arbogast’s defeat at the battle of the Frigidus River (394) and subsequent suicide. In the wake of the death of Theodosius I his most trusted general Stilicho emerged as *magister utriusque militiae* and guardian of Theodosius’ underage son Honorius (395–423). A subsequent *magister utriusque militiae*, Aetius, dominated the western empire during much of the reign of Valentinian III (425–455).

Magnentius (ca. 305–353 CE)

Flavius Magnus Magnentius, born ca. 305, was a usurper who ruled the western half of the Roman Empire from January 18, 350 to August 353. Either of Frankish or Gallic origins Magnentius rose to great prominence as a military commander serving the House of Constantine. Despite this link he rebelled against and executed the emperor Constans, who had become deeply unpopular with both the army and civil hierarchy (Aurelius Victor 42; Zosimus 2.42.1–2, 47.3). After his usurpation Magnentius controlled most of Constans' former territory, with the exception of the Danubian region, which was under the control of the usurper Vetranio. The eastern Augustus, Constantius II, refused to recognize Magnentius but was unable to move against him immediately because he was campaigning on the eastern frontier against Persia.

After deposing Vetranio, Constantius II finally moved against Magnentius in 351, defeating him at the battle of Mursa. Constantius II attained a second victory in 353 at Mons Seleucus, after which Magnentius committed suicide (Socrates 2.32; Sozomenus, *Church History*. 4.7; Zonaras 13.9).

Magnesia, Battle of (190 BCE)

Magnesia was the decisive battle of the Roman-Syrian War (192–188 BCE). Antiochus III of the Seleucid Empire had unsuccessfully invaded Greece and had lost to a Roman force at Thermopylae in 191. The two sides met again at Magnesia-ad-Sipyllum in December, 190. Lucius Cornelius Scipio and Scipio Africanus were the Roman generals. Eumenes of Pergamum fought alongside the Roman forces. In Livy's account of the battle (Livy 37.37–43), the vastly outnumbered yet elite Roman army destroys the immense, eclectic eastern army of Antiochus.

Antiochus' army numbered around 60,000 infantry and more than 12,000 cavalry. The Roman army, with its Greek allies, numbered about 27,000 infantry and 3,000 cavalry. Antiochus' army was a force of many different ethnicities with a wide range of equipment, including both elephants and scythe chariots. In the course of the battle, a gap opened in the left center of Antiochus' line due to miscalculations involving the attack of his scythe chariots. The Roman army exploited this gap with a cavalry charge, creating mass confusion and the general rout of the Antiochus' left flank. Antiochus' personal leadership of his right wing achieved some success and threatened the Roman camp. However, the Roman left flank held long enough to allow reinforcements and cavalry from the successful right wing to arrive in relief. Antiochus fled the battlefield, and his army was slaughtered.

Antiochus' decisive defeat at Magnesia brought an end to the war. In the Treaty of Apamea, the Romans forced Antiochus to abandon all his lands west of the Taurus Mountains and to pay an indemnity of 15,000 talents. The victory established the Romans as the new, undisputed hegemon of the Mediterranean world.

Magnus Maximus (d. 388 CE)

A western Roman usurper (383–388), Magnus Maximus was a Spanish career soldier of humble background. He rose in prominence during the campaigns of Theodosius I's father. Magnus Maximus was stationed in Britain as regional commander when he was acclaimed Augustus by his soldiers and revolted against Gratian in 383. Gratian, the son of Valentinian I (364–375), was nominally emperor in the west from 375 onward, but (born ca. 359) was in his early 20s and unequal to the threat of Maximus. Maximus landed in Gaul and confronted Gratian at Paris, where the greater part of Gratian's army defected to Maximus. Subsequently, Maximus assassinated Gratian and established his rule over Britain, Gaul and Spain. Theodosius initially tolerated Maximus as emperor in the west, but when Maximus invaded Italy in 387, expelling Valentinian II, Theodosius defeated Maximus in battle at Siscia and Poetovio in 388 and beheaded him in 388. The most extensive source for Magnus Maximus, Pacatus' panegyric to Theodosius, disparages him, but in the views of some scholars, Magnus Maximus was the last strong emperor to rule from Trier and his downfall was detrimental to the western Roman army.

Majorian (Emperor) (457–461 CE)

Flavius Julius Valerius Majorianus, one of the last western Roman emperors (457–461), served in Aetius' forces during the 440s and distinguished himself against the Franks. Majorian was sent into early retirement by Aetius, the chief general of all Roman forces (*magister utriusque militiae*) and most powerful man in the western empire between 433 and 454, who feared that Valentinian III (425–455) planned to marry Majorian to his daughter and designate him as his successor. After Valentinian III himself assassinated Aetius, Majorian was appointed *comes domesticorum*. After Valentinian's death, Majorian was considered a likely candidate for the western throne. Supported by Ricimer, Majorian revolted against the emperor Avitus and was proclaimed emperor by the army after the latter's defeat in 456. Majorian sought legitimacy, seeking recognition from the eastern emperor Leo and from the Roman Senate, before formally accepting the title of Augustus in 457.

While Ricimer remained in Italy as *magister militum*, Majorian embarked on an ambitious campaign to reconquer and reunite the western Roman Empire. His forces defeated the Alamanni in northern Italy in April 457 and Vandal raiders in Campania during the summer of 458. He campaigned in western Illyricum where he defeated and incorporated Huns into his army. In 458, Majorian arrived in Gaul, the base of the former emperor Avitus' power, which had not accepted his rule. Majorian ousted a Burgundian garrison from Lyons and defeated the Visigoths, who afterward renewed their allegiance. In 460, Majorian entered Spain with a large army to begin the reconquest of Vandal Africa. However, the Vandals managed to sabotage his fleet near Alicante, which forced Majorian to abort the campaign. Ricimer, the maker of emperors, was displeased with his failure. On his arrival in Italy, Ricimer deposed and executed Majorian near Tortona

on August 7, 461. Majorian was the last western Roman emperor who managed to unite imperial territory in Italy, Gaul, Dalmatia, and Spain. Subsequently, Ricimer elevated less strong and ambitious emperors (Libius Severus, 461–465; Olybrius, 472).

Maniples

Maniples were the basic military subunit of the army of the middle Roman Republic (ca. 264–146 BCE). The manipular legion replaced the Greek-influenced Roman phalanx army of the early Republic. The manipular system gave the Roman legion more flexibility in battle. The sources anachronistically attribute this change to the Roman commander Marcus Furius Camillus. Yet the transformation of Roman military organization, tactics, and equipment likely was a slow process of trial and error. The manipular legion eventually was modified and incorporated into the cohort legion in the late Republic.

The republican legion was divided into three distinct ranks: the *hastati*, the *principes*, and the *triarii*. Each rank had 10 maniples, giving the Roman legion the fighting strength of 30 maniples. Each manipule consisted of 120–160 men, except the *triarii* maniples which had 60 to 80 men. A force of skirmishers (*velites*) and cavalry (*equites*) augmented the infantry.

A manipule was made up of two centuries, each commanded by a centurion (the *prior* and *posterior*). The most senior centurion in the legion was the *primus pilus* (first spear). Other positions of note are the *optio* (centurion’s second-in-command), the *tesserarius* (orderly-sergeant), the *cornicen* (trumpeter), and the *signifer* (standard bearer).

The manipular legion was suited best for straightforward, persistent attacks. The three infantry ranks increased in fighting skill, experience, and equipment. According to Livy 8.8.5–8, each legion formed a three-tiered checkerboard formation, where the three lines of maniples masked each other's gaps. The *velites* served to harass the enemy and then fell back through the gaps of the legion. Then the youthful *hastati* would approach the enemy line, hurl their *pila* (throwing spears), close up their ranks, and attack. If the *hastati* were unsuccessful, they retired through the gaps of the *principes* who then formed up and attacked. The *triarii* were the last line of defense for the Roman manipular legion. However, the checkerboard deployment and maneuver (termed *quincunx* by modern authors) was difficult, and a simpler solid three-line battle formation was also possible.

Manius Curius (d. ca. 270 BCE)

Manius Curius Dentatus was a general of the third-century BCE Republic who distinguished himself in the Third Samnite War (298–290) and Pyrrhic War (280–275). He was consul three times (290, 275, and 274 BCE) and censor in 272. His leadership in the Pyrrhic War (278) was notable for reversing the course of the war, which had gone against the Romans (defeat at Asculum, 278). Dentatus carried out the *dilectus* and sold into slavery a man who refused the summons; apparently the war had become unpopular. The Romans had not encountered war elephants, used by Pyrrhus, before the

Pyrrhic War and found them terrifying. Roman skirmishers, however, learned how to attack the elephants, which when panicked were as much a danger to their own ranks as to the Romans.

In later decades, Manius Curius was idealized as living in rustic poverty and refusing all bribes. The Romans of the late Republic idealized the poverty of their ancestors, probably inaccurately. Though the wealth of Rome's later eastern conquests was off the scale, Rome's conquests of the Samnite Wars period brought in considerable wealth; in 293 BCE Papirius Cursor's triumph displayed 1,830 pounds of silver and 2,533,000 pounds of bronze (probably uncoined *aes rude*) from the sale of slaves.

Manlius Capitolinus, Marcus (d. ca. 384 BCE)

Marcus Manlius Capitolinus (consul 392 BCE) was a politician and general of the early Republic. According to Roman legend, when an invasion of Gauls, having inflicted a defeat on the Romans at the Allia River (390), marched on Rome, Manlius saved the Capitoline citadel from assault by the Gauls when the sacred geese of Juno, kept on the Capitoline, became alarmed in the night. Manlius threw the Gauls off the Capitoline, earning the surname Capitolinus for himself.

Manlius was later put to death ca. 384 for aspiring to tyranny. According to legend, at this time the plebeians were oppressed by the patricians. Though a patrician, Manlius took the part of the plebeians and paid off some of their debts (Livy 6.11.7). He was accused, tried, and convicted for popular agitation. The story repeats some of the elements of Spurius Cassius and Spurius Maelius, and, in the form related by Livy, may reflect the concerns and conflicts of the late republican oligarchy about popular leadership.

Manlius Torquatus, Titus (Active 360s–340s BCE)

Titus Manlius Torquatus Imperiosus was a Roman general of the Samnite Wars period (mid-fourth century BCE). He was consul in 347 BCE, 344 and 340; he held the dictatorship three times, in 353, 349 and 320. In 342 BCE the Latins revolted, joined by the Campanians. The Romans suppressed the revolt harshly. Manlius Torquatus and Publius Decius Mus commanded the battle of Veseris in 340 which broke the resistance of the Latins and Campanians.

In his youth Manlius Torquatus had fought a duel (monomachy) with a Gaul, taking the Gaul's gold necklace (*torques*) as booty, from which Manlius was called Torquatus. Before the battle of Veseris, according to legend, Manlius executed his own son for disobeying orders and leaving the line of battle to fight a duel with one of the enemy. This example of severe military discipline was extolled by later authors such as Livy and Valerius Maximus, but it cannot be considered routine, nor can it be connected to the Roman father's civilian "power of life and death" over his children. Torquatus' execution of his son was probably conditioned by the Romans' need to terrify their allies into submission.

Manlius Vulso, Gnaeus (Active 190s–180s BCE)

Little is known of the life and career of Gnaeus Manlius Vulso. He was a praetor in 195 BCE and then appears on the scene in 189 as consul and successor to Lucius Cornelius Scipio Asiagenes (Asiaticus) in the Asian campaigns, most notably against the Celts of Galatia (region of mod. Turkey).

Rome had been at war with Antiochus III in Greece, until Antiochus' defeat at Thermopylae in 191, forcing him to retreat to Asia Minor where he continued his cause against Rome, employing Galatian forces. The Romans allied themselves with Pergamum (mod. Bergama) and finally defeated Antiochus and the Galatians at Magnesia in 190/89. Vulso took over the Roman command and began to systematically eradicate the Galatians. He pacified neighboring areas such as Sagalassus (near mod. Ağlasun, Turkey) by striking deals with the local peoples, accepting subsidies for peace. But he pillaged the Galatian territories, leaving many of the inhabitants dead or captive, much to the chagrin of the Senate. Vulso defended himself, claiming that victory over Antiochus alone would have been worthless. Whether Vulso's real motive was to acquire booty or not at the expense of the Galatians is a matter for discussion. Vulso did conclude a peace treaty in Asia Minor in 188. He returned to Rome in 187 with notoriously large amounts of plunder, and was granted a Roman triumph by the reluctant Senate.

Vulso is an obscure character, but he certainly left his mark in Asia Minor. The debate as to whether his campaigns were just or amounted to personal thuggery, will continue. Posterity, perhaps wrongly, remembered him as the man who brought lavish goods into Italy with dire moral consequences for the Roman state.

Marcellus (ca. 268/5–208 BCE)

Marcus Claudius Marcellus was a republican Roman statesman and war hero mostly remembered for his controversial and successful military exploits during the Second Punic War. He was one of the few Romans during the war to naturally excel at martial combat and was considered a true match for Hannibal.

Marcellus, born into the plebeian branch of the Claudian clan, was a five-time consul (222, 215, 214, 210, and 208 BCE), first showing talent for military heroism when he saved his brother's life during the First Punic War. In 222 BCE, he defeated a Gallic king in single combat and won the *spolia opima*, the coveted military achievement of looting an enemy leader's armor. Marcellus was the third and last Roman to win such an honor, following in the footsteps of Romulus, the legendary founder of Rome, who was the first.

Marcellus received more notoriety during the Second Punic War (218–201 BCE). In the 210s BCE, he successfully defended the southern Italian city of Nola from Hannibal on more than one occasion and starting in 214 BCE, spent two years besieging the Greek city of Syracuse that had recently fallen under Carthaginian control. Though the ancient engineer Archimedes harassed Marcellus' forces with impressive war machines, the city fell to the Romans in 212 BCE. Marcellus ordered the civilians to be spared, but Syracuse was extensively looted and large amounts of spoils, including Greek art objects, entered Rome. Later Romans considered this moment a turning point when Hellenic culture greatly began to infiltrate Rome and

corrupt old-fashioned Roman values. While such corruption was probably a rhetorical exaggeration, the influx of wealth and slaves that entered Rome did indeed come to destabilize the late Republic by contributing to civil conflict. In 208 BCE, while on a scouting mission near Venusia, Marcellus was ambushed and killed by Hannibal's Numidian cavalry. It is said that Hannibal either allowed Marcellus' body to be honorably cremated and buried or he returned the body to Marcellus' son, Marcus, for proper rites.

Remembered as the "Sword of Rome," Marcellus and his victories earned him praise and also enemies. His most famous rival was the traditional statesman, Quintus Fabius Maximus. The two were at odds throughout their careers: Marcellus' temple to *Honos et Virtus* (Honor and Prowess) was meant to compete with Fabius' temple to *Honos*; Fabius advertised his superiority in not plundering the images of Tarentine gods when he took Tarentum in 209 BCE unlike Marcellus who did just that when he sacked Syracuse; and it is likely that Fabius was responsible for Marcellus' resignation from the consulship in 215 BCE after bad omens were acknowledged at Marcellus' swearing in. A most striking example of political enmity occurred when the Senate denied Marcellus a triumph for his sack of Syracuse, a much deserved reward, and instead allowed him an ovation, a lesser celebration and an insult to the general's grand achievement. Never one to endure a slight without a fight, Marcellus went ahead and celebrated a triumph outside of Rome on the Alban Mount.

Marcomannic Wars (166–180 CE)

The Marcomannic Wars marked a new phase in the conflict of the Roman Empire with the Germans, with origins preceding the reign of Augustus. The Romans referred to the Marcomannic War as the “War of Many Nations” (*bellum plurimarum gentium*), during which they fought against a loose alliance of northern tribes. Although the war has been named after the Marcomanni, the Romans found the Quadi and the Sarmatians to be more persistent enemies.

The Marcomanni (“mark men,” or frontier people) were a Suebic tribe which had previously been forced east by Roman expansion across the Rhine. Since 100 BCE, they had been settled along the River Main. In 58, they supported Ariovistus in Gaul, and were defeated by Julius Caesar. In 13 BCE, Nero Claudius Drusus became governor of Gaul, invading Germania and reaching the North Sea. The Roman advance forced the Marcomanni east (along with other Suebi), settling them north of the Danube (Ister). Here, the Marcomanni created a new kingdom, defeating the Celtic Boii (“owners of cattle”). Subsequently, during the reign of Tiberius, the Marcomanni fought the Cherusci of northwest Germany. Afterward, Domitian fought the Marcomanni, when they refused to support the Roman conquest of Dacia.

The Marcomannic Wars were fought against a number of tribes within the Danube basin, which flows southeast for 200 kilometers, from Vindobona (Vienna) to Aquincum (Budapest), and then south to Singidunum (Belgrade). The Marcomanni settled between the Morava and the Elbe. Further south, the Boii were replaced by the Suebic Eravisci. East of the Morava, the Quadi settled along the north bank of the Danube, between Carnuntum (Petronell) and Aquincum. Further east, the Sarmatian Jazyges were an Iranian tribe which had migrated west from the Azov, settling within the Pannonian plain (east of Aquincum). Finally, the Buri were another Suebic tribe, between the Jazyges and the mountains of Dacia.

According to Tacitus (writing 50 years before the Marcomannic war),

the Romans began subsidizing the Marcomanni and various other tribes, purchasing their loyalty. Consequently, the Romans were able to control a line of Germanic client-states along the north bank of the Danube, defending Noricum and Pannonia. However, the strategic situation shifted during the reign of Marcus Aurelius and his co-emperor, Lucius Verus. In 161, the Tiber flooded, causing famine in Rome. Meanwhile, the Arsacid Persians invaded Armenia, and Lucius allegedly embezzled millions of sesterces from the imperial treasury. Facing bankruptcy, the Senate halted subsidies for the northern tribes.

According to the *Historia Augusta*, Marcus feared that the empire would collapse. Meanwhile, the legions along the Danube had been sent to Persia. Although the Marcomanni and Quadi were temporarily persuaded to not cross the Danube, lesser Germanic peoples began raiding across the river in 162. During the winter of 166, 6,000 “barbarians” invaded Upper and Lower Pannonia and were defeated by Roman cavalry (with infantry) under Marcus Vindex. Subsequently, the Germans sent envoys, presumably demanding the renewal of subsidy (or tribute). Meanwhile, Celts from the Rhine region invaded northern Italy, and Marcus defeated them during 167 (with assistance from the future emperor, Helvius Pertinax). Gender historians should note that this Celtic army included women clad in armor.

During the spring of 167, the Marcomannic king Bellomarius negotiated a truce along the Danube, between 11 tribes and Marcus Bassus, the governor of Upper Pannonia. However, that summer, the Vandals and Sarmatians occupied the goldmines of Dacia. Meanwhile, troops returning from Persia brought an unidentified plague to Rome, resulting in severe casualties. Subsequently, both the Marcomanni and the Quadi crossed the Danube. According to Ammianus Marcellinus, Aquileia was besieged and Opitergium was destroyed (although this may have occurred in 170).

In 168, the emperors led an army north, across the Alps. The *Historia Augusta* states that Marcus wanted to march sooner, but was delayed by concern for the distraught populace of Rome. For example, Marcus oversaw the trial of a false prophet who attempted to incite a religious panic, hoping to subsequently plunder the capital. Afterward, there was heavy fighting in the Pannonias and Marcus Vindex was killed. However, the Marcomanni withdrew north, across the Danube. After the king of the Quadi died and his people surrendered to the Romans, the Quadi were allowed to settle along the south bank of the Danube, in return for defending it against the

Marcomanni. Another Germanic people was allowed to settle at Ravenna, which they subsequently pillaged (infuriating Marcus).

That autumn, Marcus and Lucius oversaw the construction of fortifications and began to disagree. Their expedition had been expensive, and Lucius insisted upon returning to Rome, although Marcus wanted to pursue the Marcomanni. In January of 169, Lucius died, perhaps from natural causes but allegedly poisoned by Marcus (according to Cassius Dio, Marcus feared that Lucius would attempt a coup). After Lucius' death, Marcus returned to Rome; meanwhile, there were revolts in Egypt, and the Berber Mauri (Moors) invaded Mauretania and Hispania.

In 170, there was a general uprising along the periphery, from Illyricum to Gaul, and barbarians overran the Balkans and Greece. To raise funds for a second expedition, Marcus auctioned imperial valuables from the palace. He returned north (with the empress Faustina) and defeated the Marcomanni, who were fleeing with pillage across the Danube. In 172, Marcus crossed the river, once again defeating the Marcomanni and claiming the title of Germanicus. Subsequently, the Marcomanni were forced to withdraw 10 miles (80 stades) north of the river.

In 173, Marcus moved east and attacked the Quadi to punish them for raiding the Marcomanni. During this campaign, a Roman legion from Anatolia (Legio XII Fulminata, from Melitene on the Euphrates) was surrounded in a waterless valley. According to Paulus Orosius, a Christian author of the early fifth century CE, this legion had converted to Christianity. However, according to Dio, a senatorial author of late second and early third century date, the Twelfth legion remained faithful to Mars. Regardless of the deity, the soldiers apparently prayed for rain. Subsequently, there was a thunderstorm, and chain lightning struck the Quadi, exposed upon the heights. Afterward, the horrified Romans were compassionate toward their wounded enemy. This storm is known as the Miracle of the Rain, and the event is depicted upon the Column of Marcus Aurelius. A similar event was also recorded, during which lightning miraculously set fire to a barbarian catapult.

After defeating the Quadi in 174, Marcus engaged the Jazyges led by Zanticus, along the Hungarian Tisza. At some point (presumably that winter), the Romans and Jazyges fought a battle upon the frozen Danube, during which Roman soldiers stood upon their shields, using friction to maintain their footing. Meanwhile, the Jazyges received assistance from the

Quadi, and Marcus vowed to annihilate both tribes. In contrast, Marcus rewarded the Marcomanni for their obedience, permitting trade and allowing villages within 5 miles of the Danube.

In 175, Zanticus surrendered, agreeing to return a hundred thousand prisoners. As Dio notes, this indicated the strength of the Sarmatians, who had done “great harm.” Although Marcus wanted to “exterminate” the Jazyges, he accepted the return of prisoners, and forced the Sarmatians to withdraw 20 miles from the Danube. Meanwhile, swearing fealty, Zanticus provided 8,000 cavalry as hostages (most were sent to Britannia).

Marcus chose to accept this peace, because of a rebellion in Egypt. Apparently, the emperor had fallen ill and was widely believed to be dead, with the result that Avidius Cassius’ legions hailed him as emperor. Afterward, although Cassius was a personal friend of Marcus, Cassius denounced the authority of the Senate and refused to surrender. Consequently, Marcus and Faustina departed for Syria, and Avidius was assassinated in July. Meanwhile, en route via Cappadocia, the empress died near Tiana.

In 176 Marcus celebrated a double triumph in Rome. Afterward, in January of 177, he appointed his teenage son Commodus as the youngest consul in Roman history. That summer, Commodus succeeded Lucius as co-emperor. In 177, the northerners once again rebelled, including the Marcomanni and the Quadi. In 178, the emperors reached the Danube, defeating the Marcomanni. In 179, the Quadi were defeated near Laugaricio, in modern Slovakia. After defeating these tribes, 20,000 Romans occupied their territory, establishing fortifications, capturing slaves, and deliberately disrupting agriculture and trade. One of the new forts has been excavated along the Morava, near Pasohlavky (south of modern Brno).

Eventually, the Quadi began to flee northwest, toward the Elbe and the Oder. According to Tacitus, the Suevus was the origin of the Suebi, controlled by the ancient Semnones. After more than a century of exile, the defeated Quadi were thus fleeing toward their ancestral homeland. Presumably, as they moved west, they would have been joined by the Marcomanni. Were they hoping to conquer the Semnones, just as they had subdued the Boians? Regardless, the Romans blocked their escape. As Dio wrote, “This showed that [the Romans] desired, not to acquire their territory, but to punish the men themselves.”

Marcus became ill and died on March 17, 180, at Vindobona (Vienna).

During his final days, the emperor expressed concern about his son's morality. Perhaps, it was Commodus who was most responsible for the brutal occupation. However, Commodus agreed to a surprisingly generous peace, abandoning the occupation and renewing the annual subsidies. Was this the dying wish of his father? Regardless, the Roman soldiers were infuriated, because they had hoped to enslave their enemies. Instead, the exhausted legions were sent against the Jazyges, Buri, and Dacians. In 184, there was rebellion in Britannia (followed by Gaul) and famine in 190. Meanwhile, Commodus showed little interest in the Danube.

Although the Romans never subjugated Marcomannia, this region remained relatively peaceful for centuries, excepting the reigns of Aurelian and Valentinian. During the fourth century, the Marcomanni apparently converted to Christianity, after their queen Fritigil was inspired by Saint Ambrose of Milan. However, the Huns began moving west from the Caucasus, pressuring other tribes to cross the Danube. Consequently, in October of 409, Suebic peoples (including Marcomanni, Quadi, and Buri) were among the Vandals of Gunderic and the Alani of Respendial. Together, they defeated the Franks, crossed the Pyrenees, and occupied Hispania. Subsequently, the Marcomanni were also among the Huns of Attila.

Ultimately, the Marcomannic War was marked by extreme hostility toward the Germans, as reflected by Marcus' alleged views and the depiction of combat on the Column of Marcus Aurelius. The occupation of Quadi territory was arguably genocidal, impressing Dio who observed that Marcus wished to exterminate the local populace. Unfortunately, after more than a decade of savage conflict, the Romans gained little from this Pyrrhic victory.

Marcus Aurelius (Emperor) (161–180 CE)

Marcus Aurelius Antoninus Augustus (161–180 CE) was the last of whom Machiavelli described as the “Five Good Emperors.” Born on April 26, 121, Marcus’ reign lasted from March 8, 161, until his death on March 17, 180, overlapping with two co-emperors: Lucius Verus and Marcus’ son Commodus. Unfortunately, throughout this period, Rome fought several wars, accompanied by revolts, plague, and famine. Consequently, Marcus’ troubled reign foreshadowed the crisis of the third century CE.

Originally named Marcus Catilius Severus, Marcus Aurelius was the son of a praetor, Marcus Annii Verus, and the wealthy heiress Domitia Lucilla. He was named after his maternal great-grandfather, consul Lucius Catilius Severus. He was also the nephew of consul Marcus Annii Libo, and empress Annia Faustina Major (wife of Antoninus Pius). When Marcus was an infant, his father died and he was adopted by his paternal grandfather, a former senator who shared the name Marcus Annii Verus.

As a child, Marcus was educated by the philosopher Diognetus, the Homeric grammarian Alexander of Cotiaeum, and the Libyan orator Marcus Fronto. A primary source for his early life is the correspondence of Fronto, who warned Marcus about hypocrisy and tyranny. In February 138, the emperor Hadrian adopted Antoninus Pius as his successor, insisting that Antoninus adopt both Marcus Aurelius and Hadrian’s adopted grandson, Lucius Verus.

The *Historia Augusta* states that Marcus was studious, and his adopted brother was carefree. During his youth, Marcus served as a priest of Mars, and prefect during the Latin Festival. In contrast, at the age of 23, Lucius had never held public office. In 145, Marcus married Annia Faustina Minor,

who was his biological cousin and adopted sister. Subsequently, Faustina would accompany him during campaigns, adopting the title *Mater Castrorum* (Mother of the Camp) to promote the army's loyalty to the dynasty. They eventually had 13 children, and she died in 175.

In 140, at the age of 19, Marcus received the consulship, followed six years later by *tribunicia potestas* and proconsular *imperium*, powers of the emperor traditionally given to designated successors. Subsequently, in March 161, Antoninus Pius appointed Marcus as his sole successor. However, Marcus refused to serve as emperor, unless Verus was appointed as co-emperor. Following the death of Antoninus, the two new emperors were popular with the Senate. Unfortunately, the Tiber flooded, causing famine. Several months later, the Arsacid Persians invaded Armenia, and there were revolts in Britannia and Germania.

In 162, Marcus sent Lucius east, to direct the Persian war. Unfortunately, according to the *Historia Augusta*, Lucius was a notorious playboy who wasted public funds upon erotic parties and spent most of his time in taverns and brothels. However, under the command of Avidius Cassius, the legions occupied Ctesiphon in 165 and crossed the Tigris in 166.

During the winter of 166–167, 6,000 Germanic warriors crossed the Danube into Pannonia, while Rhine Celts crossed the Alps and entered northern Italy. This sparked an increasingly genocidal conflict, known as the Marcomannic Wars. Meanwhile, according to Cassius Dio, Lucius began plotting a coup, and Marcus had him poisoned in 169. However, the *Historia Augusta* insists that Marcus would never have murdered his brother. Since rumors of assassination were frequent, and the medical knowledge of the period was rudimentary, Lucius probably died of natural causes.

When the legions returned from Persia (ca. 166–167), they brought an epidemic to Europe. Based upon the writings of Galen, scholars have suggested that this was the first known European outbreak of smallpox, though the disease is not certainly identified. The epidemic killed as much as 25 percent of the population and caused revolts across the empire. In 175, despite his friendship with Marcus, Avidius Cassius led an unsuccessful rebellion in the east. Three years later, the North African Mauri (Moors) invaded Hispania.

In 177, Marcus appointed his son Commodus as co-emperor. Together, they fought against the northerners, until Marcus died on March 17, 180. Some sources suggest that the emperor was killed by plague, but Dio insists

that he was murdered by a physician loyal to Commodus. Shortly thereafter, the northern conflict ended, because Commodus agreed to an unpopular armistice.

After his death, Marcus Aurelius became the model of a strong emperor, merciful to his enemies and relentless toward his enemies. According to Dio, Marcus lowered taxes, was generous with the imperial treasury, and forgave decades of debt. According to the *Historia Augusta*, Marcus was an excellent administrator, who paid careful attention to seemingly minor details. The Digest shows that Marcus and Lucius (called the *divi fratres*, the deified brothers, by later jurists) paid careful attention to law. During Marcus' reign, probably due to the effect of plague and war, equestrian and civilian administrators were promoted, expanding the traditional social hierarchy. For example, allegedly the son of a freed slave, Pertinax was an equestrian promoted into the Senate, who became consul in 175, then City Prefect of Rome, and was elevated to emperor in 193.

Marcus is best known for his *Meditations*, "He who follows reason in all things is both tranquil and active at the same time, and also cheerful and collected ... Think of thy last hour. Let the wrong which is done [to you] stay there where the wrong was done." Both Dio and the *Historia Augusta* agree that Marcus was objective and reasonable, "He did not readily accept the version of those who were partisans ... but always searched long and carefully for the truth." According to Machiavelli, modern leaders should learn from the "modest life" of Marcus, "that one should avoid being despised and hated." However, despite the emperor's Stoic philosophy, his military policy was brutal and merciless. This paradox suggests the intense pressure upon Marcus, as the empire endured a growing crisis. Unfortunately, as Dio wrote, the golden era was followed by "an age of iron and rust."

Marian-Sullan Conflict (80s BCE), Causes

The conflict of Marius and Sulla and their followers was intermittent and did not always involve armies, so we have not termed it a civil war. Nevertheless, the first civil war (here termed the Marian-Sullan Conflict) of the late Republic began in 88 BCE when Sulla led his troops against Rome. Although personal competition and the ambitions of Marius and Sulla contributed to the conflict, longer-term trends, especially the growth of the tribunate of the plebs and the evolution of the armies, and immediate crises such as the Social War and emerging divisions between populists and oligarchs, played a role as well. This conflict was not the first instance of violence in late republican politics, but it did have a number of important consequences for Rome in the decades following Sulla's death.

Marius, a "new man" from Arpinum, took advantage of the popular political movements initiated by the Gracchi, using tribunician legislation in 107 BCE to transfer the Jugurthine command from his former commander (Quintus Caecilius Metellus Numidicus, consul 109) to himself. His readiness to use popular politics became a hallmark of his career. Sulla, on the other hand, came from an ancient (now impoverished) patrician family and was typically more conservative in his outlook and his politics, ultimately revealing a reactionary standpoint. Ideological differences between the two men, then, were also involved in the build up to this civil war.

Seeds of the rivalry may have been sown during the Jugurthine war, when both men gave signs of their ambition. Marius, as proconsul, received the credit for the victory over Numidia, but Sulla was instrumental in the capture of Jugurtha in 105. He commemorated this capture on a signet ring which he famously wore thereafter, a reminder which Marius may not have enjoyed. Nonetheless, their military careers continued in parallel, as Sulla initially served under Marius in the latter's campaigns against the Germans, whose migrations had disrupted Roman allies from about 113. By the time the Germans finally invaded Italy in 102, Sulla had transferred his service from Marius to the other (patrician) consul of that year, Lutatius Catulus. Although Marius, as consul again, and Catulus, as proconsul, cooperated to

defeat the Cimbri in Cisalpine Gaul in 101, Marius was seen as the real savior of Rome, securing immense popularity, confirming popular dissatisfaction with the failure of senatorial commanders, and receiving a sixth consulship in 100 as a reward.

Ideological differences were revealed again this year. Marius' military reforms, which may have begun in 107 or 104, involved the recruitment of legionaries from the large numbers of landless citizens filling Rome (the *capite censi*). As a result, soldiers increasingly looked to their generals to reward them after a campaign or upon discharge, which encouraged greater loyalty to the general himself. In 100, Lucius Appuleius Saturninus (tribune 103, 100) promoted a popular program, including a bill to provide land allotments for Marius' veterans, to keep him on his side. Political violence arose, and the conservatives persuaded the Senate to pass the so-called final decree, calling on the magistrates, including Marius, "to see to it that the state suffered no harm." Wishing to reaffirm himself as the defender of the state, Marius turned on his former political associates and helped to restore order, using military force to suppress political disturbances. In the process, Saturninus and a number of his followers were killed.

The events of the following decade are unclear due to a lack of sources, but Marius appears to have been discredited by the Saturninus affair and is not visible in politics for some years. What Sulla was doing during these conflicts, we do not know, but one suspects he would have taken the side of the conservative senators who wished to see the continuing popular movement suppressed. At some point in this decade, Bocchus, the king of Mauretania, erected a statue in Rome depicting Sulla's capture of Jugurtha. Ancient and modern observers have taken this dedication as a snub to Marius, and a sign of a final break between the two men.

Nonetheless, when the *socii* rebelled in 91 to demand the citizenship which had long been denied them by conservative Roman attitudes, both Marius and Sulla received commands and cooperated on at least one occasion. Marius retired early due to ill health, but Sulla played a major part in the final suppression of the Social War, invading Samnium. This success helped Sulla to acquire the consulship for 88, with Quintus Pompeius Rufus as his colleague. The war, however, left a political legacy, namely how to integrate the newly enfranchised Italians into the Roman voting system. This was, perhaps, the most important political question in recent years, and one which again shows the opposition of Marius' and Sulla's attitudes.

Marian-Sullan Conflict (80s BCE), Course

The conflict of Marius and Sulla soon became entangled with the First Mithridatic War, the proximate cause of hostilities between Marius and Sulla. Leadership of the campaign against Mithridates VI, provoked by his invasion of Asia in 88, may well have been the most sought-after command of a generation. As consul and given both his military record and his praetorship in Cilicia (in the mid-90s), it was no surprise that Sulla received the command. Marius, though, understandably coveted the command for himself: after a decade of relative inactivity, it is likely that he wanted one final glorious campaign on which to end his career. The populist Sulpicius Rufus (tribune of the plebs 88) associated himself with Marius, secretly undertaking to reassign the Mithridatic campaign to Marius to secure support for the equal distribution of the newly enfranchised Italian peoples through the Roman voting tribes. When the consuls suspended public business to relieve tensions over the question of the Italians, Sulpicius confronted the consuls with an armed mob to force them to rescind the

suspension. The consuls then fled for their lives: Pompeius Rufus went into hiding, while Sulla sought safety in Marius' house, just off the forum. Commentators, both ancient and modern, have long speculated over this choice of refuge, but Sulla himself suggested that he sought advice from Marius. In the end, Sulla returned to the forum and rescinded the suspension, allowing Sulpicius to call an assembly to vote on his proposal for the tribal distribution. Sulla then retired from Rome and joined his army at Nola, prior to embarking for Greece to face Mithridates.

Before Sulla could depart for Greece, though, Sulpicius secured the transfer of the command to Marius. Given the bloodshed and intimidation involved, the legality of this legislation is questionable. Sulla, as consul, may have been in a legal position to overturn the transfer. Personal ambition, however, and his reactionary tendencies contributed to his momentous decision: the march on Rome by a Roman army. At the head of six legions and accompanied by his consular colleague, Sulla easily seized control of the city and drove Marius and his supporters into exile, recovering his command. The first Roman civil war had been fought by a commander pursuing his own interest with troops loyal to him rather than the state—ironically as a result of Marius' army reforms.

Sulla made some hasty arrangements for the continued operation of the state, including the annulment of Sulpicius' legislation regarding the tribal distribution of the Italians. He then departed to prepare the campaign against Mithridates, on which he was engaged for the next four years. No sooner had Sulla left than Marius, who along with others had been declared a public enemy (*hostis*), returned, collected an army, and marched on Rome, seizing control with the help of Cornelius Cinna. He unleashed a savage reprisal against his political enemies, and many optimates were killed, setting the precedent for Sulla's proscriptions later. Marius had Sulla's arrangements overturned and in turn had him declared a *hostis*: Sulla simply ignored this and continued his campaign against Mithridates. Marius and Cinna were elected as consuls for 86, but Marius died shortly after entering office, leaving Cinna in control.

Nonetheless, the Marian party dominated, executing opponents among the optimates, many of whom fled for safety elsewhere. Cinna was elected to continuous consulships, like Marius earlier, until his death in a mutiny in 84; on occasion he was joined by Papirius Carbo (consul 85, 84, 82). Marius' son joined Carbo in the consulship of 82, to prepare for the anticipated

return of Sulla as political differences and violence continued. In the east, to return to Rome to deal with his political enemies, Sulla imposed generous terms on Mithridates. He landed at Brundisium in spring 83 with his loyal, experienced army and began his second march on Rome. He was joined by aristocrats who held similar political views—or thought that he would be the winner—including Metellus Pius from Africa, Crassus from Spain, and a young Pompey (the latter two with private armies).

Sulla gained control of Rome, though pockets of resistance remained and had to be dealt with. He was created dictator, undertaking a series of reforms designed to restore conservative control and break populist forces; he also instituted a ruthless removal of political opponents by proscriptions. Some sources estimate that around 70 senators and 1600 *equites* were executed by this method. Sulla resigned the dictatorship and, after a second consulship in 80, retired from politics in 79 and died in 78.

Marian-Sullan Conflict (80s BCE), Consequences

The conflict between Marius and Sulla helped entrench the basic differences between conservatives and populists, and led to increasingly violent debate about “proper” political conduct and forms which would not be resolved until the time of Augustus. The Sullans tried to hang on to the control which Sulla had restored, but his own example proved too strong: commanders at the head of loyal armies were increasingly prepared to use the threat of armed force to pressure the Senate into giving them what they wanted. This threat of force undermined traditional methods of achieving political goals and resolving differences within the Senate.

During his rise to power, Marius emphasized and exaggerated “aristocratic incompetence.” He thereby undermined solidarity within the Senate, privileging his own advancement over the traditional unity and cooperation of the aristocracy. Similarly, Sulla established himself as greater than the Senate after the Mithridatic War, presenting himself, as Marius had done, as the only man who could protect and defend Rome. The Senate became increasingly ready not only to accept such military strongmen as “saviors,” but also to encourage their creation, most obviously with Pompey the Great.

The attitude of consensus and cooperation which had flourished throughout most of the second century BCE became increasingly difficult to achieve. Following Marius and Sulla, though, consensus and cooperation were no longer necessary. Marius circumvented the Senate in 107 and 88 with tribunician laws, seizing command for himself. The violence of Sulla’s response to the latter circumvention similarly avoided the need for consensus and eliminated any chance of reconciliation between the two men or their supporters. Personal ambition, pursued to any length, was privileged over public unity and would be again with Pompey, Crassus, and Caesar, among others.

Adding to the political confusion and violence in Rome, soldiers and former soldiers increasingly became arbiters of political disputes. As armies grew more reliant on and loyal to their generals, rather than to the higher magistrates, the Senate or even Rome, the distinction between *miles* and *privatus* blurred. Marius, and later Sulla, had used soldiers for intimidation and pacification in the forum, but Sulla in many ways formalized this greater political role for *milites*. Following Marius’ seizure of the

Mithridatic command, Sulla addressed his soldiers as a political *contio*, rather than as a military *contio*. He thereby invited the soldiers to choose sides in a political debate and to overturn a decision of citizens in a *comitia*—that is, a formal decision of the *populus Romanus*—making the *contio* of soldiers a *comitia*. Sulla encouraged the soldiers to defend the *dignitas* of magistrates against other magistrates, a role in which Caesar, too, would cast his soldiers.

The conflict also saw the revival of the dictatorship and the institutionalization of violence in a way that had not previously been seen in Rome. Caesar's march on Rome in 49, his dictatorship, and the proscriptions of the Second Triumvirate all had Sulla as a precedent. The disenfranchisement of the children of the proscribed left a significant population of politically ambitious men in forced political retirement, prime candidates for the social and political unrest of figures like Catiline.

The conflict between Marius and Sulla played an important role in the demise of republican politics, but it would be incorrect to identify it as the cause of the fall of the Republic. Their attitudes developed from events in the second century (preceding even the careers of the Gracchi brothers). Nonetheless, this rivalry saw more physical and constitutional violence than any other until the Second Triumvirate, and in the process intensified a number of trends in Roman politics and revealed the efficacy of soldiers in advancing the careers of generals. It may be argued that, despite the continuation of republican politics in the following generation, the rivalry demonstrated the inability of the Republic to continue to function on the same premises of aristocratic competence and cooperation that enabled the Roman conquest of the Mediterranean.

Marius (ca. 157–86 BCE)

The late republican Roman general and politician Gaius Marius was born in Arpinum, a small town about 60 miles southeast of Rome. Not a member of the core consular aristocracy, Marius became one of Rome's most successful military commanders, holding an unprecedented number of consulships and inflicting two major defeats on the invading Germanic Cimbri and Teutones. Marius is credited with many important military reforms, initiating or strengthening many of the trends that eventually promoted the downfall of the Republic. Marius enlisted soldiers from the *capite censi* or propertyless class, and relied on his fame to bypass the normal mechanisms of aristocratic consensus and competition. Marius deliberately emphasized his non-aristocratic background, using it to create a persona of the archetypal Roman farmer-general, displaying the associated values of frugality and discipline.

Little is known about Marius' early life. Contrary to Plutarch's insistence on his humble origins, he was probably from the equestrian order, which enabled him to hold military offices and run for magistracies, though he was a "new man," whose ancestors had not held elected office in Rome. Marius appears on the Roman political and military scene as an officer in the Numantine War (134–133 BCE) commanded by Scipio Aemilianus. Though his outstanding courage impressed Scipio, he did not form an alliance with Aemilianus, but with the Metelli, one of whom successfully backed Marius for his first two magistracies, a quaestorship held in the late 120s BCE and tribune of the plebs in 119 BCE.

Marius' ambition became clear during his tribunate of the plebs, when he opposed the consul Cotta's proposal, even when his patron Caecilius Metellus Numidicus supported him. Although tribunes had this power,

Marius' opposition was egregious because, as Metellus' client, he should have followed his patron's lead. Passed over for the aedileship, Marius' next magistracy was the praetorship of 115 BCE.

Though Marius was capable, compared to his peers, his background and relative poverty were obstacles. Marius' propraetorial command in Spain not only provided him with money and fame, but also allowed him to demonstrate his real strength, military command. He also made a marriage alliance with the patrician Julii Caesares, thereby freeing him somewhat from his reliance on the Metelli. His next post, in 109, was legate for Metellus in the African campaign against Jugurtha.

The war against Jugurtha was controversial and difficult for the Romans. Jugurtha was the nephew of Micipsa, the ruler of Numidia and a strong Roman ally. On his death in 118, Micipsa left Numidia to his own two sons as well as Jugurtha. Jugurtha had one of the brothers killed and forced the other, Adherbal, out of Numidia. Though initially accepting Roman arbitration, Jugurtha soon attacked Adherbal, claiming his half of Numidia. By 112 Jugurtha's execution of Roman *equites* forced the Romans to retaliate. Rome's military response was unsuccessful, and followed by accusations of incompetence and corruption. According to Sallust, Jugurtha's friends warned him that "at Rome everything is for sale" (Sallust, *Jugurthine War* 8).

Metellus' command in Numidia was successful, restoring discipline to the demoralized Roman army. Marius and another legate, Rutilius Rufus, later a bitter rival, introduced new military innovations, Rufus with gladiatorial methods of training for soldiers, but Marius winning his soldiers' loyalty. Exploiting his new fame, Marius won the consulship in 107, replacing Metellus as commander in Numidia.

As consul in 107, Marius chose to enlist only volunteers, and took the unusual step of allowing men of the lowest property class, the *capite censi*, normally excluded from service, to join. Marius may have taken this step for his immediate advantage, not foreseeing the long-term effects of creating an army dependent on their commander for pay and post-discharge benefits. Such armies became more loyal to their commanders than to the Republic, and the grants of land to discharged soldiers proved even more divisive. Commanders, in their turn, supported by extremely loyal soldiers, gained great political leverage. The traditional nobility, lacking such support, lost influence.

In the war against Jugurtha, Marius made progress primarily through low-intensity conflict. Finally, Bocchus, Jugurtha's father-in-law, surrendered Jugurtha to Sulla, Marius' trusted quaestor. Sulla publicized his role and so appeared to diminish Marius' glory, and more importantly, credit for the victory. This was the first instance of the rivalry between Marius and Sulla.

Marius was then assigned the command of the war against the Germans. Beginning in 113, the Cimbri and Teutones invaded the Roman province of Transalpine Gaul and inflicted successive humiliating defeats on the Romans, most seriously at Arausio in 105. Although the Cimbri and Teutones halted, news of the defeat induced panic at Rome, and made Marius the overwhelming choice for the consulship of 104 and in the following four years.

During these years in command, Marius may have implemented the military reforms for which he is credited. In some cases, he consolidated long-term trends, such as the shift from the manipular legion to the uniformly equipped and flexible cohort legion, often called the "Marian legion." However, Marius did not introduce cohorts, which date back to the Spanish wars in the earlier second century BCE.

Other reforms are attributed to Marius, such as the modification of the *pilum* (javelin) to prevent its reuse by enemies in battle, or the replacement of four different legionary standards with the eagle. According to Plutarch, Marius won the loyalty of his soldiers by sharing their labors and hardships. They consequently not only accepted Marius' stricter regulations, but also called themselves "Marius' mules." Earlier Roman generals imposed similarly severe discipline. Such hardships only underline Marius' appeal to the general population. The label also emphasizes a larger point: Marius was the first of many late republican commanders who used personal bonds to override state authority.

Marius' outsider status both benefited and disadvantaged him. By emphasizing his lack of aristocratic culture, he won voter sympathy. Whatever his personal leanings, such a background made him a better fit for *popularis*-style politics, and in combination with Rome's military needs enabled him to win an unprecedented five consecutive consulships. He would hold seven consulships in his lifetime. But his time in the field away from Rome gave his political enemies many opportunities to work against him. He could not call on the extensive network of connections that the

nobility possessed. He therefore allied with the *popularis* politician Lucius Appuleius Saturninus, who as tribune in 103 combined a benefit package for Marius' veterans with an extension of grain donations passed by Gaius Gracchus in 122.

Saturninus also used Marius to win greater influence. In 100, Saturninus as tribune, with his ally Gaius Servilius Glaucia as praetor, promoted a land bill that gave special privileges to Marius (then consul for the sixth time). The bill extended Roman citizenship to some Italians, and required all magistrates and senators to swear to uphold it. This was deeply insulting to the aristocracy. Marius took the oath, but undercut it by adding the phrase, "insofar as the law is valid." Except for Metellus, who had already gone into exile, all senators and magistrates followed Marius' example. The bill of Saturninus and Glaucia alienated Marius from the Roman nobility, while making Saturninus a new enemy of Marius.

Italians continued to demand the Roman citizenship through the 90s, revolting against Rome when their Roman champion, the tribune Marcus Livius Drusus, was assassinated in 91. The Social War, as this conflict would be called, derives its name from the Latin name for ally, *socius*. This was a difficult war for Rome. The Italian allies had long fought besides Roman soldiers, and so were just as experienced and skilled as their opponents. Ironically, the Social War was ended by Rome granting citizenship, first to loyal allies, then to their opponents as well.

In the Social War, Marius, by this point almost 70, was given a command. His service was short, and though he was victorious, he was not reappointed. However, once Marius returned to the spotlight, he became determined to stay there. At this point, Sulla, also a commander in the Social War, was reaching the pinnacle of a traditional political career, having been elected consul in 88. Sulla had also received the command against a new enemy, Mithridates VI of Pontus, who genuinely threatened Roman interests and, if defeated, would greatly enrich a Roman commander and army.

Sulla also had to attend to domestic concerns. Though the Social War was largely over, pockets of serious resistance remained. New Roman citizens also required incorporation into Rome's popular assemblies. The old Roman population resented this enfranchisement of the allies. Furthermore, the nobility wanted to limit the influence of these new citizens. The tribune Publius Sulpicius Rufus distributed them equally in the units of the *comitia*

tributa, rather than packing them into a small number of units and thus decreasing their power. This displeased many Romans. Sulpicius, needing aid, collaborated with Marius and his new ally, Lucius Cornelius Cinna, who would trade their support in return for the consulship. Marius' additional condition was the command against Mithridates.

Sulla attempted to block Sulpicius' bill by *iustitium*, a temporary suspension of public business. A widespread riot resulted. Sulla hid out, ironically, at the house of his old enemy Marius. In return for lifting the *iustitium*, Marius helped Sulla out of the city, where Sulla joined his army as they besieged Nola, the last major Italian stronghold. Sulpicius used this opportunity to pass his bill and transfer the Mithridatic command to Marius. Exploiting their popularity and the sovereignty of the popular vote, Marius and Sulpicius used a *plebiscitum* to pass these measures, bypassing normal Senate approval for any bill.

Sulla's reaction was swift, severe, and completely unexpected. By telling his army that Marius planned to enlist other soldiers for the Mithridatic war, Sulla persuaded his soldiers to unify behind him. Then Sulla took the unprecedented step of marching with this army against Rome. He easily took the city, which had no effective resistance to him, and declared Marius, Sulpicius, and their allies public enemies. He canceled Sulpicius' legislation and took back Marius' command against Mithridates. While Marius and Cinna both escaped, Sulpicius was killed in the attempt. Sulla then departed with his army to the war against Mithridates, and was gone for some years.

Marius returned from exile in 87 and joined Cinna in marching on Rome. They were made consuls for 86, Marius' final magistracy. Already old, his physical decline was likely accelerated by the events of the last years of his life. He fell ill and died 17 days after taking office. His son, Marius the younger, and his adopted nephew, Marius Gratidianus, together with Cinna and Carbo, attempted to carry on the Marian cause; Marius the younger and Marius Gratidianus both perished in the Sullans' recapture of Rome in 82.

Plutarch's narration of one account of Marius' death depicts his feverish delusion that he was fighting in battle against Mithridates. While this passage is embellished, it showcases two Marius' ambition and fierce military temperament. Although ambition and militarism characterize the Roman aristocracy, the period in which Marius lived allowed him to exploit them to reach unprecedented heights. The structural weaknesses of Roman

Republican government, notably the growing willingness of politicians to oppose the Senate, gave Marius multiple opportunities to contrast his real military accomplishments with the relative ineffectiveness of the Roman aristocracy. This, combined with the new dynamic Marius established between commander and army, became important factors in the end of the Roman Republic.

Sulla, Marius' archrival, learned these lessons from Marius, though his formulation of policy was different. When Sulla returned from Asia and inflicted even bloodier reprisals on the surviving supporters of Marius, he made himself dictator and installed reforms that were intended to increase the power of the Senate and counter populist tendencies. The lesson Sulla's successors learned, however, was the one Sulla had learned from Marius: that political power could derive from the army.

Mark Antony (83–30 BCE)

Marcus Antonius was a member of the Second Triumvirate and thus a leading figure in the fall of the Roman Republic as well as the ally and lover of the famous Cleopatra, with whom he waged an unsuccessful war against

Octavian (Augustus) and Agrippa for control of the Roman Empire.

Antony was born January 14, 83 BCE to a family very active in late republican politics. His grandfather, Antonius the Orator was put to death by Marius in 87 BCE. Antony's father as praetor in 74 BCE unsuccessfully fought the pirates based in Crete, for which he earned the mocking *cognomen* Creticus, as if he had conquered them. He died soon after.

Antony had personal reasons to ally with Caesar and to hate Cicero. Antony's mother Julia (of the Caesar branch) married the patrician Publius Cornelius Lentulus Sura (cos. 71), who was implicated in the Catilinarian conspiracy and executed by Cicero without a trial, motivating Antony to hate Cicero. Antony entered Roman politics as a follower of Curio the Younger (tribune 50) and Clodius Pulcher (tribune 57), the latter a notable enemy of Cicero.

Denarius of Mark Antony, ca. 41 BCE. After the assassination of Caesar, Antony, Octavian, and Lepidus formed the Second Triumvirate, an alliance that enabled

them to defeat and persecute their enemies. This coin, which gives Mark Antony the titles *imperator* and *Illvir (triumvir)*, depicts Octavian on the reverse. (CM Dixon/Print Collector/Getty Images)

Antony then pursued a military career, for which his bold character was suited. Antony served under Gabinius in Syria and helped defeat first the Jewish revolt of Aristobulus and later Archelaus and Berenice IV of Egypt in restoring Ptolemy XII Auletes. Antony's magnanimous burial of Archelaus won him admiration (as with the burial of Brutus after Philippi). His mother recommended him to her kinsman Julius Caesar, under whom he served in Gaul as a quaestor.

Returning to Rome from Gaul in 50, Antony was elected augur and then tribune (49), playing a crucial role defending Caesar's interests before and during the Civil War (Plutarch, *Antony* 5, *Pompey* 58–59; Appian, *Civil Wars* 2.33). But Antony abused his power governing Rome during Caesar's first Spanish campaign and started a bitter rivalry with Cornelius Dolabella. He regained favor by bringing much needed reinforcements to Caesar prior to Pharsalus and commanded the left wing at that decisive battle. However, his ongoing feud with Dolabella caused Caesar to pass over Antony for the consulship of 46 (which went to Lepidus). For this perceived slight Antony abstained from the African War against Cato and Juba, but later received the consulship of 44. His second wife Fulvia was the widow successively of his friends Clodius and Curio.

In February 44, Antony thrice offered Caesar a wreath tied with a diadem (insignia of kingship) during the Lupercalia festivities. This may have been a devoted partisan's attempt to promote Caesar's autocracy, but Antony misjudged the opinion of the crowd and Senate. However, Arthur Eckstein and others have suggested that Antony deliberately placed Caesar in a compromising position owing to his lingering discontent regarding Dolabella's impending promotion to consul. Unable to defeat Dolabella by legal means, Antony claimed as an augur that an ill omen prevented Dolabella's election (Plutarch, *Antony* 11.2–4).

Cassius and other conspirators wanted to assassinate both Caesar and Antony, but Marcus Brutus insisted Antony be spared, a favor Antony only partly later returned. For the results of the assassination were worse for the conspirators than the domination of Caesar. Although he had made a pact with Brutus and Cassius, in a speech to the people in which he exhibited

Caesar's wounded corpse, Antony whipped his audience into such a frenzy that the mob tried to burn down the houses of the lead assassins. Brutus and Cassius were forced to flee Italy and assemble an army abroad.

In a single year, Antony made enemies of Dolabella, Cicero, the assassins, the Senate, and Octavian (whose adoption he tried to block). At the end of the year, Antony illegally claimed the governorship of Cisalpine Gaul and left Rome for this province, where he made war on Decimus Brutus, one of Caesar's assassins and true governor of Cisalpine Gaul. The Senate declared Antony a public enemy and sent the consuls of 43 (Hirtius and Pansa) and Octavian against him. They defeated Antony at the battle of Mutina (April 21), but both consuls perished. Some months later Octavian decided to cast his lot with Lepidus and Antony and formed the Second Triumvirate with them.

Their plans for domination included the proscription of real and perceived enemies. Octavian agreed to resign the consulship and was engaged to Antony's underage stepdaughter Clodia. The outlawry of Antony and Lepidus was lifted, and the assassins were declared *hostes*. A blood bath in Rome followed among whose victims were Cicero and 3,000 others, whose property was confiscated (Plutarch, *Antony* 19–21; Suetonius, *Augustus* 13; Appian, *Civil Wars* 5.10–30, 36–51; Dio 47.3–15). Having raised the funds needed to make war on Brutus and Cassius, Antony and Octavian invaded Greece and defeated the assassins in the two battles of Philippi (October 3 and 23, 42); Brutus and Cassius committed suicide. Although Octavian wished to desecrate Brutus' body, Antony insisted it be given a proper burial.

The triumvirs now divided the empire. Antony presided over the eastern Mediterranean to punish those who had helped the assassins. He summoned Cleopatra to Cilicia, where she made her famous arrival on the River Cydnus as Aphrodite to his Bacchus. The two immediately became lovers and allies. Meanwhile, Octavian had to satisfy his veterans' demands for discharge benefits, causing the Italians to revolt in the Perusine War (41–40). Lucius Antonius and Fulvia were besieged by Octavian at Perugia and defeated. Antony returned to Italy in 40, but arrived too late to save to defend his wife and brother. Yet another civil war almost broke out, but in the Treaty of Brundisium (40), Octavian, Antony, and Lepidus renewed the Second Triumvirate. Antony, now a widower, married Octavia, the newly widowed sister of Octavian. The Second Triumvirate next made peace with

Sextus Pompeius in the Pact of Misenum, after which Antony and Octavia sailed east to Greece.

Antony was slow to send ships to help Octavian, who had begun a new war against Sextus Pompeius. When Antony and Octavia did come west, Octavian initially rebuffed them, but agreed at Octavia's entreaties to accept their help and promised two legions to Antony for the upcoming war against Persia. Antony returned east, leaving Octavia in Rome, but himself rejoined Cleopatra while he prepared to invade Persia.

However, Antony's invasion of Persia was a disaster (Velleius 2.82.1-4; Plutarch, *Antony* 36-50), and it lowered his reputation as a general and as a leader. He returned to Egypt where he celebrated a spectacular pseudo-triumph for his treacherous capture of the shah of Armenia. At the infamous "Donations of Alexandria" (34), Antony further inflamed Roman opinion by giving Roman provinces to his young children, the children of Cleopatra, whom Antony had married by this time. Furthermore, by divorcing Octavia, Antony turned public opinion in Italy against him as the likelihood of war loomed in 33 and 32. Probably orchestrated by Octavian, xenophobic accusations flew that he had been corrupted by "Eastern ways," and rumors claimed he had succumbed to Cleopatra's spells or drugs.

When Octavian declared war against Cleopatra in 33 (Sosius was consul when war was declared), Antony responded in kind, but he failed to seize the initiative and move quickly to take the war west. Instead, Octavian and Agrippa raised troops and funds and brought the war to Greece, where a final battle was fought at Actium on September 2, 31 BCE. Although Antony should have trusted his superior land forces, he was persuaded by Cleopatra to fight at sea. Plutarch says she was hedging her bets so that she could escape quickly by sea to Egypt if the battle turned against them, but by his own report, her fleet abandoned his fleet while the outcome was still very much in doubt, carrying off the treasury. When Antony saw her depart, he too abandoned his fleet, and followed her in a small sloop, although many of his ships continued to fight all day, unaware that he had deserted them.

Agrippa and Octavian won a total victory at Actium, and Antony's army immediately surrendered to Octavian's general Statilius Taurus. In a few short months every city and province surrendered to the armies of Octavian's coalition until the dragnet closed upon Egypt. Antony's haphazard efforts to resist were completely futile. Cleopatra let him believe she had killed herself, expecting him to kill himself, but hoping for better

terms from Octavian once Antony was dead. Antony mortally wounded himself, but did not succeed in killing himself. Cleopatra found him, and he died in her arms. She arranged for his burial. She did not long survive him. Learning that she was to be displayed in Octavian's triumph over Egypt, she too killed herself rather than suffer this humiliation.

Antony's reputation suffered at the hands of Octavian and later Greek and Roman historians and biographers. His judgment in the matter of Cleopatra was depicted as "madness," and this poor judgment was extrapolated throughout his life, rendering it problematic why Octavian, a very young but already shrewd politician, chose Antony for the Second Triumvirate. Antony was a bold military leader and warrior (as Octavian was not) and closely tied to Julius Caesar, as well as the enemy of Caesar's and Octavian's enemies. However, after a certain point Antony and his uncertain judgment became no longer useful to Octavian, who preferred to have no rivals. Nonetheless, the outcome of the contest won at Actium may not have seemed inevitable to contemporaries. After the battle of Actium, a man brought a talking crow to Octavian; it had been trained to say "Hail, emperor Caesar!" Octavian bought it for 20,000 sesterces, but a rival of the man told Octavian that the man had another crow, trained to say "Hail, emperor Antony!" (Macrobius, *Saturnalia* 2.4.29–30).

Marriage of Soldiers

For the first two centuries of the Principate (ca. 13 BCE–197 CE) Roman soldiers, both legionary and auxiliary as well as members of the fleet, were not legally allowed to marry during their period of service. The ban on marriage was instituted by the emperor Augustus, probably in 13 BCE with a series of other military reforms. The legal ban may have been lifted by Septimius Severus in 197 CE. At the least he allowed soldiers to cohabit with women while serving in the Roman army (Herodian 3.8.4–5). There is some evidence that in 205 CE the ban was still in effect, specifically a military diploma that still gives the right of *conubium* (legal marriage) to the retiring soldier. Various emperors made allowances to offer the same rights of civilian men to soldiers, in evidence by edicts that gave special rights of inheritance and other allowances to soldiers. Any relationship that existed before a man entered service was voided. Such an outcome would have been unusual for Roman citizen men who typically married later in life, but may not have been uncommon for the non-citizen auxiliary soldiers entering the ranks, who would have followed their native law and custom.

Officers were allowed to be married during service, but a man could not take a wife who originated from the province in which he served (Digest 23.2.63). There is ample evidence for the accompaniment of wives into the military environment with their husbands. The most famous instance of a general's wife living within the military settlement is reported by Tacitus. Agrippina the Elder accompanied her husband Germanicus, general of the German armies in the beginning of the first century CE, to the northern frontier and resided within the military camp with other wives and children. Famously, the emperor Gaius was born here and given the name "Caligula" (Little Boots) by the soldiers. It is somewhat unclear what rank of officer was allowed the privilege of marriage, but enough evidence indicates that wives of auxiliary centurions and decurions resided in military settlements, found most famously in the Vindolanda tablets from the northern frontier in Britain.

The existence of a legal ban on marriage for common soldiers and members of the fleet did not mean that soldiers refrained from starting and maintaining relationships during service. Ample evidence from inscriptions, military diplomas, and archaeological material indicates that soldiers still took *de facto* wives, even when they were not recognized by the Roman

legal system. Military diplomas of auxiliary veterans often name the wife of a soldier with which he will share the right of *conubium*, an important privilege given together with Roman citizenship after 25 years of service. Diplomas also name the children of these unions, who were granted citizenship at the same time. Several diplomas name four or more children on the document suggesting that some soldiers started families and had several children during military service.

Mars

The Roman war god Mars, often identified with the Greek god Ares, played a major role in the religious aspects of Roman warfare. In early Rome, Mars, Jupiter, and Quirinus protected the city and were each honored by priests

called *flamines*. The Capitoline triad of Jupiter, Juno, and Minerva later became Rome's patron gods. Originally, Mars protected agriculture. In his work *On Agriculture*, Cato the Elder names Mars Pater (Mars the Father) in a prayer said during the ritual purification ceremony called the *lustratio*, used on fields. Mars lent his name to March, which was the first month of the Roman calendar until 153 BCE. In March, the Romans both set out for battles and bred cattle, linking the agricultural and military functions of Mars.

The Salian priests served Mars by dancing, singing, and carrying the *ancilia* (sacred shields). The festivals of Mars also included horse races held in the Campus Martius (Field of Mars) on March 14 and the *Tubilustrium*, a purification of the sacred war trumpets, on March 23. On October 15, the Romans held a chariot race, from which the right-hand horse of the winning pair was sacrificed to Mars (October Horse). On October 19, the *Salii* performed another ceremony, the *Armilustrium*, to purify the weapons in preparation for storage until the next campaign season.

Mars' main altar stood in the Campus Martius in Rome, where citizens serving in the legions trained and met to vote in the *comitia centuriata* (the main citizen assembly). In the *Aeneid* Vergil, among others, named Mars the father of the legendary founders of Rome, Romulus, and Remus. Mars' temples stood outside the Porta Capena (388 BCE), in the Circus Flaminius (133 BCE), and in the Forum of Augustus, dedicated in 2 BCE. Augustus built the Forum's temple to Mars Ultor, Mars the Avenger, after the death of his adoptive father, Julius Caesar, in 44 BCE.

Mars as god of war also served as a point of communication with other communities in and near Italy. Mars' sacred animals, the wolf and woodpecker, showed Sabine colonists the way to their new homes during the *ver sacrum* (sacred spring). The Samnites sprung from these colonies, and thus were related to the Romans, who also had married with the Sabines. The Celtic peoples in Gaul identified a large number of their military or protective gods with Mars (a process called syncretism) as the Romans gained more control over Europe. Among the many gods resulting from this syncretism were Mars Caturix (Mars king of combat) and Mars Mullo (Mars the mule), who was popular in northwestern Gaul.

Mars Ultor, Temple of

The Temple of Mars Ultor was a temple built to Mars the Avenger as the centerpiece of the Emperor Augustus' forum in Rome. This temple reinforces the connection between Mars, the god of war, and Augustus' victory over his family's enemies. The temple commemorated the defeat of the assassins of Caesar (d. 44 BCE), the adoptive father of Octavian and last great dictator of the Republic. Octavian (given the name of Augustus in 27 BCE) vowed this temple in 42 BCE during the battles of Philippi in Greece in which Brutus and Cassius, the assassins of Caesar, were defeated. The temple was dedicated on May 12, 2 BCE.

View of the Temple of Mars Ultor. Built by Augustus (27 BCE–14 CE) in fulfillment of his vow to avenge the assassination of his adoptive father Julius Caesar, the temple

literary papyri.

When Judaea came under Roman rule in 6 CE, Roman soldiers garrisoned the site. In 66 CE, a Jewish rebel group, the Sicarii (Latin for assassins), under the command of Menahem ben Judas, captured Masada, slew the Roman garrison, and pillaged the armory. Menahem returned to Jerusalem to participate in the opening stages of the rebellion. There, he was killed by his political rivals. His kinsman Eleazar ben Yair led the remainders of this group, some 960 men, women, and children back to Masada. Throughout the Jewish War, they raided the surrounding countryside.

After reducing the remaining Jewish fortresses of Herodium and Machaerus, in 72, the procurator Silva led his legion to Masada. The Roman army built a wall around Masada and then constructed an earthen ramp leading up the western side of the plateau. The fortifications of the Roman army camps are still visible from the summit of Masada. The Romans brought a battering ram up the ramp, breaching and burning the secondary wooden wall that the Jews had constructed. Knowing that the Romans would soon storm the fortress, the leader of the group Eleazar ben Yair argued that it was better for the defenders to die by their own hands than to be slaves. Persuaded, the Jewish defenders committed mass suicide. Ten men were assigned to carry out the massacre, and then killed each other, suggesting a strong aversion to the actual act of suicide.

The fall of Masada ended organized Jewish resistance to the Romans. The first-century historian Josephus (*Jewish War* 7.389–397) is the only narrative source for the siege of Masada. According to him, two women and several children survived by hiding in a cistern. These women reported what had transpired to the Romans, from whom Josephus transcribed this story.

Masada has served as an important symbol for the state of Israel. The poem *Masada* (1927) written by the Ukrainian immigrant Yitzhak (Isaac) Lamdan, elevated this obscure story and archaeological site to preeminence in the Zionist movement. Masada also became the site where the Israeli military swore in its recruits, after basic training was finished. Yigael Yadin's excavation of Masada was a national event. Even to this day, Masada is still an important symbol for the Zionist movement.

Masinissa (ca. 238–148 BCE)

Masinissa was a Numidian king who fought on both sides of the Second Punic War. As a client of Rome, he created a unified and powerful Numidian state in North Africa, acting as a Roman counterweight to Carthage. The son of a Numidian tribal chieftain, Masinissa first appears in 213 BCE fighting in North Africa for the Carthaginians. He defeated another Numidian tribe, led by Syphax, a rival chieftain who had allied with the Romans. He then fought in Spain against the Romans. After his father's death, Masinissa was forced out by Syphax, who had changed alliance to the Carthaginians and used their support to unify the Numidian tribes into one powerful kingdom. After several defeats, Masinissa sought alliance with Rome and Publius Cornelius Scipio Africanus, whom he befriended.

Following Scipio's invasion of North Africa in 203 BCE, Masinissa and a Roman commander Gaius Laelius led a combined Roman-Numidian army which defeated Syphax. Masinissa recovered not only his kingdom but Syphax' as well, leaving him sole ruler of a unified Numidian kingdom. The peace treaty which followed Carthage's defeat confirmed Masinissa's gains, creating a Roman client kingdom which dwarfed the rump Carthaginian state. Masinissa ruled Numidia for over 50 years until his death in ca. 148, increasing the prosperity of his own kingdom and, with Roman support, chipping away at Carthage's remaining territory. This antagonistic policy eventually led to the Third Punic War and ultimately the Jugurthine War for control of North Africa.

Maxentius (Emperor) (306–312 CE)

Maxentius, born ca. 283, was emperor from 306 to 312 CE, based in the city of Rome and Italy and laying claim to rule in the west. He was the son of Maximian, Diocletian's colleague in the First Tetrarchy, but was passed over for the choice of Caesar in 305, probably due to his youth. In 306, after Constantine's revolt at York, the praetorians and Roman populace acclaimed Maxentius as emperor. The revolt was also triggered by the Caesar Severus' imposition of a census on Italy (which had not been taxed since 167 BCE).

As emperor, Maxentius adopted a more traditional mode of imperial self-presentation, independent of the Tetrarchy, at first calling himself *princeps* and then Augustus. He sought the aid of Maximian, now in retirement. Maximian needed little encouragement to resume the imperial role in his own right. When the Caesar Severus invaded Italy to suppress Maxentius' revolt, Maximian's and Maxentius' army defeated Severus, whose army contained many of Maximian's veterans who refused to fight their old commander. Maxentius confined Severus to Ravenna and later executed him. For his part, Constantine made a tenuous alliance with Maxentius through Maximian.

In 308, Maximian quarreled with Maxentius, attempting to depose him and failing; Maximian fled to Constantine. At the Council of Carnuntum Maxentius was not included and Galerius declared him a public enemy. After Maximian's death in 310, Constantine broke entirely with Maxentius, invaded Italy, and defeated Maxentius at Verona and Saxa Rubra. Maxentius was killed in the famous battle of the Milvian Bridge (October 28, 312).

Maximian (Emperor) (286–305 CE)

Marcus Aurelius Valerius Maximianus (Augustus 286–305, 306–308, 310 CE) was Diocletian's coruler and one of the Tetrarchs. He campaigned and governed chiefly in the western empire, including Italy, Gaul, Spain, and Africa. His deputy Constantius I was responsible for the recovery of Britain. Maximian remained loyal to Diocletian, but after their mutual abdication in 305 Maximian was unwilling to remain inactive and disrupted the so-called Second Tetrarchy by resuming the purple. In the Tetrarchic Civil War, he backed Constantine, but eventually perished.

No more is known of Maximian's youth than of Diocletian's. Maximian, born ca. 250, is said to have been the son of shopkeepers at Sirmium; he entered the army and advanced as an army officer. He and Diocletian (then called Diocles) were presumably friends, but there are no details of the bond between them. In the Roman army, many soldiers formed close friendships and termed each other "brothers."

In 285, Diocletian elevated Maximian to the rank of Caesar to combat the Bagaudae, a group or groups of bandits ravaging Gaul who were led by Aelianus and Amandus. Maximian defeated the Bagaudae and also campaigned throughout his reign against Germanic invaders. He was elevated to Augustus in 286 probably to combat Carausius (286–293), the captain of the English Channel fleet who revolted and took over Britain and North Gaul. Carausius even claimed to be co-Augustus with Diocletian and Maximian. Maximian prepared a fleet for the invasion of Britain, but the fleet was shipwrecked.

Silver antoninianus of Maximian (286–305, 307–308, 310 CE). Maximian was Diocletian's co-emperor, elevated to Augustus in 286. Maximian retired in 305 with Diocletian, but when civil war broke out, Maximian resumed the role of emperor until he was persuaded to abdicate in 308. His revolt in 310 led to his downfall and death. Located in the Yale University Art Gallery, New Haven, Connecticut. (Yale University Art Gallery)

In 293, Diocletian elevated Constantius I and Galerius to the rank of Caesars. Constantius was assigned to Maximian as his deputy, and expelled Carausius from northern Gaul. Constantius then went to war against Carausius' successor Allectus, who had murdered Carausius. Constantius successfully crossed the channel and retook Britain (296). In the 290s, Maximian campaigned against various tribes in Spain and North Africa.

As Diocletian's fellow Augustus, Maximian was not merely a general. He had his own court, officials, and bureaucrats and was expected to give justice and perform the other administrative duties of emperors as he

traveled around the western empire. He established a preferred capital at Milan. When Diocletian began the persecution of the Christians (303), Maximian enforced the edicts in Italy, Spain, and Africa.

Maximian had a son, Maxentius (born ca. 283). He may have intended Maxentius to succeed him. However, in 303 Diocletian forced Maximian to agree to abdicate with him (and probably to accept his choice of Caesars). It is not known when Diocletian planned to abdicate at this time. He was very ill in 304–305, forcing his decision to abdicate on May 1, 305. At the same time, Maximian also abdicated. Constantius I and Galerius became the two Augusti, and Severus and Maximinus II Daia (Galerius' nephew) the two Caesars. Maximian's son Maxentius and Constantius I's son Constantine were passed over.

However, after Constantius' death and Constantine's revolt at York in 306, and the revolt of his son Maxentius at Rome, Maximian came out of retirement and claimed the purple for himself (306–308). Maximian allied with Constantine against Galerius and gave his daughter Fausta in marriage to Constantine. He tried to depose Maxentius, but failed and took refuge with Constantine. When Galerius called a conference of all the emperors at Carnuntum in November 308 to try to salvage the Tetrarchy, Maximian agreed to abdicate again, probably persuaded by Diocletian. However, Maximian revolted again against Constantine in 310 and was captured at Massilia. Maximian was executed or perhaps forced to commit suicide by Constantine.

The sources for Maximian (including Lactantius and Aurelius Victor) contrast him unfavorably with Diocletian. Maximian appeared harsher than Diocletian, carrying out unpopular policies for him (Eutropius 9.27). Maximian allegedly molested the daughters of noble families (as did many other “bad emperors”) (Lactantius *DMP* 8.5). In the Tetrarchic conflict, Maximian proved a rogue emperor and faithless to Constantine. These characterizations contradict the Tetrarchic ideology of harmony and stem from the pro-Constantinian tradition in which Constantine had to justify the execution of his father-in-law. Contemporary Latin panegyrics provide a corrective view.

Maximinus I Thrax (Emperor) (235–238 CE)

A Roman emperor (235–238 CE), Gaius Iulius Verus Maximinus was the first man to become emperor from the ranks of the army. Although he was given the name Thrax (“the Thracian”) in late Antiquity, he was probably from the province of Moesia. The ancient sources also record that he was a shepherd; regardless of the truth of this story, Maximinus was certainly of more humble origin than most previous emperors, given his military background. He married Caecilia Paulina, a woman of unknown background, who bore him a son, Gaius Iulius Verus Maximus. Maximus was still a boy when his father elevated him to Caesar and perished besides his father in 238.

Maximinus’ early career is uncertain prior to the reign of Alexander Severus. He served in the emperor’s army during the Persian wars of 231–233 CE, and later participated in the German campaigns in 234–235 CE, with the special responsibility of training recruits. This career path strongly suggests that Maximinus had reached equestrian status by the 230s CE, making him a junior officer. In March 235 CE, Alexander Severus was murdered by his troops in the camp at Mainz, and Maximinus was proclaimed emperor in his stead. Unlike the majority of previous emperors, Maximinus decided not to journey to Rome to meet the Senate, but continued to campaign in Germany. The Senate confirmed his elevation in

his absence, but resented the lack of respect shown by their new ruler. Paintings of Maximinus' victories in Germany that were sent back to Rome did little to soothe their anger. His financial policies aroused further resentment, notably his order to melt down statues, ornaments and religious offerings to raise funds for the treasury. This was necessary to bankroll Maximinus' decision to double army pay, which had been increased only a generation earlier by Caracalla. The campaigns in Germany were followed by further wars against the Sarmatians and Dacians between 236 and 238 CE.

In January 238 CE, a revolt broke out in the province of Africa, sparked by protests against Maximinus' harsh taxes. The rebels proclaimed the governor Marcus Antonius Gordianus emperor (Gordian I), and his position was soon recognized by the Senate. Capelianus, the governor of Numidia, remained loyal to Maximinus, and suppressed the revolt, but his regime had already begun to collapse. The Senate chose a board of 20 senators to protect the state, headed by two new co-emperors, Decimus Caelius Calvinus Balbinus and Marcus Clodius Pupienus Maximus. When the senatorial resistance marshaled their forces, Maximinus was finally compelled to return to Rome. In April 238 CE, he laid siege to the key strategic city of Aquileia in north Italy. When victory eluded Maximinus, his troops grew restless and murdered the emperor and his son. Maximinus' rise and fall illustrates the tension developing between different groups within the Senate, army, and administration over the course of the third century CE.

Latin and Greek historians, traditionally pro- senatorial, are hostile to Maximinus and depict him as semi-barbarian and brutal; the *Historia Augusta's Maximini Duo* (Maximinus Thrax and his son) is particularly unreliable and fanciful. The portrayal of Maximinus as impressively tall and strong but uncultivated, angry, and brutal draws on elite stereotypes of imperial soldiers.

Maximinus II Daia (Emperor) (309–313 CE)

Maximinus II Daia (Gaius Galerius Valerius Maximinus) was one of the Second Tetrarchic emperors (Caesar 305–308, Augustus 309–313). A nephew of Galerius, he was elevated to the rank of Caesar in 305. His region of activity was Syria and Egypt. As Caesar (deputy emperor), Maximinus became restless when other claimants to the purple (among them Constantine I, Maxentius, and Maximian) revolted. Maximinus did not accept the settlement at Carnuntum in 308 where Licinius, a friend of Galerius, was promoted to Augustus instead of himself and where he himself and Constantine were confirmed as Caesars with the title *fili Augustorum*. Maximinus revolted in 309, claiming the title of Augustus. He did not challenge the other emperors until after Galerius' death in 311 and the defeat of Maxentius in 312. After these events, Maximinus challenged Licinius over Asia Minor and invaded Licinius' domain of Thrace. Maximinus was defeated near Adrianople in 313, fled the scene, and committed suicide (or died from a disease) at Tarsus. He is known for persecuting the Christians actively in 306–308, and for doing so even after the persecution was formally ended.

Metaurus, Battle of the (207 BCE)

The battle of the Metaurus River was fought in 207 BCE, and as a Roman victory marked a turning point of the Second Punic War. A Punic army from Spain under the command of Hasdrubal was marching toward Italy with the intention of joining his army to that of his brother Hannibal. The Romans, however, had learned this plan through the capture of two Carthaginian couriers and were able to intercept the Carthaginians. The consul Livius Salinator was already in the region with an army, while the other consular army of four legions under Gaius Claudius Nero was further south in Italy, shadowing the army of Hannibal. These four legions left a small force to watch Hannibal while the rest marched swiftly north, meeting Hasdrubal's army near the Metaurus River. Hasdrubal was forced to deploy his troops hastily: Gauls on the left, Ligurians in the center, and Spanish on the right. Nero, commanding from the right wing of the Romans, found his way obstructed by a ravine, and, leaving enough troops to keep the Gauls occupied, marched the rest behind the Roman lines to emerge in a surprise attack behind the Spanish troops.

With the battle clearly lost, Hasdrubal threw himself into the fray and was killed fighting. Livy called the battle a disaster for the Carthaginians equal to that suffered by Rome at Cannae, and cites 56,000 enemy dead, an exaggerated claim contrasting with Polybius' more conservative 10,000. The battle at Metaurus marks the first Carthaginian loss on Italian soil during the Second Punic War and the turning point of the war for the Roman side.

Military Decorations

The Roman army awarded decorations (*dona militaria*) to individual soldiers to honor various feats of valor. In order of increasing prominence, *armillae* (arm bands), *phalerae* (discs), *torques* (necklets), and *hastae purae* (spear shafts) were less distinctive than *coronae* (wreaths), which were divided into the *corona aurea*, the *corona muralis* or *vallis*, the *corona civica*, and the *corona obsidionalis* or *corona graminea*.

In the Republic, *armillae*, *phalerae*, and *torques* were given to ordinary soldiers to honor brave deeds. They were customarily made from silver or gold, as was the *hasta pura* (probably miniature size) and the *corona aurea* and *corona muralis*. The *corona aurea* might honor some particularly heroic action but was not specific, in contrast with the other three *coronae* which were awarded for particular actions. The *corona muralis* or *vallis*, the “wall crown,” was awarded for being the first attacker to mount the wall of a besieged city. The *corona civica*, the “civic crown,” was awarded for saving the life of a fellow citizen in combat and required attacking and slaying the enemy. The *corona graminea* or *corona obsidionalis*, the “grass crown” or “siege crown,” was awarded (to a commander) for relieving a besieged army or city, thus saving the lives of the besieged. Pliny the Elder (22.4.6–8) emphasizes that the most prestigious honors, the *corona civica* and the *corona obsidionalis*, were made from worthless materials: oak leaves and grass, respectively. Aulus Gellius also describes the crowns (5.6.1–20).

The siege crown was awarded to very few Romans during the Republic (Pliny the Elder *Natural History* 22.5.9–6.12). It was won by Lucius Siccus Dentatus (below) and by Publius Decius Mus, and it was awarded to Quintus Fabius Maximus “Cunctator,” who defeated Hannibal by attrition in Italy. In the Third Punic War, Scipio Aemilianus won the *corona obsidionalis* for relieving cohorts surrounded by the enemy; on the strength of this and other brave deeds, he was elected consul and given command of the war. Sulla was awarded the siege crown for relieving the siege of Nola.

According to legend, the *dona militaria* were given at least in the fifth century BCE, as shown by the heroic warrior Lucius Siccus Dentatus

(*tribunus plebis* in 454 BCE), who amassed over 300 military decorations (the numbers vary: Valerius Maximus 3.2.24; Pliny *Natural History* 7.28.101–2; Gellius 2.11.2). The fabled Dentatus won eight single combats and boasted 45 scars on the front of his body and none on his back.

Detail from monument of Marcus Caelius, a high-ranking centurion who died in the Varian disaster (9 CE). Caelius wears military decorations, in particular torques and *phalerae*, flat disks strapped to his armor. *CIL* XIII 8648 = *ILS* 2244, located in the Rheinisches-Landesmuseum, Bonn, Germany. (Alfredo Dagli Orti/The Art Archive/Corbis)

Polybius (6.39) describes Roman military decorations in less detail, emphasizing the social context in which the general honored his soldiers

and reinforced a military culture in which all personnel competed for distinction. As with donatives, military decorations enabled ordinary soldiers (Roman citizens of low social status) to receive recognition and participate in the Republic's culture that glorified victory. Soldiers wore their decorations on "full dress" occasions, though armor (properly maintained and worn) bore most of the cultural significance of uniform in modern armies. Funerary monuments show that the *phalerae* were worn strapped to the cuirass. Military decorations, displayed in Roman homes according to Polybius, were probably handed down in families. Precious-metal decorations must have represented considerable wealth, but are distinct from plunder or from donatives.

In the Principate, statistical studies have shown that military decorations became more restricted by rank. In sociological terms, the early emperors rationalized and routinized military decorations by awarding them less frequently and associating them with specific ranks. Frequent awards of *dona militaria* (and to a greater extent cash donatives) to common soldiers were associated with the civil warfare of the late Republic, in which ambitious generals rewarded their followers to excess. As part of his political strategy of reducing the influence of the army, Augustus (27 BCE–14 CE) maintained military discipline strictly and awarded decorations sparingly (Suetonius, *Augustus* 24–25). This policy was continued by the subsequent early emperors.

In the Principate, ordinary soldiers below the rank of centurion were eligible for *armillae*, *phalerae*, and *torques*. They did not usually receive the higher decorations. Centurions and above might receive *coronae*, including the plain *corona aurea* and the *corona muralis* or *vallis*. Chief centurions (*primi pili*) might receive the *hasta pura*, and equestrian officers were also eligible for the *hasta pura* and a miniature *vexillum* (standard). Senatorial officers might receive all decorations except the *corona civica* and *corona obsidionalis*. The civic crown became an honorific attribute of the emperors, worn by their statues. The siege crown appears to have disappeared; the authors of the imperial era, such as Pliny the Elder, take an antiquarian interest in it.

The emperor might still single out and reward individual soldiers' exploits, as Hadrian (117–138 CE) honored legionaries and riders in an address at Lambaesis in North Africa, preserved in an inscription (*ILS* 2487, 9133–9135). The military diplomas, awarded to honorably discharged

auxiliary and fleet soldiers, praetorians, urban cohort soldiers, and *equites singulares*, were not decorations as such, nor (probably) were the golden rings that Septimius Severus (193–211) permitted soldiers to wear, an ornament previously marking members of the equestrian order (Herodian 3.8.5).

Despite the rationalization of decorations and their stratification by rank, there is much evidence (some of it documentary, including Latin inscriptions) that Roman military culture's emphasis on honor and victory persisted in the imperial period. In awarding decorations to their soldiers, the emperors affirmed their personal bond with their soldiers, on whom the imperial regime depended. The award of traditional decorations also maintained continuity with Rome's past, on which the emperors also depended for their legitimacy.

Traditional *dona militaria* seem to have passed out of use in the later Roman army, in which officers might receive cash payments and elaborate clothing and equipment as rewards for valor or promotion.

Military Diplomas

Military diplomas (a modern term) are documents inscribed upon portable bronze tablets, recording the privileges awarded to long-serving soldiers and veterans of the praetorian and urban cohorts, *equites singulares* (emperor's bodyguard), sailors in the Italian fleet, and auxiliaries in the provinces. The earliest known diplomas date from the time of the emperor Claudius (41–54 CE) and reflect his decision to open up Roman citizenship to provincials who had proved their value and loyalty to Rome by serving for 20 years or more.

Diplomas were issued to auxiliaries until the early third century and to other units until the mid-third century. The privileges awarded consisted of Roman citizenship for the individuals concerned, and for their children and descendants, and of the right of legal marriage with non-Roman wives. From 140 CE, children of auxiliaries were no longer regularly included as beneficiaries of Roman citizenship, only those born and officially acknowledged in front of a governor after their father had ceased military service. The emperor himself made the awards, maintaining the sense of close connection between military personnel and the emperor.

Each diploma was an official extract copied from the imperial constitutions which were displayed as inscriptions upon large bronze tablets on the Capitol at Rome, none of which otherwise survive. These constitutions could relate to several hundred soldiers in different units, but the diploma was a personalized version issued to an individual and was kept by him as proof of his status and legal rights. It is unclear whether or not bronze diplomas were routinely issued, or whether individuals had to request and pay for their diplomas. If the former, then only a tiny fraction of the originals has survived, but this would come as no surprise given the likelihood that the bronze was melted down and reused.

The physical format of the tablets indicated the status of these texts as legal documents. A diploma consisted of two rectangular bronze tablets, tied together with copper wire, and sealed by seven witnesses, who verified that the text was an authentic and accurate copy of the original constitution, via the formula "copied and checked." A diploma contained two texts, on its interior and exterior faces, with the interior text usually written in a different hand from the exterior, and with scant use of abbreviations. The interior text was intended to be consulted only in case of dispute, and was not read in ordinary circumstances: it acted simply as a legal safeguard. The relative value of the two texts shifted over time, however, with the accuracy of the exterior text becoming regarded as the more important. Over 650 diplomas have been found in different parts of the empire. Many were collected in *Corpus Inscriptionum Latinarum* vol. XVI (1936), with Supplement (1955). Since then, many new examples have been published in recent years, particularly from the Balkans. New diplomas are found regularly and represent an exciting area in which we are still gaining new knowledge of recruitment, command, and deployment within the Roman army.

Military Discipline

The Roman army is stereotyped in modern Western culture as having particularly strict discipline. From a structural standpoint, an organized state army (as opposed to bands of pre-state or tribal warriors) requires discipline to accustom its soldiers to obey orders, physically and emotionally prepare them for combat, and punish crimes and infractions. However, “primitive” or ritual aspects of discipline probably dominated in the early Republic. Discipline became more rationalized and subject to the individual commander’s judgment in the middle and late Republic, though a drop in soldiers’ status also made discipline harsher. In the late Republic and Principate, discipline conflicted with the warlord’s or emperor’s role as patron of his soldiers. Discipline became more bureaucratic, employing military law and documentation. It is not certain that discipline deteriorated in the later Roman army proper, as contrasted with the behavior of later Roman allied troops (*federates*) under their native commanders.

Many aspects of Roman warfare in the early Republic (ca. 509–264 BCE) were probably governed by religious ritual. The opening and the closing of the war season, from March to October, were marked by rites purifying the army, its weapons, and its trumpets. A ritual boundary, the *pomerium*, demarcated the city of Rome (the *urbs*) and in general *domi* (“at home”) from *militiae* (the “war zone”). Citizens might not bear arms within the

pomerium; troops were mustered outside it, on the Campus Martius. During military service, citizens were polluted by shedding the blood of the enemy; when they returned to the City, they needed to undergo purification before they could reenter it and become citizens again. Furthermore, within the city and Roman territory, citizens had the right of appeal (*provocatio*) to the people from the magistrates' use of force. *Provocatio* was waived *militiae* (in the war zone). Roman soldiers in the field thus were subject to unrestricted power of punishment.

By the fourth and third centuries BCE this ritual- governed approach to warfare appears to be waning, as the Roman army served for longer and longer periods away from Rome and campaigns no longer fit into the religious year. Accounts of discipline during the Second Punic War (218–201 BCE) show that commanders were now adopting a rational approach to discipline, based on their own leadership and personal judgment of what the situation demanded and what their men would tolerate. Scipio Africanus, who encountered a mutiny of his soldiers at Sucro (206 BCE) in Spain during the Second Punic War, was one such leader. At the time of the Punic Wars, soldiers, usually conscripted, took an oath (the *sacramentum*) to their commander not to flee or leave the line of battle except to save a comrade or strike down the foe. They also took an additional oath not to steal or pillage, with certain exceptions permitting foraging for food and fodder.

In the late Republic, from the second century BCE onward, the decline in recruits' social status of origin created a greater gulf between the officer corps (drawn from the Roman nobility) and the soldiers. Soldiers were more vulnerable to their officers, illustrated by sexual scandals within the army, in which officers were accused and tried for raping young soldiers (Valerius Maximus 6.1.10–11). Roman men's homosexual behavior was accepted, but being subjected to homosexual rape was effeminizing and socially unacceptable. In Marius' army, a young soldier named Trebonius killed a superior officer who made homosexual advances toward him. Instead of punishing Trebonius, Marius rewarded him for defending his manhood. *Virtus* (manliness) prevailed over discipline in this instance (Valerius Maximus 6.1.12; Plutarch, *Marius* 14).

Discipline may have become harsher in the late republican army as a result of the recruitment of the *capite censi*. It is in this period, rather than earlier, that most instances of decimation are recorded (despite Polybius

6.39). However, some commanders, most famously Marius, made a greater personal effort to bridge the social gulf by bonding with their soldiers.

Concern over materialistic aspects of discipline—soldiers’ pay, benefits, and expenditures—increased in the late Republic and in the imperial era. Soldiers recruited from the landless *capite censi* were dependent on the army’s pay and benefits, provided by their generals; when those generals waged civil wars, as did Marius and Sulla, Caesar and Pompey, and the triumvirs, their soldiers profited at the expense of citizens. Sulla and the Second Triumvirs confiscated land from their enemies to distribute to their veterans. As a result, civilians disapproved of soldiers’ display of wealth and conspicuous consumption. The historian Sallust depicts Sulla’s veterans as unsuccessful farmers, accustomed to living beyond their means and soon indebted; out of greed they supported the conspiracy of Catiline (63 BCE) (Sallust, *Bellum Catilinae* 16, 28). Popular anecdotes of military discipline emphasized austerity.

The emperors placed even greater emphasis on discipline as a message to the army and populace that the age of civil warfare had ended. Augustus enforced discipline with great severity, and did not allow personnel, even senatorial officers, many privileges (Suetonius, *Augustus* 24–5). In contrast with the armies of the Republic, the imperial army also faced the problem of long-term service and, over time, stationary or near-stationary bases and the interactions of soldiers and civilians. In the last years of his reign, Augustus also retained legionaries in service past their time of discharge (20 years) to avoid paying additional pensions.

By the death of Augustus in 14 CE, the legionaries on the Rhine and Danube were unhappy with their continued service and mutinied. Tacitus depicts elderly soldiers pointing out their gray hair and missing teeth to Germanicus, Tiberius’ probable successor and the imperial commander sent to put down the Rhine mutiny (Tacitus, *Annals* 1.34). The mutinies died down without extreme reprisals by Germanicus and Drusus, Tiberius’ son. During the mutinies the soldiers, expelling their aristocratic officers and centurions, continued to organize and perform routine activities; when they repented of the mutiny, they took the initiative of punishing the ringleaders themselves. Tiberius made minor concessions to the mutinous soldiers.

The next phase of serious unrest was the “War of Four Emperors” (68–69 CE) which displays the tension between the ideal of discipline and the reality of imperial patronage of the army. The emperor Galba, a rigid and old-

fashioned patrician, sought to impose ideal discipline, decimating a new legion of former fleet soldiers for impertinence and refusing the praetorians a donative (Tacitus, *Histories* 1.5). The praetorians assassinated Galba and installed Otho as emperor, who had won them over with donatives and patronage (Tacitus, *Histories* 1.23). Partly through the intrigue of his legates Aulus Caecina and Fabius Valens, Vitellius was acclaimed emperor by his soldiers in Lower Germany. Tacitus claims that Vitellius' excessively profuse indulgence of his soldiers earned their contempt (Tacitus, *Histories* 2.93–4).

Later mutinies and assassinations also had a similar motivation: the troops (usually the praetorians) were displeased with emperors who sought to impose strict discipline. The praetorians murdered Pertinax for doing so in 193 CE. Coups also had a similar structure: a usurper appealed to the material interests of the soldiers, exemplified by the praetorians' "auction of the empire" in 193 CE, in which the imperial candidates Didius Julianus and Sulpicianus competed in offering larger donatives. Septimius Severus took steps to defuse the Praetorian Guard as a source of political instability, disbanding the Italian guardsmen and replacing them with Danubians (Cassius Dio 74[75].2.4–6). Nonetheless, similar revolts and coups continued through most of the third century CE.

Despite these sensational crises, most emperors and senatorial commanders tried to strike some balance between ideal strict discipline and patronage of the army: they might compensate for strictness with personal leadership, setting an example in enduring hardship on campaign. Emperors might provide patronage not through donatives, which they sought to routinize as gifts marking imperial accessions and other holidays, but through legal privileges or access to the emperor's and his experts' legal advice (not always in soldiers' favor).

In the second and early third centuries CE, some aspects of discipline became formalized as military law, including imperial edicts, emperors' and jurists' legal advice, and handbooks on military law, excerpted in Justinian's Digest (part of the Codex Justinianus). In keeping with elite tradition, the jurists prescribed severe military discipline; many offenses, especially in the field and before the enemy, were punished with death, especially desertion to the enemy, flight from battle, causing a mutiny, or striking a superior officer. In this respect the Roman army was similar to other ancient and early modern armies: European and Anglo-American militaries did not abolish capital punishments until the twentieth century. In the Roman army,

short of capital punishment, individual punishments might entail corporal punishment, fatigues, demotion in rank, transfer to an inferior branch of the service (from legion to *auxilia* or from *auxilia* to fleet), or dishonorable discharge, forfeiting veteran benefits and privileges. As an ultimate group punishment, entire units might be disbanded, to punish them for mutiny or a disgraceful defeat. However, the jurists are also more lenient concerning the definition of desertion, distinguishing it from absence without leave due to circumstances such as travel difficulties or family emergencies.

Bureaucratic documents from Roman Egypt, Dura-Europos (a third-century military base on the Euphrates), and Roman Britain attest the army's management of soldiers' pay, equipment and provisions, assignment of tasks, furlough, and records of troop numbers. These documents helped the army enforce military discipline in a rational way by distributing soldiers' benefits and responsibilities fairly and creating an objective record. Some documents recorded military personnel's daily departures and returns on assigned tasks; others are petitions for furlough, in which soldiers requested permission for leave from their commanding officer. A soldier granted furlough might be given a pass that he could display on his journey. These reflect the army's concern to discourage absence without leave and desertion.

A particularly fraught aspect of discipline was military-civilian relations. With permanent military bases and the development of the surrounding regions, soldiers interacted more with civilian subjects. Civilians complained of military abuses, particularly forced requisition or extortion of lodging and transport animals. In satirical sources such as Juvenal's *Sixteenth Satire*, soldiers are depicted as casually violent toward civilians. Some emperors attempted to redress these injustices, answering petitions from victimized civilian communities. However, the basic reality was that a Roman soldier (especially the more prestigious praetorian or legionary) was an agent of the imperial power and was empowered to wield force. The army was probably more resented in some provinces, such as Britain and Judaea, with a history of revolt.

In the later Roman Empire military discipline's punishments became harsher, probably reflecting increased conscription to fill the ranks of an army enlarged by Diocletian (284–305). Fourth- and fifth-century CE legal sources show that recruits were tattooed to discourage desertion and that deserters might be burned alive. However, Theodosius I's recruitment of

federate troops on a large scale meant that these troops, organized and commanded by their native leaders, were not subject to Roman discipline.

Military Intelligence

Modern military intelligence separates strategic intelligence, which is long-range and features general knowledge of enemy nations, their material and human resources, and their political and military goals, from tactical intelligence, which concerns the disposition and movements of the enemy in the field. A modern nation is also likely to maintain numerous intelligence agencies, civil and military, staffed by knowledgeable professionals. In contrast, the literature available to Greek and Roman elites on foreign peoples often offered little useful information. In the Republic, there appears to have been no professional intelligence service. The Roman Republic's military intelligence was collected on an ad hoc basis, dependent largely on the talents of individual generals and on their personal connections. With

the proliferation of military occupational specialties in the Principate, some low-ranking officers, termed *exploratores* or scouts, as well as the all-purpose staff or *beneficiarii* associated with provincial governors, may have specialized in intelligence. Spying within the empire to maintain internal security, repress dissent, and prevent or detect revolt is better attested. The spies, termed *frumentarii* or *agentes in rebus*, were much feared in the later empire.

Ethnography, the description of foreign peoples, was a distinct genre in Greek and Latin literature. It tended toward the sensational, especially when the peoples were too remote to be easily visited. Even when interaction with these peoples was relatively common, ethnography tended to stereotype them: the Germans were fundamentally uncivilized, not wearing clothing, practicing agriculture, or living in urban settlements; other northern barbarians lived on milk and raw meat. Greek ethnographic tradition stereotyped the Persians as effeminate and decadent. The education of Greco-Roman elites was literary, emphasizing classics; for senators, oratory was emphasized. This education could not be very useful for military intelligence, growing out of date as cultures changed. By the time of the Marcomannic Wars (166–180 CE), the Germanic Quadi had to be forbidden to cross the Danube and enter Roman markets because they might be spies for other Germanic peoples, implying that the Quadi wore clothes and resembled the local Roman citizens (Dio 71.11.3). In the mid-third century CE, the Persian Empire was reinvigorated by a new, aggressive dynasty, the Sassanids.

Somewhat more useful literature was available to the Roman elite, including *commentarii* (reports) written by Roman governors and generals. The records of the Senate were another source of information. However, even the most conscientious of Roman commanders probably faced a language barrier with peoples who did not speak Greek or Latin, and relied on translators.

In the Republic, and into the empire, strategic and tactical military intelligence collection had an ad hoc quality, depending on the initiative of individual generals. Scipio Africanus, on his arrival in Spain, collected all available information about the Carthaginians in Spain and decided that the best site to assault was New Carthage, where his examination of local geography enabled the Romans to take the city unexpectedly. Julius Caesar investigated sources of information for his invasion of Britain (Caesar,

Gallic Wars 4.20.2–4; Suetonius, *Iulius* 58.1), though he was not able to discover much and his expedition was exploratory in nature. The Senate sent out Roman embassies that collected information and probably also spied on Roman clients and foreign monarchies and peoples. Hostages were also useful sources of information. However, Roman “ambassadors” were usually distinguished senators and not specialists in any one foreign nation or people.

In the field, generals sent scouts, termed *exploratores*, ahead of the main force to investigate the location and numbers of the enemy. In the Republic, these may have been *velites* or light-armed skirmishers. Scouts and foragers might be able to capture enemy messengers. In the Second Punic War, the Romans captured messages from Hasdrubal to his brother Hannibal, enabling the Romans to surprise and defeat Hasdrubal at the battle of the Metaurus (Polybius 11.1.3–6; Livy 27.43–61). Cavalry scouts, now termed *procursatores*, continued to be used in the later empire. Deserters and refugees might be useful sources of information in the field.

In the Principate, documentary evidence suggests that some occupational specialties within the Roman army collected intelligence. The *beneficiarii consularis*, as their name suggests, were attached to the staff of provincial governors, where they assisted with bureaucracy. *Beneficiarii* were also outposted to stations near the frontiers, where they were better placed to collect information about the enemy and send it back to the provincial governor’s staff.

However, more is known about internal intelligence gathering, focused on maintaining political stability by unearthing and repressing conspiracies and revolts. In the early Principate, when both emperor and senators were based at Rome, conspiracy detection relied on delation (reporting by private individuals, usually for reward). It was probably also the task of *beneficiarii* to collect information on provincial unrest. In the middle empire, the *frumentarii*, whose official tasks included overseeing the grain supply and carrying messages, were also notorious spies, and became so unpopular that in the early fourth century CE they were replaced by the *agentes in rebus*, or “Special Agents,” who became equally unpopular.

If soldiers reported to provincial governors, it was up to the provincial governors to report to the emperor. The emperor campaigning on the frontiers, from the Dacian and Marcomannic Wars period onward, was better placed to gather and evaluate intelligence. In the later empire, the use

of imperial provincial capitals may have increased the efficiency of intelligence collection by shortening the chain of transmission. However, there were now more layers of bureaucracy.

However, Susan Mattern reminds us that in imperial strategic decision-making, deciding to go to war, value factors tended to override rational intelligence. As did the consuls in the Republic, the emperors desired the prestige of warfare (peace being considered *otium*, idleness) and the glory of victory, not to mention the possibility of wealth from plunder. The satisfaction of vengeance was another motive, if an external enemy had inflicted defeat on the Romans. The collection of intelligence was only a means to such value-determined ends.

Military Law

Roman military law is attested in the emperors' legal advice to soldiers and in Roman juristic treatises composed in the second and third centuries CE. Legal codes from the later Roman Empire also contain legislation that pertains to the army. However, large aspects of military discipline were customary practices or administrative rather than legal.

In the Republic and most of the first century CE, Roman military discipline, including administration and punishment, was based on custom and the commander's discretion. Consuls and promagistrate commanders (proconsul or proprætor) had *imperium militiæ*, which gave them unlimited power to command, judge, or punish their subordinates. Roman citizens in military service waived the right of appeal (*provocatio*) from the magistrate's decisions that Roman citizens possessed in civilian life. Soldiers

took an oath (*sacramentum*) to obey the commander and not desert or flee from the field of battle; other oaths, including an oath against stealing from the camp, might be administered as needed. Though Roman civil law received written form as the “Twelve Tables” in the early Republic, there may have been no written military law. Military treatises from the second century BCE onward are attested; Cato the Elder wrote one. These treatises may have contained precepts on discipline. Polybius composed a famous description of the Roman army in his *Histories*, briefly describing Roman military punishments.

Conquest brought plunder; soldiers also received pay and donatives after victories, creating a need to protect soldiers’ rights to property. Julius Caesar is said to have allowed his soldiers to make wills (though little weight can be placed on his remark in the *Gallic Wars* that his officers started making their wills when they were frightened of a German offensive). However, it is in the very late first and in the second centuries CE, when military bases had become stable and after soldiers’ pay was raised by Domitian (81–96 CE), that legal sources on military law appear.

Nerva (96–98 CE), Trajan (98–117), and Hadrian (117–138) took a new approach in providing benefits for their soldiers; instead of giving them money, which might be wasted, they provided legal privileges. (It cannot be assumed that these privileges existed earlier.) One legal privilege was the soldier’s will (*testamentum militis*). Roman citizens placed great importance on wills, in which they provided for heirs and family members and made bequests to friends. The making of a legal Roman will required many formalities, effectively excluding common soldiers, whom the Roman elite assumed to be illiterate and uneducated. The emperors passed laws enabling soldiers to make informal wills, “in any way they wish and in any way they can,” without observing the legal formalities required of civilians. In fact, many soldiers were literate, sent and received letters, and employed legal documents that have survived from Roman Egypt. Nonetheless, soldiers were unlikely to find experts in Roman law on the frontiers, other than their own legates or governors.

The second-century emperors also devised other legal privileges for soldiers, probably as an inducement to recruitment. In Roman law, the legitimate children of a male Roman citizen were “in his power” (subordinate to his legal authority) and could not own property in their own right. This was undoubtedly irksome to adult children. It was more

burdensome to Roman citizen soldiers who might serve far from their fathers' homes. The emperors allowed soldiers under paternal authority to possess a fund that they could dispose of independently of their fathers; this fund was termed *peculium castrense*. In practice, many soldiers had probably lost their fathers by the time they were in their thirties.

Soldiers were also granted other legal privileges to protect their interests while they were away from their civilian homes. They had the status of *absentes rei publicae causa*, "absent in service of the state," and were entitled to restitution of property should they suffer any losses while they were serving in the army. Citizens owed taxes to their home towns, termed *munera* (duties), including corvée labor for lower-status citizens. Soldiers were exempted from corvée labor at home while in service. Soldiers also had the right to bring criminal charges, and were protected by their status of *absentes rei publicae causa* from being summoned to appear as defendants in civilian courts.

Roman lawyers or jurists, educated men who specialized in knowledge of law, provide the surviving information about these privileges. Their analysis of these privileges is preserved in the Digest and Code of Justinian, a massive compendium of Roman law compiled in the early sixth century CE. The jurists engaged in theoretical debate and analysis, but also responded to real cases, mainly in connection with the imperial petition system in which citizens with legal problems submitted them to provincial governors and to the emperors and their juristic advisers. The governors or emperors might judge the cases themselves. Though such judgments are not identical with modern (Anglo-American) case law, the emperors' judgments (rescripts) were a source of law and were cited as such and debated by the jurists. The jurists also issued responses to legal real and theoretical problems that became a source of law.

Emperors from Trajan and Hadrian down to Caracalla, Alexander Severus, and the Gordians issued rescripts to soldiers; after that, during the crisis of the third century, emperors had little time to judge legal cases. With the restoral of stability, Diocletian (284–305) and Constantine (306–337) began to judge legal cases again and issued edicts concerning soldiers and veterans. Though the emperors acted as patrons of the army in the sense of giving their soldiers access to legal advice, they did not always judge in the favor of military personnel and might reprove individual soldiers sternly in their rescripts. For example, the emperors stated that deserters from the

army were not entitled to the privileges of veterans. In less obvious instances, the emperors did tend to judge in favor of soldiers and their comrades and against those “not known to [them] from military service,” such as family members or spouses.

Jurists from the late second and early third century CE also wrote theoretical treatises on military law and military affairs that have been excerpted in the Digest. These works were prescriptive rather than responses or judgments in real instances. They reflect the view of the Roman elite that the army should be subject to severe discipline. However, especially on desertion and prisoners of war, the excerpts from these treatises show an awareness of the complexity of real-life situations. Roman prisoners of war (that is, Roman citizens captured by the enemy) were presumed to be enslaved and lost their citizen status, with numerous legal consequences; if they escaped and reentered Roman territory, they had to apply for the restoral of their citizenship.

The legal codes pertaining to the fourth century CE and later, the Codex Theodosianus and parts of the Code of Justinian, attest to military law and discipline. They show the standards of discipline had become harsher, mainly to discourage desertion, and also show a tendency to micro-management, including regulations for watering horses downstream from military camps.

Military Oaths

To help maintain the loyalty of soldiers and their obedience to their field commanders and officers and ultimately to the state, the Romans imposed various oaths on the army. The most prominent oath was the *sacramentum militiae*, or military oath of loyalty. The origins of the *sacramentum* remain obscure although it may have originally developed out of religious law.

Ancient writers provide important clues to its content. First and foremost, the *sacramentum* required soldiers to follow orders and not desert their posts (Dionysius, *Roman History* 10.18.2; Servius *ad Aeneidem* 1.257, 8.1). Second, the *sacramentum* compelled the loyalty of the soldiers. In doing this it mirrored Rome's political development. During the Republic the *sacramentum* was a public expression of fidelity to the Republic and its representatives on campaign, the consuls (Polybius 6.21.1–4). In the late Republic ambitious generals such as Sulla, Cinna, and Caesar required their soldiers to swear the *sacramentum* to them personally as opposed to the Republic (Plutarch, *Sulla* 27.3; Appian, *Civil Wars* 1.66). This practice continued during the imperial period when the *sacramentum* demanded that soldiers be loyal to the emperor alone, follow all orders given in his name, never desert his service, and be prepared to die for Rome (Vegetius, *Military Affairs* 2.5).

It is clear that the *sacramentum* was taken very seriously. The *sacramentum* was honored above all other oaths and punishments for breaking it, whether through disobeying orders or deserting, were very serious and could include execution (Dionysius, *Roman History* 11.43; Ammianus 26.7.9). Herodian goes as far as to call the *sacramentum* the “sacred secret” of the empire (Herodian 8.7.4).

Originally the *sacramentum* was taken by the levied troops at the beginning of the individual campaign and most probably expired when the campaign was completed. Later in the republican period the *sacramentum* was sworn at the beginning of each New Year. In the imperial period the *sacramentum* was administered on three distinct occasions. First, all soldiers swore the *sacramentum* immediately upon enlisting in the army (Vegetius,

Military Affairs 2.5). This oath covered their entire period of service, after which a soldier would be formally released from the *sacramentum* (*PSI* 1026 l.5–11; *Codex Theodosianus* 7.1.4). Second, the *sacramentum* was administered at the beginning of each new emperor's reign (*Herodian* 8.7.4–7; *Ammianus* 21.5.10). Third, the *sacramentum* was renewed yearly, either on the third of January or on a date important to the reigning emperor—most likely the anniversary of his accession (*dies imperii*) (*Pliny the Younger, Letters* 10.52, 100–101).

In the imperial period the *sacramentum* was sworn by all Roman soldiers, irrespective of the type of unit they served in (*Vegetius, Military Affairs* 2.3, 5). It was also sworn by all officers, including those of the highest rank (*Ammianus* 21.5.1, 26.7.4; *Orosius* 7.34).

Other oaths bound the loyalty of Roman soldiers in the republican period. When on campaign soldiers also swore a range of other oaths—individually each of these oaths is usually referred to as an *ius iurandum*. *Livy* says that before the battle of Cannae in 216 BCE the soldiers swore an *ius iurandum* designed to guarantee their conduct in the upcoming battle. This oath, which previously was only a voluntary agreement among the men, demanded that the troops “not run away in flight or out of fear, and not leave their ranks except to pick up their weapons or to look for them, or to attack an enemy or defend a citizen” (*Livy* 22.38.2–5). Pompeian troops are also recorded as swearing additional *iura iuranda* relating to loyalty during the civil war with Caesar (*Caesar, Civil War* 1.76.2–3, 3.13.2). However, the exigencies of civil war and usurpation meant that the *sacramentum* or *ius iurandum* were not permanently binding. In civil war, it was not uncommon for soldiers from one side to go over to the other side, especially when defeated, and swear oaths to their new commanders or rulers.

More generally, oath taking was an important part of Roman military culture and helped to regulate the behavior of Roman soldiers on a day-to-day basis. Roman soldiers swore oaths governing their conduct in relation to theft and pillage on campaign (*Polybius* 6.33.1; *Gellius* 16.4.2–4). Even the mundane routine of camp life was governed by oaths. For example, one oath taken by the troops forbade the theft of property within a camp while another oath, sworn at the beginning of each day saw the troops recite that “we will do what has been ordered and are ready for all orders” (*Dura Papyri* 47).

Ancient evidence for military oaths sworn by Roman soldiers is sporadic and incomplete and consequently there is much to discover regarding their development, content and significance.

Military Treatises

Although the Romans lacked a formal method of military education, like the Greeks before them, they did produce a body of didactic literature on the topic. Their earliest texts on military science were by experienced soldiers. Cato the Elder and Polybius both authored military manuals in the second century BCE. Unfortunately they are lost. Among extant works by such men we have Frontinus' late first century CE *Stratagems* (*Strategemata*) that is a collection of anecdotes of successful ploys organized by topic. In the mid-second century the historian and Roman governor Arrian composed both a *Tactica* and his *Ectaxis contra Alanos*. The *Tactica* is an account of the Hellenistic phalanx as well as contemporary cavalry tactics and training. Despite its apparent antiquarianism, the *Tactica* includes references to contemporary opponents noted for their use of heavy cavalry, such as the Alans, against whom such massed infantry formations would be effective. Likewise, the *Ectaxis contra Alanos* describes phalanx formations against the Alans, with whom Arrian had to deal as governor of Cappadocia ca. 135

CE.

Philosophers, antiquarians, and rhetoricians added to the body of this literature that would have been available to Roman soldiers and statesmen. In the first century BCE, Asclepiodotus wrote a *Tactics* on the phalanx and Onasander dealt with a commander's responsibilities in his first-century CE *The General*. Aelian's early second-century CE work on the Hellenistic phalanx appears to have either inspired or shared a source with Arrian's *Tactica*, and Polyaeus composed a late second-century *Strategems*, which includes exploits by gods and heroes as well as historical anecdotes. Although these authors were lacking in practical experience, their works may preserve practical details gleaned from earlier writers and they seem to have assumed that their works would be taken seriously.

More technically oriented authors also treated the fields of military engineering and artillery. In the Augustan period Vitruvius, who had been a military engineer, included a section in *On Architecture* that dealt with siegecraft and engines. The *On Siege Engines* of Vitruvius' contemporary, the philosopher Athenaeus Mechanicus, has certain similarities and they may have shared a source. In the first century CE, Hero of Alexandria composed his *On the Construction of Artillery*. Although somewhat antiquarian in character, it is a clear discussion of the development and construction of Hellenistic siege engines. His fragmentary *Cheiroballistra* provides the technical design of a more modern, metal framed artillery piece. In the early second century CE, Apollodorus of Damascus, a military engineer and architect of Trajan, composed his *Siegecraft* which treats the tactics and techniques of assaulting fortifications.

This genre of literature remained vital through the later empire. The fourth-century CE anonymous treatise, *De Rebus Bellicis*, includes a number of military reforms and designs for new weapons, some of which are oddly impractical. Vegetius, a member of the imperial bureaucracy, composed an *Epitome of Military Science* (titled *Military Affairs* in this work) in the late fourth or early fifth century CE. The work is a prescriptive amalgam of previous writers intended to guide improvements in current practice. Even after the fall of the western empire in 476 CE, writers in the Byzantine east continued to produce such works for centuries.

Joseph R. Frechette

Milo, Titus Annius (d. 48 BCE)

Titus Annius Milo (Papianus), the son of Gaius Papius Celsus, but adopted by his maternal grandfather, Titus Annius Luscus, first appeared in Roman politics in the 50s. He supported Pompey and thus opposed Publius Clodius, a disruptive politician with links to Julius Caesar. As tribune in 57, Milo worked for the recall of Cicero, whom Clodius had had exiled. Each organized street gangs to combat the other, and laid prosecutions against the other. Milo was praetor in 55 and a candidate for the consulship of 52, hoping for support from Pompey, which he did not receive; Clodius was seeking a praetorship at the same time. In January 52, the two confronted each other with their gangs near Bovillae, and in the melee Clodius was killed.

Because of political disruption, the year 52 had begun without consuls, till eventually Pompey was made sole consul. Under a law of Pompey against public violence, Milo was prosecuted for Clodius' murder. Cicero defended him, but because the supporters of Clodius heckled the trial and threatened violence, Cicero did not speak with his usual skill. With his guilt evident, Milo was condemned and went into exile at Massilia. Cicero composed an expanded version of the defense he would have delivered—the speech known as the *Pro Milone*. When Milo read his copy, he said that if Cicero had delivered that version, he would not now be enjoying the fine fish of Massilia.

When Caesar took control of Rome, Milo was the only person excluded from his general amnesty. He joined Caelius Rufus in an uprising against Caesar in Italy in 48, but was killed in fighting near Thurii.

Milvian Bridge, Battle of the (312 CE)

On October 28, 312 CE, Constantine I (306–337) defeated his rival Maxentius (306–312) near the Milvian Bridge over the Tiber, north of Rome's walls. Constantine led perhaps 35–40,000 veterans, primarily infantry, including Germanic *cornuti*. The 313 *Panegyric of Constantine Augustus* reports 100,000 under Maxentius, but this seems an exaggeration, or perhaps a total for all forces available to him. Maxentius had more heavy cavalry, but the armies were probably numerically matched on the day of the battle.

Both Constantine and Maxentius were sons of Tetrarchs and had usurped the purple, helping to destroy the Tetrarchy, Diocletian's partnership of four emperors. Constantine's imperial ambitions had little room for rivals, and in 312 he invaded Italy. He cut through Maxentius' praetorian forces in the Po Valley and at the hard-fought siege of Verona. As Constantine approached Rome, Maxentius destroyed the Milvian bridge, intending to withstand a siege (as he had done twice before), but then—perhaps because of unrest in Rome—decided to cross the river on a temporary pontoon bridge. The battle was a decisive victory for Constantine. Though contemporary and later accounts differ in detail, Maxentius' army was quickly routed and was chased to the river. The pontoon bridge collapsed and many drowned, including Maxentius himself. Victory gave Constantine the city of Rome and complete control over the western half of the empire.

The battle's real fame comes from Constantine's vision, around which legends quickly developed. Contemporary reports differ, and modern attempts to synthesize them have never been fully successful. Lactantius (*DMP* 44) says a dream instructed Constantine to emblazon a *Chi-Rho* on his soldiers' shields; Eusebius (*VC* 1.28–9) describes a cross of light in the

sky with the famous instruction “by this conquer,” followed by an explanatory dream. The victory, apparently divinely-inspired, won Constantine’s allegiance to Christianity, and the *Chi-Rho* was quickly adopted for the army. The battle’s importance as a turning point for Constantine was thus much greater than its military importance.

Mithridates VI of Pontus (152–65 BCE)

Mithridates VI (alternatively spelled Mithradates), one of Rome’s most determined and dangerous foes, was born in 152 BCE and assumed the throne of the small kingdom of Pontus upon his father’s death 12 years later. An ambitious, brutal, and intelligent young man, he spent his first five years on the throne subject to his mother, who was acting as regent. When he reached his seventeenth year, Mithridates imprisoned her and poisoned his brothers to consolidate his position as king. Not satisfied with ruling a small kingdom on Asia Minor’s northern coast, Mithridates embarked on a series of conquests to expand Pontic power and territory. His early campaigns in modern day Georgia and north along the eastern Black Sea drew little notice. He subdued the Scythians by 100 BCE. Then, with his northern border secure and with the help of Scythian cavalry, he marched his army south, conquering Bithynia, one of Rome’s client kingdoms. The acquisition of

Bithynia doubled Mithridates' territory but triggered the first of his three wars with Rome that ultimately cost him his throne and his life.

His first drive across Asia Minor went smoothly and quickly. The Greek city states there accepted his suzerainty and those in Greece sought his aid in overthrowing Roman dominance. Crossing the Aegean, he faced the Roman general Sulla, who defeated him at Chaeronea in 86 BCE and drove him out of Greece. Sulla then recaptured Asia Minor's coastal cities and forced Mithridates to sign a peace treaty. Mithridates broke the treaty within months of Sulla's departure for Rome. Mithridates forced the Romans to withdraw from Bithynia and unsuccessfully tried to enlist allies to drive Rome completely out of Asia Minor. Rome did not send another army against Mithridates until Lucius Licinius Lucullus took the war into Pontus. Lucullus easily defeated Mithridates, driving him into the mountains where the Pontic king conducted a 10-year guerrilla war against Roman garrisons and isolated units.

The Romans recognized that the command of the war against Mithridates required special *imperium*. Pompey had enjoyed recent success in the war against the pirates, for which he received an *imperium* that extended across provincial boundaries and for three years, though he defeated the pirates in only three months. By popular vote (the *lex Manilia*) Pompey received another extended *imperium* for the war against Mithridates in 66.

Pompey replaced Lucullus in 65 BCE and, with a larger army, drove Mithridates out of Asia Minor and up the eastern coast of the Black Sea. With his kingdom all but destroyed and his sons unwilling to continue the war, Mithridates VI, the last commander of a major Hellenistic army, fled to modern-day Kerch, where he committed suicide in late 65 BCE. Rome annexed his kingdom and all its territories.

By all accounts, Mithridates VI was a brilliant military commander who wielded his Hellenistic-style army effectively on the battlefield, using his phalanx and missile troops to fix the enemy in place while his cavalry attacked the enemy's flanks. However, tactics that worked against inflexible Hellenistic armies or cavalry-dominant opponents did not fare well against Rome's agile, flexible legions. More importantly, Mithridates lacked the diplomatic skills to draw Rome's other enemies into the fight and his practice of slaughtering resistant populations convinced his neighbors that Rome was the lesser evil. In the end, Pontus lacked the resources to defeat

Rome on its own and Mithridates' character flaws prevented him from gaining the assistance he required to win.

The Mithridatic wars were also notable on the Roman side for giving extended powers to Roman commanders, prefiguring the extended *imperium* given to Julius Caesar for the Gallic Wars, the powers of the Second Triumvirs, and the *imperium maius* of Augustus.

Mithridates was perhaps most notorious in classical antiquity and later ages for his alleged immunity to poisoning, acquired via taking small doses of poisons over a long period of time. Legendary antidotes to deadly poisons were ascribed to Mithridates by later classical, medieval, and Renaissance authors.

Mithridatic Revolt (63 BCE)

The Mithridatic Revolt of 63 BCE was one of Rome's deadliest provincial revolts. In early 65 BCE, Mithridates VI reached the Crimea, the last remaining vestiges of his kingdom. His son Machares ruled the district and Mithridates hoped to find refuge there while he built alliances with the nearby Scythian and more distant Thracians. He hoped to rebuild his army and launch an invasion of Rome's Balkan territories from Scythian territory. As a ruler who traced his ancestry to both Persian and Macedonian kings, Mithridates hoped to draw troops from Persia, Bactria, and allied contingents from the Scythian and Thracian tribes bordering Rome's

northeastern frontier along the Black Sea's western coast. He had tried to buy time by contacting Pompey for peace terms, but the Roman general's response proved unacceptable. Probably recognizing the ploy, Pompey demanded that Mithridates come in person. The Pontic king refused and began to prepare to continue the conflict. What he did not know was that at least two of his sons and much of his royal court were opposed to any further war with Rome.

His son Machares had contacted the Roman consul Lucullus in 70 BCE and gained the consul's recognition of his authority in Crimea in exchange for client state status. Discovering the intrigue, Mithridates killed his son and took over administration of the Crimea. But the population would not have it. Resentful of his sudden imposition of new, excessive taxes to fund another war, they rose up in rebellion. The Black Sea port of Phanagoria seized three of his sons and two of his daughters. One daughter, Cleopatra, and a loyal garrison unit evacuated the city. Other garrisons along the Black Sea coast joined the rebellion. Desperate, Mithridates tried to send some of his daughters to Scythia in hopes of establishing an alliance through their marriage to tribal princes. However, his demoralized troops were no longer loyal. The princesses' escort killed the palace eunuchs accompanying them and delivered the king's daughters to Pompey. Pompey thwarted his efforts to gain an alliance with Persia.

Mithridates no longer had allies but remained defiant. He wanted to take the war to Italy and is believed to have contacted the Gauls and Spartacus, leader of the Roman slave uprising. However, Mithridates had lost touch with his troops. They had no stomach for such an enterprise and their loyalty was wavering. Both they and his son and designated successor Pharnaces were alarmed at the prospect of such a distant and desperate campaign. Pharnaces probably believed they would be lucky to hang onto their kingdom, given the extent of the rebellion underway and garrison defections to Rome. Unable to convince Mithridates to desist, he moved to overthrow his father. The conspirators were caught and tortured, but Pharnaces escaped to the Roman deserters' camp. There he convinced them and most of the army to turn against Mithridates. The king awoke to find that nearly all of the army and even most of his royal guard had joined his son. Mithridates tried to rally the troops against Pharnaces but they had lost confidence in him, having seen too many comrades die in his service and having seen him murder or execute too many retainers and family

members. They reportedly shouted that they would follow him no more. Finally recognizing his rule had ended and that his son intended to surrender him to the Romans, he had one of his guards kill him. His death ended the last major resistance to Roman rule in Anatolia and along the Black Sea's southern coast. Two decades later, Julius Caesar defeated Pharnaces in a war so brief that Caesar described it as "I came, I saw, I conquered." Ptolemaic Egypt would also fall more easily.

Mithridatic Wars (89–84 BCE, 83–81 BCE, 73–63 BCE)

King Mithridates VI of Pontus who opposed Rome's expansion into Asia Minor, triggered the three wars that carry his name. Sometimes called Mithridates the Great, he proved to be one of Rome's most determined and dangerous Hellenistic opponents. He spent virtually his entire reign either at war with Rome or preparing for it. Ruthless and vindictive in dealings with friends and foes alike, he fought all the major Roman commanders of his era from Sulla to Pompey the Great and made or sought alliances with nearly every one of Rome's enemies.

He triggered the first Mithridatic War (89–84 BCE) by attacking the kingdom of Bithynia, a Roman client state. Several Greek city-states joined by rebelling against Roman authorities in Greece. Unfortunately for King Mithridates, his Armenian and Persian allies became bogged down in the civil conflict over the Persian succession. Roman troops quickly captured

Thrace and the province of Cappadocia in central Asia Minor. Mithridates recaptured Cappadocia in 88 BCE, slaughtering the Roman and Italian citizens in the areas he captured. His troops entered Greece that summer. Most Greek cities shifted allegiance back to Rome. Only Athens held out, falling to a Roman siege in February 86 BCE. Shortly thereafter, a Roman fleet defeated Mithridates' fleet at Tenedos. The Roman won two land battles at Chaeroneia and Orchomenus, restoring Roman rule over Greece. With Greece lost and Roman troops in Asia Minor, Mithridates signed a five-year peace agreement, restoring the prewar boundaries and paying a large indemnity.

Rome initiated the Second Mithridatic War (83–81 BCE) when Lucius Licinius Murena invaded Pontus on his own authority. Mithridates forced him to withdraw and the Roman general Sulla ordered Lucius to restore the peace. However, Mithridates continued to make alliances and preparations to drive Rome out of the Hellenistic world. His alliance with the Cilician pirates alarmed Roman authorities who had invaded the Cilician coast to end the pirates' threat to Roman shipping. Thus, regional Roman officials seized the opportunity presented in 75 BCE when the Bithynian king Nicomedes IV died without heirs, awarding his kingdom to Rome in his will. With Roman armies mobilizing along his western border and Rome heavily engaged in Gaul, Mithridates invaded Bithynia while his fleet blockaded the Roman naval bases in Asia Minor, launching the third and final Mithridatic War (73–63 BCE). Five Roman legions under Lucius Licinius Lucullus drove Mithridates into lesser Armenia while Marcus Aurelius Cotta secured the coast. Lucullus then invaded Armenia, defeating king Tigranes the Great's army at Tigranocerta in October 69 BCE. Armenia's ally Persia was in no position to send aid, since its army was fighting off an invasion from Bactria. Lucullus defeated the Armenian king again in late 68 BCE but a mutiny saved the kingdom from conquest. Mithridates and Tigranes used the respite to recapture some of their lost territories.

Fresh from his victories in Gaul, Pompey the Great gained command and resumed the offensive in 65 BCE, defeating Mithridates and forcing him to flee to the Caucasus. Pompey then forced Tigranes to become a Roman client monarch. He then pursued Mithridates through the Caucasus to Panticapaeum, where Mithridates murdered his own son to take the throne. The city's population rebelled, allowing the Roman troops to enter in the summer of 63 BCE. Mithridates had his bodyguards slay him by the sword.

The Mithridatic Wars marked the beginning of the end of Hellenistic domination of the Middle East. The remaining Hellenistic kingdoms would fall over the next 20 years. The wars also brought Asia Minor and all but a small portion of the Black Sea coast under Roman authority. Armenia would become a major source of Roman cavalry and heavy infantry for the next 400 years, but the territorial expansion came at a cost of extending the Roman border to Persia's frontiers. With the former Hellenistic buffer states gone, Rome and later Byzantium would face almost continuous conflict along their eastern boundary until the eastern Roman or Byzantine Empire fell to the Ottoman Turks in 1453.

Monarchy

Deriving from the Greek *monarchia* (*monos*—one, *arche*—rule), monarchy is the rule of a community by a single individual. The early Roman state was a monarchy, odium of which shaped the republican attitude toward monarchy. The consuls and dictators displayed monarchic traits, but attempts by Roman leaders (such as Caesar or Antony) to imitate Hellenistic monarchs met with elite hostility. As a result, the first emperor, Augustus (27 BCE–14 CE), was careful to fashion his sovereignty as non-monarchic,

disguising an essential autocracy that strengthened with time.

The earliest phase of Roman history was the semi-legendary regal period (753–510 BCE). According to ancient historians, the first king was Romulus, who was himself a direct descendant of the kings of Alba Longa, descended in legend from Aeneas. Taking the title of *rex* (king), Romulus was the chief executive of the state, leading the Roman community in war, politics, and religious ceremonies. Following the death of Romulus, the council comprising the leading men of the state (the Senate) gathered to elect Romulus' successor. After an interval (*interregnum*) the Senate decided upon Numa Pompilius as Rome's second king.

Rome's kings continued to be elected by the Senate until the conventional date of 578 BCE when Servius Tullius seized the throne by force from his father-in-law Lucius Tarquinius Priscus. Servius Tullius was later assassinated in turn by Lucius Tarquinius Superbus (Tarquin the Proud), the son or grandson of Lucius Tarquinius Priscus. According to Roman legend, the patience of the Romans with the excesses and arrogance demonstrated by the Tarquins finally ended in 510 BCE, when Tarquin the Proud's son Sextus Tarquinius raped Lucretia, a Roman noblewoman. Lucretia's husband, Lucius Tarquinius Collatinus, along with Lucius Junius Brutus led the Roman people in revolt against the Tarquins and drove them and the monarchy out of Rome.

With the expulsion of the Tarquins, the Roman Republic was born, and its heart was a deep-seated hatred of monarchy. A new governmental system was required that could incorporate the powers and responsibilities the kings had held, while ensuring that the Roman state could never again be threatened by the ambitions of a single individual. Thus, the joint office of the consulship was instituted, whereby two senators would be elected as the leading figures of the state for a one-year period. The consuls would lead the armies in war, and adopted symbols previously held by the Roman *rex*: the 12 lictors and the *fascēs* (a bundle of sticks and an axe symbolizing the authority of the consul to execute individuals on the spot). The monarchical nature of the consulship was commented upon in antiquity, including by Polybius (6.12.1–9) and Cicero (*Laws* 3.2). In a time of crisis a dictator could be elected with supreme powers. This dictatorship was limited to six months or the duration of the crisis and the dictatorial powers were returned to the consuls upon its successful conclusion.

With the removal of the monarchy, new offices were required to take on

the sacred duties that had been performed by the king. The Romans, therefore, established a priesthood termed *rex sacrorum* (king of sacred rites), an office for life, who would be responsible for the daily religious duties. The office of *pontifex maximus*—a priesthood also for life with an accompanying college—had been established during the reign of the second Roman king, Numa Pompilius. Whereas during the time of the Roman monarchy the *pontifices* were a college of religious advisers for the king, in the Republic they became the highest religious authority in their own right, and were consulted for religious guidance in civic matters.

The Roman attitude that their republican system was superior to that of monarchy was an important element in the development of Roman political identity, and was reflected in their interactions with foreign kingdoms. However, this sense of superiority did not mean that Rome refused to engage in friendly diplomatic relations with monarchs. In their dealings with the Hellenistic world, Rome entered into alliances and worked closely with some Hellenistic kingdoms (for example, Pergamon and Ptolemaic Egypt), as well as fought against them (for example, Antigonids and Seleucids). The Romans also formed alliances with many smaller kingdoms, typically on the edge of Roman territory. These “client kingdoms” were to remain a salient component in Roman foreign policy well into the late imperial period. Despite Rome’s inherent notions of superiority over foreign forms of monarchical government, close interaction and involvement with Hellenistic monarchs had an impact upon the political aspirations of some members of Rome’s political elite. Such Romans who then tried to acquire what other Romans viewed as excessive political power and position were often accused of seeking king-like powers or *regnum*. The paranoia among Rome’s leading senators toward the threat of monarchy to the Roman state is best highlighted by the example of Caesar. By defeating his rivals in the civil war of 49–45 BCE, Caesar effectively installed himself as the figure of sole authority at Rome. This was confirmed by his adoption of monarchical trappings—including wearing triumphal dress, erecting a statue of himself alongside those of Rome’s early kings, issuing coins with his image, and possessing the right to speak first in senatorial debates—the office of dictator for life, and the failed charade undertaken by Mark Antony to crown Caesar at the Lupercalia in February 44 BCE. Caesar’s ambitions became too much for many Roman senators to bear, and on the Ides of March 44 BCE Caesar was assassinated. Although this may have removed Caesar, the threat of

monarchy was far from eradicated.

The assassination of Caesar led to a further series of civil wars, which ultimately led to the return of a monarchic regime at Rome. However, during the civil wars, the use of antimonarchic sentiment was still used as a powerful political weapon. In the build up to the final stage of the civil war between Octavian and Mark Antony, Octavian attempted to erode the popularity Antony enjoyed at Rome by depicting Antony in the image of a Hellenistic king whose ambitions were to subsume Rome into his own empire, thus stripping Rome of her own imperial possessions and threatening the existence of Roman political identity. In the “Donations of Alexandria” ceremony (34 BCE), Antony bestowed the titles “King of Kings” and “Queen of Kings” on Cleopatra’s children.

Following his final victory over Antony, Octavian found himself in the unique position of effectively being the sole ruler of the Roman world. However, Octavian had learned from his predecessors’ mistakes and was conscious of the dangers posed by the strength of Roman antimonarchic sentiment. Thus, he carefully constructed his regime through the acquisition of traditional republican powers. Octavian preferred to be called *princeps*, first citizen, rather than a monarch, and also eschewed the dictatorship that Sulla and Caesar had sullied. Second, Augustus emphasized that the powers he received, and that thus gave his regime legitimacy, were granted by the Senate itself. However, the Senate was doubtless acting at Augustus’ behest. In his *Res Gestae*, Augustus declares that the Senate granted him various civic powers; proconsular *imperium* extending over provinces with active fronts; and further titles of *pater patriae* (father of the fatherland) and *Augustus*. The name of Augustus had the advantage of conveying exalted status without actually being associated with any previous political offices.

On the death of Augustus in 14 CE, the Senate offered Augustus’ powers to Tiberius. By this time, Augustus’ regime had lasted 41 years and he had dominated Rome and Italy for much longer; few were alive to remember the old Republic, though the historian Tacitus would pen accounts containing the traditional Roman suspicion of monarchy. The turnover of the Roman elite, as senatorial families died out and families from the provinces were promoted into the Senate, also caused traditional republican antimonarchic sentiment to fade. By the later Roman Empire (from 284), the emperors were clearly autocratic. With the end of the western empire in 476 CE, Rome’s western provinces fragmented into successor kingdoms, with their

respective rulers adopting the title of *rex* (king), something Rome's emperors had never done, hence marking the transition from empire to post-Roman states.

Monarchy is a central concept in understanding the political history and character of Rome. Although originally founded as a monarchy, Rome took great pride in having overthrown the tyranny and decadence of her kings and establishing a Republic. The pride the Romans took in their Republic made them suspicious of individuals who acquired too much power. However, as Rome's empire increased, so did the ambitions of Rome's most powerful individuals. Civil war broke out and would rage on and off until only a single victor remained. With Augustus' success, Rome's republican traditions were subsumed into a new monarchical system, one that was careful to merge old and new, and to create a clear sense of political and cultural continuity.

Monomachy (Single Combat)

In contrast with early modern Europe and the early United States, where civilians used duels to resolve private disputes, ancient Greek and Roman

monomachy (dueling or more properly single combat) is confined to a military context, as a contest of champions held before pitched battle or during a siege. Typically, a notable warrior from one army would declare his readiness to fight a member of the opposing army in single combat. The opposing army then volunteered a champion, and the two champions would fight in the space between the battle lines (or outside the besieged city's walls). The outcome of the single combat did not necessarily determine the outcome of the conflict or even prevent the battle itself.

Nonetheless, such formal combats are distinct from informal instances of hand-to-hand combat in normal battle. Many such informal combats occurred simultaneously as the battle fluctuated. In the latter case, if the Roman commander could engage and defeat an enemy leader in hand-to-hand combat and despoil him of his armor, the Roman commander claimed the enemy leader's armor as a renowned prize, the so-called *spolia opima* or "rich spoils." Vignettes of individual soldiers' hand-to-hand combat with the enemy are frequent in Roman narratives of battles, including Caesar's *Gallic Wars*.

The most famous Roman monomachy is probably that of the Roman Horatii (three brothers, all named Horatius) with their Latin enemies, the Curiatii brothers (Livy 1.24–26). This combat belongs to the semi-legendary mid-seventh century BCE, but over 30 single combats are recorded during the Republic. Many of these accounts still belong to the relatively "legendary" early Republic. In another famous single combat, Titus Manlius Torquatus won the surname "Torquatus" ("necklet-wearer") from the golden necklet he took from the Gaul whom he slew in single combat (Livy 7.9.6–11). In 340 BCE, Torquatus put to death his own son, also named Titus Manlius Torquatus, for disobeying orders to remain in the battle line. The son had advanced to fight a member of the enemy in single combat (Livy 8.7.1–22).

Nonetheless, some monomachies were witnessed or at least recorded by contemporary writers. The combat of Scipio Aemilianus (the adopted grandson of Scipio Africanus) with a Celtiberian champion in Spain in 154/3 is recorded by Polybius (Polybius 35.5.1–2; Appian, *Spanish Wars* 53). Scipio defeated the Celtiberian champion and increased his own reputation for courage, probably contributing to his subsequent success in gaining the command of the Third Punic War.

Scipio Aemilianus was not the last Roman noble to fight a single combat. Single combats occurred in the last century BCE, down to the

combat of the Caesarian Antistius Turpio with the Pompeian Quintus Pompeius Niger before the battle of Munda in 45 BCE ([Caesar] *Spanish War* 25.3–5).

Monomachy showcased the Roman military ideal of *virtus* (courage), which both nobles and common soldiers could display. However, the single combat was potentially disruptive to military discipline and remained exceptional. More routine ways of displaying *virtus* were the display of military decorations and of honorable wounds.

Mons Graupius, Battle of (83 or 84 CE)

Mons Graupius is arguably the most famous battle in the history of Roman Britain. It was fought at an unknown site in Scotland and marked the culmination of the seventh northern campaign by Gnaeus Julius Agricola in 83 or 84 CE. Mons Graupius' fame is due to the valuable description of the battle recorded by Tacitus in his biography of Agricola.

According to Tacitus, Agricola undertook a series of campaigns to consolidate and expand Roman territory in Britain from 77 CE. By 82 CE, his army had advanced through eastern Scotland beyond the Forth and established a series of marching camps. The following summer campaign saw the climactic battle between Roman and Caledonian forces at Mons Graupius. Tacitus states that the Caledonians assembled a force of more than 30,000 warriors, presumably made up of a coalition of tribes, to face Agricola's army. Although the Caledonians had a number of different leaders, Tacitus highlights the role played by Calgacus and assigns him a famous prebattle exhortation.

The core of Agricola's army was formed by 8,000 auxiliary infantry, who were flanked by an additional 3,000 cavalry troopers. Agricola retained his legionary troops in the rear where they were drawn up in front of the camp ramparts. The Caledonian force occupied the hillside, although their front line was posted on the lower ground facing the Roman lines. The area between the two armies contained Caledonian charioteers.

Massively outnumbered, Agricola had little choice but to expand his front line to prevent his army from being outflanked. Battle commenced with an artillery exchange. Agricola launched his infantry attack by advancing four cohorts of Batavians and two cohorts of Tungrians. These auxiliary troops were well drilled and experienced swordsmen. They forced the Caledonian front line to fall back from the plain and retreat up the hillside. Seeing the enemy in retreat, Agricola ordered his remaining auxiliary troops forward. The Roman cavalry neutralized the Caledonian charioteers. A brief Caledonian attempt to attack Agricola's forces in the rear was repulsed by a reserve cavalry force and prompted the chaotic and disorderly rout of the Caledonian army. The killing of retreating tribesmen continued until nightfall.

If Tacitus is to be fully believed, the scale of Agricola's victory at Mons Graupius was astonishing. Of the Caledonians 10,000 were killed during the battle and its immediate aftermath. Only 360 Roman deaths were recorded, the most senior of whom was Aulus Atticus, an auxiliary prefect. Some scholars have argued that Gaius Julius Karus, an equestrian officer who was highly decorated for his role in the "British war" may have been rewarded for his actions at Mons Graupius (*L'Année Épigraphique* 1951, 88). For his commanding role, Agricola was awarded triumphal ornaments and a public statue by the emperor Domitian.

Although a large number of potential sites have been linked to Mons Graupius, in the absence of archaeological evidence the location of the battle remains unknown. Tacitus' description of Mons Graupius suggests that auxiliaries were being deployed in combat in preference to legionaries (Tacitus, *Agricola* 35, *citra Romanum sanguinem*), a depiction that has drawn some debate from scholars of the *auxilia*.

Munda, Battle of (45 BCE)

The battle of Munda took place in March 45 BCE between the forces of Caesar and those of the Pompeian generals Gnaeus Pompeius (the late Pompey's eldest son) and Titus Labienus, near the town of Munda in Spain. It was the final major battle in Caesar's Civil War.

The forces that met at Munda were significant on both sides; however, the Pompeian forces outnumbered Caesar's considerably. Caesar claims to have had 80 cohorts (approximately 38,000 men) against Pompeius' 13 legions (approximately 62,000 men). Caesar also had a large number of cavalry, which he claims numbered 8,000. This is especially significant because of the vital role they would play in the proceeding battle. Though Caesar's men were fewer in number, they had the advantage of being veterans of many successful battles, and thus of high morale under their victorious general. The Pompeians were facing what would turn out to be their final attempt at gaining a significant victory against Caesar, and so their soldiers may have lacked morale for that reason. Furthermore, their generals did not share the same record of victory as Caesar, even though Labienus was a former legate in Caesar's army during the Gallic Wars.

The forces met on a plain that was sloped in favor of the Pompeian forces, thus, the Caesareans were fighting a literal uphill battle, as they did at Ilerda four years earlier. The clash is described as being a markedly even contest that was very hard fought. Caesar's right wing, the place of honor in all armies, was occupied by his tenth legion, as was his usual practice. The tenth were particularly noted for being very reliable and effective in battle, and this battle was no different. They had begun to push back Pompey's left

wing, which required him to reinforce the wing with soldiers from his right. In doing so, he weakened his right to the extent where they felt great pressure from Caesar's forces. Furthermore, the situation for his left wing, though reinforced, was hardly improved.

The turning point came when King Bogud of Mauretania, who had supplied Caesar's forces with a large number of allied cavalry, decided to outflank the clashing forces and direct an attack on Pompey's camp. Seeing this, Labienus decided to take action against Bogud and protect the camp. However, because the Pompeian forces were already hard pressed and probably had wavering morale, when they witnessed Labienus falling back toward the camp, they assumed that he was retreating. This, in turn, caused the soldiers to lose heart and break into a rout. They soon found out that Labienus was not actually retreating, but by then it was too late. Some soldiers managed to fend off their attackers or find refuge within the town of Munda, but many were killed in the rout and the battle was lost for the Pompeians.

Though casualty figures in the ancient sources tend to be exaggerated, there are claims of upward of half of Pompey's forces having been killed in the battle, whereas only 1,000 dead are claimed for Caesar's forces. Among the dead were Labienus and Attius Varus, the Roman governor of Africa who also fought against Caesar.

It is possible that if Caesar had lost at Munda, the civil war would have turned in favor of the Pompeians. Instead, the battle of Munda enabled Caesar to become dictator for life, though he would only hold that title for another year before being assassinated.

Mutina, Battle of. See Civil Wars (II) (44–31 BCE)

Mutiny

The Roman military of the Republic was a citizen militia. Generally, men were drafted in the *dilectus* and took an oath (*sacramentum*) to serve the commander for the duration of the current fighting season or war. The oath seems to have included language that the soldier would remain disciplined and obedient. Even after Marius' reforms introduced volunteers from among the poor to augment the *dilectus*, citizen recruits continued to take the oath to serve and remain obedient for the duration of the war. Soldiers were not fully professionalized yet. Also, although these post Marian legions have occasionally been called client-armies due to the appearance of soldiers having been more loyal to their generals than the state, the reality was that such loyalty was the exception rather than the norm during the late Republic. Despite these facts, late republican legions had a reputation for strict, effective discipline.

The military of the empire was a fully professional military. Augustus reformed the army, making it a mostly volunteer, long-term service army. With the exception of emergencies, this remained the case for the first two centuries. All soldiers signed up for fixed terms of service and when they retired they received a cash retirement bonus. During the later empire, in addition to volunteers, soldiers were eventually required by Diocletian's reforms to follow their fathers into the military. Soldiers still took an oath that included language that the soldier would remain disciplined and obedient.

Any army that requires discipline to maintain order and ensure its effectiveness in combat will by nature occasionally experience incidents of indiscipline or military unrest. Types of military unrest include military conspiracy (usurpation when it succeeded), mutiny, expressions of grievances, and insubordination, which includes desertion. Insubordination in all its manifestations was the most common form of indiscipline. Mutiny was not the most dangerous type of military unrest as usurpation had a much greater potential for widespread instability and death of leadership.

Despite being less common and less dangerous than some other forms of unrest, because of mutiny's notoriety and the attention that sources for the Republic devote to such incidents, it merits singular attention as a phenomenon. Mutiny is defined as collective, violent (actual or threatened) opposition to established, regular military authority. Not every ancient army was sufficiently regularized with established regulations and penalties for a term such as "mutiny" to apply, but Roman military discipline was sufficiently regular that the term can be applied to numerous incidents in the military history of the Republic.

In theory, mutiny and other forms of military unrest should not have been a threat to the state. Because soldiers were trained to fight, could often be armed, and were accustomed to working together, they represented a much greater threat when they engaged in collective unrest than did typical crowds of nonsoldiers. In addition to its potential for violence, mutiny damaged military order in the units where it occurred and could even undermine discipline among military units that did not participate; therefore, it was a great threat to military stability. The nature of political leadership and army command during the Roman Republic meant that mutiny was not a direct threat to the stability of the state. Soldiers mutinied against their officers, not against Rome itself. During the empire, however, changes in leadership and command contributed to the potential that a mutiny could be a direct threat to the stability of the state. The fact that the military was so critical to the success of the Principate as well as the survival of individual emperors meant collective indiscipline was potentially more threatening.

Roman authors usually blamed mutinies on soldiers' idleness and/or the "madness" of soldiers. Some authors blamed ambitious officers for instigating mutinies. Republican-era mutinies were not limited to the regular soldiers. Centurions became involved in most mutinies and occasionally even tribunes joined, including against Cinna, Caesar, and Octavian. It is not surprising that centurions did so, since they were promoted from the ranks and were closely connected to the soldiers. One of the most infamous cases of an officer inciting mutiny among his men occurred during the first civil war when the legate Gaius Fimbria incited the men serving under Lucius Flaccus to turn mutinous in 86 BCE. While there were cases of commanders inciting indiscipline, such as Octavian's behavior after the battle of Mutina when he instigated his soldiers to march on the

Senate, most mutinies were not the result of political manipulation.

Because the imperial military was made up mostly of poor volunteers whom elite authors saw as uncouth and ill-educated regardless of where they were recruited and because senatorial and equestrian officers enjoyed a huge social separation from their men and so did not usually participate in mutinies it was easier for imperial authors to blame soldiers' insanity. Another common authors' excuse for indiscipline was to blame ambitious officers for instigating mutinies, especially during times of instability. Unlike the Republic, however, when such a cause was uncommon, it was a more common cause of mutiny during the empire due to the nature of individual rule.

One common reason soldiers mutinied was service conditions, including back pay, poor living conditions, and exhaustion. When the men commanded by Scipio the Elder (soon to be Africanus) mutinied at Sucro in 206 they were angry over a lack of pay. Caesar had similar trouble with his men in Spain in 49, although he was able to avoid a mutiny until the march back to Italy. The legions on the Rhine and in Pannonia that mutinied in 14 CE were angry over extended service long past the terms for which they enlisted as well as unsatisfactory retirement bonuses. When Vitellius' legions mutinied in 69, part of the reason was conditions of service in Germany. When Caesar's men mutinied at Placentia in 49 it was over exhaustion—what they perceived as unending warfare. The mutinies Pompey faced in Africa in 81 and Octavian in 36 after the battle of Naulochus were due in part to similar frustrations over continuous warfare. Some of Tiberius' soldiers in 7 CE, Titus' soldiers in 69, and Trajan's during the Dacian wars came near mutiny due to exhaustion. Another cause was political and social instability. Soldiers were not immune from the feelings of uncertainty and instability that flowed through general society in a time of political conflict. The fact that there seem to have been more mutinies during civil wars is partially due to the unstable politics, but it was also a function of the fact that we have more surviving sources for these periods so we have a more complete picture of what occurred.

Every Roman commander who fought long enough encountered a mutiny. Scipio Africanus, Lucullus, Pompey, Caesar, Antony, and Octavian all had to deal with mutinies, some of which were serious. Lucullus faced a mutiny late in his war against Mithridates VI. In addition to the mutiny already mentioned, Caesar had to resolve a mutiny at Vesontio during the

Gallic Wars and before he could go after the Pompeian resistance in Africa in 47, he had to settle a mutiny among his soldiers in Campania by discharging several legions. Antony lost two legions to mutiny in late 44. Octavian had to settle two of the largest mutinies that ever occurred in Roman forces after his victories at Naulochus and Actium. He was able to resolve both by separating the ringleaders from the rest of the force. None of these mutinies resulted in open revolt.

A brief review of some emperors' encounters with mutiny demonstrates the close relationship between emperors and mutinies. Augustus was experienced with mutinies before becoming emperor and had a couple during his reign. Tiberius' reign started with two enormous mutinies in 14 CE, but his nephew Germanicus and son Drusus resolved those. Caligula faced a near mutiny in 40 while campaigning in Gaul but defused the situation quickly. A mutiny threatened Claudius' planned invasion of Britain when the legions refused to board the ships, but they were convinced to go peacefully. Nero panicked and committed suicide at news of the mutiny (near revolt) of the Praetorian Guard and among the Spanish legions. During 68–69, Galba, Otho, and Vitellius all experienced or had incited (or both) mutinies among soldiers, all of which contributed to their respective failure. Titus faced disciplinary problems during the Jewish War in 69–70, but none of these led to serious mutinies or a threat to his command. During the late second and early third centuries, Pertinax, Macrinus, Elagabalus, and Alexander Severus, each died due to mutinies. Although our sources are poor, mutinies seem to have been the cause of death for several emperors during the chaos before 284. The reason some mutinies contributed to or caused political instability during the empire was because some emperors or their subordinates were able to restore military order quickly whereas those emperors who died were politically weak already or had relied on their legions for elevating them to the imperial throne.

Most mutinies in all periods led to no more than a commander having to meet some grievances, such as immediate discharge. Caesar and Octavian both employed a combination of appeals to discipline and concessions to resolve some mutinies. Sometimes, however, mutiny resulted in the death of officers or even a commander, as in the case of Flaccus in 86 and Cinna in 84. Octavian attempted to limit centurions and tribunes from participating in mutinies by increasing their pay and benefits in 36 to the point of

creating a social and economic gulf between the ranks. Germanicus employed a combination of appeals to discipline, punishment, and concessions to resolve the mutinies of 14 CE. Tiberius relocated some of his units that were near mutiny while Titus and Trajan used discipline and a break from fighting to resolve their close calls.

The Roman military in all periods had no policy that officers were required to follow in resolving mutiny. Officers learned by experience so if they had not seen how a mutiny might be resolved they were at a disadvantage. The oath and their power of *imperium* gave commanders great authority and latitude in maintaining discipline while they simultaneously remained aware that legionaries were citizens and so inclined to occasionally express themselves collectively and individually. As a result of having taken the *sacramentum*, any violation of discipline was theoretically punishable by death, but it was not practical to execute everyone in a mutinous legion. Also, during civil wars, officers could not afford to alienate their troops and often had to meet their demands, not punish ringleaders, or both. Cinna may have neglected this point when his men initially mutinied in 84. Sulla, Pompey, Tiberius, Germanicus, Vespasian, and Titus each ignored mutinous behavior at critical times, and the incidents resolved on their own once they had run their course. Caesar, Octavian, and Tiberius had to meet the mutinous soldiers' demands for discharge. When possible, commanders isolated the ringleaders, and the rest of the legion would usually return to order quickly, though more vigilance was needed for a while afterward. Ringleaders might be executed wholesale or decimated, as Caesar at Placentia in 49 and Antony did at Brundisium in 44 and Germanicus in 14 CE. There are reports of soldiers asking to be punished for indiscipline, but these cases were extremely uncommon and may be part of a rhetorical tradition.

The fact that Roman soldiers mutinied during the Republic and early empire does not detract from Rome's reputation as a military success, nor does it detract from the deserved fame of generals such as Caesar, Pompey, Tiberius, and Trajan. The resolution of such incidents and the restoration of order was what distinguished good commanders. The fact that no mutiny grew out of control or led on its own to revolution before 235 is a good indication of the effectiveness of Roman responses. As time passed and emperors became more beholden to their soldiers, indiscipline became a decisive contributing factor to imperial instability.

N

Nero (Emperor) (54–68 CE)

Nero was born on December 15, 37 CE in Antium, the son of Gnaeus Domitius Ahenobarbus and Agrippina the younger. Nero's bloodline could be traced back to both Mark Antony and Augustus, thus being a direct descendant from the first *princeps*. Nero's birth name was Lucius Domitius Ahenobarbus. It was not until the emperor Claudius I (41–54 CE) adopted him did he take the name Nero Claudius Drusus Germanicus.

When Claudius died, allegedly poisoned by Agrippina, Nero became the youngest emperor so far, acceding at the age of 17. The young ruler had a promising beginning under the guidance of the Stoic philosopher Seneca the Younger and the praetorian prefect Sextus Burrus. Nero promised to be a model emperor, resembling his ancestor Augustus, and he expressed a desire that the Senate and consuls should perform their ancestral roles. He took steps to improve public order, provided charitable distributions of food, guarded against forgery, and reformed and even attempted to abolish indirect taxes throughout the empire.

Nero's first major conflict that he encountered was with his mother, Agrippina the Younger. Her concept of the role of empress exceeded previous expectations established by the Julio-Claudians. The empress or Augusta had no formal political or military powers, but could exert great influence. Agrippina exerted her influence more assertively than usual. She employed her power to have her enemies eliminated, listened to the imperial council behind the curtains, presented herself on coins alongside the emperor, and chastised Nero for his affair with a freedwoman named Acte. Eventually Nero's tolerance of his mother's influence came to an end. Nero removed her from the imperial palace and later had her executed on

charges of conspiracy.

Aureus of Nero, the last Julio-Claudian emperor (r. 54–68 CE), ca. 66–67 CE. The revolts of Vindex and Galba caused Nero's support at Rome to collapse; he fled Rome and committed suicide in June 68, resulting in the War of Four Emperors (69). Located in the Yale University Art Gallery, New Haven, Connecticut. (Christopher Gardner/Yale University Art Gallery)

Under Nero, only a few distant frontiers experienced warfare. In Britain the expansion of Roman rule was delayed when an indigenous queen, Boudicca, and her followers overran several Roman settlements including Londinium (London), slaughtering thousands of Romans before she was finally defeated. At the opposite end, Nero's general Corbulo undertook to engage and detach Armenia from Persian control. In 63 CE, Roman superiority was re-established and an agreement with the Persians was

reached, which enabled Tiridates I, the king of Armenia, to accept the status of a Roman client monarch. In 66 CE, to settle unrest that had begun under the emperor Gaius and that resulted from his policies, Nero appointed the general Vespasian to put down the Jewish revolt in Judaea.

Subsequent to the Great Fire of Rome in 64 CE, Nero tried to blame the small and still illicit sect of the Christians. Many were executed and some, according to the historian Tacitus, were burned alive as human torches.

As with his predecessors Tiberius and Gaius, Nero's relations with the Senate deteriorated and in the year 65 CE a massive plot, the so-called Pisonian conspiracy, to assassinate the emperor was uncovered. The Pisonian conspiracy, led by Gaius Piso, resulted in 19 executions or suicides and 13 banishments. In 68 CE, Nero returned from Greece. His hold on power had weakened further in his absence. In Gaul, Julius Vindex revolted, encouraging the revolt of Servius Sulpicius Galba in Spain and his acclamation as emperor. After the senate declared Nero an enemy of the state, Nero, with the help of one of his slaves, committed suicide on June 9, 68, thus ending the Julio-Claudian dynasty. He left no heirs, and the empire plunged into civil warfare that only ended with the victory of Vespasian (69–79 CE).

Nerva (Emperor) (96–98 CE)

Born in 35 CE, the Roman emperor Nerva (96–98 CE) was a transitional figure between Domitian (81–96), the last of the Flavian emperors, and Trajan (98–117). For a minor emperor, Nerva has occasioned unusual scholarly debate focused on the conspiracy that led to Nerva's accession and on the

circumstances of Nerva's adoption of Trajan.

Marcus Cocceius Nerva, born in 35 CE, was a Roman senator and the descendant of an illustrious senatorial family. He held junior magistracies, but never held any significant military commands or provincial governorships, living as a courtier during the reigns of the later Julio-Claudian emperors, particularly Nero. The young Nerva played a role in the suppression of the Pisonian conspiracy in Nero's reign. Nerva avoided taking sides in the War of Four Emperors (69 CE) and continued to play the role of courtier during the reigns of Vespasian, Titus, and Domitian.

Nerva was in the imperial palace at the time of Domitian's assassination by palace servants and was probably implicated in the conspiracy, if not its mastermind. He was accepted as emperor by the Senate, which conferred the imperial powers on him. He was also grudgingly accepted by the army, which remained loyal to Domitian.

Nerva was over 60 and in poor health. He appears to have carried out (or delegated) the tasks of imperial government conscientiously. His coin issues suggest that Nerva, like Galba, emphasized the restoration of *libertas*, a traditional republican value, but by this time connoting the emperor's respect for senators, contrasting with Domitian's contempt for the Senate.

However, Nerva was not able to appease the army, particularly the Praetorian Guard. In October of 97, the praetorians rioted before the imperial palace, calling for Nerva to turn over Domitian's assassins. Nerva handed over the men, whom the praetorians killed. This episode cost Nerva his credibility as a leader.

Not long afterward, Nerva announced his adoption of Marcus Ulpius Traianus (the future emperor Trajan), then Governor of Upper Germany (or, as some have argued, Pannonia). As a relatively young but experienced military commander, Trajan was more acceptable to the soldiers and better able to lead them. Trajan also had an extensive network of relatives and allies in the Senate. Nerva died of natural causes in January 98 and Trajan was acclaimed as emperor without incident. The significance of Nerva lies in his choice of adoptive succession, breaking the dynastic succession model of the Flavians and establishing the pattern of adoptive succession for the next three imperial accessions (Hadrian in 117, Antoninus Pius in 138, and Marcus Aurelius in 161).

New Carthage, Siege of (209 BCE)

The siege of New Carthage took place in 209 BCE during the Second Punic War, under the direction of Publius Cornelius Scipio (Africanus), who had been sent to Spain with proconsular *imperium* the previous year. The Carthaginians had 3 armies in the field in Spain but none within 10 days' march of New Carthage (Cartagena), an important and well-supplied harbor city which had great significance as the provincial capital. Scipio resolved to attack the city, although it was defended naturally on one side by a lake and on the other by the sea, and connected to land only by a narrow isthmus. According to Polybius, Scipio discovered from locals that the lagoon to the north was extremely narrow and fordable in many places, and also that the water level dropped through a narrow channel at a predictable time each evening. Addressing his troops, Scipio promised them that at the time of action, Neptune himself would provide divine aid. When the operation began, Scipio attacked by both land and sea, pushing the defenders who had sallied out to meet the army back within their walls. When the water level in the lagoon dropped later that day, he ordered a company of soldiers to cross it with ladders, and the apparent fulfillment of the promise of divine help impressed the soldiers greatly. The account of the successful siege is related by Polybius from excellent sources, including a letter from Scipio himself.

New Testament

The New Testament is the foundational collection of Christian texts (“gospel” narratives about Jesus, church history, letters of church leaders, and an apocalypse) written in Greek over the course of the mid- and late first century CE, by different (mostly unknown) authors. These writers and their later editors took pains to stress they were not social or political revolutionaries (for example Jesus’ saying, “Give unto Caesar what is Caesar’s”; or submission to secular authority in Romans 13 and 1 Peter 2); the success of ambitious missionaries such as Paul partly depended on them not appearing anti-Roman.

Yet despite some pacifist tendencies, Jesus was crucified (ca. 33 CE) essentially as a political troublemaker, and one might read subtle anti-Roman bias in some New Testament passages. The seven-hill seat of the “whore of Babylon,” “drunk on the blood of saints and martyrs” in Revelations 17 is usually seen as an attack on Rome, famously situated on seven hills. (Anti-Roman apocalypticism, incidentally, was not unique to Christians; Jews and pagans wrote in this vein as well.) Jesus cast a demonic entity called “Legion” (the Greek text carefully transliterates the Latin military term) into a herd of pigs, which many Jews associated with Roman soldiers. The New Testament consistently criticizes low-ranking Roman soldiers such as the cruel ones at Jesus’ crucifixion (also note Luke 3:14). But the New Testament treats officers—centurions and tribunes—quite positively, and frequently the metaphorical language of military service

(“soldiers of Christ,” et cetera) suggests the complexity of early Christian thought on war and soldiers.

Noncombatants

Modern noncombatants may serve in the armed forces as support staff (often far from the combat zone) or be unaffiliated civilians. More formally, the Geneva Conventions define noncombatants as civilians who do not participate directly in hostilities, as well as military personnel who are sick or wounded, or whose specific duties (medical or religious) exempt them from combat. The Conventions and similar laws of war are intended to protect noncombatants from harm.

Such differentiation did not exist in ancient Roman warfare. All Roman soldiers (*milites*) were probably expected to fight, and the Republic’s traditional division of *domi* (“at home” status) and *militiae* (the field of war) precluded much respect for citizen noncombatants in the field of war. Roman warfare could treat enemy civilians brutally, enslaving defeated enemy civilians on a large scale.

Brutality toward enemy civilians was particularly routine at the fall of besieged cities, including looting, rape, killing, and other atrocities. Even allied civilians were vulnerable, displayed in the Roman sack of Tarentum during the Second Punic War (218–201 BCE). An individual Roman commander displayed his control over his army and personal mercy (*clementia*) by protecting civilians, as when Julius Caesar forbade his army to sack Corfinium (an Italian city) early in the Caesarian-Pompeian Civil War.

Nonetheless, as the Roman Empire grew, the role of noncombatants associated with the army also grew. These people included military baggage handlers and servants; privately owned slaves; merchants, slave traders, and entertainers; and officers' and soldiers' families. The servants included the grooms (*calones*) of cavalry horses. The baggage handlers and grooms may have been slaves owned by the army. They might be armed and used as a fighting force in an emergency, or equipped as soldiers to deceive the enemy into thinking the Roman forces were larger (a popular stratagem). The category is blurry as many officers and soldiers also owned personal slaves.

Merchants and slave traders followed the army, the latter buying enemy captives on a massive scale after major Roman victories. The merchants probably supplied food and drink other than the Roman army's staples. However, such merchants and entertainers (including actors, fortune-tellers, and prostitutes) were regarded as bad for discipline. Scipio Aemilianus expelled them from the demoralized Roman camp outside Numantia in 134–133 BCE, along with soldiers' personal servants.

In the early and middle Republic, many citizen soldiers left families behind in Roman Italy and returned to them after relatively short service. The season of warfare was originally less than a year, opening in the spring and ending in the fall. In the period of overseas warfare, soldiers probably formed relationships with *de facto* wives or mistresses and had children in the provinces; these families followed the army with the other noncombatants. In contrast with the imperial period, little is known about these *de facto* families during the Republic. In the 170s Tiberius Sempronius Gracchus the elder, father of Tiberius Gracchus the tribune (d. 133 BCE), settled 4,000 Roman soldiers' children in a new Spanish town named Carteia (Livy 43.3.1–3). In his narration of the Civil War (49–45 BCE), Julius Caesar relates that the soldiers of Gabinius (a Roman turned mercenary) had married Egyptian women “and lost the name and discipline of the Roman people” (Caesar, *Civil War* 3.110).

The stabilization of military bases in the early empire meant an increase in *de facto* noncombatant personnel and a change in the *de facto* status of noncombatant civilians. Roman military tradition still required all *milites* (soldiers) to participate in training and combat. However, documentary sources display increasingly specialized military occupations, including artisans (smiths, armorers, builders, et al.), medical personnel, animal herders and tenders, and even musicians. Specialist soldiers were termed

immunes and relieved from fatigues. How much time they devoted to combat training is uncertain. On active campaigns, all soldiers were required to fight, but imperial authors reiterated the stereotype that during peacetime soldiers' combat skills became rusty and praised emperors and commanders who restored old-fashioned rigorous training.

Whether or not there were noncombatant *milites*, military slaves constituted an important group of noncombatant personnel. Perhaps 1,200 slaves per legion may have been state property. According to Josephus, Vegetius, and Dio, the slaves were trained to fight and might be used as combatants in an emergency (Josephus, *Jewish War* 3.69; Vegetius, *Military Affairs* 3.6; Dio 78.26.5). But their main role was to drive the baggage animals and guard the baggage (Josephus, *Jewish War* 3.125, 5.49). Cavalrymen (*equites legionis* or *equites alae*) may have owned their own grooms, who tended their horses. Higher-paid officers (centurion and above) could afford personal slaves to attend them in their quarters. The slaves, servants, merchants, and entertainers who followed the army were termed *lixae* by ancient authors.

Noncombatant civilians populated settlements and entire towns in the vicinity of forts and contributed to the economic and urban development of the frontier provinces. They are attested in archaeological and documentary sources, such as the archaeological remains of these settlements (termed *canabae* outside legionary forts, *vici* outside auxiliary forts), Latin epitaphs and religious dedications, and documents on papyrus and wooden tablets. The informal nature of such documents often leaves it unclear whether such persons were military personnel or civilians.

However, the noncombatant civilians of the *canabae* and *vici* existed on sufferance of the Roman army. They might be expelled whenever the frontier zone became an active war zone, as happened during the Gallic Revolt of 70 CE. In provinces that remained relatively peaceful, legionary *canabae* might develop into formally constituted towns with municipal institutions and permanent and monumental stone architecture, as at Lambaesis in Numidia (North Africa), the base of Legio III Augusta. Military officers, military *collegia* (voluntary associations or fraternities), and veterans dominated the social life of such towns.

Imperial soldiers' de facto families were also among the noncombatant civilians who settled near frontier bases. They are attested in documentary sources, including Latin funerary inscriptions (in which the legally

unmarried partners term each other “husband” and “wife”) and papyri and wooden tablets that show the legal difficulties that the families faced. The emperor Septimius Severus (193–211) granted soldiers the legal right to marry, ensuring that their children were legitimate.

In the later Roman Empire (fourth and early fifth centuries CE), legal sources show that the imperial government provided rations for soldiers’ wives and children and for soldiers’ servants.

Noncommissioned Officers. See Principales

Notitia Dignitatum

The *Notitia Dignitatum* is one of the most important documents for the institutional and military history of the later Roman Empire. It lists the civil and military officials in the western and eastern parts of the Roman Empire,

from the imperial court down to provincial echelons. Both the eastern and western parts contain series of entries for each official, which give the title and rank of the official, his functions, and a list of subordinate officials. Entries for military senior officers (see *magister militum*, *dux*, and *comes*) list the units and their titles which the officer commanded. The *Notitia Dignitatum* thus presents the nominal order of battle of the later empire, but non-Roman troops (barbarian allies or federates), perhaps the most important development in the later Roman army, are not listed. The *Notitia* clearly had an honorific function, depicting the officials' *insignia* or symbols of office and kept by a high-ranking official, the *primicerius notariorum*.

The date of the *Notitia* is uncertain. The core of the eastern list was compiled and amended just before 394. The original purpose may have been to provide up-to-date records for Theodosius I's campaign against the western usurper Eugenius. The western *Notitia*, on the other hand, shows later emendations, greater discrepancies and a larger number of errors than its eastern counterpart. The last clear datable entries suggest that the various lists were revised and edited until the 420s. The last recorded new unit are the *Placidi Valentiniani Felices*, a clear reference to Valentinian III (425–455), who was born in 419, the earliest possible date. The western *Notitia* is a notoriously difficult source for analyzing fifth-century military history, frustrating attempts to reconstruct the actual order of battle and military strength available to the western empire. The *Notitia Dignitatum* may have an ideological rather than practical purpose, underlining the ideological unity and supremacy of the empire at a time that the western government was at bay.

Numantia, Siege of (134–133 BCE)

The Numantine War of 143–133 BCE also known as the Celtiberian War was fought between Rome and the Celtiberians of Hispania Citerior and culminated in the long siege of the main Celtiberian city of Numantia in 134–133 BCE. Up to this point the Romans had found the tenacious Celtiberians an obstacle in their progress to subdue the region and suffered a series of military setbacks including several attempts on Numantia. Its position and construction on a hilltop had made it impregnable and it controlled major routes particularly from the River Douro.

In 134, the Roman Senate dispatched the victor of the Third Punic War, Scipio Aemilianus, to complete what many of his contemporaries had failed to do: to subjugate and take Numantia. Since the Roman army in Spain was demoralized by their failures, Scipio imposed a strict training regimen on them. Scipio also raised a large force of allied and mercenary troops and trained them for the siege. Scipio was aware that the city could not be taken by force, so he made arrangements to starve it into submission. He constructed a circumvallation and a contravallation to control access and egress to the city and built several towers to control routes via the Douro. After a cordon that lasted approximately eight months, the population resorted to suicide and cannibalism, eventually capitulating to Scipio's crushing forces. Survivors were sold into slavery and Scipio leveled the city.

Numantia's capture signaled the end of local resistance thus establishing Rome's presence in Spain. It is also remembered for the courageous struggle the inhabitants of the city inflicted on the mighty Roman army. Scipio returned to Rome to receive a second Roman triumph.

Numerus

A *numerus* (pl. *numeri*) is a unit of soldiers, and *in numeros referri* means to enlist or enter a recruit on the rolls of a unit. However, *numerus* (pl. *numeri*) was used in the technical sense to denote a unit of native fighters who were permitted to preserve their native fighting specialties, equipment, and training. These distinguished them from the *auxilia*, non-citizens who were organized, trained, and equipped in Roman fashion. The units of *numeri* were small, though 500- and 1,000-man units are attested. The modern term for such units might be “irregulars.” The *numeri* enabled the Roman army to make use of small forces trained in relatively exotic weapons and skillsets, and do not imply that the *auxilia* or legionaries had become less martial or fierce.

Examples of *numeri* include units of slingers (wielders of slingshots) from the Balearic Islands (modern Majorca, Minorca, Ibiza, and Formentera) off the Mediterranean coast of Spain and units of Syrian archers.

O

Octavian (Augustus) (27 BCE–14 CE)

Gaius Julius Caesar Octavianus, the future emperor Augustus (27 BCE–14 CE), termed Octavian before 27 BCE by modern scholars, rose to power in the brutal civil wars of the late Republic after the assassination of his great-uncle Julius Caesar in 44 BCE. Octavian's rise was marked by his exploitation of Julius Caesar's memory and veteran soldiers and by his own disregard of Roman tradition (in contrast with his public image as Augustus). After the elimination of the "Liberators" or assassins of Caesar, Octavian's main enemy was Mark Antony, whom he defeated in the battle of Actium (31 BCE), leaving Octavian sole ruler of the Roman world. The period from 44 to 30 BCE was fundamentally shaped by the relationship between Antony and Octavian, as it continually shifted through an uneasy series of alliances until finally breaking down altogether.

Octavian exploited his connection to his great-uncle Julius Caesar, seen in the changing forms of his name. His own father was Gaius Octavius, a "new man" (praetor in 61 BCE) and his mother was Atia, the daughter of Caesar's sister; thus his birth name was Gaius Octavius. Following normal onomastic rules in Roman adoption, Octavius took the name Gaius Julius Caesar Octavianus when he became Caesar's adopted son and heir. Modern scholars term him Octavian, but the ancient sources routinely refer to Octavian as "Caesar," as he preferred. Octavian also took the name *divi filius*, "son of a god," upon Caesar's deification. He then adopted *Imperator* ("victorious commander") as his first name from about 40 BCE, firmly associating himself with the idea of military success. In this way, he reinvented himself as *Imperator Caesar divi filius*.

Octavian's position as Caesar's heir was crucial to his recruitment of

support from both people and army. When Caesar was assassinated on March 15, 44 BCE, the 18-year-old Octavian was in Apollonia in Dalmatia (Albania), waiting to accompany Caesar on his planned campaign against Persia. Octavian returned to Italy swiftly after the Ides, securing popular support by carrying out the terms of Caesar's will and providing games in Caesar's memory. On June 1, Antony's ambitions became clearer as he claimed control of the key province of Gallia Cisalpina, the strategic entry point into Italy from the Alps, rather than the province allocated to him by the Senate. Cisalpina had been assigned to Decimus Junius Brutus Albinus. Suspicion of Antony in the Senate was inflamed by Cicero's anti-Antonian invectives, the *Philippics*. In the autumn, Antony set off to try to seize Gallia Cisalpina from Decimus Brutus, while Octavian proceeded south into Campania to raise troops from Caesar's veterans, offering them generous cash hand-outs. At the opening of the *Res Gestae*, Augustus represents this act as one of liberating the state. In fact, private levying of troops, along with bribing a legion commanded by a consul (Antony) were both illegal actions.

Silver denarius of Octavian, ca. 36 BCE. After the assassination of Caesar, Octavian, not yet 20, led Caesar's veterans and exploited Caesar's memory, becoming a major contender in the late Republic's final civil wars. Octavian and his opponents struck such coins to pay their soldiers. Located in the Yale University Art Gallery, New Haven, Connecticut. (Yale University Art Gallery)

In 43 BCE, as a result largely of Cicero's influence in the Senate, Octavian was put in charge of troops along with the consuls Hirtius and Pansa to fight against Antony. At stake was control of Cisalpine Gaul, which Antony was trying to wrench away from Decimus Brutus. Thus, at the battle of Mutina in April 43 BCE, Octavian and the two consuls fought against another Caesarian, Antony, to relieve the besieged Decimus Brutus. Antony was defeated, but both consuls died in consequence of the battle, leaving a power vacuum which Octavian promptly exploited, forcing the Senate to

confer the consulship on him, even though he was too young and had held none of the preceding offices. Even though Octavian had played little role in actual fighting at the battle, being left to look after the camp, Cicero praised his prowess, so that Octavian was hailed as *imperator* and honored with a *supplicatio* (festival days of thanksgiving to the gods). Cicero's *Philippics* give vivid insight into the tumultuous sequence of events during 44–43 BCE.

On November 27, 43 BCE, however, Octavian and Antony became unlikely allies, forming the Second Triumvirate along with Marcus Aemilius Lepidus. In contrast with the so-called First Triumvirate of Pompey, Crassus and Caesar (60 BCE), which was an informal alliance, the Second Triumvirate was formally constituted. Octavian, Antony, and Lepidus acted in effect as joint dictators. They focused on avenging Caesar's murder by fighting against his assassins Marcus Junius Brutus and Gaius Cassius. This culminated in the battle of Philippi (in Macedonia) in 42 BCE—or, to be more accurate, two battles on October 3 and 23. In the First Battle of Philippi, Antony defeated Cassius, who then committed suicide in the mistaken belief that Brutus had also been defeated. The Second Battle of Philippi, which again appears to have been fought chiefly by Antony, resulted in the defeat and suicide of Brutus. Antony commanded the Caesarian forces, while Octavian played little active role in the fighting, allegedly being too unwell to fight, or (according to his enemies) hiding in a marsh while the battle took place.

Once Brutus and Cassius had been defeated, the triumvir Lepidus was sidelined, because he had played no part at Philippi, having remained behind to keep charge of Italy. Antony and Octavian divided up Rome's provinces between themselves. Antony remained in the eastern Mediterranean, while Octavian returned to Italy, only to find serious unrest among soldiers demanding retirement benefits. Octavian met their demands by unpopular land confiscations, abetted by proscriptions. In the proscriptions, previously practiced by Sulla, the triumvirs published (*proscribere*) lists of their political enemies, declaring their lives forfeit; the property of the proscribed was confiscated. Relations between Octavian and Antony deteriorated, as Antony's wife Fulvia and brother Lucius Antonius stirred up unrest in Italy against Octavian in the so-called Perusine War. Octavian's problems were increased by a sea blockade by Sextus Pompeius, son of Julius Caesar's rival Pompey the Great, designed to cut off Rome's grain supply. Octavian besieged Lucius Antonius and Fulvia at Perusia

(Perugia) in 41–40 BCE, resulting in the defeat of Lucius Antonius and Fulvia, but the problem of Sextus Pompeius continued. Anecdotes about Octavian's behavior during the proscriptions and the siege represent him as particularly cruel and merciless (for example, Suetonius, *Augustus* 13).

Antony tried to invade Italy, but his soldiers did not support him, forcing him to try to come to terms with Octavian. The Treaty of Brundisium in September 40 BCE was an attempt to reconcile Antony and Octavian, reconfirming the division of empire between the two men, and sealed by the marriage of Octavian's sister, Octavia, to Antony. Lepidus was increasingly ignored. This agreement was much heralded, with the two men even being awarded an ovation, an honor just short of a triumph, only because the two men had made peace with each other, as the official records state. Antony departed to wage war in Armenia against the Persians, where his disastrous campaigning (even losing military standards to the Persians, later recovered by Augustus) only undermined further his position at Rome.

Sextus Pompeius had initially been officially recognized by the Senate as "commander of the fleet and coasts," hoping to use him against Antony in 43 BCE, but he was subsequently proscribed by the triumvirs. Sextus Pompeius seized Sicily and used his fleet in the western Mediterranean to impose a blockade on the grain supply to Rome. By 39 BCE hunger had provoked rioting at Rome, forcing the triumvirs to grant Sextus Pompeius recognition in a treaty which conceded to him control of Sicily, Sardinia, Corsica, and Achaia (Greece). The five-year triumvirate initially elapsed on December 31, 38 BCE, when the triumvirs informally assumed a second five-year period in office down to the end of 33 BCE, which Octavian and Antony agreed upon together in the Pact of Tarentum in the summer of 37 BCE. In 36 BCE, Lepidus helped Octavian resist Pompeius (his status now reduced by his enemies to that of a pirate), culminating in the naval victory of Agrippa at Naulochus (Sicily) on September 3, 36 BCE. Octavian's success against Pompeius contrasted sharply with Antony's dismal failure in Persia.

Octavian was still not unchallenged in the western Mediterranean, however. Having played an important part in defeating Sextus Pompeius, Lepidus made new demands, bidding for control of the island of Sicily. This was a miscalculation that led to Lepidus' marginalization and exile to Circeii, with Octavian taking over the whole of Italy and its western provinces. Antony now remained as Octavian's only rival, and tensions between the two men were accentuated from 35 BCE, as Antony began to

court Cleopatra VII of Egypt and her vast fortune, slighting his wife Octavia in the process, but strengthening his military position. At the same time, Octavian campaigned in Illyricum, where he recovered the military standards lost by Aulus Gabinius in 48 BCE (again accentuating the contrast with Antony), which he then put on public display at Rome, enhancing his military reputation.

The 10-year triumvirate expired at the end of 33 BCE, as hostility between Octavian and Antony gradually increased. By 32 BCE, Octavian was regarded with hostility by many of the leading men in Rome, and felt the need to enter the Senate with an armed guard. Both consuls and a large number of senators proclaimed their support for Antony, and left Rome to join Antony as he mustered forces in the eastern Mediterranean. The situation culminated when Antony divorced Octavia. Octavian declared war upon Cleopatra and exacted an oath of loyalty from Italy and the western provinces. In his propaganda war against Antony and Cleopatra, Octavian also exploited Roman and Italian xenophobia and anti-Egyptian sentiments. After months of skirmishes, the two sides met in naval battle at Actium on September 2, 31 BCE. Antony and Cleopatra fled from Actium to the queen's capital at Alexandria in Egypt, where the following year saw their final defeat and suicides. The culmination of Octavian's military victories was his triple triumph in 29 BCE, celebrated on three consecutive days for victories in Illyricum, Actium, and Alexandria.

From 44 BCE down to his final emergence as sole ruler of the Roman Empire in 30 BCE, Octavian was involved in armed conflict over a variety of territories—from northern Italy to Sicily, from Illyricum down into Macedonia—and he won victories by both land and sea. Statues were set up in his honor at Rome in precious metals (gold and silver), and he was depicted in heroic nudity, his foot upon a globe. Despite such commemoration, it was above all to Antony himself, ironically, and then to Agrippa and other generals that Octavian really owed his success, and this is a trend that continued once he had metamorphosed into Augustus.

Odenathus (d. 268 CE)

Septimius Odenathus or Odaenathus was a Palmyrene aristocrat who became ruler of Palmyra and Roman commander-in-chief and de facto vice emperor in the Near East during the reign of Gallienus (260–268 CE). Odenathus ruled a multicultural city, for Palmyra was a entrepôt for Silk Road trade and had been settled by Semites, Greeks, Arabs, and Persians. His family had been given the Roman citizenship by Septimius Severus (193–211). In native (Aramaic) inscriptions, Odenathus bore the title “Ruler of Tadmor,” the Aramaic name for Palmyra.

Needing a buffer state to deter the aggressive Sassanid Persian Empire, Gallienus conferred on Odenathus the title *corrector totius Orientis* or “Regent of the East,” giving him commander-in-chief authority over all Roman forces in the Near East. Odenathus also received the title *dux Romanorum* (commander of the Roman forces).

Odenathus successfully campaigned against the Persians, detaching northern Mesopotamia from the Persian Empire and capturing Nisibis; he launched an offensive further into the Persian Empire. Perhaps for this reason Odenathus took the title “King of Kings,” the title of the Persian monarch, attested in inscriptions. Odenathus was then saluted as *imperator* by his troops, a rank that he was not authorized to use and which made him a usurper, but Gallienus was not in a position to suppress him.

Odenathus was married to Septimia Zenobia (born ca. 240). They had several children, at least two sons, Septimius Herodianus and Septimius Vaballathus. Other children may have existed, poorly attested. When

Odenathus was assassinated under mysterious circumstances in 268, he was succeeded by his younger son Vaballathus, and by Zenobia, who governed for her son. Herodianus was dead by this time. Vaballathus and Zenobia began aggressively to extend Palmyrene power in the Near East, conquering Roman Arabia, Egypt, and Syria, and extending into Asia Minor. Aurelian, now emperor (270–275), could not tolerate this threat and made war upon the Palmyrene Empire, reconquering it and capturing Zenobia, whom he displayed in his triumph in 274.

As with much of the history of the third-century crisis, the literary sources for Odenathus and Zenobia are difficult to use and conflicted. Zosimus (writing in the early fifth century) and the *Historia Augusta* are closest in date. Late authors, such as John Malalas and Zonaras, provide detail from unknown sources. The *Historia Augusta*'s later biographies (from ca. 218 onward, and especially from 235–284) are notoriously unreliable. The reigns of Odenathus and Zenobia also can be studied through provincial coinage and documentary sources.

Odoacer (d. 493 CE)

On September 4, 476, the Germanic commander of Rome's Italian Armies captured Ravenna and forced the western Roman Empire's newly installed emperor Romulus Augustus to abdicate. Traditional historians mark that date as the end of the western Roman Empire. The move came just one month after the German *foederati* and Italo-Roman army had proclaimed Odoacer *Rex Italiae* (king of Italy). The Roman Senate quickly followed up

by asking the eastern emperor Zeno, himself only recently ascended to the throne, to accept Odoacer as emperor of the western empire. Recognizing a *fait accompli* he could not undo, Zeno granted Odoacer the title of Patrician and asked him to reinstate the deposed emperor Julius Nepos as emperor of the western empire. However, Odoacer did not allow Nepos to resume his throne. Although Odoacer never took the title of western emperor, that refusal earned him Zeno's enduring animosity, but otherwise, to the average citizens of Rome and Italy, Odoacer's ascension to power appeared unchallenged. He called himself a Patrician, enjoyed the backing of the Roman Senate, and although an Arian Christian, practiced religious tolerance and did not interfere in the affairs of the Orthodox Church.

Little is known about Odoacer's early life or background. That he was a Germanic ally remains unquestioned but of which group is unclear. Most sources describe him as from the Scirii but some chronicles say his people were the Herculi, Turcilingi, or Rugii. As a Roman soldier he took the name Flavius Odoacer. He became an officer in the western Roman army in 470, advancing to a position of imperial bodyguard by 472. Due to his talents as a leader, the *foederati* came to him in 476 when their request for rewards was rejected by Orestes, the Roman military commander for whom they had fought for when he deposed the western emperor Nepos earlier that year. The Italo-Roman troops apparently trusted Odoacer as well for they joined with the *foederati* in electing him king of Italy.

Odoacer was no illiterate barbarian and appears to have viewed his role as protector of the empire's interests in Italy. He gained Sicily from the Vandal king Gaiseric within months of gaining control over Rome and when Nepos was assassinated near Salona, Odoacer pursued and executed the murderers. However, he also conquered the Dalmatian coast and incorporated it into his "kingdom." He elevated the power and prestige of the Senate and enjoyed the Senate's loyalty throughout his reign.

Unfortunately, the emperor Zeno's animosity proved Odoacer's undoing. Zeno promised the Ostrogoths' king Theoderic the Great the crown of Italy if he would remove Odoacer. Theoderic invaded Italy in early summer 489, defeating Odoacer in three successive engagements. Odoacer fled to Ravenna, leaving Theoderic to conquer Italy. The fighting continued back and forth well into 493. Then, Ravenna fell after a three-year siege on March 5, 493. Theoderic had Odoacer and his entire family killed shortly thereafter. The last vestiges of traditional Roman governance died with

Odoacer. Theoderic had no use for the Senate, ruling largely as a German king.

Olybrius (Emperor). See Fall of the Roman Empire; Ricimer

Orestes (d. 476 CE)

Orestes was a Roman landowner living in Pannonia in the 440s and 450s at a time when that province was under Hun control. He first comes to our attention as secretary to Attila, king of the Huns. In 449, Orestes was part of a Hunnic delegation sent to Constantinople to negotiate peace terms. The eastern Roman historian Priscus states that Orestes was the son-in-law of the western Roman *comes* Romulus, implying contacts at the western court. After the death of Attila, Orestes disappears from our records until 475 when he was appointed *magister militum* by the western emperor Julius Nepos. Orestes then overthrew Nepos and declared his own son Romulus Augustulus emperor. Orestes died in battle against the warlord Odoacer in 476.

Otho (Emperor) (69 CE)

Born in 32 CE, Marcus Salvius Otho (69 CE) usurped the throne from Servius Sulpicius Galba, inducing the Praetorian Guard to assassinate Galba on January 15, 69 CE. Otho was defeated by the Vitellians in the First Battle of Bedriacum in northern Italy on April 14, and committed suicide on April 16. Though his personal reputation was ambiguous, the ancient authors regarded Otho as redeeming his past through the fortitude displayed by his suicide.

Otho came from a relatively distinguished family and became a close friend of the emperor Nero, sharing Nero's luxurious and unconventional lifestyle. He was married to Poppaea Sabina, with whom Nero fell in love. Nero made Otho divorce Poppaea and proceeded to marry her and appointed Otho to the governorship of Lusitania (a province in Spain). Having returned to Rome by 69, Otho hoped to become Galba's heir, but was disappointed when Galba chose Lucius Calpurnius Piso Frugi Licinianus as his heir. Otho borrowed money and used it to provide gifts and favors to the Praetorian Guard, inducing them to aid and support his usurpation.

On January 15 of 69, the praetorians carried Otho off to their camp, where they hailed him as emperor. Other men of the guard seized Galba and assassinated him and Piso. Otho was accepted as emperor by the Senate. Meanwhile, Aulus Vitellius had been already hailed as emperor by the legions in Lower and Upper Germany and his generals, Aulus Caecina and Fabius Valens, were advancing on Italy.

Otho was at a disadvantage in the civil war with the Vitellians, having only the praetorians and urban cohorts and one legion (Legio I Adiutrix) at his disposal. He marched forth to meet the Vitellians and, after some small victories, was decisively defeated in the First Battle of Bedriacum on April 14. As was usual for the Julio-Claudian emperors, Otho did not command the battle in person, but deputized generals. He awaited the outcome at the nearby town of Brixellum.

After his defeat, Otho committed suicide at dawn on April 16 with the intent of sparing himself humiliation by the Vitellians and sparing his army further civil warfare. Otho had not hitherto been reputed a very brave man. His appearance was considered unmanly, since he depilated himself and was rumored to apply a bread poultice, commonly used by women, to his face to discourage the growth of a beard (Suetonius, *Otho* 12). But Tacitus says that “unlike his body, his spirit was not effeminate” (Tacitus, *Histories* 1.22). This judgment was based on Otho’s daring in usurping the empire, but also on the fortitude with which he met his death, displaying calm resolve and stabbing himself with a dagger. Such political suicide was a Roman tradition, whether carried out by leaders who had lost civil wars (as did Cato the Younger, Brutus and Cassius, and Antony and Cleopatra), or imposed by tyrannical rulers upon dissidents. Otho had not designated an heir, and the empire passed without any challenge at that time to Vitellius. Vespasian then revolted from Vitellius in July of 69; his troops defeated the Vitellians in October and captured Rome in December 69.

The main sources for the life of Otho are Tacitus’ *Histories*, Suetonius’ *Otho*, Plutarch’s *Otho*, and Cassius Dio’s *Roman History*. Tacitus’ *Histories* presents the most balanced account; Suetonius and Plutarch’s *Otho* are more negative. The extant epitome of Dio’s *Roman History* for this period contains relatively little material about Otho.

Ovation

An ovation was a lesser version of the triumphal procession, awarded during the Republic to generals whose victories fell short of a triumph. Both triumphs and ovations required that the commander have held *imperium*. An ovation featured a smaller procession than a triumph, the victor had to walk on foot, and the victor was not permitted to bear the triumphator's insignia (the *toga picta* or purple toga with gold brocade, a scepter, a laurel wreath) or ride in a chariot. The last victor permitted an ovation was Aulus Plautius in 47 CE for the conquest of Britain.

In the middle Republic the right to a triumph versus a lesser ceremony (or none) could be contested hotly in the Senate. The victory might not have produced enough enemy dead for a triumph (though the required number is debated) or the victor might have been relieved of his command. Other technicalities reflect the fierce competition of aristocrats in the mid-Republic. Besides the ovation, another lesser form of triumph was the "Alban" triumph, on the Alban Mount (attested in 231, 211, 197, and 172 BCE).

The ovation is distinct from *triumphalia ornamenta*, triumphal ornaments, in which the general received triumphal insignia but was not permitted to have a triumph ceremony. The development of *triumphalia ornamenta* reflects the emperors' desire to monopolize the prestige of the triumph ceremony for the imperial house. In 19 BCE Lucius Cornelius Balbus was the last nonimperial commander (senator) to be permitted a full triumph. After that time victorious generals who did not belong to the imperial house were granted *triumphalia ornamenta*. They consisted of triumphal insignia: the *toga picta*, scepter, and wreath. The *triumphalia ornamenta* were the highest honor that a senator could hope to receive during the Principate. Receivers of *triumphalia ornamenta* might also be permitted a statue with a laurel wreath.

Members of the imperial house could also be granted *triumphalia ornamenta* if their victories were considered insufficient for a triumph or the emperor in question wanted to monopolize the right to triumph.

Overthrow of the Monarchy (ca. 510 BCE)

The overthrow of the Roman monarchy and the expulsion of the final Roman *rex* (king), Tarquinius Superbus (“Tarquin the Proud”), represents one of the more dramatic and problematic episodes from early Roman history. The literary sources for early Rome were based (at best) on a combination of cryptic annalistic evidence and oral tradition. Modern scholars often interpret them as containing a significant amount of fabrication and elaboration. Indeed many scholars have suggested that the dramatic character of the overthrow—full of sex, violence, and family intrigue—hints that this particular aspect of the narrative draws heavily on various Roman mythic and theatrical traditions and as a result the details of the account should be treated with a healthy measure of scepticism.

According to the literary sources, the Roman monarchy had existed since the founding of the city, traditionally by Romulus in 753 BCE, and by the end of the sixth century BCE Rome had been ruled by seven different *reges* (the word *rex*, pl. *reges*, is often translated simply as “king,” although this term does not fully capture the nature of the ancient office). Despite the longevity of the monarchy, the selection of *reges*, and indeed the institution

itself, seems to have been in many ways an *ad hoc* affair. There was only a loose hereditary claim to the title, which was never successfully exploited, and power ultimately lay with the community which granted each *rex* his *imperium* through a vote of the *comitia curiata*. The institution of the Roman *rex* was therefore vulnerable, dependent on maintaining good will among the people of Rome and relationships/alliances with the powerful aristocratic families which lived around the city to maintain control.

The main events of the overthrow occurred ca. 510 BCE with both Livy and Dionysius of Halicarnassus, our main sources for the period, recording essentially the same story—suggesting that by the late Republic at least this particular aspect of Rome’s early history was reasonably well established. Although there were clearly preexisting tensions in Rome, the expulsion of the final *rex* was supposedly brought about by the rape of Lucretia, the wife of Tarquinius Collatinus, a member of the *rex*’s extended family (a second cousin according to Dionysius *Roman History* 4.64), by Sextus Tarquinius, the son of Tarquinius Superbus. Following the rape, Lucretia called together her father, Spurius Lucretius, possibly her husband, and a number of other family members, along with some prominent outsiders including Publius Valerius (Publicola) and the young Lucius Junius Brutus. Once they had assembled, Lucretia told the men of the rape, had them swear to avenge it, and then killed herself out of shame over her dishonor, providing one of Livy’s key *exempla* of archaic Roman chastity and virtue. Interestingly, it was not Lucretia’s husband or her father who was the first to act but Brutus, an outsider to the family, who proclaimed his outrage, mobilized the people of Collatia, and marched on Rome. Upon arriving in Rome the group was initially greeted with terror and confusion by the local populace, but Brutus was able to sway the people with his account of the rape of Lucretia and the many crimes of Rome’s previous *reges*, mobilizing an even larger force against the Tarquins. When Tarquinius Superbus heard about these events he quickly returned to Rome from Ardea only to find the gates barred against him. Tarquin then went away, supposedly north to his family’s homeland of Etruria, to muster support for his cause and attempt to regain his throne. In his absence, however, the Roman people replaced the monarchy with the Republic (*res publica*) which was headed by two annually elected consuls, to whom were distributed most of the powers of the *rex*. The first two consuls were Brutus and Collatinus in 509 BCE, although the literary tradition for this year is problematic to say the least

and Collatinus was supposedly exiled soon after his rise to power and was replaced by Publicola.

The overt literary narrative therefore suggests an aristocratic coup carried out by those closest to the *rex*, motivated by both a desire for power and anger at Tarquin's oppressive policies toward the aristocracy. The character of Brutus best displays this combination of motivations. Brutus was the youngest son of a powerful Roman aristocrat who was supposedly murdered in the early years of Tarquinius Superbus' reign, as the *rex* attempted to consolidate his power in the city. His brothers were also killed, but the youngest son himself was spared because he was thought to be of low intelligence and was therefore given the nickname "Brutus," meaning "stupid," and became the butt of jokes for Tarquin's sons. It is therefore likely that Brutus' later actions against the *rex* were, at least in part, thought to be motivated by revenge for the treatment of himself and his family. But revenge was not the only motivator at work within the character of Brutus, as seen in Livy's anecdote involving the oracle at Delphi (Livy 1.56). To explain a portent at Rome, Brutus was sent along with the sons of the *rex* to the oracle at Delphi in Greece. Once the priestess had given them the answer for which they had initially come, the young men asked a second question: which of them would succeed the *rex*? The priestess answered, "He among you who kisses his mother first will have the highest power in Rome." The young men all rushed back to Rome to kiss their mothers, but Brutus, who interpreted the oracle more metaphorically, pretended to stumble and kissed the Earth, as the Earth could be seen as the common mother to all mankind. Brutus then went on to claim the highest power in Rome by ousting the *rex* and claiming one of the first consulships for himself. So it seems that in addition to revenge for the wrongs against his family, Brutus also had ambitions to become *rex* himself, or at least achieve the highest power in Rome.

The problems with the literary narrative, however, are clearly evident. The dramatic character of the narrative, with its strong mythic overtones, has led some scholars to doubt even the most basic elements of the story. The foolish young man (often a third son) who becomes heir to a kingdom is a stock character in later European folk tales. But while it is impossible to ever prove the details of this narrative, some of the more basic aspects do seem to be corroborated by outside evidence. Most notably, there is a growing body of evidence supporting the presence of the tensions between

the elites and the *rex* in Rome expressed in the narrative, although not necessarily the result of personal enmity. Instead the elite tensions in Rome were probably the result of region-wide shifts in elite settlement. Both the archaeology and literary traditions for early Rome suggest that, in addition to the increasingly powerful urban centers in the region, there also were a number of powerful rural clans (*gentes*). For much of the archaic era, these clans seem to have maintained a certain degree of independence and were able to move from community to community with little to no loss of prestige or power. Examples of this can be seen in the cases of Coriolanus and Appius Claudius during the early Republic, who were both able to change communities and immediately gain power in their new homes, and even in the figures of the *reges* themselves. However, the relationship between the elite clans of Latium and the region's burgeoning communities is highly ambiguous. Although in many ways intertwined and indeed symbiotic, the points of interaction between them seem to have been surprisingly limited. It was only during the sixth century BCE that the archaeology suggests that these clans began to settle in the hinterland of communities like Rome, permanently associating with them and increasingly vying for power in the communities. So, while previously a single clan or clan leader was able to dominate a community for an entire generation, the increased and long-term focus on settlements by the elite in the sixth century BCE in Latium made this impractical. There were simply too many powerful clans in and around communities like Rome who were competing. This pressure from rival clans may have led the men in power, such as the final *rex* of Rome, Tarquinius Superbus, to become increasingly hostile and oppressive in an effort to maintain their positions. But even if the dramatic events of the overthrow of the *rex* did occur as described, they would only have represented the straw which broke the camel's back.

The consequences of the overthrow of the Roman monarchy would initially have been difficult to discern. Indeed the sources suggest that for the vast majority of the Roman populace the change from a monarchy to a Republic barely registered. The community was still controlled by the region's powerful aristocracy, except now power was shared between two (or perhaps more) aristocrats each year instead of being monopolized by a single clan leader for an entire generation. The early consuls (perhaps called *preators* at this stage, which translates simply as "leaders") seem to have maintained the powers of the *rex*, at least as far as military and political

duties were concerned, and even acquired their grant of *imperium* via the same mechanism—a vote of the *comitia curiata*. Only some of the religious duties of the *rex* were assigned to separate priesthoods. Additionally, the goals and ambitions of the new elite seem to have changed little from those of the *reges*, which is unsurprisingly as they all came from the same social and cultural group. The monarchic period's council of elders, the Senate, persisted in the early Republic and even may have increased in power, excluding non-patricians. The early consuls were, at their core, still clan leaders interested in pursuing their personal and clan-based agendas. Being in charge of the community for a year did not change these goals; it merely gave them more urgency. As a result, Rome's warfare in the early Roman Republic seems to have been dominated by the same pursuit of portable wealth which drove the private clan-based warfare which was also occurring beyond Rome's walls. Indeed, overall the community's military and political continued under the early Republic much as it had under the monarchy, albeit with a bit more movement at the top.

The story of the expulsion is fascinating for a number of reasons, quite apart from the dramatic events it contains. Most notably, scholars have been intrigued by the nature of the figures involved and their various motivations, as many of the key characters in the narrative were either familial relations or trusted companions of the *rex*. So in many ways the expulsion of the Roman *rex* can be seen as a military coup carried out by those nearest and dearest to him. The narrative of the expulsion itself is also intriguing because of the various sub-narratives it contains. Wiseman (1998) has identified four distinct stories or strands within the overarching narrative—that of Brutus, Lucretia, Publicola, and Marcus Horatius—which may have originally been separate stories but were combined to create the meta-narrative as preserved sometime during the mid to late Republic. Additionally, the expulsion of the final *rex*, like many other aspects of early Roman history, has strong parallels within Greek history. Indeed, many aspects of the character of Tarquinius Superbus are thought to have been derived from the archetype of the Greek tyrant and it is likely that his overthrow was meant to mirror that of the Peisistratids in Athens. The narrative condemning the monarchy gained further force from the mid- and late republican Romans' dealings with Hellenistic monarchs and client kings, whom they often regarded with hostility and contempt.

Palmyra

Palmyra is the Greek name for the city of Tadmor, located in an oasis in central Syria. Palmyra was a major hub for trade with the east. Occupied since 2000 BCE, Palmyra was settled by people from many civilizations: Assyrian, Semitic, Arab, Greek (from the Hellenistic Age), and Persian. These cultures are all evident in the site's art, architecture, and archaeology. The dominant language of the Palmyrenes was Aramaic; their cultural identification was probably Semitic.

Mark Antony attempted without success to conquer Palmyra, but the early Roman emperors accepted Palmyra's de facto independence due to the popularity of luxury goods from India and China (especially spices and silk textiles) at Rome. Palmyra remained a free city till Septimius Severus incorporated it into the adjacent Roman province. However, the Roman army recruited units of Palmyrene auxiliaries, especially archers and cavalry.

In the mid-third century, as the Roman Empire threatened to fragment under the stress of barbarian invasions and civil war, Palmyra became an independent realm, the "Palmyrene Empire," ruled by Septimius Odenathus and then by his widow Zenobia. Odenathus seems to have been confirmed as "Ruler of Tadmor" (attested in Palmyrene inscriptions) by the emperor Philip, as a bulwark against Persia. The emperor Gallienus (260–268) granted Odenathus the title of *corrector totius Orientis*, the emperor's deputy in the eastern empire, permitted to command Roman troops. Odenathus succeeded in reconquering part of Mesopotamia from the Persians, and took the native title "King of Kings." He was acclaimed *imperator* by his troops (around 267). Gallienus, faced with many other

rivals for the purple, tolerated this state of affairs. Odenathus died mysteriously perhaps assassinated, ca. 268, succeeded by his widow Queen Zenobia.

Zenobia governed Palmyra as regent for her son Septimius Vaballathus, but aggressively sought to expand the Palmyrene Empire. She appointed Septimius Zabdas as her general. Palmyra pushed forward into Roman Arabia (where the culture was similar). Zabdas defeated the *dux* (commander) of Roman Arabia and sacked the garrison city of Bostra, and proceeded to capture Judaea and invade Egypt. Zabdas and Zenobia captured Alexandria, despite the resistance of the Roman prefect of Egypt, whom the Palmyrenes defeated. Zenobia then sought to consolidate Palmyrene control of Syria. Coins show that Zenobia and Vaballathus increasingly took Roman imperial titles, Zenobia being *Sebaste* (Augusta) and Vaballathus *Sebastos* (Augustus), then the formal Latin titles *Augusta* and *Augustus* on coins minted at Alexandria and Antioch.

Emperor Aurelian could no longer tolerate this rivalry and reconquered Palmyra for the Roman Empire. He first captured Tyana, a city in Cappadocia at the edge of Palmyrene influence. He then defeated Palmyrene forces in the battle of Immae in Syria and forced Zenobia to flee from Emesa in Syria to Palmyra. Aurelian then besieged Palmyra; attempting to flee to the Persians, Zenobia was captured by the Romans. Aurelian court-martialed Zenobia and her generals and advisers, putting the latter to death but sparing Zenobia. Diocletian (284–305) built walls and an army camp in Palmyra as a frontier outpost.

The Greek and Roman literary sources for the Palmyrene Empire are thin and conflicted, including the fanciful *Historia Augusta* and the Byzantine chronicler Zonaras.

Sara E. Phang

View of Palmyra. Though the architectural style seen here is Greco-Roman, Semitic, Persian, and Arabic cultures also flourished at Palmyra. Permitted semi-independence from the Roman Empire, in the mid-third century CE Palmyra broke away and formed an independent empire, expanding into Roman Syria and Egypt. Palmyra (Ruins), Syria. Panegyric

Panegyric is a rhetorical genre of Greek and Roman literature, an oration or poem addressed to a ruler or to important personages, idealizing and praising them. Despite the flattery, contemporary panegyric is an important historical source, showing how rulers or other personages such as generals or high officials were regarded by contemporaries, in contrast with historiography, biographies, epitomes (abbreviated histories), and chronicles that were written decades or centuries later and subject to hindsight. Formal panegyrics were orations that were performed or were intended to be

performed in the ruler's presence, but other genres of literature may display elements of panegyric.

Roman imperial panegyric can be used as a historical source with caution due to its flattery and idealization. It may attest the emperor's activities, including military campaigns, though the tendency of panegyric to depict emperors as epic warriors makes it difficult to evaluate the emperor's active role as commander. In some cases, a sequence of panegyrics displays the shifting political alliances of the persons involved. Panegyric is also a major source for the ideology of imperial rule, showcasing the traits of a good emperor.

Extant examples of panegyric are Pliny the Younger's panegyric to Trajan (98–117 CE); the *Panegyrici Latini* (Nixon & Rodgers 1994), including orations addressed to Maximian (286–305) and to Constantine (306–337) that illustrate the complex, shifting alliances of the Tetrarchic Civil War; Pacatus' panegyric to Theodosius I (379–395); and works by the Latin poet Claudian, the court panegyrist of Honorius, writing in the late fourth and early fifth centuries. The opposite of panegyric was invective, the systematic rhetorical vituperation of a villainous personage (such as Gaius Verres in Cicero's *Verrine Orations* or Mark Antony in Cicero's *Philippics*).

Pannonia, Pannonians

The Roman frontier province of Pannonia comprised parts of modern-day

Croatia, Serbia, Slovenia, Slovakia, Hungary, and Austria. The Romans first termed this region part of the province of Illyricum, and divided it into Dalmatia and Pannonia after the Pannonian Revolt (in 8–9 or 19–20 CE). The Pannonians, originally of Celtic origin, merged with the many Roman settlers in this strategically important province. In the third and fourth centuries CE, Pannonia and the neighboring Balkan provinces were remarkable for producing emperors and many of the imperial government's and army's officers and officials.

The Romans first categorized the Balkans, from the Dalmatian coast inland, as Illyricum. Their early involvement was with the Illyrian peoples of the Adriatic coast, but in the Pannonian War of 13–9 BCE, Augustus' generals pushed inland, first as far as the River Drava. Though the push toward the Danube began in the reign of Tiberius, not until Trajan's reign (98–117 CE) was the Danube established as the northern frontier, with a line of forts (many of which became important cities) and a Danube River fleet. The river itself was a major artery for transportation. In Trajan's reign, ca. 103–106, Pannonia was divided into Pannonia Superior (upriver) and Pannonia Inferior (downriver) for easier administration.

In the tradition of Greco-Roman ethnography, Dio regards Pannonia as a distant land with a harsh climate and long winters, so that the Pannonians were unable to grow either grapes or olives. However, the Romanized Pannonians readily imported Mediterranean wine and olive oil. The original cultures were native or Celtic, but many people from around the empire, including the personnel from three legions, settled in Pannonia, as did northern Italian traders and slaves, administrative clerks, and traders from Greece and the Near East. Throughout its existence Pannonia remained a well-garrisoned and strategically important province, keeping watch on the frontier and protecting the empire.

Preconquest Pannonians and the inhabitants of the countryside lived primarily in villages and kinship groupings, lacking highly organized states and possessing very few larger urban settlements. The wealthier peoples, such as the Daesitiates, controlled and profited from gold and iron mines. The Greek authors Cassius Dio (who governed Pannonia in the 220s, and faced a mutiny of his soldiers) and Herodian had a dim view of the Pannonians as stereotypical soldiers, tall, strong, courageous in warfare, but slow-witted.

On the other hand, in the third and fourth centuries CE, Pannonia and

the other Balkan provinces (Dalmatia, Moesia Superior, Moesia Inferior, Thrace) produced a number of energetic soldier-emperors, from Maximinus I the Thracian (235–238) to Diocletian (284–305) from Dalmatia and the House of Constantine (beginning with Constantius I, Caesar 293–305, emperor 305–306) from Moesia, to Valentinian I (364–375) and Valens (364–378) from Pannonia. The region also produced lesser administrators and soldiers, presented by Ammianus Marcellinus as a distinct group, ambitious and capable but heavy-handed.

Pannonian Revolt (6–9 CE)

The Pannonian revolt is also known as the Pannonian-Illyrian revolt, the Great Illyrian revolt and the *Bellum Batiatum*. After conquering Illyricum during the Pannonian War of 13–9 BCE, Augustus hoped to expand into Bohemia, Dacia, and the Carpathians between 8 BCE and 6 CE. He set his plan in motion by displacing Dacian peoples and preparing for a war with Maroboduus, the leader of the German Marcomanni. By 6 CE the Romans, commanded by Tiberius, were about to defeat Maroboduus, when they learned that the Pannonians and Illyrians had taken advantage of their focus on Maroboduus to revolt. According to Cassius Dio, the Pannonians and Illyrians realized how numerous they were when the Romans ordered them to assemble an army to help them defeat Maroboduus. At the urging

of Bato of the Daesitiates, the Pannonians and Illyrians decided to rebel. The Pannonians resented not just forced military service, but also Roman maladministration and excessive taxation. They may also have been destabilized by the cultural changes introduced by conquest.

Initially victorious against the Romans, the Daesitiates were soon joined with another Pannonian people, the Breuci, and other Pannonians and Illyrian tribes. The Breuci were led by two noblemen, also named Bato (a common name in Pannonia) and Pinnes. Velleius describes Bato of the Daesitiates, Bato of the Breuci, and Pinnes as energetic and skilled in military affairs. Bato of the Daesitiates was a local nobleman who also had served in the Roman *auxilia*, where he (and perhaps other Pannonian and Illyrian leaders) acquired experience with Roman military tactics, Roman culture, and Latin. The Pannonians used Greco-Roman military techniques, including siege works, pitched battles, and effective logistics, to better combat their enemies in the revolt.

The Pannonian rebels, led by the two Batos and Pinnes, now numbered some 200,000 infantry and 9,000 cavalry. They mainly were from the Sava River area. The rebels initially attacked any Roman citizens within their territory, then turned upon wealthy nearby cities such as Salonae and Sirmium, looting and killing. When he learned of the revolt, Tiberius rushed south with his troops. His strategy focused on containing the revolt and preventing it from spreading, while protecting important line of communication and major Roman centers. He sent the Twentieth legion, commanded by Valerius Messala, the governor of Illyricum, to protect Siscia from the rebels. At this point the Breuci and Daesitiates separated; the Breuci attacked Sirmium, while the Daesitiates headed for Salonae. One contingent may have planned to attack Italy via Tergeste, the other to penetrate Macedonia, and a third would guard Pannonia. Responding to the Breucian threat, Tiberius commandeered troops from the neighboring province of Moesia. The governor of Moesia, Caecina Severus, and his legions defeated the Breuci on the Drava River, pushing them back into the mountains. The Daesitiates equally failed to take Salonae, and their leader Bato was severely wounded. The Daesitiates withdrew to Sirmium, hoping to help the Breuci renew an attack on that city. The Pannonian rebels made a last stand on Alma Mons (modern-day Fruška Gora), but were constantly harassed by the Romans' Thracian cavalry, acting on behalf of the Romans. The Romans thus secured major Pannonian cities and contained the rebels.

To finish off the rebels, in 7 CE the Romans sent legions from Moesia and two legions from Asia Minor to Illyricum, in addition to allied Thracian cavalry. These reinforcements gave the Roman force ten legions. On their way toward Siscia, the Roman reinforcements were ambushed by the Pannonians between Alma Mons and the Volcaean Marshes. Despite initial heavy losses, the Romans regrouped and fought their way to Siscia.

Realizing that he could not overcome the rebels in open battle, Tiberius decided to starve them into submission by destroying their crops. The Breuci, facing starvation, surrendered the following year (8 CE). Bato of the Breuci betrayed his comrade Pinnes and surrendered to the Romans. The Breucian allies, and particularly Bato of the Daesitiates, resented this. Bato of the Daesitiates captured and killed Bato the Breucian, inciting the Breuci to revolt. Meanwhile, the Romans, led by Tiberius, moved in to besiege the rebels. They besieged Bato at his stronghold of Andetrium, which fell when Tiberius' forces discovered a secret path into the stronghold. The Romans killed most of the Pannonian rebels, but took Bato of the Daesitiates hostage. Tiberius decided to spare his life, exiling him to Ravenna.

Subsequent to the revolt, Pannonia was reorganized to discourage future rebellions. It was divided into the separate provinces of Dalmatia and Pannonia, placing the territory and the peoples within it under closer Roman supervision. The Romans also reorganized the peoples who had caused the most trouble, dividing large groups such as the Breuci and Daesitiates into smaller groups and separating them by the Dalmatian-Pannonian border. Entire tribal groups may have been relocated to different areas of the provinces. Those young Pannonian men who survived the rebellion were enrolled as Roman auxiliaries and sent to serve in other parts of the empire. This strategy removed the likelihood of a similar revolt breaking out in Dalmatia or Pannonia.

Pannonian Wars (35–33 BCE, 13–9 BCE)

The Roman conquest of Pannonia, known as the Pannonian Wars began when Octavian (later the emperor Augustus) attacked the Segestani, who lived near ancient Siscia (modern Sisak in Croatia). The Romans had previously fought the Scordisci in 156 BCE, the Iapodes and Taurisci in 129, and the Colapiani in 119. Octavian, however, launched an offensive leading eventually to the full conquest of Pannonia and its conversion into a Roman province. Cassius Dio presents Octavian’s attack as a training exercise for his troops, while Appian’s *Illyrika* presents the campaign as leading to further expansion into Dacian territory. Octavian’s first objective was to conquer Segestica, a city of the Colapiani. The Colapiani inflicted heavy casualties on the Romans en route, but Octavian besieged and took Segestica, dividing it by a wall and garrisoning it with 25 cohorts (12,000 soldiers). He set up a fleet, the *classis Pannonica*, to carry troops and supplies in wartime and enable communication in peacetime. The Segestani rebelled briefly but were again defeated. Octavian’s conquest of Segestica gave the Romans a stepping stone into the Pannonian interior.

The next major Pannonian campaign (13–12 BCE) was led by Augustus’ right-hand man Marcus Agrippa. Relatively little is known about this campaign. Agrippa was probably sent to subdue the Breuci, a Pannonian people in the region of the Sava and Drava rivers. He successfully established a legionary camp at Poetovio (modern Ptuj in Slovenia). Agrippa’s sudden death caused Augustus’ stepson Tiberius to take over the campaign. Tiberius probably led his troops into Pannonia along the Sava,

stopping at Segestica to reorganize the Roman camp there. Tiberius made an alliance with the Celtic-Pannonian Scordisci and conquered several neighboring peoples, including the powerful Breuci, with their aid. After the surrender of the Breuci, other peoples in the area submitted to the Romans. Tiberius simultaneously waged war against the Illyrians, coordinating attacks from the north and south and capturing two capital cities of the Pannonians, later the Roman cities of Mursa and Sirmium (modern-day Osijek in Croatia and modern-day Sremska Mitrovica in Serbia). As was a frequent Roman practice, Tiberius enslaved many of the conquered Pannonians. The Pannonians and Illyrians attempted to revolt in 10–9 BCE, but did not succeed in dislodging the Roman conquest of Illyricum, which was held by five legions.

Roman strategic objectives for the conquest of Pannonia may have featured its important geographic location, as it had three large navigable rivers (the Sava, the Drava, and the Danube) that enabled transport and communications between Rome and the eastern frontier; it also provided land routes to the eastern empire. Adding Pannonia to the empire meant that Rome had easier access to Macedon, Greece, Asia Minor and the Near East, enabling the Romans to guard their interests in the east. Pannonia also provided a platform for further Roman expansion into Dacia and Germania. Pannonia also had wealth of its own, including gold, silver, and iron, the latter needed for Roman arms and armor. Gaining control of a region so rich in natural resources would fund further Roman expansion. The establishment of Roman military bases (first at Segestica) in Pannonia and of a Roman fleet gave Rome a permanent foothold in Pannonia.

In the last years of the reign of Augustus, Tiberius led the Roman advance even deeper into Pannonian territory, securing the lands along the Sava and Drava rivers and enabling them to advance further south and connect Pannonian territory with the Adriatic coastal cities, which had been under Roman control longer. The Sava branches into several smaller rivers, expediting this conquest. The result was the formal creation of the province of Illyricum, ca. 11 BCE. The Romans proceeded to develop the province by building roads and bridges to expedite transport and travel, and also founded several Roman cities, including Mursa, Cibalae, and Sirmium. The spread of Roman culture to the Pannonians had begun. However, Pannonia would revolt in 6–9 CE, led by noblemen from the most powerful Pannonian peoples. The quelling of the revolt was followed by the permanent

assimilation of Pannonia into the Roman Empire.

Papirius Cursor, Lucius (Active Late Fourth Century BCE)

Lucius Papirius Cursor was an early Roman general distinguished for his command in the Second Samnite War, inflicting major defeats on the Samnites at Luceria (320 BCE) and Satricum (319). He was consul five times (326, 320, 319, 315, and 313 BCE) and dictator twice (in 325 and 310). The Samnites, a tough mountain-dwelling people of central Italy, were among Rome’s most formidable Italian enemies.

In 325, Papirius Cursor, then dictator, quarreled with his second-in-command, the *magister equitum* (marshal of cavalry) Fabius Rullianus, who had disobeyed his orders and engaged the enemy. Paralleling the episode of Titus Manlius Torquatus and his son in 340 BCE, Papirius threatened to execute Rullianus by beheading him with the axes carried by his lictors. However, popular outcry by the Senate, people, and tribunes persuaded Papirius Cursor to spare Rullianus (Livy 8.30.1–35.9). The incident is sometimes cited as illustrating the powers of the dictator.

The execution of senior officers for disobedience or military incompetence was never a common practice and is not found after this episode (compare Livy 9.16), whereas military discipline for common soldiers was harsh and included capital punishment.

Patrician-Plebeian Conflict, Causes

Investigation of causes of the patrician-plebeian conflict has involved some modern skepticism, since authors of the late Republic and early empire, writing about a period centuries earlier, may have projected onto them the social conflict of the late Republic (particularly the Gracchan period). However, considerable social tension also existed in the early Republic.

Widespread debt caused the First Plebeian Secession of 494 BCE if our sources have merit (Livy 2.23–33; Dionysius, *Roman History* 6.22). Legal punishments for debtors at this time supposedly included private imprisonment and slavery, whipping, and sale outside of Rome. These punishments are highly plausible. Closely tied with debt was the plebeian desire to use Roman public land for farming. Finally, military conscription exacerbated these grievances. The story of the impoverished soldier and the ancient narrative of plebeian discontent emphasizing economic hardship fit very well with contemporary indices of economic crisis: during much of the fifth century, Rome experienced cessations in pottery production and import, military success, and temple building (Cicero, *Republic* 2.58; Livy 2.23; Dionysius, *Roman History* 6.26). Our sources for the period also record plebeian agitation for redistribution of farmland taken from territories recently conquered by Roman armies, pointing to discontent over the customs or laws regulating the utilization of public farmland. Wealthy individuals could dominate the exploitation of this land, perhaps by their patron-client relationship with many farmers.

Aside from economic and agricultural problems, abuse of domestic political authority also accounts for major conflict and reform. Consular

abuse of law probably explains the insistence of the tribune of 462 on the production of a written set of Roman legal statutes eventually created in 451–450 (Livy 3.9–64; Dionysius, *Roman History* 10.1–11.50). Roman tradition states that one of the legislators' insolence caused the plebeians to undertake a Second Plebeian Secession and the tribunes and consuls to return to their office, which had been suspended during the period of the composition of the Twelve Tables of Roman law.

Further conflict stems from two main sources: one, the wealthier plebeians seeking the same opportunities as their patrician counterparts, the other, the poorer plebeians seeking a basic livelihood through reforms in, for example, the use of public land. That these two very different sets of concerns appear together in the sources may point to an inaccurate bundling by later historians, or to clever packaging by historical reformers themselves who realized that the plebeians as a mass could be mobilized only by appealing to both the advantaged and the disadvantaged among their number.

Patrician-Plebeian Conflict, Course

Roman writers of the late Republic describe a centuries-long conflict between patricians and the plebeians resulting in the latter's legal gains. By the first century BCE, a narrative achieved canonical status. This article assumes a basic thread of accuracy in the traditional narrative.

The strikes known as the First and Second Plebeian Secessions supposedly occurred in the fifth century BCE. A colorful story focalizes

plebeian complaints (Livy 2.23; Dionysius, *Roman History* 6.26): an impoverished, abused plebeian war veteran entered the Roman forum to speak in 494 BCE, stating that Sabine depredations deprived him of his crops, burned his cottage, drove off his flocks, and stole his possessions; taxes oppressed him; lenders seized his farm, property, and person, and imprisoned him, where he was whipped. His pitiful state provoked an uprising of men surrounding the Curia, including men enslaved for debt. At news of a Volscian attack, the plebeians asserted that they would not risk their lives to defend Rome if this man's fate could afflict them. A deal was struck. All plebeians who immediately enlisted would be free of debt slavery. This enticed many plebeians to sign up; the Volscian attack was repelled. However, afterward the consul Appius favored the creditors, resulting in more debt enslavement. The plebeians used physical force against creditors seizing debtors, and threatened a riot when news arrived of an imminent Sabine invasion. No plebeians enlisted, instead seceding to the fortified Mons Sacer three miles from the city, and staying quietly on strike, panicking senators and citizens alike. The plebeians then created their own magistrates, council, and assembly meetings. This first secession is dated traditionally to 494/493 (Livy 2.23–33). Since the Romans were engaged in a war against the Volscians, and plebeians comprised a large percentage of the Roman army, the strike was effective. The patrician-plebeian conflict's next phase involved the Roman legal code known as the Twelve Tables. To compose these, two boards, each of 10 men, the so-called Decemvirs, received consular powers in 451–450 (Dionysius, *Roman History* 10.57.5). These men's abuses of power caused another strike, the Second Secession.

The fourth century witnessed continuing conflict brought about by small farmers' poverty. The legend of Marcus Manlius Capitolinus reveals massive plebeian debt in the 380s (Livy 6.11.7), with debt riots occurring in 380 and 378. The later fourth century saw several developments favoring plebeians. In 339, plebeians were allowed to become censors. In the 320s debt bondage disappeared due both to the new profusion of foreign slaves and, in 326, the Poetelian-Papirian Law was passed, which eliminated debt enslavement for Roman citizens (Livy 8.28). By 300, many prestigious, politically powerful magistracies became open to plebeians, and a law gave them *provocatio*, the right of appeal against a magistrate's physical coercion, including the death penalty.

The third century saw a final diminishing of formally-defined patrician-plebeian conflict. In 287 BCE occurred the Third Plebeian Secession, provoked by war and debt (Dio fragment 37). In response, the *lex Hortensia* mandated that plebiscites now be automatically binding upon all Roman citizens without senatorial approval, a huge concession. But plebeian-patrician conflict had already been subsiding throughout these years by other means. First, as a result of Rome's expansion, colonization and public land acquisitions over the course of the late fourth and third century allowed plebeians more access to farmland. Second, the tribunes became state magistrates, limiting their revolutionary tendencies. Last, the plebeian-patrician legal distinction faded in importance: elite failure to reproduce shrunk the hereditary patrician caste over the centuries, extinguishing many patrician clans. As an index of this process, the consuls of 172 BCE were both plebeians. The passage of the *lex Hortensia* makes most (not all) scholars see 287 BCE as the end of the patrician-plebeian conflict, although it certainly was not the end of wealth polarization, poverty, or civil conflict in the Roman Republic. The active socioeconomic distinction consisted by this time of a *nobilitas* (consisting of both patricians and elite plebeians) versus everyone else.

Patrician-Plebeian Conflict, Consequences

The first and most important outcomes of this conflict stem from the First

Plebeian Secession of 494 BCE, and were preconditions to all future plebeian reform: the formation of a new council of the plebeians and the creation of the tribunes of the plebs. This counter-magistracy formalized an earlier custom known as the *provocatio ad populum*, an appeal to the People for judgment in cases of magisterial oppression. The tribunes' primary function was offering protection and aid, both physical and legal, to plebeians. They sat outside Senate meetings and could veto any magistrate's proposed legislation (Livy 2.23–33; Dionysius *Roman History* 6.89; Valerius Maximus 2.2.7). The plebeians swore to avenge by execution any assault against the tribunes.

The tribunes soon acquired the right to summon both formal and informal assemblies, the primary mechanism for plebeian input into state decisions. Over the course of the fifth century, they gained the power to bring patricians for trial in front of the plebeians, and to call meetings of and bring proposals before the Senate. They acquired the right to pass plebiscites, that is, rulings from the plebeian assembly that first affected only plebeians and, through gradual and obscure steps, gained broader legal status. Plebiscites may have enjoyed acceptance on an *ad hoc* basis early on and have been treated as sacred, but by the *lex Hortensia* of 287 at the latest, they became recognized as binding over all citizens regardless of Senatorial approval (Dionysius, *Roman History* 7.16, 35, 65, 10.31, 51).

Another consequence was the creation of the new plebeian office known as the aediles, created shortly after the tribunes and subordinate to them. Their earliest responsibility was the upkeep of the temple-precinct of Ceres, Liber, and Libera on the Aventine Hill, an important religious center and meeting place for the plebeians. Here, from 449 BCE onward were kept written records of Senatorial decrees (Livy 3.4.13). Aediles' duties later included supervision of Roman public order, grain supply, markets, and games, and upkeep of Roman streets and public buildings. As an unintended consequence, patrician curule aediles were created to balance this magistracy by 366 BCE.

The next significant consequence of patrician-plebeian conflict is the publication in 451, in inscribed form, of the Twelve Tables of Roman law. This occurred at the demand of the plebeian tribune of 462 BCE (Livy 3.9–64; Dionysius, *Roman History* 10.1–11.50). These tables specified rules for inheritance, debt and debt bondage, marriage and reproduction, walls between neighbors, summons to court, and contracts. They outlawed

plebeian- patrician intermarriage, family vendetta, torture, and execution without trial. Displaying them transferred Roman laws from the domain of privileged elites into the realm of public property where they could be consulted and challenged at any time.

The abuse of power by some of the *decemviri*, the writers of the Twelve Tables, led to the Second Plebeian Secession of 449 BCE. The Valerio-Horatian laws followed in the same year, outlawing the appointment of any magistrate whose rulings could not be appealed, a direct response to the abuse of power by the *decemviri*. These laws may also have made plebiscites valid for the entire citizen body, but probably only with senatorial approval. Four years later, the *lex Canuleia* overturned the Twelve Tables' law against plebeian-patrician intermarriage, creating new possibilities for plebeian advancement through strategic marriage, and patricians created a new magistracy to be held only by plebeians: the military tribunes with consular powers. These tribunes held supreme office for a relatively short time in the early Republic.

The fourth century's reforms benefitted both elite and non-elite plebeians. The Licinio-Sextian legislation of 367 permitted one consul to be plebeian. The *lex Ogulnia* of 300 BCE removed the final obstruction to entering priestly collegia. Increases were made to some priesthoods, surely to provide room for ambitious plebeians: four *pontifices* were added, bringing the total number to nine, and five of the augurs were required to be plebeians. However, some fourth-century legislation also presumably helped the poor. The 367 ruling reformed debt in some way, but also improved poor plebeians' access to public land for their own farming, thus fostering their economic independence from creditors (Livy 6.35). The Genucian Law of 342 further advanced plebeian protections by restraining interest rates from rising to usurious levels and by mitigating debt; plus, it curbed elite power by prohibiting the possession of two magistracies by one person simultaneously, and disallowed repeated holding of an office within one decade. The *lex Valeria* of 300 BCE reaffirmed citizen rights to appeal, benefiting all classes (Livy 10.9.3). Most of the Genucian laws seem to have been abandoned shortly afterward, however, except one reinforcing the plebeian-patrician consular division set up by the Licinio-Sextian Laws.

Patrician-plebeian conflict is considered to have nominally ended in 287, with the *lex Hortensia*. This legislative package, enacted in response to the Third Secession, probably made plebiscites no longer require senatorial

approval. In the final analysis, the reforms sparked over the centuries by this conflict again had two major branches: for the poor, the reforms created occasional relief and outlawed debt bondage. For elite plebeians, the reforms allowed entry into all magistracies, civil and religious, previously reserved for patricians. The plebeian elites' interests came closely to overlap with those of the patricians, sharply diminishing plebeian leadership in reform. In 172, both consuls were plebeian, indicating that a policed division of the consulship was no longer required. However, these reforms did not remove chronic poverty from the Roman citizenry, and the Roman voting system remained deeply committed to underweighting the votes of citizens outside the elite.

Patricians

In the early Republic, patricians were a hereditary aristocracy that monopolized the consulship and important priesthoods. This definition of patrician became obsolescent after the Licinio-Sextian Laws of 367 BCE. Patrician families persisted, but tended to die out over time.

The origins of the patrician order are obscure. Certain family names were defined as patrician, others as plebeian, and Roman mythology derived some of these patrician gentes from the Trojans led by Aeneas who settled Latium some generations before the founding of Rome in 753 BCE. Though probably non-mythical, the origin of patricians remains vague. Attributed to

the monarchic period, patricians are thought to have comprised the early senators, termed *patres*; after non-patricians were admitted to the Senate, the Senate was termed *patres et conscripti*, the *conscripti* being non-patricians. However, the kings themselves were not patricians, and the grasp of patricians upon the higher magistracies (especially consulship) actually hardened sometime after the end of the monarchy. A small number of plebeian-named consuls are attested in the first decades of the Republic (ca. 509–445 BCE), few between 445 and 427, and almost none between 427 and 401 BCE. Patricians also dominated important state priesthoods. By 400, the patrician order was a closed one; patricians needed to be the children of two patrician parents. However, a ban on patrician-plebeian marriage was repealed in 445 BCE by Gaius Canuleius.

Detail of a procession on the Ara Pacis, ca. 9 BCE, depicting major *flamines* (high priests of Mars, Jupiter, and other gods) wearing ritual pointed caps. Such priesthoods were dominated by patrician clans, though the plebeians gained access to Roman magistracies by the mid-fourth century BCE. *Ara Pacis Augustae*, Rome, Italy. (Emi Cristea/[Dreamstime.com](#))

Writing centuries later, and influenced by the social conflicts of the late Republic, Greek and Roman authors tended to stereotype and exaggerate the conflict of patricians and plebeians. Nonetheless, this conflict resulted in the incorporation of plebeian institutions, legislated by the Valerian-Horatian Laws of 449 BCE. These institutions included plebeian magistracies (originally the officers of the plebs as a separate body): the tribunes of the plebs and the aediles; the *concilium plebis* or plebeian assembly; and the

right of citizens to *provocatio*, appeal from a magistrate's decision. The *lex Poetelia* and Licinian-Sextian laws abolished debt bondage, and required that one of the two annual consuls be a plebeian. It also became possible for politicians to hold both plebeian offices (tribune of the plebs, aedile) and formerly patrician offices (praetorship, consulship). However, some aedileships (curule aediles) were reserved for patrician candidates, and the censorship was also originally patrician.

After the Licinio-Sextian reform, patricians remained an elite body of aristocrats who were descended from and married other patricians, but patricians no longer dominated political office. Plebeians could hold the higher magistracies, including the consulship. As a result of plebeian access to higher magistracies and patrician holding of formerly plebeian magistracies, a patrician-plebeian aristocracy developed in which patricians intermarried with wealthy plebeians. This aristocracy is collectively termed "the nobility" (*nobilitas*) and dominates the Republic of the third through first centuries BCE. A noble from a wealthy plebeian family was as likely as a patrician to identify with the values and goals of wealthy aristocrats, as opposed to those of the *plebs urbana* (urban lower social strata).

Conflict of the wealthy and the poor in the late Republic is best termed factional or social conflict rather than patrician-plebeian conflict. Though it is likely that most surviving patricians sympathized with the wealthy, many wealthy plebeians also sympathized with them, and not all plebeians supported the *populares*. Two members of patrician families, Clodius Pulcher, and Julius Caesar, supported *popularis* causes, Clodius actually undergoing a formal transition to the plebeian order (*transitio ad plebem*) to become a tribune of the plebs.

Patrician families did tend to hold important state priesthoods, such as the *flamen Dialis* (high priest of Jupiter), *flamen Martialis* (high priest of Mars), the *rex sacrorum*, the Arval Brethren, and the *Salii* or "leaping" priests of Mars, named for a ritual dance that they performed. So that their sons would qualify for these priesthoods, patricians had to continue to marry other patricians. This requirement constrained the reproduction of patrician families, who tended to die out, such that Augustus promoted new members into the patrician group so that the state priesthoods could continue to be filled by patricians.

Patronage (Relationship)

Patronage was fundamental to the political and social workings of Roman public life. This was especially true during the Republic, where the success of a Roman magistrate's election campaign often depended upon the social and political network that he had established via the bestowing of *beneficia*, gifts, or favors. While the Roman philosopher Seneca wrote that the offering and acceptance of personal benefits were fundamental to the solidarity of human society (*De Beneficiis* 1.4), members of Rome's elite often used elements of patronage to further their own agenda at the expense of Rome's political cohesion. This is shown during the civil wars and conflicts of the late Republic, as powerful individuals used their personal networks of support to compete for political supremacy. With the creation of the Principate patronage remained an integral social and political concept of the Roman world, but with a single individual, the emperor, recognized as the supreme patron of the empire.

The defining elements of the Roman concept of patronage have been much studied and debated by modern scholarship. Generally, three primary components have been identified and agreed upon. Firstly, the concept involved an exchange of goods and services between two parties that was fundamentally reciprocal in nature. Secondly, the relationship between the two parties involved had to be one that was both personal and persistent. Thirdly, and finally, the relationship was expected to be asymmetrical, that is the two parties involved were for the most part of unequal social standing and the benefactions concerned were of contrasting value. According to this interpretation, patronage was a concept that conflicted with that of *amicitia* (friendship) where social equals exchanged gifts or services. "Friends" considered it boorish to emphasize the reciprocal nature of the gift or favor

as expecting a return.

However, the argument that patronage was always a relationship based on social inequality has recently been challenged as the result of an examination of Seneca's treatise *De Beneficiis*, which discusses the offering and accepting of benefactions in ancient society. It has been argued that patronage did occur between social equals, and that the exchange of benefactions was entirely voluntary, and undertaken on the understanding that the client was not obligated to repay the patron. Consequently, this argument defines the concept as an equal relationship between members of Roman society, the voluntary nature of which served to create strong bonds of *amicitia* between the parties involved, rather than acted as its antithesis. It was the strength of the bonds of *amicitia* then created between individuals that led Latin writers, such as Seneca, to recognize patronage as being essential to human social cohesion (see Griffin 2003). Seneca's presentation of the concept in this way, however, is greatly idealized and offers an ideological contrast to its implementation during the violent transition between Republic and empire.

In political circles patronage was an essential tool, since it enabled individuals to attain the required personal power base to aid their ascent of the *cursus honorum*, the standard Roman political career path. Magistrates competing for election would expend greater sums of money to obtain the required votes, since the bestowal of gifts would obligate supporters to elect candidates. Such a practice of bribery was termed *ambitus* (meaning literally "going around") and was punishable by Roman law. There was no single form electoral bribery could take. Magistrates could bribe other members of the Senate with personal favors, offer monetary gifts to Rome's citizen body, or provide spectacles and popular entertainment such as gladiatorial games. The use of *ambitus* in Roman politics became increasingly common and resulted in politics becoming the exclusive domain of the wealthiest or the most powerful and influential members of Roman society.

Patronage also became a central force within the Roman army of the late Republic. In ca. 107 BCE, Marius introduced a series of reforms whereby Rome's legions could be recruited from landless citizens, known as the *capite censi*. In consequence, the *capite censi* became entirely dependent upon the generals who commanded, equipped, paid, and provided them with land grants following their retirement. Generals were also an

important source of extra income for their troops by giving them bonuses in the form of spoils following victories or during a triumph. The dependence of Roman troops upon their commanders created unbreakable bonds of loyalty between them, and as such Roman legions became in effect the personal armies of powerful individuals. Ultimately, such patronage enabled the civil warfare between Marius (and his followers) and Lucius Cornelius Sulla in 88 and 83 BCE, and several decades later the civil wars between Julius Caesar and the Pompeians (49–45 BCE) and between Caesar's heir Octavian and his opponents (44–31 BCE).

Following the conclusion to the civil wars of the late Republic, patronage became a vital component of the Principate. To maintain the loyalty of the Roman people to the new regime, emperors embarked on ambitious public building projects, put on spectacles and games to commemorate important dates, and embarked on military campaigns to ensure Rome's continued stability and prosperity. By monopolizing public patronage in this way the Principate was able to present itself as a unifying and stabilizing entity, an aspect corroborated by Seneca in his *De Beneficiis*.

Pay and Finances, Military (Imperial)

Expenditure on the pay, benefits, and supply of the Roman imperial army comprised the largest single element of the imperial budget. This budget was probably recorded in antiquity, but documents at the level of imperial policy have not survived. Modern scholars have reconstructed and extrapolated the finances of the imperial army from remarks in literary authors and from sporadically surviving pay documents. Though no certain conclusion can be made, there is much evidence that the costs of the army were a source of conflict. Emperors and the aristocracy (urban elite) viewed the costs of the army as burdening the imperial finances and criticized the greed of soldiers, but since their power depended on the army, emperors were unable to dispense with military pay, donatives, and benefits. At the same time, the emperor's role as patron and benefactor of his subjects made raising taxes infeasible. The emperors resorted to short-term measures to raise money for the army, including debasement of the silver coinage, with long-term consequences.

This budget may have been documented by the imperial bureaucracy (see *Breviarium totius imperii*, Bureaucracy). Literary authors remark briefly, for instance, that Domitian (81–96 CE) raised pay, as did Severus (193–211) and Caracalla (211–217). Bureaucratic documents that have survived from Egypt and the Near East attest the pay of soldiers for different branches of the service at different points in time. Overall pay scales have been reconstructed and heavily extrapolated by modern scholars, assuming that pay rates remained proportional over time from the first century CE to the third. The total budget further requires reconstruction and/or assumptions about the total size of the Roman armed forces. As a result, conclusions about the military budget as a whole are tentative. The discovery of a new and valuable document might enable scholars to reassess pay rates and the overall military budget.

Surviving evidence shows that legionary infantry in the Augustan period received 900 sesterces (HS) a year, raised by Domitian (81–96) to 1,200 HS. Legionary infantry may have received 2,400 HS under Severus (193–211) and 3,600 under Caracalla (211–217). They received an attested 7,200 HS during Maximinus (235–238). Legionary cavalry received reconstructed rates of 1,050 (Augustus), 1,400 (Domitian), 2,800 (Severus), 4,200 (Caracalla), and an attested 8,400 (Maximinus).

Auxiliary infantry received an attested 750 HS (Augustus), 1,000 HS (Domitian), 2,000 (Severus), and an attested 3,000 (Caracalla) and 6,000

(Maximinus). For auxiliary cavalry, one document attests 900 HS (Augustus), and the proportional rates would be 1,200 (Domitian), 2,400 (Severus), 3,600 (Caracalla), and 7,200 (Maximinus).

Modern estimates of the costs of the imperial army range from 250 million to 500 million HS (sesterces) in the reign of Augustus, to 1.12 billion HS (in the reign of Caracalla). J. B. Campbell has suggested a total cost of 350 to 380 million HS in the early first century CE, including pay for legionaries, urban troops, *auxilia*, and legionary and praetorian pensions, assuming auxiliaries received 5/6 legionary pay. At risk of anachronism, the Roman Empire's GNP has been estimated at 20 billion HS. Some modern industrial societies spend a much greater proportion of their national budgets on defense. The Roman Empire, of course, did not employ modern mechanized warfare. However, much of the Roman Empire's wealth was in land, and thus not directly available to the government as coin.

That the finances of the army were a source of political and social conflict is much better documented. Tacitus and Cassius Dio, as chroniclers of the early empire, were much concerned with it. The educated elite, to which both emperors (before the third-century crisis) and senators belonged, disapproved of excessive expenditure upon the army, especially the Praetorian Guard. The moralistic tradition of military discipline (*disciplina militaris*) emphasized the virtues of simplicity and hardship.

The straitened circumstances of the imperial budget were not merely a matter of political discourse. In 5 CE, near the end of his reign, Augustus extended praetorian service from 12 to 16 years and legionary service from 16 to 20 years, with 5 years in reserve. This extension meant that more soldiers would die of natural causes or the dangers of service before their time expired, and was probably intended to reduce the demands for pensions. The result was the mutinies of the Rhine and Danube legionaries in 14 CE. They complained that they were being made to serve in old age, that their pensions were withheld or consisted of inferior land, and that deductions from their pay for supplies and to bribe centurions consumed most of their pay. Tiberius yielded some concessions. But there was no pay raise until Domitian, who increased legionary salaries by one-third and is said to have reduced the size of the army to do so; inscriptions show that legionary service was also extended to 25 years, probably to reduce the expense of pensions.

In contrast with these somewhat rational policies, the emperor's role as

patron of his troops dictated the payment of donatives, which might be necessary to keep the troops' loyalty but also made subversion possible. Claudius I (41–54) owed his accession to the support of the praetorians, and so gave them a very large donative of 15,000 HS (sesterces) per man. Suetonius remarks that Claudius was “the first to buy the support of the army with a bribe” (Suetonius, *Claudius* 10.4). But refusal to pay a donative could lead to disaster. Nymphidius Sabinus, a commander of the praetorians and supporter of Galba (emperor in 68–69 CE) had promised the praetorians a large donative, but Galba himself refused to pay it, alienating the praetorians. Otho bought their favor and persuaded them to revolt against and assassinate Galba. A similar fate befell Pertinax (193 CE) and Macrinus (217–218 CE) when they attempted to impose fiscal austerity on the army.

Another source of conflict was the supply of the imperial army. During wars, and more and more during peacetime, the Roman army supplied itself locally, requisitioning food, fodder, and transport from the provincials, a practice that increased as the purchasing power of the Roman silver coinage dropped. Military personnel were authorized to commandeer supplies and transport (such as animals) from provincials, who resented this behavior, particularly when it was uncompensated and involved force or insolence. Early in the third century CE, inscriptions from Thrace and Asia Minor show that towns petitioned the emperors for the redress of abusive military requisitions. The emperors issued rescripts intended to reprove and repress the soldiers. The towns commemorated the emperors' justice by inscribing the petition and response on stone.

From the soldiers' very different perspective, personnel had much of their pay deducted for food, fodder, and equipment, including one-time larger expenses such as armor and tents. Ordinary legionaries, and certainly auxiliaries, were paid much less well than the praetorians or officers. They did not receive additional pay for travel expenses or combat duty. Many soldiers attempted to support personal servants (slaves) or wives and children, for whom the army of the Principate did not provide additional pay or rations.

Conflict over expenditure on the army was more severe because the Roman imperial budget lacked what modern scholars term economic rationality and bureaucratic rationality. Income was restricted, and expenditure was required, by a political culture of patronage in which rulers dispensed benefactions to demonstrate benevolence toward their subjects or

to honor high-status individuals or groups. Among these benefactions were exemptions from taxation. Senators and their families, the population of Italy, and soldiers and veterans were all exempt from taxes. The emperors also granted tax remissions or immunities as marks of favor to individuals and communities, and provided overall tax remissions as benefactions to their subjects. In the eyes of their subjects, good rulers (emperors and governors) taxed lightly rather than exacting excessive tribute, which could and did lead to provincial revolts. This political culture placed limits upon income, especially as the imperial budget had no concept of deficit spending. Emperors, such as Vespasian or Diocletian who raised taxation or collected it more efficiently were regarded as avaricious.

Many sources of imperial wealth were ad hoc and intermittent. Some emperors raised money in emergencies by auctioning off the palace furnishings, which contained many expensive items. A major but intermittent source of money was spoils from conquest. Bullion from the exploitation of provincial mines was another source of imperial income, as were confiscations of estates from wealthy aristocrats who were tried and convicted for treason, a practice which some emperors abused.

Expenditures were also irrational and politically determined. The emperors gave donatives to soldiers and *congiaria* (handouts) to civilians at imperial accessions and on major anniversaries or to celebrate fortunate events (weddings, victories). They provided public amenities and entertainments such as gladiatorial games, and were expected to assist members of high-status groups (such as senators) who fell into poverty. Even if an emperor was not personally extravagant on the scale of a Caligula or Nero, the emperors themselves were expected to maintain a certain style of life commensurate with their rank. They met some of their expenses from the vast estates that they came to own, starting with Augustus' payment of 1.43 million HS from his own property for veteran pensions and the initial funding of the *aerarium militare*.

By the mid-second century onward, emperors often met the demands for military payments by debasement of the coinage, alloying silver with base metal and thus increasing the number of but decreasing the value of silver coins. The impact on the Roman economy was gradual. Prices did not rise steeply at first as a result of the debasement but remained relatively stable, rising slowly through the late second century CE. Inflation began to rise steeply after 235, and may have contributed to the political instability of

235–284, since the pay of soldiers was worth less, inducing them to support rival emperors who offered donatives. However, inflation continued to rise steeply during the First Tetrarchy (293–305), when political stability had been restored. Constantine succeeded in stabilizing the currency, minting the gold *solidus* which became the foundation of the later Roman monetary system.

From the late third century to the end of our period, the later Roman government repeatedly sought to repress individual and group evasion or refusal of fiscal obligations. Diocletian and Constantine attempted to set the imperial finances on a more rational footing, creating a more uniform tax system and penalizing persons who evaded fiscal obligations such as the payment of money or provision of services. The first Tetrarchy benefited from a great victory over Persia in 297–298, but the second Tetrarchy faced the expenses of civil warfare. Galerius (305–311) imposed a tax on Italy. However, these practices did not offset the cost of the intermittent civil wars of the fourth and fifth centuries CE, the loss of much of the eastern army in the battle of Adrianople (378), and the loss of parts of the western empire to the Germanic invasions in the fifth century CE, areas which no longer supplied taxes or manpower.

Pay and Finances, Military (Republic)

According to tradition, the Roman army introduced pay (*stipendium*) at the siege of Veii in 396 BCE (Livy 4.59–60; Diodorus Siculus 14.16.5). At that time *stipendium* was probably issued in kind, as grain rations. Because the earliest Romano-Campanian coinage dates from 326 BCE at Naples, the Romans around 400 BCE used uncoined bronze measured in weight and often cast as unstruck lumps (*aes rude*), probably inconvenient for an army on the march. Available coinage in 396 was Greek or Sicilian, and would have been difficult for Roman soldiers to use in the poorly monetized economy of central Italy.

The circulation of coinage in Rome leapt upward with the Punic Wars period and the conquest of the wealthy eastern Mediterranean. Booty in precious metal was melted down and struck into coins. Silver "Roman" didrachms appear around 310 BCE, but around 211 BCE the silver denarius (as opposed to didrachm) was introduced at Rome. There was at yet no Roman gold coinage. The purpose of such silver coinage was probably not to enable soldiers to buy rations, as distribution in kind would be more direct, but to pay donatives (rewards) after successful campaigns. As such, the coins already manifested an ideological element, being (as in the Greek city-states and as today) a "national" symbol. The early issues often depicted the legendary wolf that suckled Romulus and Remus. The production of state coinage became the task of junior Roman magistrates who often advertised their own families on the coins.

The first Roman gold coins were minted by Sulla around 84 BCE to pay his troops, imitated by Caesar and the Pompeians in the Caesarian-Pompeian Civil War (49–45 BCE). Caesar is said to have raised soldiers' pay, though the date of his policy is not known. To pay their soldiers, Brutus and Cassius struck a famous issue depicting the "cap of liberty" between two daggers, boasting of the assassination of Caesar. Likewise, Octavian's and

Antony's moneyers used coin legends and images to propagandize the civil war.

However, the army tended to withhold pay, distributing necessities to the soldiers in lieu of pay. Augustus' legionaries complained that they did not see much of their pay due to this practice (Tacitus, *Annals* 1.17). Overall, the study of military pay in the Republic is hampered by the lack of surviving documents comparable to those in the Principate. More is known about supply (logistics).

Less is also known about the finances of the republican army than that of the imperial period. The *tributum* or tax levied on citizens was used to pay for military *stipendia* and equipment. As a result of the booty from the Third Macedonian War, Roman citizens were exempted from paying *tributum* from 167 BCE onward. As conquered regions developed into peaceful provinces, Rome started pulling in taxes from the provinces, levied by tax farmers (*publicani*) who bid for contracts set by the censors.

The Senate and the quaestors managed the finances of the army, but in the period of overseas warfare, due to the inefficiency of travel and communication, much supply and procurement of coin must have been *ad hoc* and immediate, supplied by plunder and requisitions from allies and client rulers. In his campaign in Spain, Cato the Elder boasted that "the war will be self-supporting" (*bellum se ipsum alet*, Livy 34.9.12). The phrase has justified military plundering through medieval and early modern Europe. In his Greek campaign in 87–86 BCE, because the Marians had declared him a public enemy, Sulla did not have authorization from the Senate to requisition money from client rulers. He turned instead to plundering gold and silver treasures from famous Greek temples. Sulla later took steps to restore the temple treasures.

Beginning with Marius' recruitment of the *capite censi*, the financing of armies now required funding their discharge benefits as well as pay and supply during service. These necessities contributed to the crisis of the late Republic. After returning to Rome in 82, Sulla and his followers raised immense amounts of money by proscribing their enemies and confiscating and auctioning their property. Some confiscated land went directly to Sullan veterans. Pompey's and Caesar's military careers and benefits for their soldiers were funded by immense plunder from the Mithridatic Wars and from the Gallic Wars, respectively. The Second Triumvirate (Octavian, Antony, and Lepidus) resorted to proscriptions and confiscations to provide

their soldiers with pay and discharge benefits. In his *Res Gestae* Augustus emphasizes that he paid his legionaries' discharge benefits from his own patrimony, without mentioning its sources. The rationalization of military benefits (and discouragement of civil war's plundering) would not occur until Augustus created the *aerarium militare*, a military treasury paid from taxation.

Peace

In contrast with the Republic, peace (*pax*) was promoted as a positive value in the early empire, connoting the absence of civil war. As with many other abstract principles, *Pax* was personified as a female deity.

The Romans of the Republic appear not to have valued peace highly, as their political structure and values promoted warfare. Victory in warfare was a source of glory for Roman consuls and lesser magistrates, and a source of wealth for the citizenry through military service. Prowess in warfare was closely associated with *virtus*, “manliness” or “courage.” In contrast, *pax* as inactivity or leisure (*otium*) was associated with negative traits, such as idleness (*desidia*, *segnitia*) and even cowardice (*ignavia*). The Romans of the traditional Republic sometimes went to war just for the purpose of preventing such idleness in the citizen body.

In the Republic, peace was an entity sought by Rome's enemies when they surrendered unconditionally (*deditio in fidem*). Peace was thus an entity sought by non-Romans on Roman terms.

The protracted civil wars and vicious civil conflicts of the late Republic

motivated Augustus, once he had defeated his rivals, to promote *pax* as a positive virtue, in the sense of the absence of civil conflict. At Rome Augustus constructed the *Ara Pacis Augustae*, an elaborate shrine to Augustan Peace that also glorified the imperial family. The historian Tacitus revives the republican negative associations of peace to criticize the emperor Tiberius as “uninterested in extending the boundaries of Roman dominion” and instead persecuting internal rivals (Tacitus, *Annals* 4.32).

By the later empire peace became a more positive virtue, regarded with nostalgia, due to the persistent invasions or threat of barbarian invasion. However, a peace sought on the enemy’s terms was still regarded by Romans as shameful, an attitude manifested by Ammianus Marcellinus in his account of the peace Jovian (emperor 363–364) made with the Persians.

Persia, Arsacid

The Arsacid Persians—or Parni—entered history as one of three nomadic tribes making up the Dahae, a Scythian confederacy which lived east of the Caspian Sea. After abandoning the Dahae region (ca. 250 BCE), the Parni settled in the Seleucid province of Parthava, which later became “Parthia.” Under their semimythical leader, Arsaces I, they soon won independence from the Seleucids, prompting Arsaces to found the Arsacid dynasty. In Roman sources, *Parthia* is usually employed for Arsacid Persia.

Over the next two centuries, the Arsacids slowly dismantled the Seleucid Empire. They first swallowed up smaller, neighboring territories such as Hyrcania, Bactria, and Media. But after several victories against the

Seleucids, the Arsacids set their sights on the more profitable regions of Mesopotamia. Babylonia, in particular, with its numerous large cities, eventually became the hub of the Arsacids' new empire, which stretched from the Euphrates River in the west to the Indus River in the east.

The Seleucids' collapse might have taken the Arsacids all the way to the Mediterranean. But by the mid-first century BCE, Rome was already asserting its authority in eastern Asia Minor and Syria. The Roman triumvir Crassus' unprovoked attack on Persia in 53 BCE permanently marred any chance of lasting peace between Rome and Persia. During the next 300 years, the two superpowers engaged each other in a vicious cycle of invasions and counterattacks that, in the end, did little to alter the overall political makeup of the Near East (see Persian Wars, Arsacid).

While neither Arsacid Persia nor Rome ever permanently overcame the other, their long conflict did diminish the Arsacids' prestige at home. The Roman emperor Trajan's invasion of Persia (114–117 CE) was the first to sack the Arsacids' main capital at Ctesiphon. But several of Trajan's successors (Lucius Verus in 165; Septimius Severus in 197; and possibly Caracalla in 215) temporarily seized the capital as well. Although the Romans never held Ctesiphon for long, the city's repeated capture made later Arsacid kings seem weak in the eyes of Persia's nobility.

Civil war, which was a constant bane for the Arsacids, also intensified as royal family members vied with each other for power. By the third century, the nobility's waning confidence in the royal line finally led it to look elsewhere. In 224 CE, an internal revolt of Persian vassals deposed the last Arsacid ruler, Artabanus V. The revolt's leader, Ardashir, the son of Sasan, then established a new dynasty, the Sassanids, who proved a much more difficult foe for Rome in the ensuing decades.

The Arsacid Persians' political system has been described as "feudal." The king, who was required to be an Arsacid, wielded absolute power at the top of the social structure. The only check on his authority was a dual council of nobles and Magi, a special tribe of Zoroastrian priests, which elected each new Arsacid ruler. Below the king, court officials and local administrators, chosen from the Arsacid family or from Persia's seven noble clans, ran the empire's minor kingdoms and larger cities. Although the Arsacids constructed Ctesiphon early on as their main capital, their court remained itinerant for much of its history. Frequent travel allowed kings to supervise administrators in the provinces more closely. But to prevent

corruption or rebellion in far-flung regions, Persian monarchs also employed spies, which were often referred to as the king's "eyes" and "ears."

Other than personal troops and retainers, Arsacid kings had no standing army. When war broke out, kings called upon their "vassals" to supply local contingents of soldiers. Because kings relied on subordinates for troops, gathering a large army could be time consuming and unreliable. Disgruntled vassals might rally when summoned, but they could just as easily refuse. Worse still, they could—and frequently did—join rebellions against the king. On the other hand, if an Arsacid monarch were popular and had his vassals' support, he could amass a considerable fighting force.

Cavalry units made up the bulk of the Persian army. Of these, there were two principal types. Cataphracts were the Persians' heavy cavalry. They fought by charging with a lance and were nicknamed *clibanarii* ("iron pot-men") because both horse and rider wore armor covering them from head to hoof. Persian horse archers, by contrast, were much more famous and feared. They used a powerful composite bow and inspired dread because of a tactic called the "Parthian shot." In battle, horsemen would feign a retreat, lure their enemies into a pursuit, and then turn and fire backward in their saddles to devastating effect.

Like most Mesopotamian cultures, Arsacid Persia's primary economic activity was agriculture. But Persia's strategic position along the famed Silk Road also made the Persians wealthy as traders. They operated as middlemen, facilitating the exchange of slaves, textiles, and spices from the Far East for raw materials, precious metals, and manufactured goods from the Roman Empire. Persian merchants grew rich marking up trade goods flowing in both directions, but the Persian king and aristocracy also profited by levying hefty tolls and taxes.

Nor were the Persians shy about flaunting their wealth. At court, the Persian king sat on a throne made of pure gold. Nobles wore copious amounts of jewelry, and both men and women used cosmetics to improve their appearance. Persian men were typically bearded and styled their hair in elaborate curls. They wore loose-fitting robes, similar to the Asian caftan, but trousers for riding. The aristocracy's favorite pastimes were banqueting and hunting, which the Persians may have done on specially constructed animal preserves.

Arsacid religion was probably some blend of Zoroastrianism and the nomadic (perhaps animistic) rituals. Arsacid kings were, for example,

keepers of the eternal flame, and we know that fire worship was the cornerstone of many Zoroastrian rituals. Yet we also know that the Arsacids' successors, the Sassanids, often accused the Arsacids of being heretics to Zoroastrianism. There may be some truth to this because Arsacid kings were buried first at Nisa and then at Arbela; strict Zoroastrians, in contrast, preferred exposing their dead. However, we should also remember that the Arsacids ruled over a vast multiethnic empire—one which included not just Zoroastrian and nomadic beliefs, but Semitic, Greek, Jewish, and Christian religions as well. Aspects of these other religions could have easily influenced Arsacid religious practices.

Persian Wars, Arsacid (53 BCE–215 CE), Causes

Rome's wars with Arsacid Persia spanned almost three centuries. Finding a single cause is difficult. Part of the answer may lie, however, in the expansionist nature of ancient empires. During the first two centuries BCE, Rome and Persia experienced rapid growth. Therefore, in some sense, they were destined to collide.

But in many early encounters, Rome also took a high-handed approach

to diplomacy. When the Persian king Mithridates II dispatched an ambassador to Sulla to open formal relations, Sulla, rather infamously, treated the envoy as a social inferior, seating the diplomat across from one of Rome's minor client-kings. Lucullus used threats and intimidation tactics to assure Persian neutrality while conducting military operations in Armenia in 69, and the Roman general may have even planted spies in the Persian king's entourage. Finally, in 66, Pompey promised the Upper Mesopotamian province of Gordyene to the Armenians, conveniently ignoring that he had already guaranteed the same territory to Persia. When the Persians protested, Pompey ordered his lieutenant into Gordyene to clear out Persian settlers by force.

Rome's condescension toward Persia was rooted in beliefs about Roman racial superiority. Most Romans considered easterners culturally and genetically inferior—even subhuman. The Romans inherited many of these prejudices from the Greeks, who, ever since the Greek-Persian Wars, had regarded non-Greeks as barbarians. In the Greco-Roman mindset, barbarians were thought to be effeminate, decadent, and servile. They were certainly not considered adept warriors or worthy military adversaries. And this, more than any other reason, may be why Sulla, Lucullus, and Pompey initially treated the Persians with such disdain. These same stereotypes also helped motivate Crassus' and Mark Antony's early attempts to conquer Persia (53 and 36 BCE). Both generals believed that the Persian would be easy prey.

The disasters at Carrhae and Praaspa changed Roman perceptions about Persia. This new view, combined with losses Rome sustained during its civil wars, persuaded Augustus that conquering Persia outright was no longer a feasible option. He therefore turned to diplomacy. But while the return of the Roman standards bought a century of peace, it came with a cost. Although the Armenian buffer zone helped end the cycle of invasions and retaliatory raids so characteristic of the late Republic, it was only a temporary fix. And when conflict resumed at the end of the first century, Rome's stake in Armenia actually exacerbated affairs in the Near East by giving the two superpowers another point of contention.

By the second century, fear of slacking legionary discipline and desire for personal aggrandizement led emperors to revive Rome's earlier, more belligerent attitude toward her eastern enemies. Starting with Trajan, emperors began rushing to war for even insignificant diplomatic slights.

Trajan's war (114–117 CE), for instance, began as a relatively minor quarrel over Armenian succession. The Persian king Osroes deposed Armenia's ruler without first consulting Rome. He soon regretted his decision, however, when it became clear that Rome was mobilizing for a full-scale invasion. When Trajan mobilized for a full-scale invasion, Osroes tried to backpedal, offering Trajan a different pro-Roman candidate. However, the emperor ignored the offer and invaded Persia anyway. Thus, scholars believe Trajan used the Armenian crisis as a pretext, that his real motive was personal glory.

Persian Wars, Arsacid (53 BCE–215 CE), Course

The Roman-Persian Wars began when the Roman governor of Syria, Crassus, invaded Persia in 53 BCE. Persia was embroiled in civil war, and one of the parties had asked Rome to intervene. Crassus set out from Antioch with seven legions (approx. 40,000 men). However, local guides led the Romans deep into Upper Mesopotamia where water was scarce. Unaccustomed to desert warfare, the Romans stumbled into a Persian ambush near Carrhae. The Persians pressed their advantage with barrages of arrows and heavy-armored cavalry shock troops. Nearly all of Crassus'

soldiers were killed; Crassus himself was slain while trying to negotiate his army's surrender.

When Phraates IV acceded to the Persian throne in 37 BCE, he secured his position by murdering all 30 of his brothers. He also persecuted the Persian nobility, who again turned to the Romans for relief. Mark Antony, whose purview at the time included the eastern Roman Empire, thought a Persian victory would help him in his propaganda war against Octavian. But, on campaign, Antony became preoccupied besieging Praaspa, a stronghold in Media Atropatene. Poor logistical planning and allied desertions allowed Phraates to capture the Romans' baggage train. Inadequately provisioned, Antony was forced to call off the siege. On the long march home, harried by the Persians and plagued by disease and shortage of water, the Romans lost almost 25,000 soldiers.

As emperor, Augustus could not afford another eastern war; Rome's civil wars had sapped the empire's manpower. He also wished to avoid Crassus' and Antony's mistakes. He therefore negotiated with Persia and, in 20 BCE, gave assurances that Rome would respect the Euphrates boundary and not attempt another invasion. In exchange, the Persians returned Crassus' military standards and accepted Roman hegemony over Armenia, which served as a buffer zone between the empires. Although Augustus had earned no military victory, the return of the standards inspired jubilation in Rome. Augustus even celebrated a triumph and housed the recovered standards in the temple of Mars the Avenger.

Rome's friendly relations with Persia continued for half a century. But when Nero became emperor (54 CE), the Persian king Vologaeses I decided to test the young ruler's resolve. Violating the treaty, Vologaeses installed his brother, Tiridates, on Armenia's throne. In response, Nero dispatched Gnaeus Domitius Corbulo to the eastern frontier. Although Corbulo drove the Persians out of Armenia twice, the surrender of Corbulo's cocommander, Caesennius Paetus, in 62 forced Nero to compromise. Nero agreed to recognize Tiridates as Armenia's king and even held an elaborate investiture ceremony in Rome (Tacitus, *Annals* 15.31).

The emperor Trajan's eastern campaign (114–117 CE) ushered in a new phase in Romano-Persian relations. Trajan shunned the Julio-Claudians' diplomatic compromises, preferring instead to conquer Persia outright. He attacked Armenia in 114, deposed its pro-Persian monarch, and organized the kingdom into a Roman province. He then did the same to Upper

Mesopotamia. For these victories, the Senate awarded Trajan the title *Optimus Princeps* or “Best First Citizen.” But having met little resistance, Trajan decided to attack Ctesiphon. In 116 Trajan’s army marched down the Euphrates accompanied by a Roman supply fleet. North of the capital Trajan transferred his flotilla overland to the Tigris. The Roman army’s size unnerved the Persian king who fled, abandoning his family and golden throne to Trajan. However, Trajan had difficulty consolidating his new provinces. Soon after Ctesiphon’s fall, anti-Roman revolts broke out in Mesopotamia, Armenia, and Judaea. When Trajan died on his way home (117 CE), his successor, Hadrian, relinquished Rome’s claims beyond the Euphrates.

A half century later, another dispute over Armenia sparked a war (163–165 CE) under the co-emperors Marcus Aurelius and Lucius Verus. Verus’ commanders, Statius Priscus and Avidius Cassius, relied heavily on Trajan’s strategy. Priscus occupied Armenia first and then Cassius followed Trajan’s route down the Euphrates. After sacking Seleucia, Cassius stormed Ctesiphon and burned the Persian king’s palace. A sudden outbreak of plague, however, forced the Romans to withdraw.

Septimius Severus fought two campaigns in Mesopotamia. The first, in 195, was a punitive expedition against local rulers who had supported Severus’ political rival, Pescennius Niger. The next year, while Severus was in Gaul, the Persian king reclaimed his lost territory and raided Syria. Severus’ second Mesopotamian expedition (197 CE), which also followed Trajan’s course, was therefore aimed at Persia’s heart. After minimal resistance Severus once again captured Ctesiphon.

Severus’ son, Caracalla, who styled himself as a new Alexander the Great, also attacked Persia (215–16 CE) and may have taken Persia’s capital after luring the king Artabanus V into a trap. However, Caracalla’s own guards assassinated him soon afterward. The emperor’s sudden death spurred Artabanus to counterattack. After a heated, three-day battle near Nisibis, the new Roman emperor, Macrinus, retreated ignominiously. Artabanus forced Macrinus to pay 200 million sesterces to secure the Romans’ safe withdrawal.

Yet the Persian king’s good fortune did not last long. In 220 a revolt led by the “Neo-Persian” Ardashir ended in the ouster of Artabanus, the last Arsacid ruler of Persia. Henceforth, Rome’s contests on the eastern frontier were not with the Arsacids, but with Ardashir’s descendants, the Sassanid

dynasty.

Persian Wars, Arsacid (53 BCE–215 CE), Consequences

At Carrhae, Rome lost between 35,000 and 40,000 men, a sizable number for any ancient army. This loss had a powerful impact on the Roman psyche. Rome had not experienced a defeat of this magnitude since Hannibal's invasion of Italy during the Second Punic War (battle of Cannae, 216 BCE). The Macedonian and Syrian Wars of the second and first centuries had certainly witnessed their share of Roman setbacks. But in most of these cases Rome's battlefield losses were relatively minor and often attributable to inexperienced or incompetent commanders. Crassus, on the other hand, had been no novice in warfare. He had broken Spartacus' rebellion, something which no other general had been able to do. Furthermore, his Persian invasion force in 53 had been more than adequate. It was one of the largest seen in the Republic, and its officer staff was well trained and battle tested. Crassus' son, who was in charge of the army's cavalry regiment, was a veteran of Caesar's Gallic Wars.

Although some Roman authors tried to blame Crassus personally for the disaster, most contemporary Romans probably believed Rome had lost not because Crassus made mistakes, but because Rome's armies had been bested. Battlefield reports suggested that the legions, which were at this

time composed mainly of infantry units, had been unable to handle the Persians' horse archers. In fact, when news of Carrhae finally reached Rome, fear mongers began speaking of a possible Persian invasion of Italy. Cicero's main concern as governor of Cilicia in Asia Minor (51 BCE) was the looming Persian threat, and Cicero's fears were soon confirmed by the failure of Antony's expedition in 36. By the Republic's end, in many Roman minds, Persia had become more than just another enemy on the empire's fringes; it was now Rome's nemesis, one which posed a real danger to the security of the empire's borders and possibly Italy itself.

The emperor Augustus gained the most from the fear engendered by these late republican contests. Augustus knew that Romans, while afraid of Persia, were also war weary. Agreeing to respect the Euphrates boundary and creating a buffer zone in Armenia helped quell Roman anxieties about the eastern frontier. But Augustus' real motive was to bolster his personal reputation. He touted Crassus' recovered military standards as war trophies and cast himself as Rome's avenger. He claimed that he had restored the honor Rome lost at Carrhae, and this political clout helped solidify his hold on power and aided him in establishing the Principate.

But, in the end, the return of the Roman standards also gave Rome a military advantage over Persia. This was partly the result of Persia's almost incessant state of civil war. Without the threat of Roman invasion, Persia's royal family, the Arsacids, occupied much of their free time feuding with each other. Constant civil unrest alienated Persia's nobility, who, in turn, incited their own rebellions. By the time of Trajan's invasion, the Persian state was in such disarray that it was only able to offer nominal resistance.

However, the Augustan peace also gave Rome time to learn from its late republican errors. By the second century, Roman commanders no longer underestimated Persia's cavalry capabilities or Mesopotamia's environment. Trajan and his later imitators employed larger cavalry contingents to negate the Persians' mobility advantage. The Romans began to develop heavily armored cavalry in imitation of the Persians. Many of Trajan's successors also followed his well-planned invasion route down the Euphrates to assure that their armies had a constant water supply. The Romans were not responsible for ending the Arsacid dynasty—an internal revolt of Persian vassals accomplished this in 224 CE—but Rome's numerous second-century invasions and repeated sacking of Ctesiphon directly contributed to the Arsacids' downward spiral and eventual collapse.

Persian Wars, Sassanid

Early in the third century CE, the Persian Empire’s Arsacid dynasty was supplanted by the Sassanids, a dynasty from Fars or Pars (Greek Persis) that proved much more aggressive toward Rome. This aggression came at a particularly bad time, the Roman Empire being torn by civil war and facing Germanic invasions. The first Sassanid king, Ardashir I (224–242), and his son, Shapur I (ca. 240–ca. 272) inflicted humiliating defeats on the Romans on the eastern frontier. Though Gordian III’s praetorian prefect Timesitheus won a victory, Gordian III (238–244) himself was defeated by Shapur. Gordian’s successor, the emperor Philip (244–249) made peace with the Persians, conceding control over Armenia and paying a large subsidy. The emperor Valerian (253–260) attempted an offensive against Persia, but was badly defeated and captured by Shapur I, whose commemorative relief and inscription (the *Res Gestae Divi Saporis*) at Naqsh-e-Rostam boast of humbling the “Caesars” Gordian III, Philip, and Valerian. The Romans believed that Shapur mounted his horse by stepping on the kneeling Valerian, and that after Valerian died (some years later) his corpse was stuffed or flayed and the skin hung in a temple.

To block further Sassanid incursions, Valerian’s son Gallienus (260–268) granted extensive command in the Near East to Septimius Odenathus, the monarch of Palmyra. Subsequently, Odenathus’ widow Zenobia, ruling for her young son Vaballathus, developed imperial ambitions and invaded

Roman Syria and Egypt. The emperor Aurelian (270–275) defeated Zenobia and returned the “Palmyrene Empire” to the Roman Near East.

The Sassanids suffered from their own dynastic strife in the 270s–280s, preventing the Persian Empire from further aggression. The Roman emperor Carus (282–283) mounted an expedition against Persia, but died and was succeeded by his son Numerian (283–284), who was forced to retreat. Numerian’s successor Diocletian (284–305) and his Caesar Galerius (293–305, Augustus 305–311) renewed the Roman war against the Persian Empire around 296. The winner of the Sassanid dynastic conflict, Narses (293–302), was an aggressive ruler. Galerius’ initial expedition suffered a defeat somewhere between Callinicum and Carrhae. The next year (297) he successfully swept through Armenia, defeating Narses’ forces. In 298 Galerius campaigned through Mesopotamia, capturing Ctesiphon and the Sassanid king’s family. Narses was forced to sue for peace, agreeing to a treaty, the Peace of Nisibis (299), conceding the Romans all territory up to the Tigris, which became the boundary of the Roman and Persian Empires. With this victory and settlement, Galerius avenged the defeat and capture of Valerian in 260, restoring Roman prestige. The Arch of Galerius at Thessalonica boasts of Galerius’ conquest of Mesopotamia.

During the Tetrarchic civil warfare of 306–313 and most of the reign of Constantine I (306–337) the Sassanid Persians were not a threat. Hormizd II (303–9), the son of Narses, was succeeded by Shapur II (309–379), who ascended the throne as an infant. Reaching adulthood, Shapur II developed more aggressive intentions toward Rome, allegedly breaking the Treaty of Nisibis in 337. In his last years, Constantine seems to have planned a war against Persia, perhaps motivated by religion, hoping to halt and avenge Sassanid persecution of Christians within the Persian Empire. Constantine died from natural causes as he was setting out for this expedition, so little is known about it. What is certain is that his son, Constantius II (337–361) inherited this conflict and waged war off and on with the Persian Empire (337–350, 358–361), mainly in the form of siege warfare. Notable engagements were the battle of Singara and the siege of Amida in 359. Constantius elevated his cousins Gallus, then Julian to the rank of Caesar to take command while he fought Magnentius and then the Persians. Gallus fell to an alleged conspiracy, but Julian’s military success in Gaul resulted in his being acclaimed as Augustus by his troops. The Roman Empire was on the brink of civil war when Constantius died from an illness (361).

Julian (361–363) succumbed to the ambition of Crassus, Mark Antony, Trajan, Septimius Severus, Caracalla, Valerian, and Galerius before him, hoping to conquer the Persian Empire in imitation of Alexander the Great’s achievement. Though Julian defeated the Persians at Ctesiphon, overall his expedition in 363 was pyrrhic, being costly for the Roman army and fatal for Julian. Burning his fleet and leading his army further into Sassanid territory, Julian died from a wound received in battle. He had no heir, and the army elevated Jovian (363–364), a guards officer distinguished mainly for his great stature. To extricate the Roman army from Julian’s fiasco, Jovian made a humiliating peace with the Persians, ceding back to them the Roman territories won by Galerius. He died soon after (364), suffocated by fumes from a charcoal brazier in his bedroom.

The reigns of Valentinian (364–375) and Valens (364–378) were marked by a return to status quo conflict and negotiation with Persia, principally over Armenia, which had long been a buffer client state of either empire. During the conflicts of the fifth-century Roman Empire, Sassanid Persia was not an active threat, waging only two short conflicts with Rome in 421–422 and 440. Conflict with Persia resumed in the sixth century CE, particularly in the reign of Byzantine emperor Justinian (527–565). The emperor Heraclius (610–641) inflicted the most extensive Byzantine conquests in Sassanid territory, that were then lost to the Arab conquest in the 630s–640s.

Rome and Persia influenced each other during the third century CE and later, seen in both empires’ adoption of heavily armored cavalry (*cataphractarii*) and in general the Roman Empire’s increasing reliance on cavalry. Whether features of later Roman imperial ceremonial, such as prostration (adoration of the purple), derived from Persian influence or from Hellenistic practices is uncertain.

Pertinax (Emperor) (193 CE)

A Roman emperor (193 CE), Publius Helvius Pertinax was born in 126 CE in Liguria, allegedly the son of a freedman. He initially trained as a teacher, before joining the Roman army as an equestrian officer. Pertinax served in both major conflicts of Marcus Aurelius’ reign, the Persian and Marcomannic Wars. In 168–170 CE, he helped protect the routes into Italy from the barbarians, and the emperor promoted him into the Senate with the rank of ex-praetor. This was followed by an appointment as commander of the legion I Adiutrix in Pannonia Superior in the early 170s. The historian Cassius Dio records that Pertinax’ “brave exploits” in this role led to the honor of the consulship in 175 CE. His appointment aroused resentment among the senatorial elite, because of his humble birth, but this did not stop Marcus Aurelius from employing Pertinax in further governorships in Moesia and Syria.

After the death of Marcus Aurelius, his son Commodus dismissed Pertinax along with other close confidants of his father. But Pertinax later gained Commodus’ trust and was appointed urban prefect and consul for the second time in 192 CE. When Commodus was murdered at the very end of that year, Pertinax was acclaimed emperor in his place. He adopted the republican title of *princeps senatus* (“first man of the Senate”), to indicate his intention to rule as a benevolent peer. Pertinax was praised for his moderation, but his parsimony alienated the Praetorian Guard, who murdered him in the palace in March 193 CE.

Cassius Dio's *Roman History* and Herodian are sources for the career of Pertinax, as is the *Historia Augusta*.

Perusia, Siege of (41–40 BCE)

The primary event of the Perusine War between Octavian (later Augustus), and the alliance of Lucius Antonius (Mark Antony's brother) and Fulvia (Mark Antony's wife). The cause of the war was Octavian's grants of land to veterans, resented by Italian communities; Lucius Antonius and Fulvia supported the Italians. After a short occupation of Rome, Lucius withdrew to Perusia (modern-day Perugia) where Octavian besieged him for two months. Starvation eventually forced Lucius to surrender the city to Octavian. Lucius was spared by Octavian, and Fulvia fled to Greece. The city was destroyed entirely, except for the temples of Vulcan and Juno. The citizens of Perusia were executed or sold into slavery.

Pescennius Niger (Emperor) (193–194 CE)

A Roman emperor (193–194 CE), Gaius Pescennius Niger Iustus was a senator who served on the Danube frontier under Commodus. He was later promoted to governor of Syria, and in 193 CE was proclaimed emperor by the eastern legions following the death of Pertinax. Niger's main rival for the purple, Septimius Severus, laid siege to Byzantium (which took two years to fall). Severus defeated Niger's troops in two major battles at Cyzicus and Nicaea, before winning a decisive victory at Issus in March 194 CE. Niger tried to seek refuge in Persian territory, but was captured and beheaded.

Cassius Dio's *Roman History* and Herodian cover the civil war of Severus and Niger; the chapter "Life of Pescennius Niger" in the *Historia Augusta* idealizes him and is highly unreliable.

Pharsalus, Battle of (48 BCE)

Fought in central Greece in 48 BCE, the battle of Pharsalus (mod. Fársala, Thessaly, Greece), was fought in the Caesarian-Pompeian civil war (49–45), and was its most decisive battle. In the 50s, Caesar had successfully campaigned in Gaul amassing wealth, standing, and a devoted army. The Senate, which was led by Pompey, was anxious and ordered Caesar, whose tenureship in Gaul was due to end in 48, to return to Rome. However, with

political and personal distrust at a high between both camps, Caesar refused and crossed the Rubicon River with an army knowing he would begin a civil war. He first dealt with Pompeians in Spain, and then turned to Italy, but Pompey and most of his followers escaped to Greece, where they hoped to raise troops from eastern allies. Caesar and his legions pursued them there. After several skirmishes and a confrontation at Dyrrhachium (modern Durres, Albania) in July of 48, in which Caesar was nearly defeated, the armies confronted each other at Pharsalus.

The advantage was on Pompey's side. His armies were nearly double the size of Caesar's: approximately 40,000 to 22,000, respectively. Pompey also had the advantage of a larger cavalry and his position on high ground next to the River Enipeus protected his left flank. For Caesar to have had any advantage at all, he was going to have to rely on his hardened veteran army and their martial skills. Pompey took the initiative and intended to deploy his cavalry against Caesar's in an attempt to force them into the Enipeus. Caesar, however, had envisaged this maneuver and he stationed legionaries to protect his right flank. This was done to ambush Pompey's cavalry and with Caesar's infantry trained to use *pila* (javelins) in a thrusting motion, they were able to force Pompey's cavalry off the field. This opened up Pompey's flanks to attack from Caesar's legions who poured forward causing Pompey to panic and flee the scene of the battle to Egypt, where he was killed. A general rout ensued and Caesar had won. Troop casualties are hard to determine from the source material, but it is estimated that Caesar might have lost up to 1,200 men whereas Pompey's casualties numbered approximately 15,000 men with up to 24,000 reportedly taken captive. Caesar spared and freed his captives, but Pompey himself fled to Egypt, where as he landed he was assassinated by King Ptolemy's henchmen. Other Pompeians retreated to North Africa, but the backbone of the Pompeian resistance was broken.

Although the Roman Republic was, by the time of Pharsalus, well on the way to collapse, this battle can be seen as the final deathblow. From a military standpoint, Caesar showed his tactical genius as a general against overwhelming forces. Politically, with Pompey now dead and Crassus killed at Carrhae in 53, the informal political coalition known as the First Triumvirate was no more. Caesar had amassed enough wealth and power to rule Rome in his own right. However, his victory was short-lived. His opponents did not appreciate his clemency; they regarded it as humiliating.

They conspired against him and assassinated him on March 15, 44 BCE. As a result of Caesar's death, further series of civil wars broke out; ultimately, Caesar's great-nephew and adopted heir Octavian (the future Augustus) was the victor. Caesar's position as sole ruler paved the way for the Rome of the emperors.

Philip Arabus (Emperor) (244–249 CE)

A Roman emperor (244–249 CE), Marcus Iulius Philippus, termed Philip the Arab, was an equestrian officer from Arabia. He served Gordian III as praetorian prefect, accompanying him on his Persian campaigns. Accounts conflict as to how Gordian III died, in battle or murdered by his soldiers. Philip claimed the throne following Gordian III's death in 244 CE, and was forced to conclude a humiliating peace with Persia. As emperor, he embarked on a war against the Carpi on the Danube in 245–247 CE. The following year he celebrated the 1,000th anniversary of the foundation of Rome, which was commemorated on his coinage. Philip's regime collapsed

in 249 CE after the senator Decius was proclaimed emperor by the Danubian armies.

Piracy

The nautical equivalent of land-based bandits and brigands, pirates launch raids from ships, whether they board and rob other ships on the water or raid settlements on land, usually harbors or islands. This discussion of piracy excludes state-sponsored piracy (privateering), most familiar in the early modern era.

Early Greek (Homeric) warfare was difficult to distinguish from piracy, local nobles and their followers raiding communities by sea. It is likely that this mode of low-intensity conflict never disappeared entirely; piracy remained a way of life for certain peoples in the Mediterranean, especially the inhabitants of Illyria (the Dalmatian coast), Rough Cilicia (along the southern coast of Asia Minor) and the Boukoloi (“Shepherds”) of the Nile Delta, areas with small harbors that made it easy for pirates to escape pursuit.

By the first century BCE, as the Romans gained control of the entire Mediterranean, they began to regard pirates as opponents to Roman control. Pirates endangered shipping (which stuck close to coastlines) and imperiled travelers and traders. Marcus Antonius Creticus, the father of Mark Antony, successfully campaigned against Cilician pirates in 102 BCE. In the 70s Publius Servilius Vatia campaigned vigorously against the Cilician pirates and won the surname Isauricus as a result. The troubled political situation in Asia Minor, contested between the Romans and Mithridates, probably exacerbated piracy. In 67 BCE Pompey was granted an extraordinary

command, with *imperium* extending over the Mediterranean sea and including the coasts of many provinces, to fight pirates in the Mediterranean. His campaign was highly successful; his *imperium* was for three years, but he eliminated the pirates in three months.

It also became conventional for Roman leaders to term opponents who emphasized nautical operations “pirates,” a way of delegitimizing them. In his *Res Gestae* the emperor Augustus characterizes the followers of Sextus Pompeius, among his opponents in the civil wars, as “pirates.”

The development of Roman naval fleets, based at Misenum and Ravenna and also patrolling the Rhine and Danube rivers, had some effect in combating piracy before the naval incursions of the Goths in the mid-third century and the Vandals in the fifth century CE.

Piso, Gnaeus Calpurnius (d. 20 CE)

Gnaeus Calpurnius Piso, consul in 7 BCE and governor of Syria in 17–19 CE, was condemned for sedition, illustrating the emperor’s monopoly of patronage of the army and intolerance of potential rivals. The episode of Piso is attested both in Tacitus’ *Annals* and in a surviving decree of the Senate.

Piso belonged to one of Rome’s noblest families. His father had supported Brutus and Cassius, and was well known for his independent spirit. Piso was consul in 7 BCE, with the future emperor Tiberius as his colleague in office, and continued as a friend of Tiberius the emperor until

Piso's downfall in 20 CE. Under Augustus, Piso served as provincial governor of Hispania Tarraconensis, and then Africa, before being appointed in 17 CE as governor of Syria by Tiberius. He replaced Creticus Silanus, whose daughter was engaged to Germanicus' eldest son; this was a potential cause of conflict with Germanicus.

What follows is based largely upon Tacitus' *Annals*. Tiberius may have appointed Piso to restrain the impetuous young Germanicus, who was sent to the Near East to reinforce Roman authority and influence, notably in Armenia, and whose popularity potentially threatened the emperor himself. To expedite his inspections in the Near East, Germanicus was given greater *imperium* than the governors. Tacitus presents a vivid account of the antagonism between Germanicus and his wife Agrippina on the one hand and Piso and his wife Plancina on the other in Books 2–3 of the *Annals*. Whereas Germanicus appears as an affable character, eager to please Rome's provincial subjects, Piso is represented as a rude, unpleasant man, who took his brief from Tiberius to check Germanicus to extremes, opposing and insulting him at every possible opportunity. This culminated in Germanicus formally renouncing friendship with Piso, and removing him from his governorship.

The clashes of Germanicus and Piso began with Germanicus' ordering Piso to accompany troops to Armenia; Piso refused, and Germanicus carried out the mission himself, chiding Piso afterward. Germanicus subsequently made an unauthorized trip to Egypt, hoping to alleviate a famine. Senators were not allowed to visit Egypt, lest they be suspected of revolt. Germanicus thus seemed to be emphasizing his privilege as imperial prince and possessor of greater *imperium*. He requested Piso to see to tasks in his absence, but Piso ignored his requests. Germanicus then fell unexpectedly and fatally ill at Antioch. His deputy carried out a directive to remove Piso from his governorship of Syria.

After Germanicus' sudden death in 19 CE, Piso initially (according to Tacitus) celebrated his demise, but then raised troops in Cilicia to retake control of Syria by military force. His attempted coup failed. Piso returned to Rome, where he was summoned to trial. Although Tacitus focuses chiefly upon the accusation that Piso and Plancina poisoned Germanicus, the real reason for Piso's fall from favor appears to have been his suborning of the army. Piso allegedly behaved as a patron toward the Roman army in Syria, calling himself "father of the army" and giving out favors such as liberal

furlough (Tacitus, *Annals* 2.55). Roman imperial standards of military discipline, emphasizing severity, were intended to minimize senatorial commanders' patronage of the army. Tiberius would not have tolerated any interference in the army's loyalty toward himself.

A lengthy senatorial decree concerning Piso, copies of which have been found inscribed upon bronze tablets in Baetica (part of Spain), reveals that Piso was accused of corrupting military discipline by handing out donatives in his own name, such that his men were even allegedly called Pisonians, in contrast to the emperor's Caesarian troops. Such actions undermined the unique loyalty built up between emperor and army that had been established by Augustus, and caused Tiberius to withdraw his support for Piso, who committed suicide and was condemned at trial by the Senate. The extant decree, termed the *SC de Cn. Pisone patre*, offers many insights into the sedition of Piso. Whereas members of Piso's staff suffered the usual penalty for treason in the form of exile and property confiscation, Piso's younger son Marcus was forgiven for supporting his father's uprising, suggesting that Tiberius took pains to protect Piso's family after his suicide. The *senatus consultum* represents Piso as threatening to resurrect the civil wars and stirring up unrest in Armenia and Persia. It condemns his "wicked plans ... to disturb the present tranquil condition of the commonwealth," and instructs that its judgment of Piso's behavior should be published around the empire.

Plancina (d. 33 CE)

Munatia Plancina was wife of Gnaeus Calpurnius Piso, and granddaughter of republican nobleman Lucius Munatius Plancus. She travelled with her husband to Syria in 18 CE, offending Roman sensibilities by attending training sessions of the soldiers serving under him. According to Tacitus' *Annals*, she and her husband clashed with the imperial couple Germanicus and Agrippina (the Elder) when Germanicus traveled to the eastern provinces on a tour of inspection. Rumor implicated Plancina in the poisoning of Germanicus, but her close friend and patroness Livia, the mother of Tiberius, intervened for her in 20 CE to release her from being tried along with her husband. The historian Tacitus celebrates Plancina's suicide in 33 CE as "a penalty that was late in coming rather than undeserved" (Tacitus, *Annals* 6.26). Hostility to women in public life is prominent in the historiography of the early Principate.

Plebeians

The ancient plebeians were distinguished by certain gentilician names (see "Roman Names") and by their exclusion from important state priesthoods, such as the *flamen Dialis* (high priest of Jupiter), *flamen Martialis* (high

priest of Mars), *flamen Quirinalis*, *rex sacrorum*, and *Salii* (the “dancing” priests of Mars). Plebeian were probably not excluded altogether from the early Senate or from the consulship during the first decades of the Republic. However, by the late fifth century BCE plebeians were nearly always excluded from the consulship. As a result of the Struggle of the Orders (patrician-plebeian conflict) plebeians gained access to all of the magistracies.

Plebeian grievances resulted in the organization of the *plebs* as a separate political group, with its own assembly, the *concilium plebis*, assembling upon the Aventine Hill in ritual *secessio* (secession, withdrawal) and electing its own magistrates, the tribunes of the plebs and the aediles. The tribunes of the plebs represented the interests of the plebs and were oath bound to provide help (*auxilium*) to any citizen who requested it.

Eventually patricians and plebeians reached a compromise with the Valerian-Horatian laws of 449 BCE. Plebeian magistracies were incorporated into the regular political structure of the Republic, with tribunes of the plebs and aediles ranking below praetors, consuls, and censors. The *concilium plebis* was also incorporated, merging at least partially with the *comitia tributa*. Plebiscites (laws passed by the *concilium plebis*, moved by the tribunes) became binding on all citizens. All citizens were granted the right of *provocatio* within the bounds of Rome: the right to appeal against an arbitrary decision of the consul or other magistrates. With the Licinio-Sextian laws of 367 BCE, one of the two annual consuls was required to be a plebeian.

The incorporation of the plebeians into the governing structure of the Republic meant that the *plebs* ceased to be a separate political body and that plebeians who held high office, enriched themselves (usually through war, extortion, or acquisition of land) and married patricians, became part of a new nobility (*nobilitas*), a wealthy patrician-plebeian aristocracy. Plebeians still could not hold the most important state priesthoods, but these carried little political power and might even (as with the *flamen Dialis*, the high priest of Jupiter) burden a patrician’s life with ritual prohibitions. Another remaining distinction was that tribunes of the plebs had to be plebeians; if a patrician wanted to become a tribune of the plebs, he had to ritually transfer into the plebeian order (*transitio ad plebem*). However, by the late Republic, the conflict of interests between the wealthy nobility and the general citizen body or poor masses (especially at Rome, the *plebs urbana* or

urban lower classes) was more relevant than the ancient patrician-plebeian conflict.

Pliny the Elder (ca. 23–79 CE)

Pliny the Elder was a Roman historian, natural philosopher, and military officer who is known primarily for his composition of the *Natural History* (*Naturalis Historia*). Pliny the Elder was the uncle and adoptive father of Pliny the Younger (61–ca. 113 CE), another Roman author who is known for his large volume of letters to his friends and associates—particularly the emperor Trajan and the historian Tacitus.

Born in 23 or 24 CE, Gaius Plinius Secundus held equestrian military tribunates in the Rhine legions. Under the Flavians, Pliny held a series of procuratorships and advanced into the emperor's confidence, being consulted personally by Vespasian. He was then promoted to commander of the Misene fleet, based at Misenum on the Bay of Naples. According to Pliny the Younger, Pliny the Elder died when he decided to observe the eruption of Vesuvius more closely as a remarkable natural phenomenon. He crossed the Bay of Naples and landed at Stabiae. The eruption's emission of poisonous fumes caused him to suffocate. The eruption and Pliny the Elder's death are described by Pliny the Younger, *Letters* 6.16 and 20.

During his time on the frontier, Pliny composed several treatises including a manual for the use of a javelin for cavalry and a biography of his friend and patron Pomponius Secundus; and he also started a historical work, covering all of the wars between the Romans and the Germans in 20 books. The *Natural History*, which was dedicated to Titus in 77—a work which, according to Pliny the Younger, was “a learned and comprehensive

work as full of variety as nature itself,” was published in a limited capacity during the same year. The full work, which was further revised by Pliny over the two remaining years of his life, is the only one of the historian’s works which survives today.

The *Natural History* contains 37 books, each divided thematically and covering a large assortment of subjects ranging from natural phenomena and prodigies, geographical descriptions of the known world, Roman technology to the history of art within the region of Asia Minor. Pliny’s text has frustrated modern scholars of Roman economics and technology, in part because Pliny largely avoids critical analysis of his own sources and in part because the Roman era was still prescientific, at least at the social level of educated gentlemen (equestrians and senators). Nevertheless, as Pliny did not observe modern disciplinary exclusions, the *Natural History* is a rich source for Roman social history and attitudes. Moreover, the history serves not only as a guide to the state of science, technology, and the arts during the first century CE but also as a model for later encyclopedias and scholarly works, as a result of its breadth of content and Pliny’s meticulous referencing of original sources.

Pliny does not focus on individual conflicts in the *Natural History*, but he emphasizes the important role that Roman and Greek military personnel served as facilitators of new technological, geographical, and cultural discoveries. As a former equestrian officer, Pliny also expresses strong views about the manner in which both officers and soldiers should conduct themselves. He describes his archetypal ideal commander by comparing him with the responsible and diligent farmer. Similarly, Pliny espouses selflessness and austerity as ideal traits for the common soldier; and he asserts that soldiers should be rewarded with nothing more than a simple grass crown. The historian is also exceptionally critical of the carnage and loss of life wrought by Roman military activity—particularly Julius Caesar’s Gallic Wars, which Pliny describes as “a great detriment to the human race even if it was forced upon him” (Pliny *Natural History* 7.92).

Pliny the Younger (ca. 61–ca. 113 CE)

Gaius Plinius Caecilius Secundus was born in 61 or 62 CE, the son of Lucius Caecilius of Comum, a well-to-do senator, and was adopted by his uncle Gaius Plinius (Pliny the Elder). Pliny the Elder was a Roman military commander and administrator who wrote the encyclopedic *Natural History* and who died while investigating the eruption of Mount Vesuvius in 79 CE. Pliny the Younger's career was distinguished but less sensational, but his letters provide insights into Roman administration and its typical conflicts and his *Panegyricus* to Trajan displays Roman imperial ideals.

Pliny the Younger held a senatorial tribunate in Legio III Gallica (Pliny *Letters* 7.31), but his career otherwise followed a civilian course, emphasizing judicial affairs and administration. After holding the offices of quaestor, tribune of the plebs, and praetor (the latter judicial rather than military), Pliny was a prefect of the *aerarium militare* or military treasury (Pliny, *Letters* 10.32). He also held the position of *praefectus aerarii Saturni*, in charge of the regular treasury. Pliny was a suffect consul in 100 CE, when he gave a panegyric to the new emperor Trajan (98–117) that was later revised and expanded into the extant *Panegyricus*. The *Panegyricus* to Trajan praises him effusively and contrasts Trajan with the "tyrant" Domitian (81–96).

Subsequently Pliny was *praefectus alvei Tiberis*, in charge of managing the banks of the Tiber, a river that tended to overflow its banks, resulting in destruction of property and legal issues for the Romans (the permanent embankments of today are a nineteenth-century creation).

In 112–113 (though the exact date is disputed), Pliny was then commissioned with his most significant and best known office, governor of Bithynia-Pontus, a small province on the coast of Asia Minor (modern Turkey). Pliny's letters to Trajan and the emperor's replies comprise Book 10

of Pliny the Younger's *Letters*. These letters reflect common concerns of Roman governors, such as the rivalry of Greek cities, the infrastructural problems of cities (local benefactors were unable to finish building projects), the recruitment of the army, and the use of Roman soldiers in policing. Pliny referred to Trajan the question of slaves who had infiltrated the recruits; Trajan ruled that if slaves had volunteered, they were to be put to death (*Letters* 10.29–30). According to Trajan, soldiers should not guard prisons because they would be taken away from their military duties (10.19–20, compare 10.27–28). The Roman Empire lacked a civilian police force, civilian corrections officers or civilian security forces. Soldiers were frequently detached for such duties.

Pliny's letter also displays the question of the Christians, a minority religion in this period. Pliny (*Letters* 10.96–7) regarded the Christians as similar to other illicit cults and associations, a potential source of public disorder. Trajan's reply was relatively tolerant. Pliny is not heard of after 113, so he may have died in Bithynia-Pontus.

The other nine books of the *Letters* reflect Pliny's extensive social network. His friends and acquaintances included the historian Cornelius Tacitus and the imperial biographer Suetonius Tranquillus. Pliny frequently recommended friends or acquaintances for positions in the government, typical of Roman patronage. The *Letters* were revised and edited by Pliny to showcase his mastery of Latin prose style. However, Book 10 is relatively unedited and can be compared with juridical sources.

Plunder

An important element of Roman warfare was plunder, the appropriation of the property of the conquered enemy, including coin and precious metals, movable goods, and livestock. Human captives (enslaved enemy) were also part of the loot, but are treated separately in *CAGR* under “Prisoners of war and slavery.” After a Roman victory, the plunder, booty, or spoils, in Latin *praeda*, was systematically collected by the army and was displayed in a victorious general’s triumphal procession. Whether all of the plunder could be or was displayed in the triumph is unclear; captives were often sold to slave traders shortly after the defeat of the enemy, and it is possible that only a representative sample was displayed.

As a material index of successful conquest, the display of plunder was an important element of the triumph ceremony, the victorious general’s ritual procession through the streets of Rome. Triumphant generals gained prestige from the display and expenditure of plunder for public benefit. However, rivals might contest their misuse of plunder. Material gain as a motivation for warfare aroused some discomfort in Greek and Roman authors, a discomfort which probably reflects the rivalry of the Roman elite. The Roman emperors continued to wage war at least partly for material gain, though the rewards of warfare became more intermittent. Plunder in Roman warfare continues to arouse modern scholarly controversy over its motivation of Roman imperialism.

Detail from the Column of Trajan, ca. 106–113 CE, depicting Roman spoils of the Dacian Wars, including Dacian shields, scale-type armor, and the Dacian dragon-shaped standard later adopted by the Roman army. Typical plunder also included movable wealth and human captives. Located in the Forum of Trajan, Rome, Italy. (Ciolca/[Dreamstime.com](#))

After the triumphal procession, some of the plunder was divided among the general's soldiers as donatives. Part of the plunder went to the state treasury. More typically, generals would use the booty to fund public amusements such as games or more permanent public amenities such as buildings (especially temples). These buildings are recorded as constructed *ex manubiis*, *manubiae* being the part of the *praeda* that the general was allowed to dispose of as he saw fit. He may have been expected to spend *manubiae* upon public benefactions and not appropriate them for his personal use. For instance, Augustus boasts in his *Res Gestae Divi Augusti*, a posthumous biographical inscription, that he constructed the Temple of Mars Ultor, vowed to avenge his adopted father Caesar's death, *ex manubiis* (RGDA 22). Some republican nobles were prosecuted for misappropriation of booty, though such prosecutions were often motivated by their political enemies.

Praeda, and in general the profits of empire, became a source of controversy in the last two centuries of the Republic and distorts the extant literary sources on the subject. As a result, plunder as a motivation for

Roman conquest is a long-standing controversy in the modern scholarship of Roman imperialism. Were the Romans really motivated by greed—a less admirable motive than self-defense, courage, or glory? The subject is prone to exaggeration. Vast sums of gold and silver (on the order of “a billion dollars” in modern economic terms) appear in ancient authors’ descriptions of some triumphs in the second- and first-century BCE Republic. Nonetheless it is apparent that the immediate profits of war had become extremely large, augmented by the longer-term profits from taxation and tribute.

The ancient sources exhibit some discomfort with the subject and attempt to rationalize it. In his *Histories* Polybius, as a Greek captive and foreign observer, emphasizes the rationality of the Romans and stresses the Roman army’s orderly and systematic collection of plunder, which soldiers turned over to the commanding general (Polybius 10.16). Polybius claims that Roman soldiers did not appropriate any of the booty for themselves, though this seems unrealistic, especially with small precious objects such as money or jewelry.

Other rationalizations were moralistic. Ancient authors tended to disapprove of commanders who sought battles and wars solely for the purpose of material gain. Cicero in the *Verrine Orations* (70 BCE) disparages Verres, the governor of Sicily, for “looting” his province (though these military metaphors are rhetorical). Marcus Crassus is depicted as a highly avaricious general, seeking war with Persia in 53 BCE solely for Persian wealth. Sallust, in his *The War with Catiline* (*Bellum Catilinae* 7–11) generalizes that the Roman leaders of the past sought fame and glory, not wealth; the nobles of the late Republic, in contrast, were motivated by greed, rivalry, and extravagance. Greek and Roman authors praised generals who abstained from taking plunder after their victories.

In practice, the pursuit of material gain through conquest was a more complex social phenomenon in which generals’ quest for prestige and fame was indissoluble from their display and expenditure of wealth from conquest. They gained political and social prestige through the display and expenditure of wealth, in the triumph ceremony and associated festivities, in the presentation of games and religious festivals to the public, and in the building of public amenities. (On these processes, Hölscher 2006; Beard 2007.) They also used wealth for social power directly through donatives, especially to soldiers. Very likely the ancient authors’ discomfort with the vast sums of wealth from conquest had more to do with the excessive power

and prestige of the victors and the envy of their rival nobles.

The Roman emperors continued these patterns, lavishing patronage from the wealth acquired through conquest. Augustus' Temple of Mars Ultor has been mentioned above. Augustus is said to have boasted that "I found Rome a city of brick, and left her a city of marble" (Suetonius, *Augustus* 28); in part it was his military victories that enabled him to do so.

However, bonanzas from imperialism in the Principate were somewhat more intermittent, with long periods without the plunder from major victories. Some Roman authors considered that the empire had reached natural boundaries (especially in northern and western Europe) beyond which the native peoples had little wealth worth conquering. Britain lacked plunder, as was remarked by Cicero (*Letters to Atticus* 4.16.7 = 89.6 Bailey) of Julius Caesar's expedition in 55–54 BCE and by Tacitus (Tacitus, *Agricola* 12). However, the Jewish War (culminating in the looting of Jerusalem) and Trajan's Dacian Wars (101–102 and 105–106) resulted in immense plunder. Nonetheless, the decrease in major campaigns yielding major profits had implications for the imperial treasury. Roman emperors could not rely on military campaigns to augment the imperial treasury, and resorted instead to extending the service of praetorians and legionaries (resulting in the mutinies of 14 CE), instituting new taxes, even auctioning the palace furnishings, as Marcus Aurelius (161–180 CE) and Pertinax (193 CE) did, and debasing the imperial silver coinage by adding base metal to silver.

Plutarch (ca. 50–120 CE)

Plutarch (Mestrius Plutarchus) was a Greek scholar and author who is best known for his *Parallel Lives*, a series of biographies of important Greeks and Romans. Plutarch also wrote *Lives of the Caesars* (Roman emperors) of which only the *Galba* and *Otho* survive. Of Plutarch's 227 works, many are lost, but other philosophical, rhetorical, and antiquarian works are collected in the *Moralia*. Plutarch's *Parallel Lives* include quasi-mythological figures such as Lycurgus of Sparta and the Roman kings Romulus and Numa, but also many solidly historical personages. Plutarch's method of composition pairs a notable Greek and a notable Roman, for example, Alexander the Great and Julius Caesar, appending a *synkrisis* or comparison at the end (19 of these comparisons survive with the biographies).

Despite his value as a historical source, Plutarch focuses on the lives of great men as exemplars of philosophical and moral virtues and vices, selecting his material accordingly and constructing his narratives with obvious dramatic arcs. For instance, Julius Caesar and Mark Antony are clearly headed toward their dooms. This literary method of composition contrasts with the imperial biographer Suetonius. The dramatic arcs render his biographical narratives tendentious, though highly entertaining. Plutarch's *Parallel Lives* in translation became highly popular in Renaissance and early modern Europe and inspired Shakespeare's plays *Coriolanus*, *Julius Caesar*, and *Antony and Cleopatra*.

Polybius (ca. 200–ca. 118 BCE)

Polybius was a Greek statesman and historian. For 17 years he was one of many Achaean political prisoners or hostages held in Italy in the custody of the Romans. The status of a hostage in the ancient Mediterranean masked the coercive relationship with hospitality, the custom of “guest-friendship”; hostages were usually elites so that guest-friendship was plausible. Despite Polybius’ captivity, he came to possess a privileged position in Rome with access to the highest strata of Roman society. While in Rome, he devoted himself to the recording of Roman history and Roman interactions within the ancient Mediterranean world. The focus of Polybius’ history is the rise of Rome to Mediterranean dominance, which he wrote during Rome’s establishment of hegemony over the Greek eastern Mediterranean.

Polybius was born in Megalopolis, Arcadia near the end of the third century BCE to a wealthy, aristocratic family. His father, Lycortas of Megalopolis, was an influential statesman. Polybius began writing at a young age but also became involved in politics. In 182, he bore the ashes of his hero, Philopoemen, to burial and acted as an envoy at Alexandria in 180. By the late 170s, Polybius was climbing steadily up the political ladder of the Achaean League and ultimately was elected *hipparchus*, the Achaean second in command and traditional leader of the cavalry, in 170/169. Polybius was poised to be elected *strategos*, the highest position of the Achaean League. However, this would not come to fruition.

Rome was at war with Macedon in the Third Macedonian War against King Perseus. With Perseus’ utter defeat at the battle of Pydna in 168, the Romans deported a thousand prominent Achaeans, including Polybius, whom the Romans sent to Italy as a hostage in 167. Once in Rome, Lucius Aemilius Paullus commissioned Polybius to be a tutor to his sons. Polybius

befriended Scipio Aemilianus, Paullus' younger son, and gained access to the Roman upper class. As the friend of many influential Roman aristocrats, Polybius was able to travel the Roman world, making trips to Africa, Spain, and Gaul. He was released from Roman captivity in 150 and accompanied Scipio Aemilianus on campaign in the Third Punic War. Polybius witnessed the sack of Carthage in 146 firsthand. He briefly returned to Greece and aided in the reestablishment of government and the further transition toward Roman hegemony. He also partook in an expedition to the Atlantic Ocean and likely served as an advisor during the Numantine War.

Through his broad travels Polybius toured the various landscapes of Rome's conquests and conducted interviews with former soldiers and leaders, such as the king of Numidia, Masinissa. Maybe most important of all, Polybius observed the Roman army in combat and in its relationship to Roman politics and society. This combined with his familiarity with Greek military knowledge provided Polybius with the ability to give firsthand and knowledgeable insight on matters of war.

Polybius was writing primarily for a Greek audience, to whom he hoped to explain how the Romans came to dominate the Mediterranean world in a period of 53 years. Polybius was fascinated with Rome's meteoric rise and the role of *tyche* (fortune). He also showed great interest in the Roman constitution. Polybius advocated a mixed constitution: a mixture of monarchy, oligarchy, and democracy. He felt that the Romans had achieved a near perfect balance.

One of the striking qualities of Polybius' writing is his extensive personal experience. He disliked so-called armchair historians and the writers of Hellenistic sensational "theatrical" history, whose goal was to entertain. Polybius was a proponent of *pragmatikē historia*, "practical history" that focuses on political and military affairs with the goal of instructing politicians and soldiers. In this approach, Polybius built upon and expanded the historical approach of Thucydides. Accordingly, *pragmatikē historia* needs to be based on real evidence, including eyewitness accounts, firsthand observation and experience, and the study of contemporary sources. Polybius did not believe in explaining events through supernatural tales or the actions of the gods, and he reduces the role of religion in Roman warfare. As a "practical historian," Polybius' speeches may be more reliable than those of most other ancient authors, who often treated speeches by historical characters as rhetorical exercises,

because Polybius was investigating relatively recent events, easily remembered by his contemporaries, and because he conducted considerable background research whenever possible.

Polybius' writing of *pragmatikē historia* caused him to emphasize moral behavior, presenting models to imitate or avoid. He praises physical caution, bravery, moral courage, loyalty and good faith, restraint in gaining and using wealth, generosity, and self-control and moderation. He criticizes recklessness and impulsiveness, cowardice, debauchery, drunkenness, sloth, and deceit. He emphasizes diligence, perseverance, and education. Polybius often was critical of other historians for their biased and inadequate historical accounts (although Polybius is sometimes guilty of the same bias). For Polybius, facts and practical lessons were needed to benefit real students.

Polybius was one of the first ancients to write universal history and in many ways laid foundations for the writing of history. He emphasized explanation and formulation of beginnings and reasons for historical events. Authors such as Sempronius Asellio, Cicero, Strabo, Diodorus, Livy, Plutarch, Arrian, Athenaeus, and Ammianus read Polybius and were influenced by his work. Livy often used Polybius as his principal source, especially for his accounts of the eastern Mediterranean. However, Livy was a very different author, more rhetorical and "theatrical," and his treatment of the same events bears comparison with the parallel episodes found in Polybius.

Polybius arranged his history in a unique chronological and geographical framework. Chronologically, his history followed the Olympiads. Yet geographically, his work progresses from west to east each year. Polybius' history covers the years 264–146, with emphasis on the growth of Roman power between 220 and 167; it also contains several digressions on geography, historiography, and government. Polybius wrote a number of minor works, including a biography of Philopoemen, a treatise on tactics, and a history of the Numantine war, all of which are lost. Although his history survives, it is not intact. Of the original 40 books, only Books 1–5 remain complete. Books 17, 19, 26, 37, and 40 are almost entirely lost. His history survives mostly in excerpts from other works. The "Excerpta Antiqua" and the *Excerpta* of Constantine VII Porphyrogenitus (905–959) provide the vast majority of the surviving material from Books 6–29 of Polybius' history. Polybius' work is the most significant and extensive

surviving example of history from the Hellenistic Age.

Pomerium

The *pomerium* was the ritual boundary of the city of Rome, with religious and military significance. According to legend, Romulus, the founder of Rome, ploughed the religious and ritual boundary of the city, the *pomerium*, and set boundary stones. The perimeter was later demarcated by a wall, and *pomerium* can refer both to the sacred perimeter and the wall, excluding the gates.

Warfare was excluded within the *pomerium*. Within its circumference, military activity of any kind, including the mustering of troops, military exercises, and the wearing of military garb, was prohibited. War gods' temples were outside the *pomerium*. The *dilectus* (levy) was held outside the *pomerium* on the Campus Martius. Soldiers trained on the Campus Martius. State ambassadors and generals negotiating for triumphs met with Roman representatives outside the *pomerium*. The triumph ceremony took place as an exception to the military prohibition rule. The triumphant general and his soldiers were permitted to cross the *pomerium* and enter the city after ritual purification. The *pomerium* also excluded some foreign deities, and religious protocol prohibited certain forms of public divination and religious cults, including specific priests, to leave the sacred limits.

The consecrated border of the city of Rome was extended when the city grew, often corresponding to military victory. The “Servian walls” of the fourth century BCE extended the city limits but not the *pomerium*. Sulla enlarged the *pomerium*, though he himself first broke the *pomerium* taboo by marching upon Rome with an army and taking the city by force. Julius Caesar, Augustus (according to Tacitus), Claudius, Vespasian, and Hadrian further increased the sacred limit. While some *pomerium* boundary stones have been unearthed, the exact route remains unknown.

Augustus’ establishment of permanent armed forces in the city of Rome (Praetorian Guard, urban cohorts, and *vigiles*) violated the tradition of the *pomerium*, but paid lip service to it in that the praetorians’ camp was outside the traditional boundary, and soldiers were not permitted to openly carry weapons within the border.

Pompey (106–48 BCE)

Pompey the Great (Gnaeus Pompeius Magnus) was a major figure in the late Roman Republic, pursuing a career driven by desire for military glory and securing unusual positions.

When Sulla returned in 83 from the eastern Mediterranean and sought to recapture Rome, Pompey, then 23, joined him with a private army of three legions from family clients in Picenum. Impressed by Pompey’s military performance and wanting to bind him closer, Sulla arranged a

marriage first to his stepdaughter, Aemilia, and then on her death to Mucia, a relative of the Metellan nobles who had also helped Sulla.

Sent against Marians in Sicily and Africa in 82–81, Pompey secured Sicily first, then Africa; his execution of opponents led to the nickname “the adolescent butcher.” On his return, Sulla greeted him as *Magnus* (“the Great”), but Pompey used that name only later. Pompey requested a triumph for his African victories; Sulla initially refused, but when Pompey moved his army nearer, Sulla conceded and allowed Pompey his first triumph.

In the consular elections for 78, Pompey supported Lepidus against Sulla’s wishes, but after Sulla’s death, when Lepidus as consul rebelled, Pompey accepted a command against him. Next he requested a command to assist Metellus Pius against Sertorius, a Marian general, who had been holding out in Spain for three years. When the Senate rejected the request, Pompey resorted to his usual method—refusal to disband his army, so the Senate reluctantly gave him proconsular power equal to Metellus. He remained in Spain from 76–71, unable to end the war because of Sertorius’ guerrilla tactics. Finally, Sertorius was murdered by his own officer, Perperna; Pompey easily defeated him and brought Spain under control.

While returning to Rome, Pompey captured 5,000 slaves from the revolt led by Spartacus, largely crushed by Crassus, and claimed some of the credit. He celebrated a second triumph on December 31, 71 for Spanish victories, and then requested the consulship of 70, though technically not qualified. In addition to his great popularity, the threat of an undisbanded army again secured his request. He and Crassus were elected consuls, restoring tribunes’ powers and re-arranging jury-panels.

Pompey next received two extensive commands through tribunician bills passed directly by the assembly, despite senatorial opposition. In 67 Gabinius proposed an extensive three-year command to deal with Mediterranean piracy, which had cut Rome’s grain supplies. Demonstrating his organizational skills, Pompey cleared the seas in three months.

In 66 Manilius secured Pompey’s appointment to take over the war against Mithridates from Lucullus (compare Cicero, *Pro Lege Manilia*). The king was defeated almost immediately; while Pompey failed to capture him as he fled over the Caucasus, Mithridates eventually committed suicide in 63. Meanwhile Pompey had carried out an extensive reorganization in the eastern Mediterranean, creating four new provinces and establishing

Rome's eastern frontier.

Bust of Pompey the Great, ca. 70 BCE. Pompey's unconventional career was marked by extraordinary commands, granted by popular vote to combat piracy through the Mediterranean and to wage war against King Mithridates VI of Pontus in Asia Minor. Located in the National Archaeological Museum, Venice, Italy. (Alfredo Dagli Orti/The Art Archive/Corbis)

Pompey returned in December 62, and (uncharacteristically) disbanded his army before heading to Rome, where on his forty-fifth birthday he celebrated his third, and most magnificent, triumph. He had two more requests: land allotments for his veterans, and ratification of his eastern rearrangements. This time, without his usual bargaining chip—an undisbanded army—the Senate thwarted him. He therefore joined an

alliance with Crassus and Caesar, who were also being blocked in the Senate. This “First Triumvirate,” combining their political resources, was cemented by marriage between Pompey and Caesar’s daughter Julia. The initial aim was to secure the consulship of 59 for Caesar; duly elected, he forced through laws securing the three men’s requests.

Caesar left hurriedly for a five-year command in Gaul, leaving Pompey to face discredit from Caesar’s methods. Clodius, a tribune for 57, began attacking Pompey and forced his supporter Cicero into exile. In late 57 Pompey secured Cicero’s recall, and also received a commission to restore the grain supply, which carried proconsular power for five years, with 15 legates, but no army.

By 56 cracks were appearing in the “triumvirate” because of individual ambitions. The three met at Luca to make new arrangements: Pompey and Crassus became consuls in 55; Caesar’s command in Gaul was extended by five years; following their consulship, Crassus secured command of Syria and a campaign against Persia, while Pompey received Spain which he governed in absence.

Julia’s death in childbirth in 54 broke one link between Pompey and Caesar, but Pompey rejected new marriage arrangements offered by Caesar. In 53 another link was broken when Crassus and his army were annihilated at Carrhae. Meanwhile Caesar’s successes in Gaul, misrepresented at Rome, increased tensions between him and Pompey.

In 52, continuing violence and corruption led to talk of Pompey being appointed dictator, but he was made sole consul instead, with the support of conservative senators, including Cato. He now married Cornelia, the young widow of Crassus’ son, and daughter of Metellus Scipio, who joined Pompey as consul later that year. Pompey was drifting toward the optimates—they probably thought him the lesser of two evils.

A tribunician law had been passed allowing Caesar to run in absence for the consulship when he returned from Gaul; Pompey now had this privilege annulled. This overturned Caesar’s plan to move straight into another consulship to avoid prosecution for force he used in 59. As tension increased, both were urged to disband their armies, but neither would blink. Finally the conservatives had the Senate order Caesar to quit his province immediately and put Pompey in charge of resistance to him. Caesar’s response was to cross the Rubicon and invade Italy.

Pompey realized his troops were no match for Caesar’s battle-hardened

legions, and so he retreated across the Adriatic to regroup and train, while Caesar made a lightning campaign against Pompeian supporters in Spain. Pompey put together nine legions, reinforced by allied contingents, and built up a fleet, which controlled the Adriatic. Even so he could not stop Caesar from crossing to Apollonia. The two had their showdown at Pharsalus in August 48: Pompey had superior numbers, but Caesar's tactics and his veterans' experience brought him victory.

Pompey retreated to Egypt, pursued by Caesar with a small army. On Pompey's arrival the advisers of the young Ptolemy XIII considered whether to offer him refuge, but the advice to choose Caesar prevailed. As Cornelia watched, Pompey left with a small group of companions, heading for what appeared to be a welcoming party, but on disembarking he was murdered, one day before his fifty-ninth birthday.

When Caesar arrived, Pompey's head and seal were presented to him. Caesar was angered at this insult to a great general, his former ally and son-in-law, and executed the murderers. Cornelia was given Pompey's ashes, which she carried back to their country house near Alba.

Portents

Portents were signs of the gods' approval or disapproval of human affairs in ancient Rome, including military campaigns. These signs were either spontaneous events, which required interpretation and expiation, or

deliberately sought via prescribed rituals propitiating the gods, which the Romans believed ensured military success. The spontaneous signs (*prodigia*) could be abnormal births of animals or people, abnormal behavior of animals (such as swarms of bees), lightning strikes, visions in the sky, earth tremors, mysterious voices, and so on. Sometimes, the army was directly implicated in a portent, such as when spiders covered the military standards when the Pompeians disembarked at Dyrrhachium in 48 BCE (Dio 41.14.1), signifying that the Pompeians would lose the war. Any portent involving the *aquilae*, the eagles which were the primary military standard by the late Republic, signaled serious divine displeasure with the general or army.

During the Republic (509–27 BCE) any witness to portents reported them to the senators, so that they could determine whether the portent was a public prodigy (*prodigium publicum*), meaning that the gods were unhappy with the entire Roman people. Sometimes the Senate rejected portents as private or foreign events (for example, in 169 BCE at Fregellae). If the Senate accepted the portent as public, the senators ordered expiatory rituals to be performed to a god or gods, in all temples in Rome, or even throughout Italy. The consuls could not leave for their military assignments (*provinciae*) until all public portents had been expiated. By the time of Augustus (27 BCE–14 CE), most public prodigies were no longer reported; only the portents dealing with the emperors were significant because the emperor embodied the religious health of the state.

The Romans also sought divine favor for specific events, such as battles or Senate meetings, through *auspicium*, a consultation of the will of the gods. Higher magistrates with *imperium* also held the power of *auspicium*, enabling them to practice official divination. When in an established city, the magistrates divided the sky or land into a sacred grid (*templum*) to wait for predetermined bird flights or calls. Depending on bird type and location of the sign, an augur, one of a specialized college of priests, determined the gods' disposition. The Etruscans originated this observation of bird signs. When the army was on the march or aboard ship, the general ordered a *pullarius* (chicken keeper) to feed grain to his sacred poultry to determine the gods' will (a ritual called *tripudium*).

A famous episode of the *tripudium* occurred during the First Punic War (264–241 BCE), when the naval commander Claudius Pulcher (consul in 249 BCE) grew angry when his chickens would not provide a favorable omen by eating; he thus threw the chickens into the sea, saying "If they will not eat,

let them drink!” (Cicero, *Nature of the Gods* 2.7; Suetonius, *Tiberius* 2) Claudius subsequently lost the battle of Drepana.

By the first century BCE, taking the auspices fell out of favor on campaign because many generals were promagistrates and no longer had the correct authority to perform the ritual. By the late Republic, the solitary nature of observing bird signs became subject to manipulation, for example, Marcus Calpurnius Bibulus’ abuse of the practice as an attempt to block Caesar’s legislation in 59 BCE. This manipulation led to a distrust of the auspices, although the practice continued throughout the empire. In his *Gallic Wars* and *Civil War*, Julius Caesar minimizes the use of divination and religious ceremonies in Roman warfare to emphasize the rational qualities of his leadership and the discipline of his troops.

Finally, the Romans sought to know the gods’ will through haruspicy, reading the livers of sacrificial victims. A *haruspex*, one of an Etruscan college of priests, travelled with the legions. These Etruscan priests compared the appearance of the sacrificial animal’s fresh liver with bronze models of a sheep liver, inscribed with the gods’ names, to interpret which unfavorable omens needed expiation to which god. One such extant model is the Piacenza Liver, which dates to the third or second century BCE. A misshapen liver portended unfavorable omens. The *haruspices* practiced regularly in Rome until Christian emperors, beginning with Constantine I (306–337), began to discourage them, starting of course with private divination, regarded as seditious by the emperors. Theodosius I (379–395) prohibited haruspicy along with other pagan practices. The traditional Romans interpreted and expiated all negative portents, whether spontaneous or deliberately sought, to maintain their *pax deorum* (gods’ peace) so that they could continue to be successful in military and political life.

Praefectus

The Romans employed the title prefect (*praefectus*) for various military officials and civilian administrators, typically equestrian but varying greatly in seniority and authority. The most numerous prefects (approximately 360 per year) were commanders of auxiliary infantry or cavalry units, termed *praefectus cohortis* or *praefectus alae*. High-ranking prefects included the prefect of the grain supply, the prefect of the fire brigade, the prefect of Egypt, and the praetorian prefect. The camp prefect played an important role in managing legionary logistics. Another prefecture, the urban prefect, was a prestigious senatorial post.

In the mid-Republic, units of Italian allies (*socii*) were commanded by Roman *praefecti sociorum*. The practice of recruiting non-Italian allies as cavalry units began in the late Republic. Caesar used Gauls and Germans as cavalry, commanded by native leaders. He depicts two of these leaders, Raucillus and Egus of the Allobroges, as unreliable, peculating from their men and deserting to Pompey (Caesar, *Civil War* 3.59). In the early empire, the Roman army continued to recruit non-Italian peoples with "warlike" traditions into the *auxilia*. Auxiliary units usually took titles denoting their original ethnicity. Auxiliary prefects were originally local aristocrats with natural ties to their men. However, the Romanization of the provinces meant that auxiliary prefects became Romanized, literate men. Many may have been second-generation citizens. Their loyalties were to the empire rather than to their ethnicity. Other equestrian commanders in the early empire were probably of Roman or Italian ethnicity, commanding auxiliary units with men whose ethnicity was non-Italian.

An auxiliary infantry prefect (*praefectus cohortis*) could be promoted to angusticlavian tribune in a legion, ensuring that the *auxilia* and the legions were not isolated from each other. After serving as tribune, he took another post as an auxiliary prefect, this time *praefectus alae* (cavalry commander). These three posts were known as the *militia equestris* and evolved by the mid-first century CE. After *praefectus alae*, the equestrian could enter the imperial civil service as a procurator (a financial official), of which there

were several grades, or hold other equestrian posts in the city of Rome.

The culmination of an equestrian career were the four senior prefectures: the *praefectus annonae* or prefect of the grain supply for Rome; the *praefectus vigilum* or commander of the fire brigade for Rome; the *praefectus Aegypti* or equestrian governor of Egypt; and the praetorian prefect, commander of the Praetorian Guard (sometimes two). The praetorian prefect became the most powerful civil administrator in the empire, deputizing for the emperor in day-to-day administration. Because of the prestige and high salaries of the procurators and the four major prefectures, many equestrians who held these offices probably did not ascend through the *militia equestris*, but received their high-level posts by patronage (the exploitation of social connections). The praetorian prefecture in particular demanded competence in Roman law; some notable jurists in the early third century CE, Ulpian and Papinian, were praetorian prefects.

A legionary centurion could attain the rank of camp prefect (*praefectus castrorum*), an important officer who managed the infrastructure and logistics of the legionary base. If building or siege works needed to be carried out, the camp prefect would organize them. Some early camp prefects were equestrians promoted by patronage. By the mid-first century CE, the most common path to *praefectus castrorum* was through promotion through the hierarchy of centurions to the rank of *primus pilus*, chief centurion of the first cohort of the legion, a highly prestigious rank for a common soldier. The *primus pilus* served for a year and was discharged, attaining equestrian status. He could re-enter the service as *praefectus castrorum*, exploiting his long familiarity with the local economy and the military community, or he could enter the imperial civil service as a procurator. Accordingly the *praefectus castrorum* was middle-aged or more when he attained his rank.

As an exception to the general policy that senators commanded legions, some legions had equestrian commanders: this was the case for the two legions in Egypt, where the governor (*praefectus Aegypti*) was also an equestrian. Legio I-III Parthica, created by Septimius Severus (193–211) also had equestrian commanders, and Severus' new province of Mesopotamia also had an equestrian governor. Some small imperial provinces also had equestrian prefect governors. However, in general equestrians were not permitted to govern provinces or command legions until the mid-third century CE, when equestrians displaced senators from these posts.

The reorganization of the administration and military by Diocletian and Constantine separated civilian and military careers more strictly, so that members of the imperial service could not hold a mixture of civilian and military posts as had been the case in the Principate. The praetorian prefecture was quadrupled, and the city prefect (*praefectus urbi*), always a senator, also rose in prominence as de facto ruler of the city of Rome in the emperors' near-permanent absence. Where old-fashioned legions persisted, they still had *praefecti* as commanders.

Praemia Militiae

The *praemia militiae* ("rewards of military service," singular *praemium*) consisted of the cash pension distributed to praetorian and legionary veterans at the conclusion of their service during the Principate. Veterans also received additional legal privileges. The *praemia militiae* were a major element of the imperial budget, funded by the *aerarium militare* or military treasury founded by Augustus (27 BCE–14 CE). Augustus thus ended the irregular patronage of the army that had marked the wars of the late Republic, placing the army's benefits on a solid footing, despite an initial shortage of funds that led to the temporary extension of legionary service and the mutinies of 14 CE. The *praemia militiae* thus contributed to stabilizing the imperial order. Caracalla (211–217 CE) is said to have raised the *praemia militiae*, perhaps to keep pace with inflation.

Prior to Augustus, pensions and land grants to veterans had required the

initiative of the Senate and of individual generals. In the mid-Republic, the Senate had settled colonies of Roman citizens, usually veterans, in Italy. This practice fell into disuse in the second century BCE. Leaders in the late Republic, including the Gracchi and Caesar, attempted to revive it, founding a few additional colonies abroad, most notably at Carthage.

As recruits' economic status declined, soldiers became more dependent on their generals to provide funds or grants of land for their retirement. At this time, however, service in the legions was usually short (six years at a time, the longest routine service being 16 years). Men who had served a six-year tour of duty were still young and often re-enlisted, continuing to serve under generals with whom they had a personal bond of loyalty. Nevertheless, Sulla took aggressive measures to provide land for his veterans, confiscating it from his proscribed enemies and expelling the inhabitants from many Italian cities to make room for Sullan veterans. This policy was very unpopular. Julius Caesar settled some of his veterans in overseas colonies, as did Octavian.

Augustus reorganized the conditions of service, discharging many legionaries with pensions paid from his own funds (as he claims in his autobiographical inscription, the *Res Gestae Divi Augusti*) and from the profits of his wars, especially the conquest of Egypt. Praetorians received a pension of 20,000 sesterces, and legionaries a pension of 12,000 sesterces. This was a very substantial amount of money; in the first century CE, legionaries earned only 900 sesterces a year. The *praemium* enabled a legionary or praetorian veteran to buy a farm, should he choose to, or to establish a small business or provide for his descendants. Impoverished and disgruntled veterans had featured in the late Republic's conflicts, either supporting conspirators outright (as the Sullan veterans did with Catiline) or mutinying. To avoid poverty, they enlisted repeatedly, as Caesar's veterans did serving with Octavian and Antony, perpetuating the cycle of war.

In 6 CE Augustus founded a military treasury termed the *aerarium militare*, funded by a tax on the inheritances of Roman citizens and a smaller tax on auction sales. *Praemia militiae* were now drawn from the *aerarium*, intended to be a permanent fund. The *aerarium* thus stabilized imperial rule in contrast with the late Republic's generals' irregular rewards for soldiers and veterans. Augustus capitalized the *aerarium militare* with 170 million sesterces of his own property.

In 5 CE Augustus chose to extend legionary service from 16 years plus four years in reserve, to 20 years plus five years in reserve. The new Praetorian Guard, which had served 12 years, now served 16 years. The extensions were probably intended to reduce the number of beneficiaries (since more men would die from normal attrition) and to spread out the payment of pensions over a longer period of time. These measures reduced the burden of the entitlements on the *aerarium militare*, which was not yet being filled substantially from taxation.

As a result, the legionaries on the Rhine and Danube mutinied in 14 CE, after Augustus' death. They complained of the extension of their service into old age, and of withheld or substandard grants of marginal land, to Germanicus and Drusus, members of the imperial family assigned by Tiberius to suppress the mutinies. Tiberius made concessions, discharging the older legionaries and paying pensions. For a short time legionary service reverted to 16 years. However, legionary service was extended to 25 years sometime in the late first century, perhaps in connection with the pay raise granted by Domitian (81–96) around 83. Soldiers were also discharged every two years to reduce the burden on the *aerarium*.

Since financing the army and provision for veterans were the largest single items in the imperial budget, prudent emperors took various unorthodox expedients to raise money, such as new taxes, confiscations, or even selling off the palace furnishings. Tacitus insinuates that emperors instigated treason trials to raise money from the confiscation of the alleged conspirators' estates. Another option that could not be relied upon was the conquest of wealthy enemies such as the Jews in the Jewish War or the Dacian king Decebalus.

Caracalla (211–217) raised legionary *praemia* to 20,000 sesterces and praetorian *praemia* by some undetermined amount. He was an enthusiastic patron of the army, but this measure may also have been intended to keep pace with inflation. However, the spiraling inflation of the third-century CE crisis period (235–284) contributed to the political instability of this period, with many revolts and rival emperors.

Praetor

The office of the praetor was highly adaptable and served multiple functions in the Roman Republic. According to tradition, the position was created in 367 BCE to take over part of the civic duties entrusted to consuls. Other evidence suggests that the supreme magistrate(s) in the early Republic may have been called praetors, not consuls, making praetors much more ancient than 367 BCE.

In the classical Republic, praetors were annually elected magistrates with chiefly judicial functions, ranking below the consul in the Roman Republic's traditional political system. Praetors, like consuls, were elected for one year, held *imperium* and *auspicium*, and were accompanied by lictors (ritual attendants that acted essentially as bodyguards), though praetors were subordinate to the consuls' authority and only had six lictors each to each consul's 12. The praetor's primary role was in judicial matters, but additional tasks included handling the civic duties of the consuls while the latter were on campaign. These included presiding over the Senate, administering justice, and governing the city. If necessary, praetors could also take command of an army to support the consuls in the field.

A second praetorship was created ca. 246 BCE which distinguished from the old office. The traditional position was now known as the *praetor urbanus*, who served as the major city praetor and handled the normal civic duties within Rome. The newly created *praetor peregrinus* did alleviate the judicial load on the *praetor urbanus* but primarily served as a backup general who could command another army in an emergency. The *praetor urbanus* only left the city in extreme emergencies, such as at the height of the crisis during the Second Punic War (218–201 BCE), and even then could only be absent from Rome for no more than 10 days at a time.

In a military role, praetors normally handled support tasks such as naval operations and garrison duty. Occasionally praetors saw heavy action and won victories significant enough to earn a triumph, though often they lacked the greater resources given to consular armies and could only afford

defensive actions. Praetors normally were given small armies, usually only one legion and supporting allied forces and sometimes only allied units. This meant that praetors could garrison a province but likely could not hold against major uprisings such as that of Viriathus in Spain in the 140s BCE.

Among the most important roles of the praetor as Rome expanded during the second century BCE was to serve as governors over the newly formed provinces. In 228/227, following the First Punic War, two additional praetors were created to run Sicily and Sardinia. Two more positions were formed to handle the Spanish provinces in 198/197. Sulla increased the number of praetors to eight, and Caesar eventually expanded the position to 16. Praetors could be prorogued if necessary. In that case they became *propraetors* and retained their positions with slightly modified powers. Though necessary to govern the various provinces, this vast increase in number of praetors led to heightened competition in Roman society for the consulship, as only two consuls were elected annually and the pool of former praetors vying for the position only kept growing.

Under the empire, the praetorship greatly lost importance and praetors primarily served only as imperial administrators. Praetors should not be confused with the Praetorian Guard or the praetorian prefect; the office continued to be filled by election, though their powers had been greatly reduced. Though they continued to administer law, praetors no longer served in a joint civic-military role as in the Republic. By the division of the empire in 395 CE, the praetorship had been reduced to a purely municipal role.

Praetorians

The Praetorian Guard was the personal bodyguard of the Roman emperors. Adapted from a republican institution by the first emperor Augustus in 27 BCE, the division soon took on additional tasks both within and outside of Rome. Occasionally the Guard played a pivotal role in the transition of power, but generally in all of their activities the praetorians can be seen as representing the power of the Principate whether for good or for malevolent purposes. Thus the praetorians played a disproportionately large role in politics, compared to the rest of the Roman army.

Considered a separate division of the army for much of its history, the Guard was originally organized into nine cohorts, ostensibly to distinguish them from a legion (which had 10 cohorts). The number fluctuated throughout the first century CE to as many as 12, but by the beginning of the second century there were 10 cohorts which is where the number remained until the demise of the Guard in 312 CE. The effective strength (that is, how many men per cohort) was almost certainly milliary (1000 strong), which meant that these soldiers would have been highly visible in the capital. It was for this reason that Augustus initially only stationed three cohorts at any one time in Rome: he was interested in disguising that his power was reliant on such a large force at his personal disposal.

Relief from the Arch of Claudius, depicting praetorians, ca. 51 CE. Created by Augustus, the Praetorian Guard was an elite force stationed at Rome to guard the emperor and maintain order. Praetorian detachments accompanied major campaigns, particularly when the emperor was present. Located in the Louvre Museum, Paris, France. (Leemage/Corbis)

Praetorians were recruited mainly from Italy, though over time, the area from which these men were drawn was expanded. Furthermore they were paid more than any other soldiers and served for a shorter period of time. It was this that was the catalyst for a conflict early in their history when, at the death of Augustus, the legions on the German frontier complained about their conditions of service compared to the Guard. The challenge was put down, but it highlighted the problems for the rest of the army at this early date of an elite division operating so close to the emperor.

It was under Augustus' successor Tiberius that all of the cohorts were brought together into Rome and a camp especially constructed for them. By

this time (23 CE), the presence of an armed division in the capital had become less of a concern and in fact the *Castra Praetoria* was an imposing structure overlooking the city from the Viminal Hill; the inhabitants of Rome could not help but be reminded daily of the power of the emperor. Inevitably there were conflicts between civilians and soldiers, something mentioned in several of the literary sources: the presence of the Guard not only on the streets but also at such places as venues for the games and at the theater exacerbated the relationship. Indeed, the situation became more strained after Septimius Severus cashiered the Italian Guard in 193 CE and replaced them with legionaries from the provinces. Cassius Dio, a senator in Rome at this time, comments on the boorish demeanor of the new praetorians and it is clear from his comments that the situation had deteriorated after the change (Dio 74[75].2.4–6).

The praetorians were an interested party in any transition of power, though being a pragmatic lot, they did not often take direct action themselves—it was not in their best interests to have disruption at the top. Officers of the Guard were involved in the assassination of the emperor Caligula (41 CE) and that of Caracalla (217 CE) but there are few examples of the rank and file taking part in such activity. The murder of Pertinax in 193 CE is the exception: 200 of the Guard went to the palace to confront the emperor over his strict discipline and in the ensuing encounter he was killed. It was because of this event that Severus decided to cashier the Guard in its entirety, though doing so also allowed him to reward the legionaries who had proclaimed him emperor in Pannonia on the death of Pertinax. And so, although it is a common perception that the Guard was instrumental in many of the changes of power in the imperial period, the evidence does not bear this out.

In the civil war of 68–69 CE, however, the Guard played a pivotal role in the removal of the emperor Galba and the installation of his successor Otho. Angered by Galba's refusal to grant them a donative as promised by the praetorian prefect Gaius Nymphidius Sabinus, it was easy for Otho to seduce them to his side; Tacitus records in his *Histories* that Otho offered incentives to praetorian soldiers whenever the opportunity arose. In particular, he took an interest in a special branch of the Guard, the *speculatores*, who were responsible for such activities as spying, and it was through these men that a large part of the Guard was brought to his side (Tacitus, *Histories* 1.24–5). As a result, Galba was murdered in the Roman

Forum at the hands of his own praetorians. The Guard played a role in the rest of the events in this turbulent year both in the field and in the capital. In fact Otho's successor, Vitellius, is said to have used promotion to the praetorians as a method of rewarding his field troops (Tacitus, *Histories* 2.94), which resulted in these men fighting to the very end against Vitellius' rivals to maintain their newly won status. After the success of Vespasian, however, the system returned to the earlier system of recruitment, though that emperor also reduced the number of cohorts back to nine.

It was only in the second century that the praetorians began to take the field with any regularity. In the first century, they were part of the contingent that had dealt with the revolts in the north in 14 CE; Guard members also had been sent by Domitian to Dacia in the late 80s CE along with their prefect Cornelius Fuscus who was killed in battle. Under Trajan, they played an active role in the Dacian Wars, celebrated on his column. Identification of the praetorians on that monument is tricky because of the similarity of equipment to the legionaries but it is clear from epigraphic evidence that their soldiers took part in battle. The Guard also was involved in the Marcomannic War. Although the praetorians were not set up as a field division at the outset, once the emperors themselves began to see more activity on campaign, it made sense that members of the Guard, along with the *equites singulares Augusti* (set up in the early second century as an additional protection unit) accompanied him.

In the third century during the multiple transfers of power that occurred with great rapidity, the Guard was involved in many of the changes, though it was not usually instrumental in the outcome. One occasion where the praetorians did have a major impact was in the conflict between Pupienus and Balbinus, who had been installed as emperors by the Senate, and the supporters of Gordian III (238–244 CE). In the ensuing dispute, the *Castra Praetoria* was besieged for only the second time (the first having occurred during the civil war of 69 CE); the soldiers were trapped for several days and were forced out only when the water supply to the camp was cut off. The praetorians then went on a rampage, eventually attacking the palace itself and murdering the two emperors, installing Gordian III in their place. The reason for the Guard's anger at Pupienus and Balbinus was fear that they would replace the current members of the division as had happened under Severus 50 years earlier; it is clear that the position of the praetorians was starting to be precarious.

By the late third century, the Guard had become a liability, in particular because of the cost of maintaining the division. The effective strength was reduced by Diocletian in the late third century but the final act was left to Constantine when the Guard supported his rival, Maxentius. In 312 CE, after Constantine's victory at the Milvian Bridge, the praetorians were abolished. Other imperial guards corps, termed *scholae palatinae*, attended the imperial court.

Primus Pilus

The role of *primus pilus* was the most senior position within the legionary centurionate. Entry into the primipilate granted status and prestige, as well as access to more senior posts across the empire.

The rank of *primus pilus* arose during the republican period when experienced centurions were needed to provide charismatic leadership during prolonged military campaigns. Julius Caesar notes the heroic exploits of Publius Sextius Baculus, who endured so many wounds in battle that he could no longer stand upright (Caesar, *Gallie Wars* 2.25).

The Augustan military reforms cemented the status of the *primus pilus*, who now received a significant salary of 54,000 sesterces. The *primus pilus* was appointed for a single year, although the rank of *primus pilus bis* demonstrates that some did so on two occasions. The retiring *primus pilus* received equestrian rank and a payment of around 600,000 sesterces marking the end of a successful career for many.

The *primipilares* offered the emperor a group of military personnel of proven loyalty and significant military experience. *Primipilares* could advance to a camp prefecture or a tribunate in the city cohorts of Rome. Further possible posts included procuratorships and governorships of equestrian provinces. In some circumstances, *primipilares* reached the praetorian prefecture. Arrius Varus began his career commanding a cohort under Corbulo in the eastern empire. He was later elevated to the primipilate by Nero and eventually reached the praetorian prefecture after the downfall of Vitellius (Tacitus, *Histories* 3.6, 4.2).

Princeps, Principate

Even though the words emperor and empire are often used to describe the position and regime of Augustus and his successors, Augustus and his early successors preferred to be addressed by the title of *princeps* (first citizen), a

title with strong republican connotations, although never part of a Roman emperor's official titles. Augustus' decision to use *princeps* and not terms more closely associated with monarchic power promoted the image of his regime as an extension of Rome's republican past. The adoption of the title of *rex*, with autocratic and tyrannical connotations, would have too closely associated Augustus and his regime with Rome's early kings or Hellenistic monarchs, and as such would have offended Roman sensitivities. *Dictator* was also a title that contradicted Augustus' message of republican renewal, concord, and reconciliation, since the actions of Sulla and Caesar had sullied the connotations of dictator, an office traditionally held only during times of crisis, contrary to the Augustan image of peace. Finally, although it was Augustus' official *praenomen* and was based in republican tradition, the title of *imperator* stressed military leadership and like that of *dictator* would have contradicted the Augustan message of universal peace. In contrast, rising out of the ashes of civil war, the Principate was a deliberate combination of old and new, creating a sense of continuity with Rome's traditional republican past while looking forward to a stable, prosperous, and more cohesive future for the Roman world.

More clarity can be shed upon Augustus' motives in establishing the Principate by considering the Roman traditional view of monarchy, and the actions of Caesar and Sulla while in the position of supreme power. For the Romans, the concept of monarchy was the antithesis of the Roman political system, since the overthrow of the monarchy led to the creation of the *res publica*. Consequently, the Romans were especially suspicious of anyone who attained and demonstrated what could be recognized as monarchical power. Such fears were realized by the actions of Sulla and Caesar during their dictatorships. Although traditionally only temporarily held during a crisis, Sulla and Caesar both used the office to their advantage, Sulla to eliminate his political rivals, and Caesar to consolidate his monarchical position at Rome by making the office perpetual, a move that ultimately cost him his life. Octavian could not escape these precedents and learned from them to tread with extreme caution while compiling political powers that would set him above and apart from the Roman Senate.

Caesar's assassination in 44 BCE resulted in another period of political uncertainty, as the assassins of Caesar and Caesar's supporters prepared for the inevitable clashes that lay ahead. In 43 BCE the triumvirate of Antony, Octavian, and Lepidus divided the imperial territories between them. They

defeated the assassins of Caesar in battle at Philippi in 42. Their cooperation was short-lived, however, and the expulsion of Lepidus from the triumvirate in 36 BCE made the final showdown between Octavian and Antony inevitable. In the ensuing struggle, a propaganda war was fundamental to Octavian's eventual success. To force Antony into making the first aggressive move, Octavian attempted to erode Antony's standing at Rome by publishing the alleged will of Antony. This document stressed Antony's monarchical behavior in the eastern Mediterranean, including his alleged division of Rome's eastern provinces among his children with Cleopatra as though they were his personal possessions to distribute. In this alleged will, Antony also declared Caesar's son Caesarion as *rex regum*, king of kings. Furthermore, the will's revelation that he wished to be buried with Cleopatra in Alexandria seemed to offer the Roman people the final definitive proof that Antony had abandoned his Roman identity. In this way, Octavian presented the resulting war against Antony as a defense of Roman republican tradition against the tyranny of Hellenistic monarchy, carefully shaping the image of himself as the caretaker of Roman political and cultural tradition, a theme that would remain at the heart of the slow and cautious evolution of the Principate.

In 27 BCE, what has become known as the First Settlement occurred, during which the role of *princeps* began to emerge. Octavian may well have stage-managed events in the Senate with a select group of advisors, including senior senators. On the Ides of January (January 13), Octavian appeared before the Senate and formally handed back command of the provinces and Rome's armies that he had held up until that point. This was an important gesture, since it transferred the power of command back into the traditional hands of the Senate and people of Rome. The Senate reconvened three days later and declared that the future security and well-being of the Roman state depended upon Octavian, and that he should once again assume command of the provinces and Rome's armies. As the situation required, Octavian at first refused, but gradually acquiesced to the Senate's pleading and agreed to assume command of the provinces that were yet to be pacified and the Roman forces within them. He accepted this appointment for a limited period of 10 years. None of this went against republican Roman tradition. Octavian still held the rank of consul, legalizing his command of Rome's armies, and the acceptance of his position for a set and limited period of time maintained the façade that

Octavian was merely the Republic's caretaker. The final announcement made by the Senate at this point was to grant Octavian the name of Augustus, a name emphasizing his exalted or "august" status.

The First Settlement lasted until 23 BCE when, after a serious illness during which it was feared that Augustus would die, a new settlement was reached. This Second Settlement removed obstacles that stood in the way of the advancement of Rome's political elite, and established a clear and quasi-traditional means of political succession. Augustus' constant holding of the consulship every year had restricted the number of Roman aristocrats who could hold Rome's highest political office. Thus, Augustus formally renounced the consulship, and only took it up again twice more, in 5 and 2 BCE. With his retirement from the consulship, Augustus accepted the rank of proconsul, which legitimized his continued command of the provinces and armies he had acquired in 27 BCE. To have authority over the provinces not formally under his jurisdiction, Augustus was granted *imperium proconsulare* that placed him on an equal footing with his fellow proconsuls and allowed him to act in their spheres of influence if and when he felt it necessary. This *imperium proconsulare* was limited to a term of 10 years, and used Cassius' and Brutus' position in 43 as an important republican precedent. Once again, the legality of the emerging Principate emphasized that its authority was obtained from the Senate, and situated firmly in republican Roman tradition.

Politically, however, the rank of proconsul did not provide the *princeps* with any ability to control the situation at Rome itself. Thus, Augustus was first granted a special privilege by which he could cross the *pomerium*, the sacred city boundary of Rome, while still maintaining his rank as proconsul. Except during triumph ceremonies, commanders and armies were traditionally excluded from the *pomerium*. Secondly, Augustus was also granted the powers, without the office, of tribune of the plebs (*tribunicia potestas*). *Tribunicia potestas* allowed the *princeps* to summon the Senate whenever he wished, and to avoid having to follow normal senatorial procedure; it became one of the emperor's standard powers. The settlement of 23 BCE established a clear position of authority and power for the Principate, while allowing some continuation of the Republic's administration. The Principate was at this point almost fully formed.

The final stages in the Principate's evolution occurred in 19, 12, and 2 BCE. Firstly, in 19 the *princeps'* *imperium* as proconsul was extended to

incorporate Rome and Italy. This extension of *imperium* put the *princeps*, on the face of it, on an equal footing with the two consuls, and when combined with his other powers, consolidated his political and constitutional role. In 12 Augustus added the title of *pontifex maximus* to his list of honors, placing him at the apex of Roman religious life, a title that would now be exclusive to the *princeps*. Then in 2, Augustus was awarded the title of *pater patriae* (father of the fatherland), an achievement that Augustus viewed as his greatest, and another title defining the princeps as the sole defender and protector of Rome.

The powers of *tribunicia potestas* and the special *imperium* embodied within the rank of proconsul were central to the Principate's successful continuation. The granting of these powers to Tiberius marked him as Augustus' successor, placing him in a similar position to Augustus when Augustus died in 14 CE. Due to these powers Tiberius was able to convene the Senate, and to read out Augustus' will, the financial and military account of the empire, and Augustus' own biographical account of his life, the *Res Gestae*. The Senate offered the powers of *princeps* to Tiberius, who at first feigned rejection as Augustus had done in 27 BCE, but eventually accepted. Augustus had been successful where Caesar had failed, and established the Principate as a central institution in Roman political life. The Principate would remain in the Julio-Claudian family until the dethronement of Nero in 68 CE. In the subsequent civil war of 68–69 CE, the Principate became the prize for anyone who was powerful enough to both seize and retain it. While successive emperors maintained the composite powers that Augustus had accumulated their personal authority gradually increased as the Principate became more firmly established and the memories of the Republic faded.

Principales

Principales were junior officers in the imperial Roman army below the rank of centurion, recruited from similar or lower social levels. The *principales* received higher pay than common soldiers and exemption from fatigues. Their titles are mostly known to us through inscriptions. Modern scholars have attempted to reconstruct the *principales*' promotion patterns from these inscriptions. The legion had many other occupational specialties known from inscriptions, who were probably not considered *principales*.

The titles and duties of one group of *principales* are closely related to the tactical command of a legionary century. The *optio* was the centurion's second-in-command and might be promoted to centurion. Below him were the *signifer*, who carried the century's standard during battle, and the *tesserarius*, keeper of the watchword. The *aquilifer* carried the legionary eagle standard, while the *imaginifer* bore the emperor's image (probably a painting) on a standard. These two standard-bearers had greater prestige than mere *signiferi*, since losing the eagle standard was a military disgrace and since the emperor's image was a focus of loyalty (the troops of Vitellius, revolting against the emperor Galba early in 69 CE, stoned his images). But a simple *signifer* still had the responsibility of helping maintain order and morale in battle and on the march. Losing an ordinary standard in battle

was also disgraceful. All these officers below the rank of centurion received one and one-half times base pay.

Another group of *principales* was involved in the administration of the legion. *Librarii*, or clerks, kept records. They were overseen by the *cornicularius* or chief record-keeper. Many military records on papyrus and wooden tablets have been found in Egypt, in Roman Britain near Hadrian's Wall, and in Dura-Europos, an outpost in Syria on the Euphrates. They suggest that military paperwork was extensive, though the average soldier may not have been very literate. Legionary soldiers' private letters have been found in Egypt, but fodder receipts for auxiliary cavalry show that these men could barely sign their names. Though a *librarius* only received base pay, he (as with other *principales*) was exempt from heavy labor. However, the clerks were probably still expected to perform combat training and to fight in combat; they could even be promoted into the tactical specialties mentioned above. The Roman army did not maintain large numbers of noncombatant support staff as in modern (twentieth-century) armies.

Principales who distinguished themselves might be promoted to centurion or into the *beneficarii*, a group of junior adjutants who were assigned to headquarters and were often detached from their legion to travel on duty and to assist provincial governors and other functionaries (Vegetius 2.7). *Beneficarii* received one and a half times base pay. Because *principales* were involved in administration, they and centurions were probably the "common soldiers" whom civilians might encounter and who gave the impression that soldiers were a relatively privileged class.

Principes (Republic)

The *principes* were an organizational rank in the manipular army of the Roman Republic (ca. 350–110 BCE). They were the men in the prime of life. Experienced in warfare, they were older than the *hastati*, but not quite as experienced or as aged as the *triarii*. Together with these other ranks of line infantry, they made up the main fighting force of the Roman army. There were ten maniples of 120 *principes* in a legion, totaling 1,200 at full strength.

Their name is derived from the Latin word meaning leading men, though they did not lead the army in the manipular array, rather, the *hastati* did. Their name, therefore, is an allusion to their ability, where their age and knowledge of battle formed the perfect balance: they were experienced, but not old enough to have their age be a detriment to their skill.

The *principes* were probably armed similarly to the *hastati* with two *pila*, a large oval shield (the *scutum*), helmet, greaves, breastplate or mail, and a sword. As with the *hastati* and the *triarii*, the *principes*' differentiation by age, experience, and equipment disappeared with the transition to the cohortal legion, in which all infantry were equipped alike.

Prisoners of War and Slavery

Modern international treaties and regulations attempt to impose uniform and humanitarian treatment of prisoners of war. In classical antiquity, these

regulations did not exist. According to common law or the classical “law of nations” (*ius gentium*), captives in war were enslaved by their captors. The Romans often enslaved defeated but unsundered enemy peoples, often on a large scale. Furthermore, Roman law acknowledged that Roman citizens might themselves be captured and enslaved.

Captives must be distinguished from *dediticii*, enemy peoples who made a formal surrender to Rome (*deditio in fidem*). *Dediticii* were at Roman discretion allowed to retain their preconquest internal social and political arrangements. Roman ideology emphasized fair treatment of peoples who had undergone *deditio in fidem*; they owed loyalty to Rome, but they were not slaves. Triumphal iconography blurred this point, depicting newly conquered regions or peoples as captives. The Romans of the early Republic, furthermore, offered Latin or allied status to the peoples of Italy whom they conquered, recruiting them to fight Rome’s wars.

In contrast, enemy peoples who resisted conquest were, when defeated, taken captive. Wealthy or notable captives might be ransomed by their own peoples. Other enemy captives were massacred, usually the fate of enemy adult males. Others were sold into slavery either on the spot or after exhibition in the Roman commander’s triumph. The triumphant general might distribute captives to his soldiers. Female captives were liable to be raped. In short, Roman attitudes toward enemy captives were harsh.

Sale of enemy captives into slavery was probably the most usual Roman manner of disposing of captives. Slave traders followed the Roman army in hope of profiting from Roman victory. For this reason slaves were said to be sold “under a spear” (*sub hasta*) or “under a crown” (*sub corona*), the laurel wreath that symbolized Roman victory. A substantial proportion of the Roman slave population derived from war captives, more so in the mid- and late Republic. Less frequent conquests in the Principate still produced large numbers of slave captives. For instance, after the sack of Jerusalem, 97,000 Jews were enslaved.

Female captives were liable to be raped by their conquerors. The legend of the Sabine women exhibits Roman assumptions about female captives and also suggests the ambiguity of assimilation. Romulus’ war band lacked wives and raided the neighboring Sabines, carrying off their women. The Sabine men, desiring to avenge the insult, made war on the Romans, but the Sabine women intervened to stop the battle (Livy 1.9–11). The legend illustrates that the Romans were able to incorporate defeated peoples as

allies and eventually as citizens, a process well known in historical times.

Some Roman conquerors, such as Scipio Africanus, displayed their humanitarian treatment of female captives. After the fall of New Carthage (209 BCE), Scipio was presented with a Celtiberian noblewoman. Expected to use her as a concubine, he instead returned her, untouched, to her people (Polybius 10.19.3–6; Livy 26.50). Scipio may have imitated Alexander the Great's chivalrous treatment of the Achaemenid Persian king Darius' wives. Centuries later, around 298, the Tetrarchic Caesar (deputy emperor) Galerius imitated Alexander's behavior when he captured the Sassanid Persian king Narses' harem, returning them at the Peace of Nisibis (Petrus Patricius 4.14 Müller). But these anecdotes merely contrast with the more usual rape and enslavement of female captives. Young (adolescent) male captives were also liable to be raped, as Roman sexual mores accepted male citizens' homosexual relationships with social inferiors.

Captivity was a mutual risk. Roman soldiers expected that if the enemy captured them, they would be enslaved. To become a prisoner of the enemy was the worst possible outcome for a Roman fighter. According to Roman military values, capture implied the fighter's cowardice, since he had permitted his capture rather than die fighting. Accordingly, the Roman Senate refused to ransom Roman captives from Hannibal after the battle of Cannae in 216 BCE, equating captives, those who surrendered voluntarily, with cowards (Livy 22.60–61).

However, when Romans fought Romans, in the late republican and imperial civil wars, they did not normally attempt to enslave one another. In his *Histories* of the civil war of 69 CE, Tacitus depicts the Flavians' sack of the north Italian city of Cremona: the Flavian soldiers took many Cremonese captive, attempted to sell them as slaves, and when no one would buy Roman slaves, began to kill them (Tacitus, *Histories* 3.34). This ugly episode appears isolated. The Roman elite was highly sensitive to the mere discourse of slavery in civil warfare and civil conflict, such as the victor's arrogance, insults offered to the losing side, or "servile" behavior by the defeated. Merely surrendering to the victor was an extreme humiliation; some Roman commanders who lost civil war battles chose to commit suicide rather than surrender.

The imperial Roman jurists debated the captivity of Romans in war in a less moralistic manner, as a possible occurrence with legal consequences. The jurists' opinions and rulings in the Digest of Justinian (Book 49.15)

suggest that by the late second century CE, Romans were often captured not as a result of a decisive battle, but due to the dangers of low-intensity conflict or military or civilian travel in remote areas. Both military personnel and civilians were occasionally captured by brigands or enemy raiders and sold across the frontier. These conditions reflect the increased insecurity of the frontiers from the late second century CE onward.

A male Roman citizen captured by the enemy became a slave. *Ipsa facto* he lost his citizen status and all other citizen rights, such as his right to own and inherit property. His legal marriage and rights over his children were dissolved. Persons who were captured by bandits and remained within the boundaries of the Roman Empire did not lose their free status. If sold by the bandits, they might be able to escape and prove their free status.

If the former Roman citizen ever escaped from the enemy and reentered Roman territory, he underwent a process known as *postliminium* to formally regain his citizenship and attendant rights. *Postliminium* also restored the status of the dependents of Roman citizens, such as their children (who did not have full rights to property) and slaves. The jurists ruled that deserters to the enemy should not obtain *postliminium*.

Probus (Emperor) (276–282 CE)

A Roman emperor (276–282 CE), Marcus Aurelius Probus was born at Sirmium in Pannonia Inferior in 232 CE. He was a senior officer in the Roman army when he claimed the throne after defeating the emperor Florianus in 276 CE. Probus consolidated Rome's hold on its northern frontiers through a series of wars against the Alamanni, Franks, Burgundians, and Vandals in 277–279 CE. The historian Aurelius Victor compares him to the Carthaginian general Hannibal in his knowledge of warfare. Probus' reign witnessed several internal revolts, all of which were dealt with effectively. These included an insurrection in Isauria, a notoriously unsettled region, which was led by the brigand Lydius. He occupied the city of Cremna, killing many of its citizens, until he was defeated by the governor Terentius Marcianus. There were also rebellions by Saturninus, governor of Syria, an unknown governor of Britain, and Proculus and Bonosus in Germany. In 281 CE, Probus staged a triumph in Rome to commemorate his foreign victories, and decided to embark on a Persian campaign the following year. But Probus never made it to the eastern frontier, being killed in Sirmium in late 282 CE after his praetorian prefect Carus staged a revolt. Allegedly, Probus' soldiers mutinied against him because he put them to work draining swamps.

The career of Probus is related briefly in the epitomators Eutropius and Aurelius Victor; the *Historia Augusta's* Life of Probus is unreliable.

Proconsul

A proconsul was a former consul whose *imperium* had been prolonged for an additional term, usually one year, by prorogation to maintain his command of an army or governance of a province. Proconsuls maintained

similar powers to that of a consul—they had supreme command of their armies. However, the *imperium* of a proconsul was not as supreme as that of a regular consul. Proconsular *imperium* extended only within the *provincia* assigned to the proconsul, and if a regular consul was also in the province, the proconsul was subordinate to the consul. This type of prorogation was mainly used for administering overseas provinces when not enough regular consuls and praetors were available. However, it was also used if a consul had failed to end a campaign during his regular term and required additional time to do so—one such example is that of Titus Quinctius Flamininus in the Second Macedonian War (200–197 BCE).

Unlike the regular consul, the proconsul's appointment was subject to removal. The Senate determined the proconsul's geographic jurisdiction and they also could rescind the prorogation if the proconsul overstepped these boundaries or proved incompetent. In addition, the Senate's appointment of promagistrates could be overruled by the citizen assemblies, as was done during the Jugurthine War when Quintus Caecilius Metellus Numidicus was replaced by Marius in 107 BCE.

Proconsuls did not have to be former consuls. In special cases proconsular *imperium* could also be bestowed on private citizens. Both Scipio Africanus in 211 BCE and Pompey in 76 and 67 were appointed as *privati* to handle major operations; in Scipio's case in Spain and for Pompey his campaigns against Sertorius and the Mediterranean pirates. Neither had held the usual preceding office prior to receiving their appointments. Though Caesar was consul in 59, an extended proconsular *imperium* in Gaul was likewise given to him for five years in 58, renewed subsequently for another five years.

Under the empire, the title of proconsul was mostly associated with the ex-consuls who routinely governed major provinces such as Africa and Asia. Most other provinces were governed by *legati Augusti pro praetore*.

Promotion in Army (Imperial)

During the Principate (27 BCE–235 CE), the Roman military hierarchy formed a two-tier structure in which high-ranking officers were drawn from the senatorial and equestrian orders. Due to the importance of patronage in Roman society, the promotion of elite officers was determined by prestige and social connections rather than merit or ability; they received no special training, and it is debated whether there was any special tracking of talented officers. Common soldiers were usually recruited from lower-status citizens and noncitizens. Low-ranking officers (centurions and below) were usually recruited from the ranks, though some equestrians obtained the rank of centurion. The army afforded soldiers a degree of social mobility through ascending the ranks of the centurionate to equestrian status, but such ascent took many years. Much is still not known about promotion patterns for lower-ranking personnel, which are studied and reconstructed from inscriptions. On the other hand, low-ranking officers and even simple legionary soldiers were representatives of the Roman power in the provinces and displayed various traits of privilege such as a regular income, literacy, and the use of Latin as a “language of power.” Veterans received further privileges.

In the Principate, senators were eligible for the ranks of provincial governor, legionary legate (commander of a legion), or laticlavian tribune. A young man of senatorial family held the rank of *tribunus laticlavius*, or broad-stripe tribune, in his late teens or early twenties, before he entered the Senate at age 25. Nominally second-in-command to the legionary legate, the laticlavian tribunate suggested continuity with republican tradition, since the *dilectus* recruited citizens from age 17 onward. The youth of the laticlavian tribune ensured that he would not be a serious candidate for the imperial power. A senatorial tribune might still be able to distinguish himself in combat, as did the son of Lucius Apronius, a governor of Africa

during the war with Tacfarinas in the early first century CE.

Senators later in their lives might hold the rank of legionary legate or provincial governor, a *legatus Augusti pro praetore* in imperial (garrisoned) provinces or proconsular governor in public (ungarrisoned) provinces. The distinction between imperial and public provinces and the separation of provincial governors and commanders of legions were instituted by Augustus as an attempt to stabilize imperial rule. Governors of provinces with active frontiers and armies were the emperor's appointees, his trusted men. Governors of public provinces lacked such military opportunities.

Studies of prosopography (the study of elite careers) have suggested that many imperial senators' military experience was limited and that only some distinguished themselves as legionary legates and governors with military responsibilities. But scholars still debate whether men with military aptitude (the so-called *virī militares*) were designated and specially tracked and promoted, receiving the consulship at a younger than normal age so they would still be vigorous in senior commands.

The equestrian order formed a larger pool of potential officers. Many of these men were Romanized provincial elites, stereotyped by Roman authors as more eager for military service and less corrupted by the luxury of the capital. They also owed their commissions and promotions to friendship or patronage. Equestrians might become commanders of auxiliary infantry or cavalry units (*praefectus cohortis* or *praefectus alae*). They might serve in legions as narrow-striped tribunes (*tribunus angusticlavius*, equestrian tribune). There were five equestrian tribunes per legion; they were usually older than the senatorial tribune and had more serious responsibilities, commanding two cohorts each. Equestrians might also seek commissions as centurions. A few equestrian officers were promoted from the ranks, usually from *primus pilus* (chief centurion). The office of camp prefect (*praefectus castrorum*), chief operations officer, a position of great responsibility demanding experience, was typically held by these men. Before the third century, however, equestrian officers, however, could not be promoted to higher military ranks than auxiliary prefect, angusticlavian tribune, or camp prefect unless they were adlected (formally appointed by the emperor) into the senatorial order. It was more common for equestrian officers to be promoted into the civilian administration.

Centurions bridged the gap between the senatorial and equestrian officers and the common soldiers. Some centurions were appointed as

equestrians (*ex equite Romano*), but probably more centurions reached the centurionate after promotion through a sequence of *principalis* and centurion ranks (below). Still other centurions were promoted from service in the Praetorian Guard to centurions in the provincial legions.

Centurions formed a hierarchy within the legion that is still debated. A legion had nine regular cohorts and one first cohort. Each regular cohort had six centurions, ordered hierarchically. The five centurions of the first cohort were termed the *primi ordines*, and their top ranking man was the *primus pilus* or chief centurion. The *primus pilus* typically served for one year and then was promoted into the equestrian order. Such promotion, at least in peacetime, took many years. Centurions typically served longer than the 20 to 25 years of regular service, often holding centurion posts in different legions throughout the empire. They provided long-term experience and continuity in the officer ranks, since senatorial and equestrian officers held their ranks for only a few years at most. The rank of centurion traditionally required bravery in combat and talent at tactical command, as well as a certain toughness, as centurions administered discipline and corporal punishment (for this reason, centurions were often hated by common soldiers). However, the centurionate also required literacy and administrative ability. Centurions might be required to command legionary detachments on special tasks or to perform police duties. A number of papyri from Roman Egypt (discussed in Alston 1995) show that centurions in charge of districts functioned like police inspectors in an empire with no formal police force, receiving and possibly investigating reports of crimes submitted by civilians. Even if the district centurions only passed on the petitions, they show that some civilians turned to the army for assistance.

Below the centurionate, soldiers (*milites*) were divided into common soldiers without rank (*milites gregarii*), *immunes*, and *principales*. The *immunes* were exempted from routine duties and included specialists in numerous occupations, including craftsmen, smiths, masons, engineers, armorers, medics, and clerical staff. *Immunes* did not receive a higher pay grade, in contrast with the *principales*, officer ranks below the centurionate. *Principales* included the *optio* (orderly, second-in-command to the centurion), *signifer* (standard-bearer, a tactical responsibility), and *tesserarius* (keeper of the watchword, responsible for security). *Principales* may have been promoted through *optio*, *signifer*, and *tesserarius* to reach

the centurionate, but this reconstruction is based entirely upon career and funerary inscriptions. It is also not clear whether the clerical staff, including clerks (*librarii*) subject to the head clerks (*cornicularii*), formed a separate track. Some legionaries with administrative training held the rank of *beneficiarius* (assistant) to legionary headquarters or provincial governors; their relationship to the main organization of the legion is also obscure. The *principales*, *librarii*, and *beneficarii* and some of the specialists (such as engineers) all had to be literate.

As some scholars argue, soldiers with these specialized occupations, including craftsmen and clerks, were still expected to fight in combat when the need arose. In contrast with modern armies, there was no noncombatant track. Displaying significant *virtus* (courage) in combat might win a low-ranking soldier promotion as well as military decorations. Under other conditions, legionary common soldiers and specialists (except for the *principales*) were unlikely to receive further promotion. They awaited their discharge and the attainment of veteran status, with greater wealth and formal legal privileges.

The Roman army of the Principate thus provided soldiers a trickle of social mobility through the centurionate into the equestrian order. For those below equestrian rank, social ascent into the upper orders was likely to take two generations or more. The sons of veterans might enter the army at a higher rank than *miles gregarius* and be promoted more quickly. For equestrians, on the other hand, the Roman army was a veritable engine of promotion and assimilation into the imperial elite. Equestrian officers eventually displaced senatorial officers in the mid-third century CE, attaining legionary commands and provincial governorships without first being promoted into the senatorial order. These commanders and governors were given new titles, *dux* and *praeses*, displacing legate and proconsul. The emperor Gallienus (260–268) may have taken steps to formally disbar senators from military commands, but this is also disputed. Most of the emperors of the third-century crisis, culminating in the emperors of the Tetrarchy, came from this equestrian background, obscured by invective (in the case of Christian authors such as Lactantius) or the superposition of stereotypes of the old Republic (in the case of the *Historia Augusta* and Aurelius Victor).

Promotion in Army (Republic)

In the Roman armies of the early and middle Republic, citizens were assigned to battle lines determined by age, experience, and property classes. A soldier would simply have naturally progressed through different age classes of a unit as he matured. The exceptions to this rule were the richest citizens, the poorest citizens, and those who distinguished themselves in combat. The youngest legionaries served in the *velites*, the light infantry. *Velites* carried only javelins, a small shield and a sword, and so the poorest as well as the youngest citizens were assigned to this unit if they could not afford the equipment required to serve as heavy infantry. Soldiers of a higher property class would go on from the *velites* to the more heavily armed and armored *hastati*, to the *principes* (men in the prime of life) to the *triarii* (the most mature and experienced line). The second highest property class of *equites*, men rich enough to own and maintain a horse, would enter the cavalry rather than the infantry. The higher positions of tribune and legate were restricted to, at a minimum, the property class of the equestrian, and appointed either by the Senate or by the general, from personal friends or promising young noblemen.

Threaded through the legion's structure were commanders of specific subunits, and also several other higher ranking noncommand positions. In

the cavalry, the 300 men were divided into 10 tactical units of 30 squadrons. Each squadron was commanded by three officers, the senior (*praefectus*), the second in command (*optio*) and the third ranking (*decurio*). These officers were appointed by the military tribunes. The legion's main fighting unit was the maniple, which was comprised of 120 men if a maniple of *hastati*, 120 if *principes*, and 60 men in the case of the *triarii*. Each maniple was organized into two centuries. Each century was appointed a centurion, but since the maniple acted in battle as a whole unit, the commander of one century was overall commander, called the *centurio prior*, and the other was the *centurio posterior*, who would take over if the other was wounded or killed. Each centurion had a second-in-command called an *optio* who stayed near the rear to encourage the troops and prevent spontaneous retreats. There were three other junior officers to each century: a standard bearer (*signifer*), a trumpeter (*tubicen*) and a guard commander who supervised the night watches in camp (*tesserarius*). The most senior centurion of the whole legion, called the "first spear" (*primus pilus*) was always in command of the maniple of *triarii* to the extreme right of the line.

The ten maniples of each line gave the legion a total of 60 centurions and 60 junior rear-guard officers (*optiones*). Polybius tells us that the 60 centurions were elected from the legions, and then those men chose the 60 *optiones*. We know, however, that centurions could also be appointed by the Senate or promoted from the ranks by the tribunes. We also know that the relative seniority of the centurions depended on which century they commanded and which line; the *triarii* being senior to the *principes*, and the first century senior to the second, and so forth. This gave each centurion an exact seniority level relative to every other centurion, but how exactly one progressed up through this system is not known. It is important to remember that during the early and middle Republic, the legion was not a standing army or permanent institution. This means that each time a new legion was raised, a previous rank was not "carried over" and thus the centurions were not automatically given the rank they had held when they had last served. This could provide for a fairly *ad hoc* system of appointment for new legions or those receiving substantial reinforcements.

One example of a centurion's career is given to us by Livy, who records a speech allegedly made in the mid-second century BCE by a long-serving soldier called Spurius Ligustinus (Livy 42.34). According to his account, this man spent two years in the ranks before he received promotion from his

general to centurion of the tenth manipule of the *hastati*. Under another consul in another legion he was appointed to centurion of the first manipule of the *hastati*, when enlisting again he was appointed first centurion of the *principes*. Later in his career he served four times as the highest ranking centurion in the legion, the *primus pilus* of the first century of the *triarii*. His progress, as we can see from this account, was irregular, promoted once in the field (perhaps to a vacancy) but moving up more often through being re-enlisted at a higher level. It is likely that this was a common course of promotion in the early and middle Republic, because those who reenlisted often and had a knack for soldiering would be recognized for their experience and expertise by their fellow soldiers, the centurions, tribunes, or even the commander.

A common thread which runs through accounts of promotions in the republican army is bravery (*virtus*). A display of courage seems to be the reason for many in-the-field promotions, while the weight of experience and a proven record of level-headedness were the prerequisite for appointment to a higher position through re-enlistment. Polybius tells us that the Romans looked for talent in command and steadiness in their centurions, someone who would “die in defense of his post.” There are also many instances of soldiers promoted on the spot for their bravery. This bravery, often meaning the same kind of constancy that Polybius implies, the ability to remain in position, the courage not to panic, and the presence of mind to maintain awareness of the situation on the battlefield, were highly valued.

In the late Republic, as armies remained in the field for longer periods of time with the same comrades and commander, in-the-field promotion became more common. Being noticed in battle had been Ligustinus’ big break into the command structure, and this was probably the case for many legionaries of the late Republic as well. By the first century, soldiers were increasingly professional, self-selecting men, and over time the distribution of financial circumstances of many of the soldiers, and especially the junior officers, had changed. The centurions commanding cohorts—now the main unit of the army—were now frequently of equestrian status. Some had achieved that status through profits of booty, but others were appointed from that property qualification, as it seems that the higher ranks of centurion now carried enough prestige to attract the interest of the equestrians.

The ethos of the centurion became famous in this era. Their reputation was still, at its base, steady, strong, and stalwart, but now it had taken on the shine of heroism—centurions must be first to battle and last to retreat. Losses among the centurionate were disproportionately large and there must have been a great deal of movement through the ranks as a consequence. The emphasis had changed from level-headed leadership to the need to catch the commander's eye, and in the pages of Caesar we meet many centurions who had received promotions to their posts on account of some conspicuous act of bravery. As in the earlier periods, this was probably through promotion to a vacant post rather than a steady moving up through the hierarchy of cohorts. Election by comrades was now a thing of the past, while the general, the legates, and the tribunes were the judges of military excellence and hence promotion.

Propraetor

During the Roman Republic, a *propraetor* most often referred to an elected praetor whose authority had been extended (prorogued) by decree of the Senate for an additional term to command an army or govern a province. Such circumstances normally came about through military or political necessity. A campaign could last beyond a regularly elected term, or there perhaps were too few regular praetors to govern all Roman *provinciae*.

Propraetors still exercised *imperium*, though they were outranked by regular praetors. The reduced *imperium* still granted most of the same powers as a regular praetor, however—a *propraetor* could command troops

and govern a province, though their authority was tied to the Senate's approval. The Senate could rescind their prorogation of *imperium* if the propraetor was failing his mission. The propraetor's *imperium* was restricted to the boundaries of his *provincia*.

Propraetors were not always prorogued. Special commands could warrant those in charge being given propraetorian *imperium* (for example, *Res Gestae Divi Augusti* 1.3). Major commands such as those granted to Pompey, Caesar, or Crassus bestowed proconsular *imperium*, but if a mere legate was granted temporary command over a legion or a province, he would only wield propraetorian authority. This was often done in the imperial period, with the Emperor appointing legates with propraetorian *imperium* to govern imperial *provinciae* in his name as *legati Augusti pro praetore*. This status enabled Augustus himself, possessing proconsular *imperium*, to control them.

Propraetors were also quite common during the late Republic, when there were too few praetors to govern all Roman *provinciae*. Some praetors from the previous year had to be maintained in their commands; even the *praetor urbanus* was often prorogued to account for this deficiency.

Prorogation

Prorogation was the extension of elected magistrates' *imperium* for an additional length of time. It was introduced ca. 328/327 BCE, but gained its

greatest utility during the earlier period of Rome's overseas wars, in the Second Punic and Macedonian Wars, thenceforth.

Proconsuls and propraetors continued to exercise *imperium*, though they were outranked by their regularly elected counterparts. Magistrates could be prorogued for many reasons, but mostly it was to continue a military campaign that had lasted beyond their elected term. Notable examples include proconsuls Titus Quinctius Flaminius in 198–197 in the Second Macedonian War (200–197 BCE) and P. Cornelius Scipio Africanus in 211/210 during the Second Punic War (218–201 BCE). The necessity of prorogation was dictated by the slow speed of travel and communications in the ancient world.

Prorogation was key to Roman military flexibility, which regularly involved the use of ad hoc decision-making. According to scholar Arthur Eckstein, the Romans lacked an orderly method of solving strategic problems; they rather “muddled through” (Eckstein 1987: xxii). Roman flexibility is best shown during the Second Punic War. With numerous threats facing Rome, prorogation was used to its fullest extent. T. R. S. Broughton's compilation of Roman Republican magistrates lists that from 218–201 BCE, 139 promagistrates were appointed, while only 119 magistrates were elected, and most promagistrates held military commands.

During the late Republic, prorogation became fully institutionalized, as there were too many *provinciae* for regularly elected officials to govern. The Senate used prorogation extensively. Multi-year commands became commonplace; for example, Pompey received three years to deal with Mediterranean piracy, while Caesar and Crassus were assigned five-year stints in Gaul and Persia. In addition, Caesar's was further renewed an additional five years.

After Augustus established the Principate, the Emperor appointed governors to rule in his name, though it was not traditional prorogation. Though these governors exercised proconsular or propraetorian *imperium*, the practice of prorogation by Senate decree largely ended with the fall of the Republic.

Proscriptions

The proscriptions were a series of extraordinary state-sponsored murders of prominent individuals, first under Sulla in 82–81 BCE, then under the Second Triumvirate of Mark Antony, Lepidus, and young Octavian in 43–42 BCE. They were driven by publicly posting the names of targeted individuals, deemed public-enemy outlaws to be killed without trial. The word *proscriptio* originally meant an advertisement of a sale, which is darkly significant to the two proscriptions in Roman history, since they were largely aimed at confiscating property of wealthy equestrians and senators (if not seized by the proscribers themselves, their property was auctioned off with proceeds going to the state). Hundreds—maybe thousands—died in these bloodthirsty affairs, which represent a wretched episode in the collapse of a republic based on civility and respect for the rule of law.

There were controversial precedents for extra-judicial but state-sanctioned killings (see *Senatus consultum ultimum*). Following his first march on Rome in 88 BCE, Sulla publicly outlawed 12 enemies. Cinna and Marius slaughtered many of Sulla's allies, having marched on Rome in 87. Thus Sulla may have seen himself as legitimately retaliating when he published the first proscription list of 80 people, soon after taking Rome by force a second time in November 82. Two more lists appeared during Sulla's irregular dictatorship. June 1, 81 was the last day anyone could be proscribed anew, but names were improperly added, and the whole novel

episode served as an excuse for Sulla's friends to murder rivals or get their hands on desired property. Abettors of proscribed individuals were also punished, even family members. The sources disagree on the number of victims. Appian (*Civil Wars* 1.95) claimed more than 1,640, while another source (possibly reflecting other violent deaths under Sulla) has 4,700. Plutarch's figure of 520 (*Sulla* 31) may be closer to the true total of the officially proscribed. Most victims were rich equestrians, targeted not just for their wealth but as part of Sulla's plans for restoring the primacy of the Senate and senators. Until 49 BCE, sons and grandsons of the proscribed were banned from ever taking part in public life.

Despite the dictator Sulla's later constructive attempts to restore stability, he never lived down the odium his proscriptions caused, and long-lived was the memory of him inspecting and paying for severed heads, even decorating his house with these grisly trophies. Sulla's example cast a shadow over the political violence of the following decades, when many feared proscriptions at the hands of powerful men like Pompey and Julius Caesar. The latter's famed clemency allowed the survival of enemies, some of whom conspired to assassinate him in March 44. This failure of Caesarian *clementia* became a convenient excuse for Antony, Octavian, and Lepidus to announce proscriptions in 43 when they formed the Second Triumvirate. In fact, they were desperate to raise funds for their war against Brutus and Cassius, and many of the proscribed lost all their property but escaped death. Appian (*Civil Wars* 4.5–7) claimed that 300 senators and 2,000 equestrians were killed or had their property taken, but this may not be the number of those officially proscribed; 300 is the most conservative figure. This proscriptions authorized by three dictator-like autocrats were particularly notorious for including family members of the triumvirs, which may have been merely a show of solidarity; like many others, relatives such as Mark Antony's uncle avoided death. There was a real element of targeting specific enemies for elimination. The most famous victim was Cicero, decapitated by a centurion in December 43; Antony had his revenge for the *Philippics*, Cicero's famous speeches against him. The enforcement of the second proscription relied very heavily on soldiers (see Appian, *Civil Wars*, Book 4). The majority of the proscriptions occurred in 43 and 42, possibly extending through 39. The horrors of the proscriptions may have contributed to the Roman elite's disdain for common soldiers.

Protectores

The *protectores* (sg. *protector*) were a cadre of staff officers and/or imperial guards in the later Roman army, introduced in the mid-third century CE. The creation of the *protectores* is associated with the other reforms to the organization of the Roman army that took place at this time, such as the organization of a central field army dominated by cavalry, and the exclusion of senators from military commands. Officers who distinguished themselves in some way (in the legions, the Praetorian Guard, or the central cavalry as centurions or noncommissioned officers) might be promoted to the *protectores*, from which they could hope for further promotion. The creation of the *protectores* is one aspect of the greater “professionalization” of the Roman military during the third-century crisis. The same or another group of *protectores*, also termed *domestici*, appear to be the emperor’s bodyguard. In the fourth century, the *protectores* continued to be influential, especially when imperial dynasties came to an end and a new candidate had to be found among the military cadre.

Provincia

The term *provincia* (pl. *provinciae*) is usually translated as "province," but this sense evolved from its original connotation of "military task/assignment" during the Roman Republic to a regional administrative district. In the classical Republic, a *provincia* was a Roman magistrate's tour of duty or assignment, defined as a task pertaining to a general area rather than a strictly delimited geographic region. The consul, praetor, or promagistrate who held a *provincia* might have the task of conquering a region or people within general geographic limits and the time span of his office. The *provinciae* of the extraordinary commands (such as Pompey's commands against piracy in the Mediterranean or the Mithridatic War, Caesar's command of Gaul, or the Second Triumvirate's division of the empire) were unusually large. However, a *provincia* might entail a specific task such as that of Gnaeus Sicinius in 173 BCE, who was assigned to combat a plague of locusts in Apulia (southern Italy) (Livy 42.10.6–8) or the initial assignment of the roads of Italy to Caesar for 59 BCE. Caesar obviously did not want this trivial project, securing the *provincia* of Cisalpine and Transalpine Gaul instead. The Senate determined *provinciae* and then assigned them to consuls and praetors by lot. In the late Republic, the *provinciae* for the consuls were announced before the elections.

Provinciae gradually evolved into geographically delimited regions, in which promagistrates were required to remain during their term of office; if they left their *provinciae*, they lost their *imperium* and, after a law of Sulla's, committed treason. The geographic boundaries of many *provinciae* were not finalized till the reign of Augustus, who ensured that the "public"

provinces assigned to senatorial proconsuls were geographically delimited, restricting their activities. The “imperial” provinces with active frontiers remained more undefined in the traditional manner, allowing for continued expansion, but their commanders, the *legati Augusti pro praetore*, were chosen by the emperor, who was the ultimate arbiter of military activity in these areas.

The sense of “province” as a region of the empire that Romans administered and governed also emerged slowly. In the middle Republic, the Roman elite still thought of *provinciae* as regions to be conquered, and felt little obligation to govern the inhabitants. Rome’s conquest of the eastern Mediterranean meant that Greek communities, with a strong self-governing tradition, and with elites trained in oratory, sought the aid of the Romans and protested Roman abuses; they expected Roman commanders to adjudicate disputes. Gradually the commanders of *provinciae* evolved into the governors of provinces, who were expected to administer or at least to not pillage or extort from their subjects. The oversight of Roman governors also evolved slowly; the *lex Calpurnia de repetundis* (149 BCE) enabled prosecution of individual governors for extortion, often by political rivals at Rome. Though the Senate and people could take away individual *provinciae* and recall magistrates and promagistrates, there was in fact little positive restriction on the conduct of individual governors. A moral consensus that governors should govern justly underlines Cicero’s denunciation of the abusive governor of Sicily, Gaius Verres. However, the advent of the Principate made the emperors more able to intervene in and regulate provincial governors.

New provinces were added during the Principate, including the Mauretaniae, Britain, and Dacia. Depending on the state of Rome’s wars with Persia, Rome sometimes claimed the buffer zone between the Tigris and Euphrates rivers and converted it into provinces; at other times, client rulers governed this area. The Rhine frontier was converted into two provinces, Upper and Lower Germany, late in the first century CE. The geographic boundaries of provinces were adjusted periodically during the Principate, and subjected to a thorough overhaul in the reign of Diocletian (284–305), who subdivided many provinces into smaller units for greater ease of administration, grouping provinces into larger units termed dioceses.

Provocatio

Deriving from the verb *provocare*, the institution of *provocatio*, or appeal to the Roman people, was a core civil right of Roman citizens during the Republic. *Provocatio* protected citizens from arbitrary violence at the hands of magistrates and provided accused citizens with the right to a trial by the people. In this respect, *provocatio* resembled the medieval right of *habeas corpus*, preserved in Anglo-American criminal law. Roman *provocatio*, however, was delimited and did not apply in certain situations. In the early empire, appeal to the people was largely replaced by appeal to the emperor. In trials involving *maiestas* (treason against the emperors) there was no appeal. The right of *provocatio* largely withered away by the later empire.

The origins of *provocatio* are obscure. In the later Republic, a *lex Valeria de provocatione* was attributed to Valerius Publicola, one of the earliest magistrates of the Republic, but is not extant. It is more probable that *provocatio* developed during the patrician-plebeian conflicts. Marcus Porcius Cato the Elder (censor in 184 BCE) may have been responsible for *leges Porciae de provocatione*. In any case, the developed institution of *provocatio* enabled a citizen, facing the summary authority (*coercitio*) of a magistrate, to appeal (*provocare*) to the Roman People and demand a trial. Such trials originally took the form of *iudicia populi*, ad hoc trials by the comitial assembly, presided over by a different magistrate (aedile or tribune).

Provocatio did not apply in military service, where soldiers were subject to their commanders' unrestricted *imperium militiae* and summary judgment as military discipline. Corporal punishment was routine. Excessive brutality by some commanders in the middle Republic did result in trials at Rome. In the late Republic, the drop in the social status of recruits probably diminished elite concern for brutal discipline.

Provocatio also did not apply within the Roman household. The *paterfamilias* or head of the household, the father or grandfather, possessed

patria potestas (paternal authority) over his children and grandchildren, even over adult sons. *Patria potestas* was in theory absolute, including *vitae necisque potestas*, “the power of life and death,” the right to kill children and expose unwanted infants. In practice, *vitae necisque potestas* was little used. However, a *paterfamilias* had the right to judge his children and descendants and to punish them. In the Republic, women who were guilty of crimes were usually turned over to their *pater familias* for punishment.

Provocatio also did not apply in states of emergency, pronounced by the “last decree” (*senatus consultum ultimum*) of the Senate, which instituted conditions resembling martial law. The use of the *senatus consultum ultimum* in the late Republic’s civil conflicts eroded the value of *provocatio*, as did declarations that enemies were *hostes publici*, public enemies who could be hunted, seized, and killed with impunity. In contrast with these extreme situations, there is some controversy whether the dictator’s *imperium* was restricted by *provocatio*.

In the empire, *provocatio* to the Roman people was replaced by appeal to the emperor; faced with the judgment of a provincial governor, a Roman citizen might request a trial at Rome. However, there was no appeal in cases of treason against the emperor (*maiestas*). In the middle and later empire severe punishments against lower-status citizens convicted of capital crimes became routine; the Republic’s right of *provocatio* against cruel punishment was forgotten. The defense of citizens against abuses of power was more often undertaken by bishops and justified in theological terms.

Public Order

Roman approaches to public order were marked by variety. A number of factors encouraged general stability in Roman society, such as a well-developed tradition of private law, clear social hierarchies and the patron-client relationship, and religion as a means of social control. Moreover, many modern historians have argued that Romans simply tolerated more violence and disorder in their society than we would today.

While Romans lacked our fully-developed police forces and communication systems, we should not underestimate their efforts to impose order by state force, nor their inclination to use approaches akin to policing to enforce the law. As early as the middle Republic, a trio of junior magistrates, the *tresviri capitales*, patrolled the city, dispensed summary punishment to petty criminals, seized runaway slaves, looked out for arson, and administered Rome's small jail near the Forum (the *carcer Tullianum*). Consuls and other officials could themselves impose order on the spot by personal displays of magisterial authority. Furthermore, aediles policed markets and enforced laws affecting public space. A similar situation prevailed in towns outside of Rome, where town mayors, aediles, and other municipal officials carried out arrests and other elements of police work by using staff-attendants such as lictors and public slaves (that is, slaves who were owned by the community they served).

The various crises of the late Republic led to intolerable disorder in Rome and Italy, which ultimately was only settled by means of military force. In establishing a new order amid the awkward transition from Republic to empire, Octavian as Augustus countered several problems by using two innovative means: first, his own novel full authority; and second, the employment of Roman soldiers to impose security among civilians. To quote one example, Suetonius noted in his biography of Augustus (Suetonius, *Augustus* 32):

Many, many rotten problems that were harmful to the public good had endured because of the usual lawlessness of civil wars.... Violent

vagabonds went about in huge numbers, openly armed with swords, as if for the sake of protecting themselves. Travelers in the countryside were seized—both free men and slave—and enslaved into forced labor in owners' private prison-houses (*ergastula*). Also, behind the legal title of new clubs (*collegia*), many factional groups with a political slant were meeting to conspire every sort of crime. So Augustus countered bandit activity by stationing soldiers where needed. He inspected the prison houses, and he dissolved all the *collegia* except the long-standing and legitimate ones.

Here we see Augustus' concern over maintaining the distinction between freedom and slavery, and his eagerness to uphold other Roman legal traditions. Despite the façade of the Principate that the old Republic still existed, Augustus was ultimately willing to use his unrivaled power to impose order in the state, and soldiers were a key element in this effort. The first emperor's approach set the standard for his successors (indeed, his stepson Tiberius, who succeeded him in 14 CE, helped him in the efforts specified above, and later increased the number of military stations in Italy, Suetonius, *Tiberius* 8, 37).

In terms of policing by Roman soldiers, Augustus' greatest innovation was the complement of security forces he implemented in the city of Rome. These included the Praetorian Guard, the urban cohorts, and the *vigiles* (this latter group was mainly concerned with firefighting, but their duties carried over into policing as well). These units grew until they had doubled to a full strength of about 20,000 in Rome by the end of the first century CE, and they continued to be a major factor in Rome until Constantine took the city in 312. Later first-century emperors posted units of *vigiles* outside of Rome in the port cities of Ostia and Puteoli, and urban cohorts in the major provincial centers of Lyon and Carthage. Most of Augustus' and his successors' supervision of provincial disorder, however, was mediated through receiving and replying to petitions. Yet emperors could, and did, use troops at their disposal (especially praetorians) for security errands against bandits, or to murder perceived enemies. Meanwhile, soldiers in imperial Rome, whose very presence violated the republican taboo on having troops in the city, were a mixed blessing for the emperor and his subjects. They helped keep order at games and other public settings, but did not completely prevent riots. What's more, praetorians notoriously involved

themselves in dynastic intrigues.

Roman provincial governors were key figures of public order outside of Italy. These were elite Romans chosen and dispatched by the Senate or emperor to govern each province for a year or more. Each governor had at least a few hundred troops to help him repress and execute bandits and other troublemakers. Governors cooperated with local elites (town councils, municipal magistrates, and in the eastern provinces, actual civilian police officials) to maintain order. Ultimately, each person was responsible for his or her own security, and Roman law recognized the right of self-defense. Roman authorities only rarely disarmed a populace; in fact, people routinely carried weapons for self-protection during a journey. At the broader scale, each provincial community was also responsible for its own security. The existence of police-like forces in some areas does not mean that Rome meant to provide full protection to all the empire's subjects. The noticeable spread of military posts in the empire during the second and third centuries had more to do with the state serving its own needs to control and administer the empire, though ordinary people sometimes enjoyed incidental security benefits. Unfortunately, civilian and military police became notorious for corruption and abuse of civilians.

As the fifth-century CE western Roman Empire fell apart, power moved more toward private rural villas, and to bishops as the Catholic Church replaced some facets of state authority. The eastern Roman Empire, throughout the rest of its later history, continued to see a changing mixture of civilian police, soldiers stationed among civilians, and royal guards, who helped the ruler of Constantinople try to impose his authority in his realm.

Punic War, First (264–241 BCE), Causes

Sometime in the early 280s, a group of Italian mercenaries from Campania in southern Italy, formerly in the service of the Syracusan tyrant Agathocles, seized control of the city of Messana (modern Messina) on the northeastern tip of Sicily, massacring and expelling most of its inhabitants. They began calling themselves “Mamertini” (“Sons of Mamers,” the Oscan name for the war-god Mars). By the 260s, Hiero II, the ruler of Syracuse, began a war against the mercenaries. In 264, the Mamertini sought protection from Hiero’s attacks from both Rome and Carthage. The Roman Senate long debated whether to accept the appeal, but eventually decided to do so. The Mamertini performed a formal surrender to Rome (*deditio*), and returned to Messana, only to find a Carthaginian garrison already installed in the city. They expelled the garrison along with its commander, Hanno, who returned to Carthage, where he was later crucified for cowardice.

After considerable delay at Rome, two legions were dispatched to Sicily under the command of one of the consuls of 264, Appius Claudius Caudex. Arriving at Rhegium in southern Italy, Claudius learned that Hiero was now allied to Carthage, and that their combined forces were now besieging Messana. On the consul’s first attempt to cross to Sicily, the Carthaginian fleet forced him to turn back. A Carthaginian attempt to settle the dispute diplomatically failed when Claudius demanded that the Carthaginians depart Messana. Claudius now made a second, successful attempt to cross to Sicily, and may have tried to negotiate a solution with the Carthaginians, but this too failed.

The question of the causes of the First Punic War is bound up with the issue of war guilt: who was more responsible for starting the war, that is, who was the aggressor—the Romans or the Carthaginians? Unfortunately, the only fully-extant account of the outbreak of the war (Polybius’ *Histories*, Book 1, chapters 7–12.4) is a mere summary, and leaves out crucial details

supplied by later, more fragmentary sources. It seems clear, however, that when Claudius and his forces were dispatched to the Straits of Messina, the Romans did not intend or anticipate (at least right away) a full-scale war with Carthage. After all, the aggressor against whom the Romans were to protect the Mamertini was Hiero's Syracuse, not Carthage, and besides, Carthage and Rome were in a formal state of friendship and alliance (they had been treaty partners since 509 BCE)—which is perhaps why the Mamertini thought it sensible to appeal to both in 264. In addition, that the Romans sent only one consular army (consisting of two legions—less than 10,000 men) to the Straits, and the consul was armed with no formal declaration of war on either Carthage or Syracuse, indicates the limited nature of his assignment: to raise the siege of Messina by Hiero's Syracusans, either through force or negotiation. On the other hand, the Carthaginians' crucifixion of Hanno for cravenly abandoning Messina may indicate a more belligerent Carthaginian stance.

Division of Roman opinion on the Mamertine question adds nuance. Those opposing the action cited a moral justification: the Romans would be hypocrites for helping out the bloodthirsty Mamertines after having punished a group of their own mercenaries only a few years before for doing to the people of Rhegium precisely what the Mamertines had done to the inhabitants of Messina. It would be "an error difficult to defend," as Polybius puts it, for the Romans to provide assistance to the Mamertines. In addition, Polybius reveals, "the majority" (whether of senators or of the common people, the historian fails to specify) wanted to avoid a continuation of the high attrition rates in Rome's recent wars in Italy.

Those in favor of aiding the Mamertines, however, won the day. Their views reveal the true causes of the First Punic War, at least as far as the Roman side is concerned. These senators argued that if Rome did not respond positively to the Mamertine request for protection, the Carthaginians might do so, and thus gain a foothold in northern Sicily, from which point they might go on to conquer Syracuse and the rest of the island, which itself would provide the Carthaginians with "a bridge for crossing to Italy" (Polybius 1.10.9). Roman fear of Carthaginian aggression, therefore, was a major cause of the outbreak of the war. Roman motivation was thus largely defensive and preemptive in nature. Roman greed naturally, albeit secondarily, also played a role: some objections were overcome when the consul pointed out the plunder to be had from a war in Sicily.

On the other hand, in this same context, Polybius says the Romans had been content up until 262 to protect the Mamertini. This indicates that one of the Romans' motives for undertaking the war with Carthage was largely moral: once they accepted the absolute surrender of the Mamertini to their discretion (*deditio*), they felt themselves bound and committed to adhere to the *fides* (the bond of trust) that mandated their protection of the surrendered party—no matter what the costs or consequences to themselves. Many Romans did not want or anticipate war with Carthage at first, but once this became a reality, they felt compelled to follow through on their acceptance of the Mamertine *deditio*, and protect the Mamertini—even if it meant a long and costly “hegemonic war” with Carthage.

Punic War, First (264–241 BCE), Course

After diplomatic efforts failed to avert conflict with Carthage in 264, Claudius' legions first routed Hiero's forces besieging Messana, then

marched to the Syracusan camp and plundered it. The Romans soon returned to the walls of Messana to attack the Carthaginian troops, routed them as well, and marched on Syracuse and laid siege to the city. In 263, 40,000 Roman troops arrived in Sicily. These destroyed Hadranum, besieged Centuripae, and received the surrender of 67 Sicilian towns and cities and, eventually, after renewing the siege of Syracuse, of Hiero II himself.

The campaign of 262 was dominated by the struggle for the Carthaginian stronghold of Acragas (Agrigentum, modern Agrigento) in western Sicily. The Romans besieged the city for five months before a relieving Carthaginian force arrived, which included war elephants; these were used, perhaps for the first time in Carthaginian history, in the subsequent battle between the Romans and Carthaginians. The Romans were victorious, sacked the city, and sold its surviving inhabitants into slavery.

To expel the Carthaginians from Sicily, the Romans now realized, a decent fleet was necessary, which they began constructing in earnest. The Romans' ships were heavier and less maneuverable than the Carthaginians', and they depended less on ramming tactics than on turning sea battles into land battles through a Roman innovation—the *corvus*, or “crow.” This mechanism consisted of a 24-foot high pole on the bow of the ship with a 36-foot swinging plank attached via a pulley, and having on the underside of its far end a large, iron grappling-hook. In battle, the plank would be dropped onto the deck of an opponent's vessel, which both secured the enemy ship and provided a passageway for Roman troops to board her.

The Romans initially enjoyed mixed success at sea. One of the consuls of 260, Gnaeus Cornelius Scipio, detached 17 ships from the main fleet to try to win over the pro-Carthaginian Sicilian town of Lipara, but was trapped by the Punic fleet and captured. Gaius Duilius, the other consul of 260, relieved the Carthaginian siege of the Sicilian city of Segesta and captured another city, Macella, before taking to the sea with 140 Roman ships, and defeating at the battle of Mylae the Carthaginian general, Hannibal Gisco.

The land war in Sicily ground toward a stalemate. In the first years of the 250s, the Romans confined the Carthaginians to the western end of the island, and opened a short-lived second front on the large islands of Sardinia and Corsica, which were partially controlled by Carthage. The Roman strategy for ending the stalemate was to strike at the Carthaginian homeland, and invade North Africa itself. In summer 256, a Roman fleet

sailed to Cape Ecnomus where it was met by the Carthaginians. In the battle that followed, the Romans were victorious. The Roman invasion of Africa proceeded, and the Roman commander Marcus Atilius Regulus defeated the Carthaginians at Adys.

In winter 256/255, the Carthaginians sent envoys to negotiate a peace with Regulus, but the consul's demands were too severe to be acceptable. In spring 255, a mercenary army under the command of the Spartan mercenary general, Xanthippus, arrived at Carthage. With their help, the Carthaginians defeated the Romans in battle at Tunis. Regulus himself and 500 Romans were captured, 2,000 escaped, and the rest were killed. Regulus was tortured and died in captivity.

In 254, the Romans scored a naval victory over Carthage and rescued the survivors of the African expedition, but on their return journey their fleet was destroyed in a storm off the southeastern corner of Sicily; 80 of 264 ships were destroyed, and 25,000 soldiers and 70,000 rowers were killed.

Sicily once again became the main battlefield of the war. The Romans attacked Carthage's remaining strongholds, Drepana, Panormus (modern Palermo), and Lilybaeum. Meanwhile, storms continued to take their toll on the Roman fleets. In 251, the Romans won a major victory against the Carthaginians at Panormus, but in 249, the Roman commander Publius Claudius Pulcher famously ignored some bad omens (the sacred chickens on board his ship refused to eat, so he threw them overboard, saying, "if they won't eat, let them drink!"), and was defeated by the Carthaginian Adherbal; 93 of Claudius' 123 ships were lost off Drepana. Meanwhile, the fleet of Claudius' colleague, Lucius Iunius Paullus, was wrecked off Cape Pachynus, thus effectively depriving Rome of its navy. Paullus then went on to capture Sicilian Eryx on land.

The Carthaginians now began attacking the southern Italian coast. First Carthalo, and then his successor Hamilcar Barca (the father of the famous Carthaginian general Hannibal, the instigator of the Second Punic War) raided Locri and Bruttium in 248. Hamilcar also forced the Romans into a grinding campaign of attrition in western Sicily. As the sieges of Drepana and Lilybaeum wore on, the Romans rebuilt their fleet from funds borrowed from wealthy Roman citizens. In summer 242, a new Roman fleet of 200 ships blockaded Drepana and Lilybaeum. In spring 241, the Roman and Carthaginian fleets clashed near the Aegates Islands. The Romans were victorious and Carthage sued for peace.

The treaty ending the war mandated that Carthage and Rome should enjoy friendship (*amicitia*) on condition that Carthage evacuate Sicily and all islands between Italy and Sicily, leave Hiero II of Syracuse and his allies in peace, return all prisoners without ransom, and pay 3,200 talents over 10 years. In addition, neither side was to attack the friends and allies of the other, recruit troops, build fortifications, or impose tribute in the dominions of the other, or make friendships with the allies of the other.

Punic War, First (264–241 BCE), Consequences

According to Polybius, one of the consequences of the Carthaginian loss of the First Punic War was the so-called Wrath of the Barcids, named after the embittered loser of the battle of the Aegates Islands, Hamilcar Barca. A further consequence was that Rome had now become a naval power of the first rank, and the balance of power in the western Mediterranean had shifted from Carthage's favor to Rome's. Polybius also mentions that Hiero II of Syracuse, who was protected by the Treaty of Lutatius, now tried to balance the power of Rome and Carthage to secure and further his own power in Sicily. Carthage's former Sicilian holdings now became a Roman province.

In the immediate aftermath of the First Punic War, the economy and society of Carthage almost completely collapsed. Carthage was in no position to pay off its large mercenary forces that had fought in the war, so

these now rose up in revolt, first in North Africa itself, and then on the island of Sardinia. The mercenaries in North Africa, under the leadership of Mathos and Spendius, marched on Carthage twice, seized Tunis, and blockaded Utica and Hippo. In 240, Hamilcar Barca raised the siege of Utica, and defeated the mercenaries at the battle of the Bagradas River. After a brief rebel resurgence, which saw them take possession of Utica and Hippo and lay siege to Carthage itself, Hamilcar defeated them twice, in 239 and 238, at a place called “the Saw.” Hamilcar, together with Hanno the Great, again defeated the mercenaries later in 238 at Leptis, this time decisively. The Carthaginians then recovered the Libyan interior, along with Utica and Hippo.

Meanwhile, a revolt broke out on the Carthaginian-controlled island of Sardinia, where another major mercenary force was stationed. In addition to stopping Italian traders supplying the mercenaries in Africa, returning 2,700 Carthaginian prisoners of war without ransom, and refusing to receive the surrender of Utica before it went over to the African mercenaries, the Romans assisted Carthage by refusing a request of the Sardinian mercenaries in 240/239 to occupy the island. In late 238 or early 237, however, after some of the Sardinian mercenaries were forced to flee a revolt of the island’s mixed Punic-Sardinian population, the Romans accepted a second mercenary offer to occupy the island, and dispatched a Roman garrison to take control of it. When the Carthaginians protested the Roman action, and informed them that a Carthaginian force was being prepared to deal with the Sardinian situation, the Romans accused them of preparing war against Rome, and quickly pushed through the assembly a declaration of war against Carthage. Not willing to tangle with Rome again so soon, Carthage backed down, ceded Sardinia (and probably Corsica as well) to Roman control, and agreed to pay a 1,200-talent indemnity.

Punic War, Second (218–201 BCE), Causes

The Second Punic War, also known as the Hannibalic War, was the second of three conflicts between the Roman Republic and the Carthaginian Empire (“Punic,” from the Latin *Punicus*, meaning “Carthaginian”). The Romans’ second victory over Carthage in 201 BCE paved the way for the Republic’s dominance over the ancient Mediterranean and the demise of Carthage’s centuries-old maritime empire.

While Polybius and Livy asserted that the Second Punic War ultimately began after Hannibal’s destruction of the city of Saguntum, the true causes of the conflict are rooted as far back as the end of the First Punic War (264–241 BCE) (Polybius 3.6). The loss of Sicily in 241 was a heavy blow to Carthage and while complying with Roman demands the Carthaginians were immediately faced with a massive insurrection of their mercenary troops that led to a three-year campaign in Africa and Sardinia. In 238 BCE, the Romans seized the island of Sardinia under the threat of war and forced the Carthaginians to pay a larger indemnity. To Polybius, this was a chief cause of the Second Punic War, as it deepened Carthaginian resentment for Rome (Polybius 3.10, 13).

Expansion into Spain solved a myriad of problems for the Carthaginians beyond the recovery of territory. The command was given to Hamilcar Barca, an undefeated general from the First Punic War, who used the opportunity in Spain to provide the revenue needed to pay off the Roman indemnity and revitalize the Carthaginian state (Caven 1980: 78). Despite the practical reasons for Carthaginian expansion in Spain, Livy and Polybius saw Hamilcar’s campaigns as preparations for invading Italy

(Polybius 3.10,12; Livy 21.2.1–2). After Hamilcar's death in 229 BCE, the leadership of Carthaginian Spain fell to Hasdrubal, Hamilcar's son-in-law.

Hasdrubal continued to strengthen Carthage's position in Spain, relying on diplomacy rather than force, and established alliances with several southern chiefdoms in the Iberian peninsula. His success prompted Rome to send an envoy in 226 BCE, who sought assurance that Hasdrubal had no intention of carrying his conquests beyond Spain, and established the Ebro River in the north as the limit to Carthaginian expansion (Polybius 3.27.9; Livy 21.2.7). Hasdrubal readily consented to the Roman demands, suggesting that Carthage in fact had no intent of invading Italy. Five years later, Hasdrubal was assassinated, and the Carthaginian army recognized Hamilcar's 26-year-old son, Hannibal Barca, as their leader (Polybius 3.13; Livy 21.3.1).

Polybius, and Livy especially, attributed a lifelong hatred for Rome to Hannibal. When Hannibal was a boy, he enthusiastically asked to join his father on the Spanish campaign. Hamilcar then brought Hannibal to a sacrificial altar and instructed him to swear an oath to bear antipathy always for Rome (Polybius 3.11.5–7; Livy 21.1.4). Hannibal was an energetic commander, much more aggressive than Hasdrubal, and immediately set out on a campaign to the north against a coalition of recalcitrant tribes in the center of the Iberian peninsula. Within a year Hannibal had subdued nearly all of the independent tribes south of the Ebro River. It was on the return from this campaign that he became involved in a quarrel with the Iberian city of Saguntum, an ally of Rome.

Both Livy and Polybius said that Hannibal avoided attacking Saguntum for a time, although the city was apparently harassing several Carthaginian allies. The Saguntines were worried about the growing threat of Hannibal, and sent several embassies to Rome requesting aid in 221 and 220 BCE. The Romans agreed to send a commission to Spain in 220 BCE to investigate Hannibal's activities, and then to Carthage to voice their official complaint. By the time of their departure, however, Hannibal had already besieged Saguntum. When the ambassadors reached Hannibal at New Carthage, they requested that he end the siege, and respect the treaty signed in 226 BCE. (Polybius 3.15; Livy 21.9.2–4). In contrast to Hasdrubal's tactful interaction with Rome, Hannibal outright rejected the Romans' request and asserted that Rome had no right to interfere with Saguntum, further stressing the fact that the Saguntines had attacked Carthaginian allies. The Romans then

departed for Africa itself, while Hannibal wrote to the Carthaginian Senate, warning them of the Romans' approach. At Carthage, the Romans received a similar reply, after which they then returned to Rome.

By all accounts, Hannibal seems to have abided by the treaty with Rome, as Saguntum was south of the Ebro. Preceding their quarrel with Hannibal, the Romans were called in as arbitrators in a local dispute at Saguntum in 223, likely as the behest of Massilia. During their mediation, the Romans advocated executing several leaders of the opposing faction in the city, thereby securing the positions of a pro-Roman faction (Polybius 3.30). The Romans were historically inclined to respond to the appeals of allies, and such appeals had been used as justification in the past for war, specifically the First Punic War. While the Romans were not likely overtly attempting to provoke Carthage in a war, the alliance with Saguntum could be seen as a forward defense against the Carthaginians in Spain.

When the Roman diplomats returned from Africa, they informed the Senate of the hostile spirit at Carthage. Simultaneously, news reached Rome that Saguntum had fallen to Hannibal after an eight-month siege (Livy 21.16.1). The Senate was alarmed and decided on war with Carthage immediately (Polybius 3.20.1, 6–8; Livy 21.16.1–2). In accordance with the formalities of warfare, the Senate first put the question of war to the centuriate assembly, and sent a final delegation to Carthage to demand the surrender of Hannibal (Livy 21.17.3–4, 18.1–2). The Carthaginians noted the absurdity that the Romans were threatening war against their entire state because of the acts of a single individual. Moreover, the Carthaginians addressed the fact that the Romans had no right to claim Saguntum as an ally. In the first treaty made after the First Punic War, the Romans and Carthaginians agreed to respect and abstain from attacking each other's respective allies. There was no mention of Iberia in the treaty, and Saguntum was not an ally of Rome at that time (Polybius 3.21; Livy 21.18.4–12).

In a famous scene, the Roman diplomat, Fabius Buteo, held up the folds of his toga, and declared to the Carthaginian Senate, "Here we bring you war and peace, take which you please," to which the Carthaginians replied that Buteo should choose whichever he liked. Buteo then answered that he had let fall war, prompting the Carthaginians to cry back that they accepted it. With this said, the Roman delegation departed, and both sides began gathering allies and preparing for war (Polybius 3.33; Livy 21.18.12–14).

Punic War, Second (218–201 BCE), Course

Hannibal aimed to humble the Roman Republic by destroying its vast network of alliances in Italy and in 218 BCE, led his army toward Roman territory via the Pyrenees and Alps Mountains since Roman sea power prevented a naval invasion.

In December 218 BCE, a Roman army awaited the Carthaginians at the foot of the Alps. Underestimating the enemy's forces based on their haggard appearances (Hannibal lost thousands of men, baggage, and most of his war elephants to hostile Celtic tribes and the harsh conditions of crossing the mountains in winter), the Romans engaged the Carthaginians in battle and

were defeated at the Trebia River. Though Hannibal's army was outnumbered, the Carthaginian general showed his strategic brilliance by exploiting his army's flexibility to outmaneuver and overwhelm the Romans' straightforward, frontal assaults. Approximately 15,000–20,000 Romans and allies were slain.

The Carthaginians moved south, ambushing and defeating another Roman army at the battle of Lake Trasimene in June of 217 BCE. Hannibal employed similar enveloping tactics, resulting in the deaths of roughly 15,000 Romans and allies, including consul Gaius Flaminius, and the capture of an additional 10,000 men. Carthaginian casualties numbered about 1,500 men. The Romans, terrified that Hannibal would march on Rome, revived the emergency office of dictator and elected Quintus Fabius Maximus. Recognizing that the Roman army could not best Hannibal and his cunning tactics in pitched battles, Fabius initiated a war of attrition where he and his troops trailed the Carthaginians from high ground and periodically sprang surprise attacks that prevented the enemy from foraging supplies. The aim of this tactic was to slowly starve and wear down the enemy, a plan that most likely would have worked since Hannibal was always short of supplies (he was to receive reinforcements only once during the 15 years he spent in Italy). Fabius' countrymen, and especially his second-in-command, however, balked at the dictator's delaying tactics; they considered the tactics cowardly and alien to the typically aggressive Roman ways of war.

After Fabius' dictatorship expired six months later, the Romans returned to what they knew best—strong, frontal assaults—and readied the largest force to come out of the Republic for another battle. In August of 216 BCE, the opposing armies fought outside the small town of Cannae in what would become one of Rome's most devastating defeats and Hannibal's greatest victory. Using the Romans' strengths against them again, Hannibal's forces encircled the Romans and killed approximately 50,000 Roman and allied troops, including the consul Lucius Aemilius Paullus, 80 senators, and other officers. The surviving consul, Gaius Terentius Varro, and 10,000 soldiers managed to escape the massacre. Hannibal lost approximately 5,000 men.

For the next decade, Hannibal was relatively successful in humbling the Roman Republic; he traversed the length of the Italian peninsula virtually unopposed, persuading many Italian communities to abandon their alliances with the Romans. In the meantime, the Republic stretched its diminishing

resources and struggled to regain those lost territories while avoiding pitched battles with Hannibal: Roman troops were stationed in Spain, preventing Hannibal's brother, Hasdrubal Barca, from joining Hannibal in Italy; more forces were sent to Greece to keep Philip V of Macedon from aiding Hannibal; and additional soldiers were sent to Syracuse, a previous Roman ally that came under pro-Carthaginian leadership in 215 BCE.

By 209 BCE, the Romans were slowly recovering their allies and cornering Hannibal in southern Italy. In 207 BCE, after dogged persistence, prudent decisions, and hard-learned lessons, the Romans won a significant victory over the Carthaginians at the battle of the Metaurus River against Hasdrubal Barca. The combined Roman armies led by consuls Marcus Livius Salinator and Gaius Claudius Nero coordinated their attacks in an unusual show of professionalism and successfully executed both frontal assaults and flexible maneuvers. The Carthaginian army was destroyed. Hannibal, who was stationed south in Apulia, was not aware of his brother's defeat or of his death in battle until Nero had Hasdrubal's severed head flung into Hannibal's camp.

Roman fortunes continued to grow under the generalship of Publius Cornelius Scipio Africanus, a survivor of the battle of Cannae. In 211 BCE, Scipio became the commander of the Roman army in Spain and implemented more training for his soldiers so that they could withstand and overcome clever tactics. Five years later, Scipio and his hardened troops eradicated the Carthaginian presence in Spain.

In 205 BCE, Scipio received senatorial approval for an invasion of Africa. His army, uniquely composed of the Cannae veterans and 7,000 volunteers, reached Africa the following year. Scipio's army won battle after battle as they worked their way toward Carthage. Alarmed, the Carthaginian senate recalled Hannibal. The opposing forces met at the battle of Zama in October of 202 BCE and for the first time during the war, the two sides were evenly matched in terms of strength and experience. It was not until Scipio's cavalry executed a timely enveloping move late in the battle that one side gave way; Hannibal's army was surrounded and defeated. Carthage surrendered and the war was over.

Punic War, Second (218–201 BCE), Consequences

The Romans remembered the Second Punic War as their climax of greatness and their impressive victory forever changed the Republic: demands were put on political and economic practices to manage newly acquired territories; the spoils obtained during the war ushered unparalleled amounts of wealth into Rome; and the new precedent of long-term military command added further strain to Roman customs and policies that would eventually cripple the Republic.

Although the Romans triumphed over Hannibal, the memory of the skilled general haunted them. Between 218 and 216 BCE, Hannibal killed and captured some 80,000 to 100,000 Romans, an incredible number in the ancient world. Consequently, Rome's terms ending the war were harsh:

Carthage had to pay an indemnity of 10,000 talents over fifty years; Carthaginian armed forces were severely reduced; they lost power over their foreign policy; and Rome acquired Spain and other overseas Carthaginian territories. Ultimately, Rome would not be satisfied until Carthage was utterly destroyed in the Third Punic War (149–146 BCE).

Punic War, Third (149–146 BCE), Causes

The Third Punic War was largely a reaction to the second. Hannibal Barca opened the Second Punic War with a string of victories that frightened the Romans worse than any threat in their previous history (Appian, *Punic Wars* 134). Eventual Roman victory never entirely stilled that fear. The years between the Second and Third Punic Wars remained tense as the Romans sought to assure themselves that Carthaginian humiliation was final. Ultimately, failure to find that assurance led the Romans to create it.

The treaty ending the Second Punic War forced Carthage to pay Rome a

war indemnity of 10,000 talents over a 50-year period. Rome gained control of Spain and all the Mediterranean islands previously held by Carthage. The Carthaginian navy was reduced to ten warships; the army was forced to surrender its elephants. Carthage, now a client state of Rome, was not allowed to conduct foreign policy, declare war, or engage in battle without Roman consent. The Carthaginians were forced to make restitution to Masinissa, an ally of Rome, and return all recently captured Roman transport ships, with crews and cargo. The defeated city was required to return all prisoners of war, runaway slaves, and Roman deserters. They were also forced to supply grain to, and pay the salary of, Roman forces in Africa, until the treaty was ratified. As a sign of good faith, Rome demanded Carthage supply hostages during negotiations (Appian, *Punic Wars* 54). Though not part of the original treaty, Hannibal, whose generalship had frightened the Romans so and whose diplomatic leadership they feared almost as much, was eventually forced to flee the city, with the encouragement of Carthaginians who opposed his anti-corruption policies.

Surprisingly, Carthage rebounded strongly. Stripped of its army and foreign territories, the city focused on trade and farming. Wealth soon returned to the city, and Carthage offered to pay off the war indemnity early. Rome declined, wanting to keep Carthage in a state of submission as long as possible. Carthage continued to pay on time and accumulate wealth. The accumulation of Carthaginian wealth caused discomfort to some Roman leaders. If Carthage recovered, yet a third challenge to Roman supremacy in the western Mediterranean might be made. A group of Romans, reportedly led by Cato the Elder, made it their business to see that the Carthaginian threat never developed (Appian, *Punic Wars* 58).

Other issues lingered as well, including Numidian encroachment on Carthaginian territory. Numidia, a neighbor and former ally of Carthage, took advantage of Carthaginian weakness, and the terms of the treaty between Rome and Carthage, gradually extending Numidian borders at Carthaginian expense. Unable to act without Roman consent, Carthage repeatedly requested permission to defend themselves, or that Rome force Numidia to desist. Rome habitually sided with Numidia, and Carthage felt continuously less protected. Eventually, an aggressive party took control of the city government. After particularly egregious Numidian prodding, Carthage struck back without Roman consent. It was a mistake twice unfortunate. First, the Numidians easily defeated the inexperienced

Carthaginian army. Second, the Roman war party saw in this action their excuse to inflict a final humiliation on Carthage (Appian, *Punic Wars* 69–74).

Carthage quickly disavowed the action, replacing their government with one willing to submit to almost any Roman terms to avoid war. Rome held out the possibility of peace, but their intent was only to weaken Carthage as much as possible before war began. Rome demanded Carthage surrender 300 noble children as hostages before any discussions took place. Carthage complied. Rome then demanded that Carthage completely disarm. Though the numbers are open to question, Carthage reportedly surrendered 200,000 suits of armor, 2,000 catapults, and mounds of munitions. Only then did the Romans make their final demand. Carthaginians must destroy their own city. They could move anywhere they wanted within their territory, as long as it was at least 10 miles from the sea. Such a move would have destroyed Carthage as a center of trade. Convinced, now, that Rome meant to destroy them under any circumstance, Carthage chose war (Appian, *Punic Wars* 76–93; Polybius 36:3–7).

Punic War, Third (149–146 BCE), Course

The Third Punic War began in 149 BCE. Carthaginian defenses were formidable. The city, sited on a peninsula, was surrounded by a wall (Appian, *Punic Wars* 95). Rome, on the other hand, faced the Carthaginian

challenge with a large but poorly trained army with inadequate logistics (Appian, *Punic Wars* 94). The consuls Manius Manilius commanded the army and Lucius Marcius Censorinus the navy (Appian, *Punic Wars* 75). The Roman commanders opened the war with a combined attack. Manilius led his legions against the front wall, while Censorinus attacked a portion of the south wall, perceived as weaker. The combined attack failed. A second attempt met the same fate. A third attack breached the outer defenses of the city's front wall, but could not scale the wall itself (Appian, *Punic Wars* 97).

Manilius ordered two large rams built. Both created breaches in the city wall, but the Carthaginians held off the Romans, blocking their penetration into the city. That night Carthaginian raiding parties burned both rams. The Carthaginians repaired the breaches in the wall as well as they could in the darkness, but morning found one still usable by the Romans. Manilius attacked, pushing past the first defenders, but the assault broke down, and the Romans fell back. Carthaginian leaders pressed their advantage and Manilius escaped the city only with the help of Scipio Aemilianus, adopted grandson of Scipio Africanus, who defeated Hannibal at Zama. Scipio, with great presence of mind, held his men in reserve, and his disciplined and unshaken soldiers covered the retreat of the main army (Appian, *Punic Wars* 98).

Hasdrubal, the general previously condemned for attacking the Numidians, remained in command of 30,000 men who had not returned to Carthage after that conflict, being under threat of death. Carthage now appointed him commander of all forces outside the city (Appian, *Punic Wars* 70, 74, 96). He led a successful campaign against Roman foraging parties (Appian, *Punic Wars* 100). On one occasion, he staged a night attack against the main Roman camp, throwing the Romans into disorder. Scipio, refusing to panic, formed his cavalry and led them against the Carthaginian flank. The darkness that covered Hasdrubal's attack also left him uncertain how many Romans were attacking him. In the dark literally and figuratively, Hasdrubal withdrew (Appian, *Punic Wars* 99). When the wind was in their favor, the Carthaginians also sent fireships against the Roman navy, inflicting significant damage on the Roman fleet (Appian, *Punic Wars* 99).

Winter, inadequate logistics, and lack of progress forced a new strategy on Manilius. He attacked nearby cities, punishing them and gathering supplies. Initially this seemed promising. Unfortunately, most Roman

commanders acted incautiously, spreading their formations in search of food. Hasdrubal saw this opportunity and took advantage of it, sending his cavalry to punish the searchers when they dispersed. Only Scipio operated efficiently, keeping his men together and maintaining a reserve (Appian, *Punic Wars* 100–101). As Manilius returned to the main Roman camp, the Carthaginians mounted another night attack, raiding the small camp guarding Roman transport ships. Again Scipio responded, his force carrying lit torches into the rear of the Carthaginians. Fearing a large counterattack, the Carthaginians withdrew into the city (Appian, *Punic Wars* 101).

Embarrassed and hurt by Hasdrubal, Manilius turned his attention to defeating the Carthaginian leader and the forces he commanded outside the city. This strategy fared no better than previous Roman efforts. Finding a strong hilltop position, Hasdrubal stopped the Romans and forced them to withdraw. As the Romans recrossed a river on their way back to Carthage, Hasdrubal struck. Scipio and 300 cavalry counterattacked, holding Hasdrubal at bay while the Romans escaped. Still under attack, Scipio then withdrew his own force across the river. Discovering that some Romans remained trapped by Carthaginian forces, Scipio led his cavalry back across the river, cut his way through to the trapped men, and led them to safety (Appian, *Punic Wars* 102–104). On the way back to camp, the Romans suffered further losses from enemy cavalry and from a raiding party sent out from Carthage itself (Appian, *Punic Wars* 104). Manilius attempted a second attack on Hasdrubal in the spring, but was again unsuccessful, with one exception. Scipio persuaded Hasdrubal's cavalry to desert, joining the Romans (Appian, *Punic Wars* 108). Hasdrubal then returned inside Carthage, taking control of the city by killing his political rivals (Appian, *Punic Wars* 111).

In 148 Rome sent only one consul to Africa, Lucius Calpurnius Piso Caesoninus. He determined, once again, to subdue cities supporting Carthage (Appian, *Punic Wars* 110). His failure encouraged Macedonia to revolt, a situation the Romans contained only with difficulty.

That year Scipio returned to Rome to run for office. Initially he announced for an aedileship, but as the only successful commander in Africa, many supported him for consul. Too young to hold that office, the Senate voted him a single year exception. He won easily and was assigned the African command (Appian, *Punic Wars* 112).

Lucius Hostilius Mancinus commanded the navy in 148. As Scipio

returned to Africa, Mancinus spotted a weakness in the city walls. Forcing his way through a gate, he drove into the city. His men, however, unequipped for a land battle, were pressed back. Scipio, learning of Mancinus' situation, sailed into view with his replacements lining the decks of their ships. The Carthaginians, thinking Scipio brought the entire army, stopped attacking long enough for Mancinus to escape (Appian, *Punic Wars* 113–114).

Scipio imposed a tight blockade, building a fortification in front of Carthage with a tower allowing him to spy on the city. He dug a mole across the mouth of the harbor. The Carthaginians, working at night, dug a new channel, sallying with the remainder of their fleet. After a daylong battle, the Carthaginians pulled back, but their inexperienced navy blocked the entrance to the harbor. Rome destroyed most of their ships before order was restored (Appian, *Punic Wars* 121–123).

Scipio attempted to breach the city walls near the harbor, but the Carthaginians attacked and burned his siege engines. He ordered them rebuilt, along with a large brick wall to defend them. While this work progressed, he attacked Carthaginian forces outside the city. Organizing and conducting his campaign skillfully, he forced the cities remaining in support of Carthage to capitulate (Appian, *Punic Wars* 124–146).

Returning to Carthage, Scipio deceived Hasdrubal regarding his point of attack and broke into the city. The Romans fought their way along streets lined with six story buildings, Scipio sending men ahead to clear the rooftops of the burning buildings, without regard for people trapped inside. Over the next six days, he forced his way ever deeper into the city until all but Hasdrubal, his family, and some Roman deserters surrendered. Finally, Hasdrubal surrendered. The deserters, knowing surrender meant torture, committed suicide. Legend suggests that Hasdrubal's abandoned wife, screaming insults at her cowardly husband, killed their children and threw them into the flames, stepping into the fire after them. Carthage had fallen (Appian, *Punic Wars* 127–131; Polybius 39.3–4).

Punic War, Third (149–146 BCE), Consequences

For Carthage, the aftermath of the war was swift and brutal. Those not killed in the fighting were sold into slavery. The Roman army pulled Carthage down and burned it. Carthaginian allies suffered a similar fate (Appian, *Punic Wars* 133). Carthaginian lands became the province of Africa, among the leading grain producers of the Roman Republic (Appian, *Punic Wars* 135).

The destruction of Carthage in 146 BCE left Rome the sole superpower of the ancient Mediterranean world. Many Romans of that time and after believed victory over Carthage led to the fall of the Roman Republic (Appian, *Punic Wars* 69; Plutarch, *Cato the Elder* 27,1–2; Sallust, *Bellum Catilinae* 10, *Jugurthine War* 45). They believed that with no significant enemy keeping Romans vigilant and challenged, Rome grew soft and demoralized. Such ideas are often self-sustaining, but the argument still intrigues ancient historians. The reality, however, is that no way exists to determine such things with certainty.

Carthage disappeared as a state, but Punic culture and influence remained strong in northwest Africa throughout the imperial period. It could hardly be otherwise given the impact Carthage had on the region. The wealth of Carthage sustained the area for centuries, most of the nearby cities were Carthaginian allies, and many of them were founded by the great city. If the Carthaginian state never returned, the city itself did. The first attempt to rebuild on the original site was the city of Junonia by Gaius Gracchus, part of his land reform program (Appian, *Punic Wars* 136). Though Junonia did not survive, Caesar built a city named Carthage near the original site a century later, as a colony for retired soldiers. It grew into a large and wealthy city, becoming the center of northwest African grain trade during the imperial period (Appian, *Punic Wars* 136).

Pupienus and Balbinus (Emperors, 238 CE)

Roman emperors (238 CE), Marcus Clodius Pupienus Maximus and Decimus Caelius Calvinus Balbinus were acclaimed joint emperors in January 238 CE to lead the senatorial resistance against Maximinus I. Pupienus advanced north to Ravenna to check Maximinus' advance, while Balbinus remained in Rome. The imperial college was augmented by the addition of the teenaged Gordian III, grandson of Gordian I, as Caesar. After Maximinus was murdered by his own troops outside Aquileia, the government of Pupienus and Balbinus began to collapse. The two emperors frequently disagreed, and they were hated by the Praetorian Guard, who murdered them in May 238 CE.

Pydna, Battle of (168 BCE)

The battle of Pydna was the decisive battle of the Third Macedonian War, fought on June 22, 168 BCE between a Roman force led by Lucius Aemilius Paullus and the Macedonian army of King Perseus. After previous consuls led indecisive campaigns in Macedon during the years 171–169, Paullus was sent out to bring the war to an end. Due to corruption of the sources, the timeline of the years 168–167 is uncertain, but a military tribune called Gaius Sulpicius Gallus who was serving with the army is said to have predicted an eclipse of the moon on the night previous to the battle, enabling a precise date of June 22, 168 BCE.

The disposition of the battle is preserved in the literary account. Romans were pursuing the retreating army of Perseus when they arrived at a plain near the ancient town of Pydna, where Perseus had set up camp. Some of Paullus' officers argued that they should give battle immediately, lest they give Perseus a chance to escape. Seeing the fatigue of his men, however, Paullus elected to wait. According to Livy, Paullus moved his army onto the foothills, terrain unsuitable for the phalanx, the main fighting unit of the Macedonians. On the following day, with his line facing east, Paullus made sacrifices to the gods, hoping to obtain a favorable omen, but did not receive one until the death of the twenty-first beast. Even then, the result indicated that the Romans would need to act on the defensive. Paullus waited until the afternoon to prevent the sun shining in the eyes of his soldiers. The battle was started either by a trick of Paullus, who had his soldiers "accidentally" drive a runaway horse into the Macedonian lines, or a Macedonians attack on a foraging party. In either case, Paullus' traditional religious scruples were fulfilled, as the Macedonian forces advanced forward to the attack. Traditional religious protocols of warfare represented the Romans as fighting defensive wars, attacked first by the enemy (see "*Ius fetiale*," "Formal declaration of war").

At first the greater reach of the Macedonian phalanx, due to their use of the extra-long 18-foot pike called the *sarissa*, pushed the Roman troops back. Since the Romans, using shorter weapons, could not engage with the Macedonian front, the Romans retreated slowly, until uneven ground and the irregular course of the battle began to open up gaps in the Macedonian lines. It was then that Paullus exploited the particular strength of the manipular legion, its maneuverability, and ordered maniples to attack the

weakest and most poorly protected areas of the Macedonian phalanx: its flanks and rear. The Macedonians, carrying heavy *sarissae*, were less able to maneuver. The Romans were better armored and their shorter weapons were more advantageous at close quarters, and they soon turned the tide of the battle. We are told that 25,000 of the Macedonians were killed, compared to some 80–100 Romans, and that the nearby River Leucus ran red with blood. King Perseus fled in the wake of this disastrous defeat, but was eventually caught and gave himself up to Paullus, ending the Third Macedonian War with victory for Rome.

Pyrrhus, War with (280–275 BCE)

Faced with a war against Rome in 281 BCE, the Greek city of Tarentum in southern Italy invited King Pyrrhus of Epirus to cross the Adriatic Sea and aid them in their war. Pyrrhus invaded Italy with a force of 25,500 infantry, 3,000 cavalry, and 20 elephants. He fought three major battles against the Romans: Heraclea in 280, Asculum in 279, and Beneventum in 275. Although victorious at Heraclea and Asculum, Pyrrhus suffered heavy casualties throughout the conflict that proved irreplaceable.

Roman expansion into southern Italy created a tenuous political and military relationship between the Tarentines and Romans. The Tarentines reacted by sinking several Roman warships and attacking a Roman garrison at Thurii. With full-scale war against Rome eminent, the Tarentines called upon Pyrrhus to defend the Greek cities of southern Italy and pledged their support to him. Before sailing to Italy, Pyrrhus secured from Tarentum the finances necessary to pay for his campaign and was awarded the supreme command of all allied forces. Pyrrhus managed a difficult crossing of the

Adriatic with his army and first met the Romans at Heraclea.

Pyrrhus chose to seize the initiative and led an indecisive cavalry charge against the Roman lines. Yet his phalanx and elephants were able to rout the Roman army. After the battle, Pyrrhus marched on Rome to force a peace treaty. He got within 37 miles of the city, but the Romans refused to come to terms. Pyrrhus had to turn south to face a two consular Roman army at Asculum. The two forces were evenly matched and fought for a full day on broken ground. The next day another desperate fight ensued on more open ground, allowing Pyrrhus to utilize his cavalry and elephants. The Romans eventually retreated to their camp but did not rout. This second battle was more costly than the first. The Romans suffered nearly twice as many casualties. However, Pyrrhus had been wounded, he had lost several officers, and he was unable to replace his losses. Additionally, the promised reinforcements from his Italian allies did not materialize in significant numbers.

After Asculum, Pyrrhus became distracted by a campaign in Sicily. For three years he fought a frustrating war against the Carthaginians, while the Romans attacked his allies in southern Italy. A Roman and Carthaginian alliance put added pressure on Pyrrhus, and he was forced to return to Italy to give aid to his allies. With half of his remaining forces, he marched to meet a Roman consular army at Malventum (later renamed Beneventum). His surprise night attack failed, and he was drawn into another costly battle. Pyrrhus' elephants panicked and charged against his own men; the Romans forced Pyrrhus into a disorganized retreat. He no longer had the men or the money to continue the war in Italy. After stationing a strong garrison at Tarentum, Pyrrhus returned to Epirus with only 8,000 infantry and 500 cavalry. The Epirote garrison at Tarentum held out against Roman attacks until 272.

Pyrrhus won two legitimate victories against the Romans at Heraclea and Asculum, and the sources exaggerate Pyrrhus' casualties at Beneventum. Additionally, the Romans suffered heavy losses in the Pyrrhic War. However, Pyrrhus' missed opportunities in Italy and his failures in Sicily proved too costly for a sustained campaign against Rome. This is the source of the term "pyrrhic" to denote a victory achieved at excessive cost.

Q

Quaestor

A quaestor was a junior Roman magistrate who assisted consuls or promagistrates on campaign or with civilian administration, or who administered financial and other local affairs at Rome. The quaestorship was the first significant magistracy normally held in the republican *cursus honorum*, succeeded by aedileship (not required), praetorship, and consulship. Once quaestors were elected, the Senate allocated quaestors to particular magistrates. Consular quaestors assisted the consuls at first on campaign and, when *provinciae* began to entail civil administration, with that as well. Typical campaign duties included the management of pay for the troops and supplies. The advent of prorogation meant that propraetors and proconsuls might be attended by quaestors. At Rome, at least one *quaestor urbanus* administered the treasury (*aerarium*). It was possible for consul and quaestor to conflict, but in such instances the consul was able to overrule the junior magistrate.

The number of quaestors gradually grew as Rome's overseas dependencies increased. During his dictatorship (82–81 BCE), Sulla raised the number of quaestors to 20 and required senators to have been quaestors (thus lowering the bar to membership in the Senate). Caesar increased the number of quaestors to 40. Their number may have been reduced again by Augustus. The quaestorship, now attached to the emperors' staff, continued to exist in the Principate as an honorific post for young aristocratic men. It took on greater importance with legal secretarial duties in the later Roman Empire.

The term *quaestor* is lexically related to but should not be confused with *quaesitor*, a magistrate supervising the criminal courts (*quaestiones*) as a

prosecutor or inquisitor.

Quincunx

The quincunx (Livy 8.8.5–8) was a tactical formation used in the period of the manipular legion (mid-Republic). When the legion deployed for battle, it formed three lines (the *triplex acies*): *hastati* in front, *principes* in the middle, and *triarii* in the rear. The *hastati* were deployed in 15 maniples, the *principes* in 15 maniples, and the *triarii* in groups of 15 termed *ordines*.

According to this passage, the maniples were not deployed in a single continuous line but alternating with empty spaces, forming a checkerboard pattern or quincunx, like a number five die face or playing card, repeated to use all the maniples being employed in an engagement. In battle, the forward maniples could fall back, enabling the middle and rear maniples to move forward into the empty spaces and replace exhausted men. This formation would have required extensive drilling and in combat was vulnerable to outflanking, the enemy entering into the gaps. Accordingly, some scholars have questioned its existence.

R

Radagaisus (d. 406 CE)

Radagaisus was king of a barbarian confederation that invaded Italy in 405–406 CE (Zosimus 5.26.3–5). Nothing is known of his origins or background prior to his invasion of Italy, possibly motivated by the advance of the Huns in central Europe. Radagaisus' forces are said to have included hundreds of thousands of warriors, an unbelievably high estimate given army numbers in the later Roman Empire. In response, the *magister utriusque militiae* Stilicho gathered 30 units of the western Roman field armies, supported by barbarian auxiliaries such as Alans, Goths, and Huns. Such a force may realistically have numbered 15,000 men. Radagaisus' hordes initially met with little resistance and devastated northern Italy. His army split into in three forces, probably due to lack of supplies.

Radagaisus' main force besieged Florence during the spring of 406, which was about to surrender until the timely arrival of Stilicho's army. The western Roman army surrounded Radagaisus near the hill of Fiesole and blocked all access to supplies, thereby starving his forces. Radagaisus tried to escape but was apprehended and executed near Florence on August 23, 406. Stilicho suffered minimal losses and managed to incorporate 12,000 of Radagaisus' forces into his auxiliary forces. It is possible, however, that survivors of Radagaisus' army fled Italy over the Alps and contributed to the invasion of Gaul in 406.

Raetia

Raetia was a Roman province overlapping with parts of modern Switzerland, southern Germany, and Austria. The region, bordering barbarian Germany and controlling the Alpine passes into northern Italy, was strategically important. Tiberius (the future emperor) and his brother Drusus conquered western Raetia in 15 BCE, and a province termed Raetia et Vindelicia was created, with a capital at Augusta Vindelicum (Augsburg). Raetia was at first garrisoned by auxiliaries, then by a new legion, Legio III Italica, stationed at Castra Regina from 170 onward.

On the German frontier, the northern border was defined not by a river but by a *limes* (frontier) work east of the Rhine that bordered Upper Germany to the west and Raetia to the north, bending near the border between Upper Germany and Raetia. This *limes* work took the form of a patrol road with forts rather than a wall, built in stages by Vespasian and Domitian; Hadrian added a palisade. The whole is termed the Odenwald-Neckar *limes* after its modern geographical termini. Around 150 the Odenwald-Neckar *limes* garrisons were moved 12–15 miles eastward. The area between the Rhine and the *limes* was termed the *Agri Decumates*. It was evacuated and lost to the empire during the third-century crisis invasions.

Recruitment of Army (Imperial)

The recruitment of the imperial Roman army (27 BCE - 235 CE) varied with the branch of the service: Praetorian Guard, urban cohorts, legionaries, *auxilia*, fleet, and *vigiles* (the fire watch in the city of Rome). The minimum age for recruitment was probably still 17 years; the emperor Hadrian ruled that younger boys or old men should not be recruited (*Historia Augusta, Hadrian* 10.8). Slaves and persons with dishonorable status (deserters, convicts, and probably prostitutes, actors, pimps, and gladiators) were excluded, though due to the lack of standard identification papers such exclusion was probably impossible to enforce.

The Praetorian Guard were recruited from Italians until Septimius Severus (193–211) disbanded the Italian praetorians for assassinating Pertinax. Severus recruited the new praetorians from the Danubian provinces, promoting legionaries into the Guard. Recruitment from the Balkans probably continued through the third century until Constantine the Great (306–337) disbanded the Guard permanently in 312 to punish them for supporting his rival Maxentius. The Italian praetorians were also recruited from a slightly higher social stratum than legionaries (below) and received higher pay and a shorter term of service, 16 years, enabling the promotion of praetorian veterans into staff officer positions while they were still relatively young, in their early thirties.

In contrast, the recruitment of the *equites singulares Augusti* or Emperor's Horse Guards bore closer resemblance to the *auxilia* (below). The *equites singulares* were recruited from Germanic peoples in the Rhineland, particularly the Batavi and Ubii, who had strong cavalry traditions.

The recruitment of the legions shifted geographically from northern Italy in the early first century CE to the Romanized provinces and eventually to the frontier areas near legionary bases. At the time that Augustus reorganized the Roman army, legionaries were still recruited from Italy, and in particular from northern Italy (called "Gallia Cisalpina," but long Romanized). By the late first century CE, recruitment from Spain and southern Gaul took over, followed by recruitment from the Danubian provinces. In the third century, recruitment from the areas near frontiers and military bases became common; over the first two centuries CE, extensive settlement had occurred around many military forts, and the settlements surrounding legionary forts tended to grow into small cities. These shifts are attested through inscriptions, largely epitaphs and dedications.

The social status of legionary recruits is difficult to determine, due to the remote perspective of the literary authors, extremely wealthy and highly educated senators and equestrians who regarded common soldiers (*milites*) as socially far beneath them. Cassius Dio, a Roman senator from Asia Minor, regarded Augustus as recruiting those men who were “strongest and most in need of a livelihood” (52.27.4) who otherwise would turn to brigandage to support themselves. Dio thus suggests that soldiers were poor men, even desperate, a stereotype that persisted from the period of Marius’ recruitment of the landless *capite censi*. Dio and other literary authors also persistently depict soldiers as uneducated. However, other sources, both legal and documentary, do not suggest that legionaries were impoverished, at least by the second century CE after Domitian (81–96 CE) raised pay. The Roman jurists discussed Roman citizen soldiers’ property rights, including savings accounts and testation (the making of wills). Letters and documents from Roman Egypt show that soldiers could write (or at least have letters written for them) and had disposable income, requesting and sending gifts. Basic literacy and numeracy were assets to promotion as *principales* (junior officers below the centurionate).

The recruitment of the *auxilia* also underwent geographical or cultural shifts. They were originally recruited from non-Italian ethnic communities (the term “tribes” is misleading) with a warlike tradition. Due to the spread of the Latin language and the Roman citizenship, by the mid-second century CE auxiliaries became indistinguishable from legionaries. Many auxiliary units retained ethnic titles, but these are not a reliable guide to the actual ethnicity of auxiliary soldiers without further evidence (for example, nomenclature, depiction of ethnic dress or weapons on tombstone reliefs). Service in the *auxilia* was not necessarily inferior to legionary service, despite slightly lower pay; provincials might regard auxiliary service as a good prospect.

Less is known about the recruitment of the fleet and *vigiles*. Despite their construction of a navy during the First Punic War, the Romans were never principally a naval power and often relied on Greek allies to supply and man ships. Fleet service was the least prestigious branch of the regular service. The fleet soldiers based at Misenum (on the Bay of Naples) and Ravenna were probably recruited from southern Italy, Greece, and the Illyrian coast and were of Greek ethnic origins. The *vigiles*, Rome’s fire watch, were initially recruited from freedmen, probably residents of the city

of Rome who knew its neighborhoods well. Later in the empire they were probably recruited from freeborn as well. They were not considered to be regular soldiers.

Recruitment of Army (Later Empire)

The later Roman army (from ca. 284), facing a possible shortage of recruits, employed various means of compulsion to recruit manpower, including conscription, hereditary service, and the conscription of defeated enemies settled within the empire.

The manpower needs of the later Roman army can only be a rough estimate. The size of the later Roman army is debated; during the fourth and fifth centuries, it consisted of somewhere between 300,000 and 600,000 men scattered across the empire from Britain to Syria, but the current estimate is perhaps 400,000 to 500,000. To maintain this strength the Roman army needed to enlist at least 15,000 recruits and as many as 27,000 to 45,000 per annum. More might be needed in times of crisis or to replace casualties suffered by units in combat. Some battles had very high casualties; two-thirds of the Roman army at Adrianople (378) was lost, or 10,000 to 26,000

men. Recruits served for 20 years in the *comitatenses* (mobile units) and 24 years in the *limitanei* (border units).

Although there is some evidence of voluntary enlistment in the Roman army, most citizen recruits were conscripted. Regular conscription can be dated to the reign of the emperor Diocletian (284–305). Hereditary conscription of the sons of soldiers and veterans was one practice. Conscription was also a “form of taxation” (Lee 2007: 80) in which landowners would annually deliver tenants as recruits. This tax could be commuted to cash payments (the *aurum tironicum*). The burden of conscription seems to have fallen on the rural population of the empire. Certainly Vegetius argued that rural conscripts were superior to urban conscripts because they were inured to the heavy work and long marches soldiers needed to be able to endure. Certain regions were known for the superiority of their recruits, such as Illyricum in the fourth century and Isauria in the fifth. These regions were mountainous and harsh, known for producing bandits as well as soldiers.

Military service seems to have been unpopular among Roman citizens, as we have reports of individuals cutting off their thumbs to avoid conscription. Imperial law punished the shirkers brutally; recruits were also tattooed to discourage desertion. On the other hand, once conscripted Roman citizens seem to have served loyally and efficiently.

In addition to citizen conscripts, Rome also recruited from non-Roman (once referred to as “barbarian”) populations. Some of these non-Roman recruits joined the Roman army voluntarily. The Roman army, in this case, offered the potential for regular meals and pay, travel, and the potential for promotion within the Roman military.

Another source of recruits was the *dediticii* (captives, surrendered peoples). In this case, defeated non-Roman fighters would have the option of serving in the Roman army under Roman officers. Service was probably preferable to enslavement or execution, the other usual fates of captives. A third category of non-Roman recruitment was the *laeti*, tribal groups who had received permission to settle on Roman territory in return for military service. In this case, it appears that the *laeti* were required to provide a certain number of recruits in return for the right to live in Roman territory. Like the *dediticii*, recruits from the *laeti* served under Roman officers.

The habit of recruiting from among non-Roman populations, either prisoners of war or free men, has raised questions concerning the

“barbarization” of the Roman army. This argument dates back to Gibbon’s *Decline and Fall of the Roman Empire* (1776–1788). Gibbon identifies barbarization of the Roman army as a factor in the collapse of Roman authority in the western empire. In short, Gibbon argued that Christianity had robbed the Romans of their martial spirit, leading them to increasingly depend on non-Roman recruits to man the Roman armies. When these non-Roman recruits reached a critical mass, they turned against Rome, causing the collapse of Roman institutions in the west. The evidence tends not to support Gibbon. As long as they were regularly paid and served under Roman officers, non-Roman recruits in the regular army were as loyal as Roman recruits. Usurpations that destabilized the fifth-century CE western Roman Empire emanated from the commanding officer cadre.

The recruitment of the regular Roman army is distinct from the employment of barbarian peoples, such as the Visigoths and Huns, who retained their own leaders and organization. These peoples, the fifth-century allies or *foederati*, were effectively clients (like earlier client monarchs and peoples, but allowed to settle within the empire) and received subsidies from the imperial government. Not all of these peoples turned on the Roman Empire and extorted subsidies; some fought as loyal allies. However, those that proved unreliable contributed to the fragmentation of the western Roman Empire.

Recruitment of Army (Republic)

Though many phases are only known in schematic terms, during the Republic (509–27 BCE) the Roman army evolved from an army of citizen yeomanry (farmers, small property owners) supplemented by formally

allied Italian forces, to an army of propertyless professional soldiers supplemented by non-Italic auxiliaries. In the earliest (monarchic) period, property owners above a certain minimum were recruited into the hoplite phalanx of heavy-armed infantry.

The so-called Servian constitution, reconstructed by Roman antiquarian authors, displays a more elaborate timocratic structure. Citizens were arranged into *classes*; the first *classis*, drawn from men worth 100,000 *asses* or more, comprised 80 centuries; the second *classis*, men worth 75,000 to 100,000 *asses*, comprised 20 centuries; class three, worth 50,000 to 75,000 *asses*, 20 centuries; class four, worth 25,000 to 50,000 *asses*, 20 centuries; class five, worth 11,000 to 25,000 *asses*, 30 centuries. 18 centuries of cavalry (*equites*) were drawn from the aristocracy, originally patrician, later opened to well-to-do plebeians. Army engineers formed two centuries; musicians, two centuries. Men with less than 11,000 *asses* of property, the *capite censi*, were not recruited; they were assigned to a single century, even though they must have been a large portion of the population (Livy 1.43; Dionysius, *Roman History* 4.16–18).

What this schematic arrangement actually meant for recruitment is still unclear. A century probably did not signify literally 100 men. The largest category was probably the fifth, from which the bulk of the legions were recruited: subsistence farmers who owned a small amount of land. Before the adoption of coinage, the Romans used bronze (*aes*) by weight as a measure of wealth. Though the exact value of the *aes* (pl. *asses*) is debated, its value was low.

By the classical Roman Republic (ca. 264–133 BCE), recruitment no longer followed the Servian census classes, which were used to structure voting in the *comitia centuriata*, and instead was geographical, organized according to the regional groups (tribes) that citizens belonged to. At the start of the campaign season, the consuls summoned the male citizens to the Campus Martius (outside the *pomerium* or boundary of the city of Rome, which an army was forbidden to enter), organized by tribe. The consuls called each man up and chose or rejected him for military service. They could reject unsuitable men, so that the army of the mid-Republic was in fact not a mass conscript army, in contrast with the *tumultus* or *levée en masse*. In a *tumultus*, an emergency was declared and an emergency chief magistrate, the dictator, was appointed; he could conscript every able-bodied male citizen into the army to meet the crisis.

Rome also relied heavily on Italian allies, who might make up half or more of a mid-republican force. These allies, the *socii*, were bound by treaties (the oldest being the treaty of Rome with the Latins, the *foedus Cassianum*) and by a document termed the *formula togatorum*, which specified how many men each Italic community was required to provide. Allies were organized into *alae* or “wings” that in battle stood to either side of the Roman legions. The *alae sociorum* might be both cavalry and infantry. Allies might be rewarded with conquered land and plunder, but as the centuries went by, and the profits of Roman warfare increased, the Italians grew increasingly resentful of their lack of Roman citizenship and exclusion from the Roman political process. The Republic might also recruit the military forces of client monarchs or client peoples, especially to secure military skill sets that most Romans and Italians lacked, such as archery, handling war elephants, or crewing ships.

The Punic Wars and especially the Hannibalic War, with its massive Roman defeats at the Trebia (218 BCE) and Lake Trasimene (217) and Cannae (216), put a great strain on the Roman system of military recruitment. A large proportion of citizens served in the army. At one point, slaves were freed and enrolled in the army. It is not clear, though, that service in the Roman army caused Roman soldiers to lose their land. In this view, as Rome’s wars increasingly became overseas wars, soldiers were unable to manage their farms, fell into poverty, and lost their land, which was bought out by wealthy property owners. Other causes of citizen poverty, such as overpopulation, have also been suggested. The demographic and economic conditions of Roman Italy in the second century BCE have been extensively debated (see de Ligt 2012).

For whatever the reason, the Republic lowered the property qualification for recruits from 11,000 to 4,000 *asses* (214 BCE) and subsequently to 1,500 *asses* (140 BCE). This policy was also intended to attract recruits due to the unpopularity of the Spanish Wars in the mid-second century BCE. The Spanish Wars were arduous and offered ordinary soldiers little plunder; the Romans suffered humiliating defeats at the hands of Viriathus and the Numantines, adding to the wars’ unpopularity.

In 133 and 123–122 BCE, Tiberius and Gaius Gracchus, the famous tribunes of the plebs, promoted policies that were intended to increase military manpower by distributing land to poor citizens, enabling them to meet the property qualification for service. The land redistribution program

was unpopular with Rome's wealthy landowners, who stood to lose from it, and in the resulting violent conflicts both Tiberius and Gaius Gracchus lost their lives (133 BCE; 121 BCE). Another method to increase military manpower was needed.

Around 113 BCE, the Germanic Cimbri and Teutones first invaded Transalpine Gaul, a Roman province since 121 BCE. Ferocious warriors, the Cimbri and Teutones were a threat to Italy. They defeated the Romans in several battles, the worst being Arausio in 105 BCE. The resulting manpower losses probably motivated Gaius Marius to recruit the *capite censi* or propertyless Roman citizens (beginning ca. 107–100 BCE), a drastic move that in the long run created legions of soldiers who depended on their commanders for their pay and benefits, including land allotments for veterans. Such armies followed their generals' interests rather than those of the Roman state, though to term the soldiers "clients" of their generals is probably an exaggeration.

The Italians also agitated for the Roman citizenship, finding a champion in the tribune Lucius Appuleius Saturninus, who aided Marius in his first conflict with Sulla. However, the allies did not receive the citizenship at this time. The tribune who also proposed Italian enfranchisement, Marcus Livius Drusus the younger, was assassinated in 91 BCE, touching off the Social War (91–87 BCE) between the Romans and the Italians. The war was ended when the Romans enfranchised the Italians who surrendered to them.

After the Social War, recruitment of the legions spanned Italy and increasingly was drawn from northern Italy (Cisalpine Gaul). The widening of recruitment ensured more effective soldiers, but dissociated soldiers further from the Roman political process; they might know little and care less about Roman politics other than their generals' interests. Recruits in this period (the first century BCE down to about 13 BCE) still served for relatively short periods, six years up to 16 years at a time. Veterans thus might still be young men and willing to serve again, often re-enlisting under their previous general.

With the enfranchisement of Italians, the Roman army needed a new source of cavalry and turned increasingly to non-Italic peoples who were good horsemen and had a strong warlike tradition, first in Cisalpine Gaul (a process that had begun earlier, in the years before the Second Punic War) and then, best known from but preceding Caesar's Gallic Wars, from continental Gaul and Germany. Rome had always recruited client peoples.

These non-Italic mostly cavalry forces were the beginning of the *auxilia* of the Principate.

The volunteer army of Roman and Italian soldiers manned the Caesarian-Pompeian Civil War (49–45 BCE) and the triumviral wars (44–31 BCE). The number of legions swelled to around 60. After 31 BCE, Augustus, the first Roman emperor, faced the challenge of demobilizing many of these soldiers and converting the remaining legions and *auxilia* into a long-service army that would not support civil wars.

Religion and Warfare

For Romans during the Republic (509–27 BCE), military success was intimately connected to religious piety. Polybius (ca. 200–118 BCE), a Greek historian and first-hand observer of the Third Punic War (149–146 BCE), asserted that the Romans were superior to everyone in the strength of their religious convictions. According to Livy, Hannibal, the Carthaginian leader in the Second Punic War (218–201 BCE), declared the Romans would control all of Africa, Spain, and Italy because the gods willed it. The Romans performed many rituals, both regular and spontaneous, to maintain the *pax deorum* (gods' peace), which led to military success. The following sections describe Roman gods of war, the rituals in Rome, rites before battles, and the religious and military spaces in Rome.

The Romans worshipped many gods of war. Mars was the war god and crop protector, which reflects the republican ideal of the farmer-soldier. In Rome, he had temples outside the Porta Capena (388 BCE) and in the Circus

Flaminius (133 BCE). The archaic war goddess, Bellona, had a temple on the Campus Martius (296 BCE), where the Senate met recently returned generals and where the fetial priests declared war on distant enemies. Minerva was the tutelary goddess of the arts, but she was depicted as a warrior goddess in the Capitoline triad (Jupiter, Juno, and Minerva). Minerva's syncretism with the Greek goddess Athena strengthened her military aspect. Sometimes the personification of the city of Rome, the goddess Roma, also wore military dress. This goddess did not have a temple in Rome until the reign of the emperor Hadrian (117–138 CE), but she received cult in the Greek world from the second century BCE. Roma's cult allowed allied cities to demonstrate their allegiance to Rome despite rapidly changing politics, especially during the civil wars of the first century BCE.

The Romans also deified abstract military concepts. This practice developed from contact with the Greeks in Magna Graecia (southern Italy and Sicily). The Greek goddess of victory, Nike, thus inspired the Roman goddess Victoria. Victoria received a temple on the Palatine Hill in Rome in 294 BCE. In the late Republic, other gods also gained the title Victor or Invictus (unconquerable). For example, Lucius Mummius, who sacked the Greek city of Corinth in 146 BCE, used the spoils to build a temple to Hercules Victor on the Caelian Hill in Rome; he dedicated this temple in 142 BCE. Victorious generals often used plunder to build temples, reinforcing the association of religion with victory.

Every year, the consuls sacrificed to various gods, including Capitoline Jupiter, to ensure the success of their military campaign. The Salian priests of the war god Mars celebrated the religious opening of the military year, the *Quinquatrus*, in Rome on March 19 and the religious closing ceremonies, the *Armilustrum*, on October 19. This priesthood devoted to Mars was instituted by King Numa Pompilius in the seventh century BCE. The priests' primary function was to guard the *ancilia*, the sacred shields copied from the one given by Jupiter to King Numa. From March 19 to 23, the Salian priests held a festival culminating in the *Tubilustrum*, the polishing of the battle trumpets in preparation for war. On May 23, the priests again held the *Tubilustrum*. Finally, on October 19, the Salian priests held the *Armilustrum*, during which the priests purified the arms before storing them until the next campaign season. These symbolic lustrations were distinct from regular cleaning. Each festival involved a procession in which the priests danced, sang the *Carmen Saliare* (the song of the *Salii*),

and feasted.

Detail from the Column of Trajan (ca. 106–113 CE), depicting a military sacrifice. The emperor as commander-in-chief presided over such sacrifices, which ritually marked the beginning and end of a campaign, purifying the Roman army and promoting victory by assuring divine good will. Located in the Forum of Trajan, Rome, Italy. (Alfredo Dagli Orti/The Art Archive at Art Resource, NY)

To guarantee that the Romans only entered into just wars, the fetial priests ritually declared war on Roman enemies and evaluated the religious aspects of treaties. If a campaign was going badly, the Senate consulted the priests to institute special rituals for the gods, including games to honor the gods, sacrifices in all the temples in Rome, or a *lectisternium* (banquet for the gods). In the Second Punic War (218–201 BCE), the Senate vowed the *ver sacrum* (sacred spring), which required the sacrifice of all livestock born in the spring to Jupiter. Although the Romans made the vow in 217 BCE, they only fulfilled it in 195 BCE. Finally, if the Romans had resolved all military conflicts, they would shut the doors of the temple of Janus in the Roman Forum. Because of the continuous military conflicts the Romans undertook, Janus' doors were only closed once during the Republic: in 235 BCE by the consul Titus Manlius Torquatus.

In the field, Roman priests and generals performed specific battle rituals to ensure the gods' approval of the current war. When a new commander arrived or two legions were joined, the generals purified the army with a ritual procession of animal sacrificial victims around the legions (*lustratio*). Before every battle, the generals sacrificed sometimes multiple victims to ensure the gods' favor for that specific engagement. A *haruspex*, an Etruscan priest and diviner, read the gods' will in the liver of the sacrificed animal. The generals also took special auspices called the *tripudium* in which a bird-keeper fed the sacred chickens grain. If the chickens did not eat, the gods were against the engagement (for example, before the disastrous battle of Drepana in 249 BCE). The Romans also interpreted certain spontaneous omens before a battle as signs of divine ill-favor.

If an engagement was going poorly, a general had several options. The most extreme option was to dedicate himself and the opposing army to the infernal gods. Thus, by his death he would guarantee Roman victory, for example, Publius Decius Mus "devoted" himself in 340 BCE to defeat the Latins, plunging suicidally into the mêlée. Another option to gain divine favor during a siege was to perform an *evocatio*, which persuaded the gods of the enemy to desert their community and seek a better cult in Rome, assuring enemy defeat. The most famous of these vows is the *evocatio* of Juno Regina from the Etruscan city Veii in 396 BCE. During any battle, a general could also vow a temple to the god of his choice. If successful, the general would then build the temple in Rome using the spoils from his victory.

If a battle was successful, the general owed a sacrifice to the gods who assisted him. Quintus Fabius Maximus Rullianus vowed a temple in Rome and all the enemy spoils to Jupiter Victor in his battle against the Samnites and Gauls at Sentinum in 295 BCE. After his victory, he burned the collected enemy armor as an offering to Jupiter. A general could also dedicate spoils in the temples in Rome to advertise his success. The most prestigious dedication was the *spolia opima*, the armor of an enemy leader defeated in single combat. Finally, if the legions had killed more than 5,000 enemy soldiers (the required number varies), the general celebrated a triumphal procession through the center of Rome. The triumph advertised the general's success by displaying spoils and captives to the people in Rome.

Traditional Roman religion, like other polytheisms, emphasized sacred locations and buildings. The army trained and met in its voting assembly,

the *comitia centuriata*, on the Campus Martius (Field of Mars), which lay outside the sacred boundary of Rome near the Tiber River. The main altar to the war god Mars and many of the army's religious monuments stood here, including temples vowed to gods in battle, such as the four small republican temples in the modern Largo di Torre Argentina. These temples advertised the military success and piety of the vowing general often as aid to future elections. Thus, military activity enriched Rome's landscape during the Republic. Similarly, Roman allies also enriched their home cities throughout Italy thanks to their participation in Roman campaigns.

Even as the Romans embellished their own temples through war, the ideal was to respect the enemy temples and gods. According to Appian's *Punic Wars*, when the Roman general Censorinus demanded the Carthaginians abandon their city during the Third Punic War (149–146 BCE), he said he would not harm the temples there when he destroyed the rest of the city. Although a certain amount of plunder was acceptable, generals who took too much from enemy temples could be put on trial. Despite this ideal, the spoils from many enemy temples beautified the temples in Rome. The overall goal for the Romans was to maintain the *pax deorum* (approval of the gods) so that they might continue to be successful in war.

In the Principate, emperors and generals continued to carry out traditional rituals of military religion, seen on the Column of Trajan where Trajan officiates at sacrifices intended to purify the Roman army. The new feature of military religion was the imperial cult. Soldiers not only took oaths to the emperor, they venerated his images carried on special standards, and they celebrated the day of his accession and other imperial holidays recorded in the *Feriale Duranum*, a calendar of military holidays from a Roman auxiliary unit at Dura-Europos in the early third century CE. Soldiers' religion also broadened in scope beyond the traditional state religion of Rome, which many, recruited from outside Roman Italy, may have been unfamiliar with. Pagan cults from many areas of the Roman Empire flourished in the Roman army, including the cult of Mithras, a Near Eastern deity associated with light and whose cult featured a complex hierarchy of initiations.

Republic, Political Structure

The classical Roman Republic, *res publica*, maintained an unwritten, seemingly "balanced" constitution that distributed power between the various elements of the polity. Developed over the fourth and third centuries BCE, and pertaining most to the period from the First Punic War (264 BCE) to the Gracchi (133), this constitution incorporated monarchic, aristocratic, and democratic elements, working together and in opposition to create stability and balance (Polybius 6.3). Not all Roman citizens had equal power or responsibility, but the Roman political structure required the direct participation of its citizens. It should be remembered that Polybius' and the following description are a reconstruction, which evolved over time; the existence of features of the classical Republic in the earlier period (fifth and fourth centuries BCE) has been fiercely debated by modern scholars.

Polybius dubbed the annually elected consuls, the chief executives and commander-in-chiefs, the "monarchic" element of the constitution because they held powers similar to kings, if in a limited fashion. Indeed, the foundation myths of Rome often feature the theme of one unjust monarch being overthrown by a pair of champions, such as Romulus and Remus, who then take his place. The two consuls held *imperium* (the power to command) and *auspicium* (the power to consult the gods through ritual divination). With *imperium* went *coercitio*, the power to coerce or impose punishment. They commanded the military outside the sacred boundary of Rome (*pomerium*) and kept order within it. They could enforce existing laws and

introduce new ones to the citizen assemblies. They wore togas trimmed in purple and sat in special chairs inlaid with ivory, reminiscent of earlier kings.

However, the powers of the executive consuls were restricted by built-in features of the Republic. The consuls were elected yearly by the citizens. In office, each consul held the power of veto and could thereby limit the other's power. The consuls and other office holders typically served one year terms and dealt with each other, as well as other elected officials, face-to-face, as Rome had no bureaucracy in the modern sense. Senior magistrates had *apparitores*, staff who handled paperwork, but these functionaries lacked formal authority. Competition for office holding, both magistracies and priesthoods, could be fierce. Those with political aspirations were expected to run for and achieve lower offices first, proceeding upward in the *cursus honorum*, in traditional succession before attempting the top offices of consul and censor. If an office holder was found to have abused his position of power while in office, the Roman Senate could investigate and bring charges of wrongdoing against him.

The Roman Senate was from its beginnings an advisory body, traditionally made up of the leading men of the founding families of Rome. The Senate is the "aristocratic" element in Polybius' analysis of the Roman constitution. In the Republic, the Senate had no legislative power as a body, but exercised great authority: *auctoritas*. Membership in the Senate was determined not by popular election but by a ranking of the leading men of Rome conducted by the popularly elected censors every five years. To make the "cut," a senator had to be among the top 300 (or more) men of Rome based on wealth, military service, moral character, and success in running for political office (the minimum rank of quaestor was required). A senator served for life unless the censors determined that he was deficient in wealth or character. Being removed from the ranks of the Senate was a mark of shame for the former senator and his family. During the third and second centuries, the Senate grew in power and authority, becoming influential in religious matters, supervising the state's finances and foreign affairs. Because members tended to serve for life, the Senate became one of the few well-defined political and social groups in Roman society. Despite this, its members often worked at cross purposes, competing for offices, courting the voting public.

The democratic element identified by Polybius resided in the various

voting assemblies. Roman citizens came together at the city of Rome to vote for office holders, vote for laws, vote to condemn or acquit citizens accused of capital crimes, vote on declarations of war and peace, and form juries for public trials. Voting took place over the course of a single day. Citizens were represented by centuries instead of voting directly, but Roman citizens gathered to listen and debate the issues placed before them. Roman citizens could express their displeasure with the state of affairs at Rome in such assemblies but participation was limited in many ways. The people could not introduce legislation themselves, for example. Voting was not by individual, *per se*, but by groups. The centuriate assembly (*comitia centuriata*) voted by century—not by individuals—with each century having one vote. Voters were arranged in centuries by the censors, with the oldest and wealthiest citizens occupying the first centuries to cast their votes. In practice, this gave older and wealthier elements in Roman society more influence, and the vote was likely to be decided before the poorest had their chance to vote.

The tribal assembly (*comitia tributa*) voted by tribe; there were 35 in all. The urban tribes had more sway than the rural tribes given their proximity to the city. Those living in or near the city often carried more weight in the assemblies and in the state. The original *concilium plebis* had excluded patricians. In some scholars' view, after plebeians gained access to the normal magistracies and the tribunes of the plebs became a mainstream magistracy, the *concilium plebis* or plebeian assembly merged with the *comitia tributa*. Others argue that the *concilium plebis* remained separate, restricted to plebeians and convened by the tribunes, even though its legislation, the *plebiscita*, was binding on all Romans.

SPQR: The Senate and People of Rome ruled the Republic. The political institutions of the Roman Republic favored those members of society who had the wealth and leisure to campaign for office and serve in unpaid leadership positions. The system also favored those voters who had the time and the ability to come to Rome on election day. While the elite in society exercised more power, the whole of the citizen body had the opportunity to participate. The Roman Senate held the most influence and perhaps the most power of any institution in the Republic. The members' wealth, political and military experience, and sense of unity offered the best avenue for leadership and power. However, the competition for offices, military campaigns, and family honor, combined with a genuine desire to support

the Republic and her people, were often at odds with the body's charge to advise the leaders of state in the best interests of the state. Over time, the strains of gaining and governing a territorial empire tested and bested this once elegant balance of monarchic, aristocratic and democratic elements, giving way to the Principate.

Res Gestae Divi Augusti

The *Res Gestae Divi Augusti* (RGDA), “Achievements of the Deified Augustus,” was composed by Augustus or his secretaries probably during the last months of his life. It was read out to the Senate at its first meeting after his death, and then displayed as an inscription outside his Mausoleum at Rome. The inscription at Rome has not survived, but virtually the whole text has been reconstructed from three copies found in Galatia in Asia Minor. A version in Greek and Latin was displayed on the walls of the Temple of Rome and Augustus in the provincial capital at Ancyra; a copy in Latin was inscribed on a monumental gateway celebrating Rome's conquests in Pisidian Antioch; and a Greek version was displayed upon a large base bearing statues of members of the imperial family at Apollonia. The Greek translation softens the imperialist tone of the Latin original, perhaps in recognition of the different attitude toward Roman rule to be

found in the newly conquered province of Galatia.

The heading of the text declares: “Below is a copy of the achievements (*res gestae*) of the deified Augustus, by which he made the world subject to the rule of the Roman people, and of the expenses which he incurred for the state and people of Rome.” Speaking in the first person, Augustus emphasizes his military achievements—by pacifying the whole world by land and sea, he implicitly surpassed even Alexander the Great—and the large expenditures he made as a result of his conquests. His foreign conquests, especially his defeat of Cleopatra VII at Actium, were key to his financial security, allowing him to undertake a vast building program in the city of Rome, invest in the city’s grain supply, and make cash donatives to its population. The *RGDA* delineates Augustus’ unique relationship to the army, as he molded for himself a role as commander-in-chief of Rome’s military forces: soldiers swore their oaths of loyalty to him; veterans received land on retirement or payments from his own funds; cash donatives marked his triple triumph; troops hailed him as *imperator* 21 times. Unequivocally, the Augustan era is represented as a golden age of peace and prosperity, attributed to the personal achievements of Augustus himself, marked by the closing of the gates of Janus. The *RGDA* is a document of imperial propaganda; this representation should not be accepted at face value.

The *RGDA* starts with the civil wars in the aftermath of Julius Caesar’s assassination. Augustus states, “I liberated the *res publica* from the tyranny of a faction,” depicting his younger self’s illegal raising of a private army as an act of liberation. The *RGDA* mentions Octavian’s victory at Philippi and his clemency toward Roman citizens, but ignores Antony’s crucial role at Philippi and Octavian’s ruthless proscriptions and reputation for cruelty in this period. The second half of the text deals with Augustus’ foreign conquests, describing how peoples from beyond the limits of the empire—including Britain and India—requested friendship with Rome. The *RGDA* gives a positive gloss to the Augustan campaign in Arabia, described by a contemporary, Strabo, as a dismal failure. The *RGDA* also minimizes problems in the client kingdom of Armenia and tensions with Persia which continued beyond Augustus’ death. Nonetheless, the *RGDA* is a central document in the study of the reign of Augustus and of the transition from Republic to Principate.

Resistance to Draft

For much of the Roman Republic, the consuls could rely upon volunteers to provide both experienced and new recruits to fill the ranks of the citizen army needed for each year's campaigning. Military service was a responsibility of Roman male citizens. As the demands of governing a territorial empire and year round campaigning set in (beginning as early as the third century BCE), our sources begin to indicate that Roman citizens were reluctant to serve in troublesome regions (such as Spain) where the fighting was prolonged, victories less certain, and plunder difficult to obtain. The traditional *dilectus* (which was a "selection," not mass conscription) resulted in a shortfall of troops, causing the property qualification for service to be lowered even before Marius eliminated it in 107 BCE. Mass conscription in an emergency, the *tumultus*, was rarer and could be required in response to an extraordinary military challenge or disaster (such as the Varian disaster, 9 CE). Those unwilling to be called up could provide substitutes (*vicarii*). Augustus sold an equestrian into slavery who cut off his sons' thumbs to prevent their being called up for service (Suetonius, *Augustus* 24). Conscriptions were hugely unpopular in Italy during the imperial era; emperors rarely used them. In the later Roman Empire, punishment for those who resisted conscription became harsher. At no time do Roman citizens appear to have resisted conscription out of principle (as in modern conscientious objection).

Revolt

Two types of revolt are apparent: one type of revolt was instigated by a would-be emperor, who might win a civil war and become a successful usurper; the other type did not seek to install a new emperor, but was motivated by provincial subjects' dissatisfaction with Roman rule. This article concerns the second type, provincial resistance (for the first type, see "Usurpation").

Examples of anti-Roman provincial revolts are the Pannonian revolt of 6–9 CE, the Varian disaster of 9 CE, the British revolt of 60/61, the Batavian-Gallic revolt of 69–70, and most famously, the Jewish War of 66–70 (sometimes called the First Jewish War to distinguish it from the Bar Kochba revolt of 132–135, the Second Jewish War). In these provincial revolts, several patterns stand out. First, the provincial subjects had been conquered relatively recently; this applies to all these instances except the Jewish Wars and the Gallic revolt of 69–70. Second, the new subjects resented Roman maladministration, taxation, or conscription. Third, local native aristocrats emerged as leaders, but they had no desire or ability to become Roman emperors because of their hatred of Rome and because of their relatively low status and ethnic origins. Fourth, many of these leaders had served in the Roman army, typically in the *auxilia*, as was the case with Bato of the Daesitiates (a leader of the Pannonian Revolt), Arminius and his brother Flavus (leaders of the Varian disaster or German revolt), and Julius Civilis, Julius Classicus and Julius Tutor (leaders of the Gallic revolt). They acquired a working knowledge of Roman military strategy, tactics, logistics, and leadership which they applied to their rebel armies. Exceptions also

stand out: the British revolt (60/61 CE) was allegedly led by Queen Boudicca of the Iceni, and the Jewish War and Bar Kochba revolt were partly motivated by religious conflict.

Because these accounts of provincial revolts invariably (with the exception of Jewish sources) are written by Greco-Roman authors, they pose major problems of framing and interpretation. Postcolonial approaches to the Roman Empire have questioned and sought to deconstruct the imperial production of knowledge about Rome's enemies. The *topos* that veterans of the *auxilia* defect and lead revolts is particularly interesting. The interpretation of other forms of evidence, documentary or archaeological, for evidence of provincial resistance is another approach to provincial revolt.

Rhine (River)

The River Rhine, 1,230 kilometers or approximately 765 miles in length, runs northward from the Swiss Alps to the North Sea. In Roman antiquity, the Rhine (Rhenus) became the de facto northern border of the Roman Empire with barbarian Germany. The Rhine was a major transport route for the Roman army and for civilian shipping, and many important legionary bases were built on the river.

In his *Gallic Wars*, Julius Caesar relates his expeditions across the Rhine

and his bridging of the river, a triumph of Roman engineering and of the labor of his soldiers (*Gallic Wars* 4.39). However, in the Augustan period Augustus' general Drusus advanced the Roman frontier eastward to the Elbe (Albis). The Rhine-Meuse-Scheldt delta was not easy to navigate, so Drusus also constructed a canal, the *fossa Drusiana*, connecting the Rhine with the IJssel and thus with the North Sea. In 47 CE, Domitius Corbulo constructed another canal, the *fossa Corbulonis*, connecting the Rhine with the Meuse.

After Drusus' death and after the Varian disaster (9 CE), the Romans withdrew the German frontier to the Rhine, where it remained despite Germanicus' punitive expedition into Germany where he defeated Arminius in 16 CE. However, the Rhine must not be considered a rigid, linear barrier separating Rome from barbarian Germany. The Romans needed to operate on both banks of the Rhine and extended Roman control eastward into German territory. The "provinces" of Upper and Lower Germany, formally constituted in Flavian times, were restricted to the Rhineland.

The Rhine was patrolled by a fleet, the *classis Germanica*, based at Cologne, that provided heavy transport for troops and supplies and that also kept watch along the river. Civilian shipping also employed the Rhine as a major waterway. Legionary bases on the Rhine grew up into major settlements, some of which, such as Bonn, Colonia Claudia Ara Agrippinensium (Cologne/Köln), Mogontiacum (Mainz am Rhein), and Nijmegen, are important cities today.

Rhine and Pannonian Mutinies (14 CE)

In 14 CE, legions posted along the lower Rhine River and in the province of Pannonia mutinied simultaneously. Although the mutineers in both camps were unconnected, the incidents were triggered by the death of Augustus

and shared the same underlying causes—terms of service. The incidents are highly informative of Roman responses to military unrest. Once resolved, these were the last large-scale mutinies for at least 50 years.

Augustus, the first emperor of Rome, died in August of 14 CE. At the time the legions assigned to Pannonia (VIII, IX, and XV) were gathered together for summer duties. As soon as the news reached Quintus Iunius Blaesus, the commander of the assembled legions, he declared a break of several days from standard camp duties for the men to rest and honor Augustus. During this break, some of the soldiers began grumbling about conditions and gathered to complain. Soon a mutiny erupted among members of all three legions. Blaesus responded by trying to calm down the men. Although he was unable to stop the mutiny entirely he did get the men to pause long enough to send envoys to Rome and await their return. While the envoys were gone the mutiny in Pannonia flared up again and turned violent resulting in the death of a centurion and some pillaging of the local area. Despite this violence the mutinous legions mostly remained in the camp, an indication that they did not seek to desert or revolt, but wanted to secure legal discharge with the promised cash bonuses.

Nearly simultaneously with events in Pannonia, the four legions assigned to the lower Rhine River (I, V, XX, and XXI) also mutinied. As with Pannonia, the four legions were assembled together in a summer camp to complete seasonal operations. The camp was under the command of Aulus Caecina Severus, legate in the region. When he received news of Augustus' death he also gave his men a couple days' break from standard duties so that they could mourn the death and celebrate the new emperor. During this rest period the mutiny erupted over the conditions of service, a grievance that seems already to have been an issue among the legionaries, and over the rapacity of certain centurions. This mutiny turned violent immediately as the soldiers attacked selected centurions, killing at least one and expelling them from the camp. The soldiers did not attack the commander or the higher-ranking officers or civilians. They also did not pillage the local area, but demanded to send envoys to Rome. As in Pannonia, the super-annuated legionaries wanted release from service after 16 years under the terms in effect when they had enlisted and replacement of some centurions. The legions maintained a form of order in camp and did not desert the fort.

The release from normal duties may have been the trigger for these

outbreaks, but it was not their cause. Primarily, the mutineers sought restoration of the conditions under which they were enlisted, especially honorable discharge after 16 years with a cash bounty, as originally promised (Tacitus, *Annals* 1.26.1). When Augustus had established in 13 BCE regular, lengthy army service he promised to release soldiers after 16 years with a cash bonus, *praemia*. None of our sources suggest that continued service as reserves was expected. According to the *Res Gestae Divi Augusti* (16.2), he paid these bonuses in 7, 6, 4, 3, and 2 BCE. When in 5 CE Augustus reformed the terms of enlistment he extended the length of service to 20 years and increased the *praemia*, but also added five years additional service as reserves for all retired soldiers (Dio 55.23.1). It appears from our sources (Tacitus, *Annals* 1.17.2–6, 26, 31; Dio 57.5.4) that men were not being discharged on schedule, and this had been the primary cause of mutiny in both legionary camps.

Tacitus also reports (*Annals* 1.17.4) that in Pannonia an additional grievance was that discharged men received poor quality land instead of cash. Augustus had created a new military treasury in 6 CE (*RGDA* 17.2; Dio 55.24.9) to pay the soldiers' retirement bounties. This treasury had apparently run into financial difficulties and had been unable to fund all the retirements. The stopgap solution was to retain soldiers past their normal discharge, decreasing the number of veteran candidates for *praemia* through natural attrition. The other solution was to grant marginal land, which displeased the soldiers. In addition to restoring the conditions under which they had enlisted, the soldiers wanted immediate discharge for men who had served their full time. In the case of the Rhine mutiny they also demanded the replacement of certain cruel or corrupt centurions. The two mutinies shared the same cause, but were entirely separate and uncoordinated.

The new emperor, Tiberius, was a seasoned commander, but had his hands full in Rome with the transition and so ordered his nephew Germanicus and son Drusus to take care of the mutinies. Germanicus, adopted son of Tiberius and commander of the legions in Gaul and on the Rhine, was already in Gaul and so went to the mutiny on the Rhine. Germanicus found the mutineers unsympathetic, but peaceful. In an impromptu assembly (*contio*) the soldiers made en masse demands (*acclamatio*) and threatened to raid the countryside and march on Rome. After a botched effort at quick resolution in which he tried to deceive them

with a fake letter from Tiberius, Germanicus was able to conciliate the soldiers sufficiently to return them to obedience. He did so by promising to meet their reasonable demands for discharge if they would return to service. The men took the oath (*sacramentum*) to Tiberius and dispersed to their two winter forts. Germanicus then went up the Rhine to make sure the legions upriver were settled.

Drusus went, accompanied by Aelius Sejanus and two cohorts of praetorians, from Rome to resolve the Pannonian mutiny. Drusus found the mutineers agitated and met with no luck negotiating initially. But a full lunar eclipse, frightening the superstitious soldiers, soon after he arrived provided an opportunity to turn the tables on the ringleaders by swaying some wavering soldiers over to his side. With the support of more men Drusus had the praetorian cavalry surround the camp as he moved against the ringleaders and violently put down the mutiny. Once he had restored order he may have discharged the remaining superannuated soldiers and after issuing a new military oath dispersed the legions to separate winter quarters. The Pannonian mutiny was thus resolved completely.

Events in Lower Germany, however, were less settled. After Germanicus returned to the Lower Rhine legions, he discovered they remained agitated. A new mutiny erupted in his own camp at Ara Ubiorum where legions I and XX were stationed. The Senate had sent representatives to the camp to inform Germanicus his authority had been extended. They had been sent out before news of the original mutiny had reached Rome. Members of legion I, fearing that the envoys had arrived to rescind Germanicus' promises, rioted in camp. Because Germanicus had issued a new oath to the legions after the previous violence, this outburst was effectively a new mutiny. Germanicus addressed his men the next day. Realizing the legions were still restive, he sent the noncombatants away, a clear signal that he intended to use violence to restore order. As a result, the mutineers lost heart and Germanicus was able to seize the initiative with support of sufficient loyal men. The recently mutinous legion then suffered a self-inflicted punishment similar to decimation as they had to judge and execute their fellow soldiers.

Having restored order at Ara Ubiorum, Germanicus turned to Vetera where a new mutiny had also erupted among the two legions (V and XXI) under the command of Caecina Severus. Germanicus gathered *auxilia* with the legions and marched on the camp with a considerable force. Caecina,

ordered to resolve the mutiny before Germanicus arrived, moved against the ringleaders violently with considerable casualties. With the violence completed, the mutinies along the Rhine were resolved.

Afterward, Germanicus led the formerly mutinous legions on campaign across the Rhine. They raided and pillaged local tribes and then withdrew back across the Rhine. The campaign gave the survivors a chance to prove their valor and discipline while rebuilding unit cohesion. It also reasserted Germanicus' control of the units and Caecina's role as a commander. After this campaign, order was restored, and Germanicus returned the legions to their respective winter quarters. The mutiny was resolved.

Although both mutinies occurred at roughly the same time and for similar reasons, there is no indication that the mutinies were in any way coordinated or connected directly. The triggering incident for both incidents was the relaxation of normal discipline following the death of Augustus. The fact that mutinies occurred among no other legions in 14 CE is probably a function of Caecina's and Blaesus' decision to relax discipline. Both incidents followed a similar course not only because of how our sources narrate them, but because such collective unrest often follows the same general pattern or stages.

In the aftermath, once all the long-service veterans had been discharged and the bounties paid out to these two sets of legions, Tiberius canceled Germanicus' promises of 16 years' service on account of the expense and the difficulty in finding sufficient volunteers. Although it may seem like a risky decision given the size of the mutinies, there were no further mutinies over length of service for more than a century, and there would not be another large-scale mutiny for more than 50 years. Despite the size of these incidents, they did not cause harm to the empire or the military because they were handled quickly and resolved completely.

Ricimer (d. 472 CE)

Flavius Ricimer, supreme commander of the western Roman army in Italy (457–472), was notable for elevating and deposing many of the last emperors of the western empire. He was born into a royal family of Visigoths and Suebi in 418. Despite his highborn barbarian background, Ricimer’s career was exclusively Roman. His early prominence probably started under Aetius, whom he served with his future colleague Majorian. Ricimer is first attested as a senior general (*comes*) during the short reign of Avitus (455–456). Ricimer defeated the Vandals at Agrigentum in Sicily in 456 and succeeded in ambushing a Vandal fleet of 60 ships near Corsica the same year. Avitus’ Gallic background and reliance on Visigothic allies made him unpopular in Italy, and the Italian field army revolted with Majorian and Ricimer as its commanders. Both men defeated Avitus near Placentia in October 456 and deposed the emperor afterward. Ricimer was awarded the honor of Patrician and the position of *magister utriusque militiae* by Majorian. While Majorian campaigned as emperor in different provinces, Ricimer remained in Italy where he fostered strong ties with the senatorial aristocracy. After the failure of Majorian’s campaign against Vandal Africa, Ricimer turned on Majorian. He had Majorian executed and elevated his puppet emperor Libius Severus (461–465). Imperial armies in Gaul and

Dalmatia refused to accept Severus, but Ricimer exploited alliances with Visigoths and Burgundians to ward off a potential counter-offensive from Gaul, while employing diplomatic ties with Constantinople to defuse the Dalmatian crisis. During Severus' reign, Ricimer defeated an incursion of Alans in northern Italy. When Severus died, allegedly poisoned by Ricimer, Ricimer governed Italy on his own authority for 18 months. Eventually Ricimer accepted Anthemius as western Roman emperor in 467, as a compromise with the eastern empire to receive military support against the Vandals. Anthemius was the choice of the eastern emperor Leo, as an experienced commander who had served in Illyricum and had a respectable aristocratic pedigree. To secure ties between both men, Ricimer married Anthemius' daughter Alipia.

Anthemius and Leo began a campaign to reconquer Vandal Africa, but Ricimer did not participate in the campaign, which ended as a massive fiasco in 468. Ricimer became increasingly disgruntled with Anthemius and retreated to Milan with his army in 470, while the emperor resided in Rome. An uneasy truce was struck between both contenders which lasted for a year. Ultimately, both men fell out again and Ricimer laid siege to Rome in 472. Anthemius called upon reinforcements from Gaul who were intercepted and defeated by Ricimer. Ricimer then proclaimed the western senator Olybrius as emperor and had Anthemius executed after capturing Rome on July 11, 472. Neither Ricimer nor Olybrius lived long to enjoy their victory; both died from natural causes soon afterward. Ricimer was an Arian Christian (the most widespread heresy of the time) and endowed the church of Saint Agata dei Goti at Rome. Sidonius Apollinaris calls Ricimer "unconquered" (*invictus*) and there is indeed no reference to Ricimer having ever lost a battle (Sidonius, *Second Panegyric*, 352).

The representation of Ricimer in Roman sources is predominantly negative, due to his barbarian background and elevation of and deposition of emperors. His policies were predominantly aimed at the defense of Italy, in which he was relatively successful. However, Ricimer's violent opposition to western Roman emperors who wished to pursue independent policies accelerated the disintegration of imperial rule in Western Europe outside Italy.

Roman Citizen Colonies

Roman citizen colonies were created by the Roman state during the Roman Republic. They were small settlements, with no more than 300 colonists. The settlers were Roman citizens and retained the Roman citizenship; Latins and allies could only join such colonies after the Second Punic War. At the time of the foundation, all settlers received small parcel of land, probably two *iugera* (0.5 hectares).

These colonies were usually placed on the Italian coast, and were crucial for Roman defense strategy: as coastguard stations, they had to watch the most important approaches into the peninsula. Many Roman colonies were established during the First Punic War, at which time naval attacks were a serious possibility. To make sure that the colonies remained up to strength, the colonists were given an exemption from normal military service. From the Second Punic War onward, they were forbidden to stay away from the colony for more than 30 days in a row.

After the Second Punic War a new type of Roman citizen colony was established, which contained 2,000 settlers per colony, who received slightly larger parcels of land; these were no longer exclusively settled on the coast. This change intended to make joining a colony more attractive: colonists had to be offered larger plots and be able to retain their citizenship. At the same time the threat to the Italian coast was less pronounced, so that colonization now increasingly functioned as a mechanism for poor relief rather than a military strategy.

Rome (City)

The city of Rome centers on the fabled “seven hills of Rome,” the Quirinal, Viminal, Esquiline, Caelian, Palatine, Capitoline, and Aventine, that thrust up out of the Tiber River flood plain. The site enables the fording of the Tiber and hence was settled since earliest times (eighth and seventh centuries BCE), the early inhabitants occupying the tops of the hills rather than the swampy and unhealthy valleys. The height difference between the hills and valleys was greater than today because millennia of continued occupation have raised the valley floors and the first-century CE buildings are now below street level.

In the late seventh century BCE, the Romans constructed drains to convert the waterlogged central valley into the Forum, in early Rome a meeting place and market place lacking the splendid buildings later associated with it. Public works in mid-republican Rome emphasized aqueducts that brought clean spring water from the neighboring highlands to the city, enabling the population to grow. The Tiber remained prone to flooding (the embankments that now constrain the Tiber are nineteenth-century works) and wealthier people still preferred to inhabit the hills such as the Palatine, poorer citizens inhabiting the valleys. By the first century CE, Rome had grown to approximately a million inhabitants, the largest city in western Europe before London in the late eighteenth century.

In the Republic, the city of Rome was the center of political life and state religion. Assemblies and debates (*comitiae*, *contiones*), deliberations of the Senate, and elections occurred at Rome; as the population of Roman

citizens in and outside Italy grew, their participation in the political process declined because most could not travel to the city to vote. The state religion, particularly the cults of Jupiter Optimus Maximus, Juno, and Minerva, were based at Rome, with their temples on the Capitoline Hill. Roman cities in the provinces reproduced many of these institutions, cities with temples, forums, and baths becoming symbols of the empire to its subjects.

The city of Rome was also a center of conflict. The concept of the city was intended to exclude armed conflict; the city was surrounded by a ritual boundary, the *pomerium*, which could not be entered by soldiers under arms. The army was mustered outside the *pomerium*, and only a triumphing general and his soldiers were permitted to breach the *pomerium* to hold the triumph ceremony.

Nonetheless urban violence broke out from time to time. In the early Republic, during the patrician-plebeian conflict, the *plebs* repeatedly seceded (took flight to) the Aventine Hill, then relatively remote, and there held their own assemblies and elected their own magistrates, the aediles and tribunes of the plebs. The incorporation of the *concilium plebis* and the aediles and tribunes of the plebs into the mainstream Roman political system meant that the Aventine was no longer an alternate location of power.

In the late Republic, conflicts came to a head with outbreaks of violence, most notably the lynching of Tiberius Gracchus and his followers (133 BCE), followed by the destruction of Gaius Gracchus and his followers in 121, who had followed ancient tradition and occupied the Aventine Hill, where they were besieged. Tribunes such as Lucius Appuleius Saturninus and Publius Clodius Pulcher fomented mob violence and were themselves assassinated. Violent conflict was legitimated by the Senate's creation of states of emergency, such as the *senatus consultum ultimum* (SCU), a decree that suspended normal restrictions on the power of magistrates. A state of emergency was declared against the attempted conspiracy of Catiline (63 BCE).

However, the worst violence in late Republican Rome was the product of civil war, beginning with the conflict of the Marians and Sulla. Sulla's capture of Rome in 88 and 82 marked the entry of a conquering Roman army into the *Urbs*. Sulla's proscriptions created a reign of terror for their victims. The civil war of Caesar and the Pompeians, and the war of Caesar's heir Octavian with the "Liberators," did not threaten the city of Rome

directly, but did not need to; the memory of Sulla lived on, revived when the Second Triumvirate began proscribing their enemies (43–42). The peace that Augustus emphasized was specifically the cessation of civil war.

Shrewd politicians in the late Republic, and the emperors in the Principate, sought to reduce social and political conflict in the city of Rome, as violent conflict was dangerous in a densely inhabited city (prone to fire). Gaius Gracchus instituted a grain ration at a fixed price for poor adult male citizens; the tribune Clodius Pulcher made it free in 58 BCE. Augustus fixed the recipients of the grain ration at 200,000; olive oil was added to the dole by Septimius Severus (193–211 CE) and Aurelian (270–275) changed the grain ration to bread and added pork. These rations were probably not sufficient to support entire families, who continued to depend on gifts from patrons and on whatever earning power individual members possessed.

To maintain public order, the Republic had relied on only a few magistrates, the aediles and junior magistrates such as the *tresviri capitales*. These probably used slave or freedmen dependents as police. The popular agitators of the late Republic had collected gangs of followers whose clashes contributed to public violence. Augustus created the Praetorian Guard, urban cohorts, and *vigiles* to maintain a military presence in the city and maintain public order (though they probably were not a police force in the modern sense of also investigating crime). Though the urban troops did not openly carry weapons, thus upholding the ancient ritual prohibition on weapons within the *pomerium*, nonetheless they were a constant reminder that the emperor's power depended on military force. The praetorians, however, proved a new source of conflict, learning that they could elevate and assassinate emperors, beginning with the assassination of Gaius and elevation of Claudius (41 CE), continuing with the assassination of Galba and elevation of Otho (69), and later the assassination of Pertinax and “auction of the empire” (193).

Elaborate building programs advertised the power of Roman warlords of the late Republic and of Roman emperors, perhaps assisting to defuse conflict by emphasizing legitimacy. Such projects, which might take years, also provided work for Rome's inhabitants. These triumphal monuments, including the Forum of Augustus, the Arch of Titus, the Column of Trajan, and the Column of Marcus Aurelius, emphasized the victories of Rome over external enemies. Though Augustus built a Temple of Mars Ultor (Mars the Avenger) to emphasize his role in avenging Julius Caesar's assassination, he

also built the *Ara Pacis Augustae* (Altar of Augustan Peace).

However, the wrong kind of building could alienate the Romans. The Great Fire of 64 CE burned large areas of the city. After the fire, the emperor Nero (54–68) took advantage of the destruction by building the Domus Aurea, a huge palace complex, which did not endear him further to his subjects.

Long the symbolic center of the empire, a center of trade, immigration, and culture, Rome began to decline as the center of the empire when the emperors no longer visited it. From the late second century CE onward, emperors were frequently away on campaign in the provinces. The emperors of the mid- and late-third century onward hardly ever visited Rome, preferring instead to develop provincial capitals that were nearer the frontiers. Constantine I (306–337) founded the most famous new capital, Constantinople, which survived the fall of Rome and the western empire. Late antique Rome continued to be governed by the Senate and by the city prefect (*praefectus urbi*), a senior official of senatorial rank; when Christianity became legitimate, the bishop of Rome (later the Pope) also became influential. The sack of Rome by the Goths in 410 CE stunned the inhabitants of the Roman Empire, but did not by itself cripple an empire which center(s) of power had shifted elsewhere.

Rome (History)

Rome's origins as a small settlement in central Italy are rooted in myth and legend; the Roman monarchy (ca. 753–510 BCE) was supposedly founded by Romulus and Remus, twin brothers and descendants from the mythological Aeneas, a refugee from the Trojan War. The monarchy was overthrown in 510 by the founders of the Republic to avenge wrongs by the last king, Tarquin the Proud, and his son. This period is mainly legendary, rendered most famously by the Latin historian Livy (59 BCE–17 CE).

The Roman Republic, employing a strategy of allying with the peoples it conquered and using them as manpower in subsequent wars, conquered first its neighbors, the Latins and Etruscans, and then central and southern Italy and northern Italy (termed “Cisalpine Gaul”). Rome's first oversea challenger was Carthage, a major maritime and commercial empire based in what is now Tunisia in North Africa. The First Punic War (264–241 BCE) ended in a draw and a treaty for both states. Carthage employed mercenaries for its army, led by the male members of Carthaginian families with a tradition of such leadership. Hannibal Barca was one of these leaders. In the Second Punic War (218–201 BCE), Hannibal led Carthage's attack against Rome on land, invading Italy from the north and inflicting several stunning defeats (the worst being Cannae, 216 BCE) on the Romans. The Romans, however, were not easily defeated. Fabius Maximus, termed Cunctator (“Delayer”), employed a strategy of attrition on the Carthaginians in Italy; Cornelius Scipio, later surnamed Africanus, attacked Carthaginian possessions in Spain and drew Hannibal away from Italy to North Africa, where he defeated Hannibal in the battle of Zama (202 BCE). Rome imposed harsh treaties on Carthage as a result of the war, but proceeded in the Third Punic War (149–146 BCE) to destroy her already weakened rival completely.

In the second and first centuries BCE, Rome came into conflict with the Hellenistic monarchies, first Macedon, which at this time controlled Greece. The Romans claimed to liberate the Greeks from their Macedonian overlords, but in fact added Greece to their possessions. They proceeded to conquer the Hellenistic Near East, goaded by the resistance of local monarchs such as Mithridates VI of Pontus (in northern Turkey). Immense wealth flooded into Rome as a result, but it failed to enrich all strata equally: the elite benefited while the middle strata, from which Rome's soldiers were recruited, received much less wealth, some falling below the

property qualification required for the recruitment of soldiers. Around 107 BCE, Gaius Marius, one of the late Republic's most successful commanders, took the step of recruiting soldiers from the landless poor and thus creating an at least partly professional army, economically dependent on its commanders.

A pattern appeared in which Roman leaders, given unprecedentedly long and powerful commands against overseas enemies, used the plunder of these conquests to pay their armies. This dynamic separated the interests of the army from those of the state. Gaius Marius' rival Lucius Cornelius Sulla discovered that he could march his army against the city of Rome. Sulla's control of Rome lasted only a short time (82–81 BCE), but he set a dangerous precedent followed by Julius Caesar, who was granted an extended command to wage war in Gaul in the 50s BCE and refused to give it up, choosing instead to begin his civil war with Pompey the Great and his followers (49–45 BCE).

After defeating the Pompeians, Caesar became the *de facto* sole ruler of Rome, adopting the title of dictator. A Roman dictator was a temporary sole magistrate; the term, like the Greek *turannos*, did not necessarily have a tyrannical connotation. However, Caesar declared himself dictator for life and otherwise alienated the Roman republican aristocracy, which assassinated him on March 15, 44 BCE (the "Ides of March"). Nearly two decades of civil war followed, resulting in the rise of Caesar's great-nephew and adopted heir Gaius Julius Caesar Octavianus (Octavian) to sole ruler of the now shattered Republic. Octavian thus became the first of the Roman emperors, taking a new name, Augustus (27 BCE–14 CE). He retained command of the army and thus was termed *imperator* (whence "emperor") but was more often termed *princeps* ("first citizen"). The early Roman Empire from Augustus to the third century CE is termed the Principate.

The Principate (ca. 27 BCE–235 CE) enjoyed relative stability during the first and most of the second centuries CE. Emperors waged campaigns against external "barbarians," annexing parts of Germany, Britain, and eastern Europe. But the main source of conflict was internal: disgruntled senatorial aristocrats who conspired against the emperors, overthrowing Augustus' descendant Gaius (Caligula) in 41 CE and the Flavian dynastic emperor Domitian in 96. Another source of internal conflict was revolts of the army in favor of usurpers who won the support of the armies, whether by cash payments or other patronage. This happened in the so-called Year of

Four Emperors, 69 CE, named for its three short-lived emperors Galba, Otho, and Vitellius; the fourth was its victor Vespasian (69–79). Internal conflict also occurred on the edges of the empire, most famously the revolt of Britain in 60/61 CE, of the Jews in 66–70 CE, and of the Gauls in 69–70 CE.

In the late second and early third centuries, after about 193, the pattern of revolts and usurpations began to spin out of control. A strong dynasty, the Severans, rose to power from a civil war and maintained its grip till 217, when Caracalla, the son of the founder Septimius Severus, was assassinated. Two of his successors, Elagabalus (218–222) and Alexander Severus (222–235), exploited links with the Severan dynasty. The third century, especially after 235, was marked by a succession of short-lived emperors and by renewed incursions along the frontiers. Stability was restored by the emperor Diocletian (284–305) and his imperial colleagues, the Tetrarchy or “four rulers,” which reorganized the empire for more effective administration and dropped the illusion of “first citizenship” and cooperation with the Senate.

Unfortunately, Diocletian attempted a system of non-hereditary imperial succession that his colleagues and successors did not succeed in maintaining. A period of civil war ensued that enabled the rise of Constantine the Great (306–337), who was the first to revolt in 306 and eliminated most of his rivals by 312. He established his own sole rule (after 324) and reverted to dynastic succession. Though Constantine built upon and strengthened the administrative institutions that Diocletian had reorganized, Constantine is most famous for his conversion to Christianity, an unprecedented event (his immediate predecessors had persecuted the Christians). The later Roman emperors from Constantine onward were Christians, with the exception of Constantine’s nephew Julian (361–363), who was raised as a Christian but, influenced by Greek philosophy, converted to paganism. New sources of conflict arose, Christian doctrinal controversies and persecution of heretics.

The later Roman Empire in Western Europe (284–476) was under pressure from migrating peoples outside its boundaries, but was able to cope before the battle of Adrianople (378), a massive defeat. Internal conflict may have increased, though our evidence for it is an unprecedented volume of imperial legislation that shows Roman government’s struggles to maintain the army, collect taxes, and assert its power against increasingly powerful local landowners.

After the 390s, the empire was divided into its western and eastern (Greek-speaking) halves, each ruled by one of the sons of Theodosius the Great (379–395). A pattern developed in which the western emperors, increasingly figureheads, relied upon powerful generals who commanded often non-Romanized troops against the incursions of other “barbarian” peoples. Civil war and usurpation continued to destabilize the later Roman Empire, particularly in the western empire. Eventually the western generals found that they could do without emperors. Central authority in western Europe devolved into a series of “barbarian” or post-Roman kingdoms. In the eastern Roman Empire, the central authority and urban civilization were stronger; the empire was able to fend off outside threats. Though diminished by the Arab conquests of the seventh century, the eastern Roman Empire persisted as the Byzantine Empire until 1453 CE.

Rome, Siege of (410 CE)

In the “siege of Rome” in 410, the Visigoths threatened the city of Rome for the third time and actually sacked it during August 410. After the downfall of the western Roman supreme commander Stilicho in 408, there was nothing to stop the demands of the Visigothic warlord Alaric. Alaric had

previously attempted to invade Italy in 401–402 but had been halted by Stilicho at the battles of Pollentia and Verona.

After he received a western military command, Alaric moved to Noricum in 408. He then demanded 4,000 pounds of gold in tribute, nominally as payment for his troops, which was refused by the emperor Honorius. In the winter of 408–409, Alaric and the Visigoths reached Rome and threatened to besiege it. Instead, the Visigoths cut off the city's grain supply from Portus, the port of Rome in the later empire, and the looming threat of famine forced the Senate to negotiate an agreement. In return for huge sums of gold, silver, silk, spices, and a great number of slaves, Alaric withdrew his forces to Tuscany while arranging a meeting with imperial representatives near Rimini in the spring of 409.

At these talks, Alaric mainly used Rome as a tool to pressure Honorius' court into negotiations. During the first talks he demanded the rank of *magister utriusque militiae* (commander-in-chief, Stilicho's former position), gold and grain for his soldiers, and the provinces of Venetia, Dalmatia, and Noricum to station them. Honorius' court refused these terms, after which Alaric merely requested grain and the province of Noricum. When this was also refused, Alaric marched on Rome again and commenced a second "siege," or rather show of strength near the city to intimidate the Senate. In collaboration with Alaric, the Roman Senate acclaimed the city prefect Priscus Attalus as emperor in December 409. Attalus appointed Alaric as his supreme commander, and together they tried bringing the cities of northern Italy to their fold during the first half of 410. They laid siege to Ravenna where Honorius' garrison was on the verge of mutiny. The timely arrival of 4,000 eastern Roman soldiers in the harbor of Ravenna meant an unexpected reinforcement of Honorius' position. Meanwhile, Alaric and Attalus had failed to secure the African provinces. The African regional commander Heraclian remained loyal to Honorius, sent the emperor financial aid, and, more importantly, annulled grain shipments to Rome, thereby critically undermining Attalus' authority in the city. A dire famine broke out among the Romans, who allegedly even resorted to cannibalism.

Alaric attempted one last time to negotiate a settlement with Honorius, deposing Attalus as a gesture of good will. An unexpected raid on the Visigothic camp by a rival Gothic commander in Honorius' service ultimately broke down these peace talks. Alaric saw no alternative but to satisfy the demands of his troops and returned to Rome for a final siege. The

Visigoths entered the city through alleged treachery from within, when at least one Roman opened the Salarian Gate to them. From August 24 to 27, 410 the Visigoths were allowed to sack the city, on the condition that no arson was committed and citizens seeking sanctuary in churches be spared. The Visigoths withdrew due to shortage of food and progressed through Italy until Alaric's unexpected death from illness later in 410.

Politically and militarily, the sack of Rome did little to change the stalemate between the Visigoths and the imperial court. Nevertheless, the sack of Rome created a major outcry among Romans around the Mediterranean and stirred intellectual debate between pagans and Christians.

Romulus Augustulus (Emperor) (475–476 CE)

Romulus Augustulus, the last Roman emperor, was the son of Orestes, who was made *magister militum* by the emperor Julius Nepos in 475. In August of that year Orestes, with the aid of the Heruli, Torclingi, and Scirian *foederati*, seized the city of Ravenna, the capital of the diminished western Roman Empire. However, Orestes did not capture Julius Nepos who fled to Dalmatia. Orestes placed his son Romulus Augustulus ("little Augustus") on the throne of the western empire. Augustulus was then 12 years old, implying that he was a figurehead for his father's rule.

Orestes sought recognition for his son from the eastern Roman Empire, but such recognition was not forthcoming, Constantinople preferring to

maintain its support for Julius Nepos. Orestes then attempted to consolidate his hold over what remained of the Roman state. Orestes, however, made a fatal mistake by reneging on a promise made to his *foederati* to give them Italian land to settle on. The *foederati* in turn deserted Orestes and allied themselves with the warlord Odoacer. Orestes rallied the remaining Roman forces to his son's cause and met Odoacer in battle near the city of Placentia (Piacenza). Orestes' force was defeated and Orestes himself captured and executed. Odoacer then deposed Romulus Augustulus, sending him into exile in Campania. Augustulus then disappears from the historical record. With the exile of Augustulus the Roman Senate, in conjunction with Odoacer, wrote to Zeno, the eastern Roman emperor, placing themselves under his rule. Odoacer, in theory, then ruled Italy in the name of the eastern Roman Empire. In practice, Odoacer ruled Italy as an independent king. He allegedly refused the imperial regalia, sending them back to Constantinople.

Saguntum, Siege of (219–218 BCE)

In May 219 BCE, the Carthaginian general Hannibal Barca besieged the Iberian east coastal town of Saguntum (modern Sagunto, Spain). The siege lasted some eight months precipitating the Second Punic War (218–201). From 237, the Barcid family had been establishing the Carthaginian presence in Spain and was slowly advancing this northward. It is in this context that Rome took an interest, fearing their dominance of the region. However, Rome was preoccupied with Gaul and Illyricum and had no interest in engaging Carthage in war and signed the Ebro Treaty (226/225) with Hannibal's brother-in-law, Hasdrubal, prohibiting Carthaginian expansion beyond the river, which is some 150 kilometers north of Saguntum. Technically, then, Saguntum was under the aegis of Carthage. But, by 220/219, the Saguntines were wary of Hannibal's advances and appealed to their ally, Rome, to intervene, warning Hannibal of potentially contravening the treaty.

The order of events leading to the siege of Saguntum is not clear in the sources but appears to be as follows. Its strategic position on a hilltop close to the Mediterranean Sea was vitally important for Hannibal's plans to invade Roman territory. He thus ignored Roman demands and stormed the town. His aggressive stance was immediately noticeable, but he underestimated the opposition and this led to a protracted siege with many Carthaginian casualties including Hannibal himself. In the meantime, the Saguntines appealed to Rome for help, but it never arrived. The assault was fierce. Siege tactics and sophisticated weaponry and machinery, including battering rams and catapults were deployed. During Hannibal's recuperation, his men constructed further siege works and the fighting

continued with incessant ferocity. Nevertheless, the Saguntines showed their own determination, resilience and were adept defenders in their own right. They adopted the use of the *falarica*, described by Livy as a fearsome javelin coated with pitch and sulfur and set alight before being hurled: it was used with some success. In the end, however, superior machinery and numbers won the day and the reduction of Saguntum was completed. Hannibal ordered instructions that survivors of military age should not be spared. The town itself was ransacked, captives were sold, and plunder was dispatched to Carthage. Hannibal was now in a position to invade Italy.

Carthage's defeat and indignity after the First Punic War (264–241), coupled with Rome's behavior in Corsica and Sardinia, can be seen as the prime factors for the causes of the Second Punic War. War was thus unavoidable, and the capture of Saguntum provided the incentive. The result was a 16-year war in which Rome, though almost defeated, would emerge victorious once again. Although Hannibal was to threaten Rome's military machine on several occasions, notably Cannae (in modern Apulia, Italy) in 216, the eventual consequences for Carthage were devastating. For Rome, it established their presence in Spain for some 600 years.

Sallust (86–ca. 35 BCE)

Gaius Sallustius Crispus was a senator in the late Roman Republic who is best known for his surviving historical works, the *Bellum Catilinae* or “Catilinarian Conspiracy,” and the *Bellum Jugurthinum* or “Jugurthine War.” He is the first Latin historian whose works survive intact; earlier historians’ works only survive in fragments quoted by later authors.

Sallust was quaestor ca. 55 BCE, and tribune of the plebs ca. 52, when he sided against the tribune of the plebs Titus Annius Milo. In 50 the censors expelled Sallust from the Senate for his alleged personal immorality, though the prominence of moralizing in Sallust’s historical works suggests the subsequent exaggeration of this anecdote for ironic contrast.

The support of Caesar enabled Sallust to be elected to another quaestorship, which permitted him to reenter the Senate. In return, Sallust served as one of Caesar’s military officers during the civil war of Caesar and the Pompeians. Sallust was not a very successful military officer, failing to quell the mutiny of Caesar’s soldiers in Campania (Appian, *Civil Wars* 2.92; Dio 42.51.1). Nonetheless, Caesar made Sallust proconsular governor of Africa. As governor, Sallust allegedly enriched himself through extortion (Dio 43.9.2). Sallust was prosecuted for extortion upon his return. Despite his acquittal, he retired from politics and devoted himself to writing. He died sometime after 35 BCE. Besides the *Bellum Catilinae* and *Bellum Jugurthinum*, Sallust wrote a *Histories* which has not survived extant; fragments are quoted by other authors.

The *Bellum Catilinae* covers the Catilinarian Conspiracy of 63 BCE and events leading up to it. It can be compared with Cicero’s contemporary speeches, the *Catilinarian Orations*. Cicero was consul in 63 and emphasizes his role in suppressing the conspiracy. In contrast, Sallust downplays Cicero’s role to showcase Catiline himself and sketch a colorful array of conspirators, including Sullan veterans, barbarians, and women. Sallust contrasts the speeches of Cato the Younger and Caesar, advocating respectively for Catiline’s execution and acquittal. These speeches may have been based on Cato’s and Caesar’s actual words; however, as is common with speeches in ancient historiography, Sallust the historian uses them to present his own analysis of the situation. The *Bellum Catilinae* is most famous for its programmatic preface, presenting an abbreviated and moralistic version of Roman history that contrasts a virtuous past, when

Roman men were motivated by *virtus* (courage in battle, virtue) and military glory, with the decadent present, motivated by *avaritia* (greed) and *luxuria* (luxury, self-indulgence).

The *Bellum Jugurthinum* treats the history of the Jugurthine War (ca. 112–105 BCE) and the rise of Marius and Sulla. In contrast with the *Bellum Catilinae*, its characters are less clear-cut. Though Marius defends himself (*Jugurthine War* 85) in a long speech vituperating the decadent aristocracy, and aligning himself with traditional Roman military virtues, Marius' conduct elsewhere in the *Bellum Jugurthinum* is clearly criticized by Sallust. During the Jugurthine War, Sulla was Marius' quaestor, a relatively junior officer, but with hindsight Sallust sketches his formidable character. The *Bellum Jugurthinum* sketches a gloomy portrait of Roman politics: "Romae omnia venalia esse" (*Jugurthine War* 8.1): "at Rome, all things are for sale."

Sallust's work is regarded as a major influence upon the Latin historian Tacitus, who wrote in the early second century CE and employs a similar terse style and similar moralizing.

Samnite Linen Legion

A military force raised by the Samnites in 293 BCE that fought against the Romans at the battle of Aquilonia. According to Livy, the Samnites were

hard pressed by the Romans and employed a brutal ritual to secure victory (Livy 10.38). An area was enclosed with linen strips within which sacrifices were made following precepts of a linen book. Men were then brought in, 10 at a time, and swore an oath not to run from battle or suffer a curse on themselves, their households, and their families. Any who refused the oath or broke it were to be killed. Supposedly 16,000 men were enrolled in the Linen Legion, outfitted with impressive weapons and armor, and paired with another force of 20,000 men of similar quality. This episode fits into Livy's narrative of the Samnites' increasingly desperate and ineffective attempts to oppose the Roman conquest. Ancient authors often associate linen with archaic rituals. The ritual resembles a *lex sacrata*, which was a method of raising and unifying military forces through rituals which other early Italian peoples are said to have used. Livy emphasizes the inhuman nature of the ritual, reflecting negatively on the Samnites. Since Samnium, a region of central Italy, was impoverished, the lavish armor is probably a later fabrication. The Linen Legion was defeated in battle purportedly due to Samnite dread of their own ritual and Roman stratagems.

Samnite Wars (343–ca. 272 BCE)

In Italy, Romans and Samnites fought each other in a series of conflicts known as the Samnite Wars stretching from 343 to ca. 272 BCE. Traditionally there are three Samnite Wars with the Pyrrhic War as essentially a Fourth Samnite War. Italy at this time was a chaotic and dangerous land with communities fighting for survival against aggressive neighbors. As a result of these conflicts, the Romans consolidated their control over Italy, creating a cohesive political and military network, and used the resources of the peninsula to conquer the Mediterranean.

Early Italy was a land divided among hundreds of communities that ranged from small pastoral villages to large cities with varied levels of organization. Some connections linked Italian peoples, including common religious shrines/sanctuaries, trade, intermarriage, and language. Through the fifth and fourth centuries BCE isolated communities developed a sense of regional identity, based on common language, culture, and geography, making it possible to speak of "Samnites," "Latins," and other peoples acting in a somewhat cohesive fashion. In part, such changes can be traced to increased contact with the Etruscans, Greeks, and Carthaginians. Growing regional identity allowed greater cooperation among Italian communities, but did not end intra-regional conflicts.

By the mid-fourth century BCE, pressure from neighboring peoples spurred the Romans to consolidate loose control over the Latin cities in a military alliance. The Samnites slowly consolidated into larger tribes (the Pentri, Hirpini, Caudini, and Caricini) and then the broader confederation of Samnium. The poor resources of Samnium also propelled the Samnites to raid their neighbors as well as migrate when population grew too large through a *ver sacrum* (sacred spring) ritual in which all of the youths born in a certain year were dedicated to follow a totem animal to a new place to live. By the mid-fourth century BCE, the Romans and Samnites could coordinate the military efforts of their regions in prolonged conflicts.

As the Romans and Samnites amalgamated regionally, they began to expand their influence further through military alliances. Italian society was heavily militarized. Generally men's position in society and politics was determined by military accomplishment. The peninsula was divided among peoples who required military achievement to fuel domestic influence, resulting in a self-replicating pattern of aggression. Military alliances between communities further enhanced both defensive and offensive capabilities. In 354 BCE, the Romans and Samnites concluded their first alliance, perhaps in an effort to avoid conflict as their spheres of influence drew closer. War broke out nonetheless.

Over this period, the causes of the conflicts changed in response to shifting circumstances. The First Samnite War resulted from Samnite raids against the Sidicini, a small people of northern Campania who called for help from Capua who in turn looked to Rome. After a debate in the Senate, Roman desire to expand their alliance network won out over their existing Samnite alliance following a pattern of Roman behavior of allying with

people that resulted in war with a third party. So too, between the First and Second Samnite Wars the Romans and Samnites competed for allies, primarily in Campania, resulting in slowly building tensions that eventually led to another war. In the face of continued threats (both real and perceived) the Romans sought to subdue neighboring peoples and, in time, all the peoples of Italy. By the end of the fourth century BCE, Samnite motivations for opposing Rome shifted to a resistance of growing Roman hegemony in Italy that was seen as threatening regional independence.

The sources for Rome's wars in Italy are distorted in favor of the Romans and depict the wars as epic conflicts. The most complete narrative is the history of Livy (written during the reign of Augustus), the extant portion of which describes the Samnite wars down to 293 BCE. Later Roman conceits about the nature of their rise to prominence shaped the narrative of the wars into a slow and inevitable Roman victory. Roman authors falsely portray the conflict as one that both the Romans and Samnites knew would determine the leadership of Italy.

The First Samnite War (343–341 BCE) is difficult to assess due to Roman elaborations of the narrative. It began as a result of Samnite raids into Campania, forcing Capua to ask for Roman aid. The war was likely small in scale, limited to minor battles in Campania and nearby. After three years, the Romans and Samnites made peace. Afterward, Rome's allies refused to stop fighting. As a result, the Romans waged a war to assert their dominance over their allies in the Great Latin War (341–339 BCE), in which the Samnites provided important assistance aiding Roman victory.

The largest of the Samnite Wars was the second (326–304 BCE). In the years since the Great Latin War, the Romans and Samnites expanded their alliances at the expense of each other, resulting in war. Early on, the Romans lost two major battles at the Caudine Forks and Lautulae, which Roman historians minimized. Subsequently, the Romans slowly isolated Samnium by expanding the war, establishing colonies throughout central Italy and expanding their military alliances into central and southern Italy. By the end of the war, Roman armies broke their way into Samnium and inflicted heavy losses, forcing the Samnites to sue for peace.

Weakened by the previous wars, the Samnites resorted to new tactics in the Third Samnite War (298–290 BCE). The Romans commanded huge resources through their alliances, resulting in a polarization of the peninsula into Rome's alliance system and the rest of the Italians. The Samnite general

Gellius Egnatius forged an alliance of Samnites, Gauls, Etruscans, and Umbrians against Rome; the Samnites and Gauls fought at Sentinum in northern Italy in opposition to Roman hegemony. After a close battle, the Romans were victorious. Later, the Samnites attempted to raise a new army known as the Linen Legion through a dreadful ritual meant to inspire and unite them, but this force too was defeated. Unable to resist Roman invasions of Samnium, the Samnites surrendered again.

The Romans and Samnites fought again in the Pyrrhic War (280–275 BCE), which was a kind of fourth Samnite War. In 282 the Greek Tarentines of southern Italy attacked a Roman fleet and invited Pyrrhus of Epirus to help them, promising Samnite support. Pyrrhus, the Samnites, the Tarentines, and other allies defeated the Romans in two battles and briefly invaded Latium. Heavy losses, a failed invasion of Sicily, and defeat in a third battle against the Romans prompted Pyrrhus to return to Greece. The Samnites continued to fight until 272 but were forced to surrender.

Among the most prominent Roman generals of the Samnite Wars were Quintus Fabius Maximus Rullianus, Lucius Papirius Cursor, and Publius Decius Mus, who boasted multiple consulships, dictatorships, and triumphs.

The Samnite Wars were a key factor in the Roman conquest of Italy resulting in huge amounts of resources and manpower in Roman hands that they could use to fuel expansion. The Romans had seized huge swaths of territory from their defeated foes, some of which was used to settle citizens and colonies but most became public land of the Roman people. Extensions of Roman citizenship were a means of incorporating and controlling allied communities in the fourth century BCE. As such, many of the Latins were full citizens while the Campanians and Sabines were citizens without the vote. Due to land seizures and citizenship extensions the Romans controlled resources and population far outstripping other Italians. Such extensions ceased after the Samnite Wars as citizenship gained enhanced value due to greater Roman power, resulting in discontent among those Italians who desired to play a more influential role in the Roman political system.

Throughout the Samnite Wars, the Romans founded a number of Latin colonies, which were made up of former Roman citizens mixed with some Latins and local population. Principally meant to act as garrisons in potentially hostile territory, they also spread Roman culture through local economic and social contacts knitting the peninsula together. Citizens of Latin colonies had rights of intermarriage, commerce, and emigration with

Rome.

Roman hegemony had significant effects on the peoples of Italy. Urbanization occurred throughout the peninsula, especially in those areas where cities had been less common. Trade and commerce greatly expanded within Italy and beyond, taking advantage of growing Roman influence. Many Italian elites found it expedient to tie themselves closer to Rome for their own economic and social benefit. In the third and second centuries BCE, the Romans promoted a concept of Italy as a whole (*tota Italia*) to create a common sense of identity. Following the trends of regional differentiation of previous centuries, regional cultures strengthened even as Roman culture became more influential. Latin became a lingua franca, but rarely replaced local Italic languages, which survived into the late first century CE.

By 265 BCE, all the peoples of Italy were tied to Rome through bilateral alliances or other similar ties. The only requirement Rome imposed on allies was military service. Italians made up half of Roman armies. The intra-Italian warfare endemic in earlier periods ceased, which aided growing economic prosperity and created a vast pool of military resources for the Romans. Polybius estimates the total manpower available at 700,000 infantry and 70,000 cavalry (a third of which were Romans). In terms of fielded numbers, in 212 BCE the Romans deployed nearly 250,000 men (half Italians) shortly after losing over 100,000 men to Hannibal. No other ancient state had similar manpower reserves.

After Roman consolidation there was some surviving resentment and new sources of discontent, especially among the Samnites. They joined Hannibal's army in Italy and rebelled against Rome alongside the rest of the Italians in the Social War (91–87 BCE) in the face of increasing Roman imperialism and a refusal to extend citizenship. Despite some residual hostility, the Romans forged Italy into a cohesive whole that provided the means of creating their empire. In time, the peoples of Italy would lose their individual regional identities and become Romans in the aftermath of the Samnite Wars.

Samnium, Samnites

Samnium (*Safinim* in Oscan, an Italic language the Samnites spoke) was a mountainous region of Central Italy that was the homeland of the eponymous Samnites. The Apennine Mountains in this region are not uniform in arrangement, but are made up of various subranges that divide the area into small valleys and plateaus. The high peaks of Samnium's mountains remain covered in snow much of the year and give rise to a number of rivers that flow down into the neighboring plains, although within Samnium the rivers are modest in size. The mountains lack any significant mineral wealth. Prior to increased deforestation in the second century CE, some of the mountains were covered in noteworthy forests. The high altitude of Samnium produces some of the harshest winters in Italy, with significant amounts of snowfall. Summers are hot and dry. Samnium was not as agriculturally productive as the lowland plains of Campania, and though some Samnites were farmers, many were herders, a practice which expanded during the second century BCE when Rome acquired more public land in the area that could be used to support large herds of animals. Samnium's poor resources resulted in few major urban centers. Their largest urban centers were Malventum and Bovianum. After the Samnite Wars ended in the early third century BCE, the Romans founded Latin colonies at Malventum, which they renamed a more positive-sounding Beneventum, and Aesernia, and extended the Via Appia across the region. Augustus placed Samnium in region IV of his division of Italy.

As a result of the harshness of the mountains, Samnium could not support a population to match other regions of Italy. When the local

populations grew too large for the land to support, the young men of the community migrated to other areas of Italy, often following a totem animal in a ritual called the *ver sacrum* (sacred spring). The ritual migrants were not necessarily welcome elsewhere, leading to conflict.

Divided into four major tribes, the Pentri, Hirpini, Caudini, and Caricini, the Samnites spoke an Oscan dialect, a subset of the Italic family of Indo-European languages. Their society was organized into extended family groups or clans. They however were not isolated from the rest of Italy and the Mediterranean; they had acquired extensive aspects of Greek culture, including artistic motifs, an alphabet, and religious practices, and were in close contact with the other peoples of Italy through trade, intermarriage, alliances, and cultural exchange.

Detail of tomb fresco from Paestum, depicting Samnite warriors, fourth century BCE. The Samnites, occupying the mountains of central and southern Italy, were particularly fierce warriors, finally defeated by the Romans in three wars from 343 to 290 BCE. Located in Paestum, Italy. (Leemage/Corbis)

The Romans discovered that Samnium was one of the most difficult regions of Italy to conquer, partly because of the geography and partly because the Samnites were tough and aggressive. Approaches into Samnium were few and often difficult to traverse. The Samnites were able to exploit

the mountain passes and their dispersed fortifications to help protect their lands from invasion. In 321 BCE, the Samnites ambushed and captured an invading Roman army in a small valley called the Caudine Forks. As late as 277 BCE, the Samnites inflicted a severe defeat on a Roman army that attacked them in the otherwise unknown Cranite Mountains.

The Samnites themselves were a warlike people. By the fifth century BCE, the four major tribes formed a confederacy that could coordinate military activity to some degree. Samnites men were warriors and are depicted as such in surviving Samnite art. Tribal elites led bands of loyal warriors, relying on personal connections rather than an institutionalized army. Some Samnites served as mercenaries for the Carthaginians and Greeks. The Romans fought the Samnites in three long, brutal wars, from 343 to around 272 BCE. When Pyrrhus and Hannibal invaded Italy in the late third century BCE, the Samnites aided them against Rome.

In the Social War (91–87 BCE), the Samnites played a central role in the Italian rebellion against Roman rule. They refused to accept peace and Roman citizenship along with the other allies. Consequently, Sulla took terrible reprisals on the Samnites and forcibly subdued Samnium in 82 BCE. It is unlikely that Sulla succeeded in genociding the Samnites, since their mountains offered many refuges, but in subsequent centuries the Samnites disappeared, being absorbed into the general population of Italy.

Sarmatians

The *Sarmatae* or Sarmatians were a Central Asian people north of the Black Sea who migrated into the lower Danube region between 250 BCE and 50 CE, coming into conflict with Rome in the late first through third centuries CE.

They are poorly distinguished from the similar Scythians in Greek sources, and even in the middle empire Greek authors sometimes term them Scythians.

There were two major groups of Sarmatians: the Roxolani, occupying the Danube delta, and the Jazyges, who migrated to the region north of Pannonia Inferior. The Romans fought an alliance of the German Suebi and the Sarmatians in Domitian's reign, which motivated Domitian (81–96) to make peace with the Dacian king Decebalus. In the middle second and third centuries CE, the Jazyges joined with the Marcomanni and made raids across the Danube. The Roxolani raided into Moesia Inferior.

On Trajan's Column, the Sarmatians wear distinctive scale armor, covering every part of their bodies except their heads, which wear pointed helmets. Their horses are armored similarly. This rendering seems implausible, but archaeologists have found metal scale armor at Sarmatian sites. Their armor precedes the Persian and Roman cataphract (heavy armored) cavalry of the mid-third century and later.

Scipio Aemilianus (185/4–129 BCE)

Publius Cornelius Scipio Aemilianus, often called Scipio Africanus the Younger or Scipio the Younger, was a prominent Roman aristocrat, politician, and general of the mid-second century BCE. He commanded the siege of Carthage in the Third Punic War (149–146 BCE) and destroyed the city of Carthage, eliminating the Republic's most formidable enemy. He also commanded the Numantine War (134–133), besieging and destroying Numantia, a Celtiberian settlement that had offered stiff resistance to the Romans in the conquest of Spain. Closely related to Tiberius and Gaius Gracchus, he became an opponent of Tiberius' land commission and died in 129 under mysterious circumstances.

Scipio's family connections were very illustrious. He was the second

oldest son of Lucius Aemilius Paullus, the commander of the Third Macedonian War in 168 and victor of the battle of Pydna. While still a child, Scipio was adopted by a son of Scipio Africanus, Publius Cornelius Scipio, who had no living children. Scipio Aemilianus' agnomen thus indicated his original family, the Aemilii. Africanus (who had died in 183) had married Aemilia, Aemilius Paullus' sister, and had two daughters, one of whom, Cornelia, married Tiberius Sempronius Gracchus and had three surviving children, Sempronia, Tiberius Gracchus, and Gaius Gracchus (the future tribunes of 133 and 123–122 BCE). Scipio Aemilianus was later married to Sempronia, but they had no children.

Such distinguished ancestry put pressure on young Roman nobles to live up to them. After the end of the Third Macedonian War, Aemilius Paullus befriended the Achaean hostage Polybius, who focuses on and is favorable to Paullus and Scipio Aemilianus in his *Histories*. According to Polybius (31.23.1), the young Scipio confessed to him that he felt inadequate to his family's expectations of him. He had not yet begun speaking in the courts and assemblies, as was usual for young nobles at this time. Polybius appears to have counseled Scipio to distinguish himself in other ways, through good moral conduct (moral decline is a theme in Polybius) and through generosity with the money he inherited.

Scipio also proceeded to distinguish himself in military service. The protracted and difficult Spanish Wars were proving unpopular with Roman soldiers. In 151 the consuls held the *dilectus*, but a poor turnout resulted in their coercion of recruits. The consuls were confronted by the tribunes of the plebs, whose task it was to defend citizens against the magistrates' use of violence. As this conflict erupted, Scipio Aemilianus created a sensation by volunteering to serve in Spain as a military tribune. He could have elected easier and more lucrative service in the eastern Mediterranean. In Spain Scipio distinguished himself, winning a duel with a Celtiberian champion and winning a mural crown for being the first to storm a besieged settlement.

Scipio served in the Third Punic War (149–146 BCE), first as a tribune, rescuing Roman troops (for which he was awarded another crown) and negotiating aid from the now very old Masinissa, the king of Numidia, who aided Scipio due to friendship with his adoptive grandfather Africanus. Scipio returned to Rome in 147 to run for aedile. Instead the people of Rome awarded Scipio the consulship to wage the Third Punic War, even though

Scipio was not yet old enough and had not yet been aedile or praetor (the offices that preceded the consulship). He was awarded command in Africa, overriding the usual assignment of provinces by lot. The parallel was with Africanus, who also had received special nomination for the consulship at age 31 to wage the Second Punic War in 205.

Taking charge in Africa, Scipio Aemilianus cut off Carthaginian access to their harbor and besieged the city of Carthage, destroying it house by house and capturing the citadel (146 BCE). He sold the Carthaginians into slavery and razed the city. Carthaginian North Africa was reorganized as the Roman province of Africa. Returning to Rome, Scipio was awarded a triumph and took the name Africanus. Scipio, now famous, was sent to the Hellenistic eastern Mediterranean in 143 to negotiate with various monarchs. He held the censorship in 142.

In 135, Scipio was elected consul for the second time for 134, to wage war against the Numantines, a Celtiberian (Spanish) people who resisted Roman conquest. The Numantine War was effectively a war of vengeance for Celtiberian resistance and for the humiliation of the Romans: a few years before, the Roman commander Gaius Hostilius Mancinus had conceded a treaty with the Numantines (in effect a surrender) that the Senate then rejected, forcing the Romans to surrender Mancinus to the Numantines. Tiberius Gracchus had assisted Mancinus in his negotiations; Scipio supported the Senate's rejection. In Spain, Scipio first imposed severe discipline on the Roman army, which was demoralized from the long, unsuccessful war. He threw out thousands of camp followers (including officers' servants, entertainers, prostitutes, and soothsayers) and imposed hard labor on the soldiers. He then besieged Numantia, erecting massive earthworks, and starved the city out, which finally surrendered. Scipio enslaved the surviving Numantines and returned to Rome to triumph. In his absence, the land conflict had come to a head; because of actions during his tribunate in 133, Tiberius Gracchus and his followers had been massacred by Scipio Nasica and his followers.

A consummate aristocrat, Scipio Aemilianus was probably opposed in principle to the Gracchan land redistribution program. To oppose it, he defended Rome's wealthy Italian allies who held *ager publicus* that was subject to redistribution by the Gracchan program. Scipio influenced the Senate to remove judicial powers from the Gracchan commission, reserving these powers for the consuls. This aroused great popular anger against

Scipio. One morning in 129, Scipio was found dead, apparently having died in his sleep, but there were rumors that he had been assassinated (poisoned or strangled) by those with reason to hate him, including his own wife Sempronia and mother-in-law Cornelia. There was no investigation into the cause of his death.

The sources for Scipio Aemilianus' life are incomplete. Plutarch wrote a biography that is not extant. Polybius' original *Histories* covered the period of Scipio's life at least through the destruction of Carthage, and Polybius may also have written a history of the Spanish Wars, but his continuous narrative for these periods is also not extant. Appian's *Spanish Wars*, probably based on Polybius, provide a continuous narrative. Livy's *History of Rome* also covered the period of Scipio's life, but the surviving text breaks off shortly after the Third Macedonian War; summaries of Livy survive, the *Periochae*. Cicero's *De re publica* (*Republic*), *De senectute* (*On Old Age*), and *De amicitia* (*On Friendship*) employ Scipio Aemilianus as an idealized character and interlocutor. Reputed to have wept at the destruction of Carthage because he forebode the destruction of Rome, the historical Scipio probably agreed with Polybius' theory of constitutional cycles, in which monarchy is overthrown and replaced by aristocracy, which degenerates into oligarchy; spurred by demagogic leaders, oligarchy is replaced by democracy, synonymous in Polybius' view with anarchy and leading to the rise of another monarchy.

Scipio Africanus (236–183 BCE)

Publius Cornelius Scipio Africanus (Scipio the Elder) was a republican

Roman statesman and war hero best known for his victory over Hannibal Barca and his ending of the Second Punic War (he was given the honorary agnomen “Africanus” to commemorate his success over Carthage). Scipio’s political and military achievements were unequaled in scope until the large-scale exploits of the late republican generals (Marius, Sulla, Pompey, and Caesar). Nonetheless, Scipio Africanus’ career remains impressive given that it occurred at a time when the Roman elite largely respected the Republic’s political and martial limits.

Scipio was born into the patrician Cornelian clan and was the second son of Publius Cornelius Scipio (consul of 218 BCE). His wife was Aemilia, the daughter of Lucius Aemilius Paullus (consul of 216 BCE) and together they had two sons and two daughters. Their son, Publius, later adopted Scipio Aemilianus, who would become a war hero in his own right; he followed in his grandfather’s footsteps and defeated Carthage in the Third Punic War (149–146 BCE) where he earned the same agnomen Africanus. Cornelia, one of Scipio Africanus’ daughters, later became the mother of the republican reformers, Tiberius and Gaius Gracchus.

Scipio first entered the historical scene in November of 218 BCE as a soldier serving at the battle of the Ticinus River during the Second Punic War where he may have rescued his father, the commanding general, from Hannibal’s cavalry. Scipio was a military tribune at the battle of Cannae in 216 BCE and was one of the 10,000 legionaries to successfully push through the Carthaginian center and avoid the pitiable fate of the rest of the Roman army.

Scipio’s career took an unprecedented turn in 213 BCE when he was elected aedile despite his unfinished 10-year cavalry service and ineligibility due to age. Timing, talent, and family connections, however, allowed him to quickly rise to the top military and political positions. In 211 BCE his father and uncle were killed while campaigning in Spain and a new Roman commander was needed to replace them. Since he resembled his father in appearance, Scipio gained the support of the Roman troops and obtained the Spanish command even though he was still customarily unqualified for the position.

Scipio lived up to his family’s prodigious reputation. In five years he successfully expelled the Carthaginians from Spain; more importantly, he adapted to the Carthaginians’ clever fighting techniques and learned from his experiences. Scipio was one of the few Romans during the Second Punic

War who had a talent for martial affairs and he shaped his soldiers into a more disciplined and flexible fighting force so they could better withstand and overcome assaults by Hannibal's professional troops. He made adjustments to traditional legionary formations and had his cavalry actively participate in battle in addition to their traditional role of reconnaissance and the routing of fleeing enemies. Scipio's changes paid off; his forces defeated Hannibal's brother, Hasdrubal Barca, at the battle of Baecula in 208 BCE, prompting Hasdrubal to flee Spain, and they overpowered Hannibal's other brother, Mago Barca, at the battle of Ilipa in 206 BCE where Mago received mortal wounds.

Because of his successful techniques and inspiring leadership, Scipio 's soldiers hailed him as *imperator*, possibly the first instance of such recognition. In addition to being a cunning general, Scipio also was known for his generosity and mercy; he dealt fairly with the native Spanish tribes that were previously allied with Carthage and did not press his rights of conquest on the women. Though his exploits in Spain were worthy of a Roman triumph, Scipio was denied a triumph because he lacked the customary prerequisites. He honored republican political processes and the authority of the Senate by not appealing the decision, thus earning him more praise by his contemporaries.

Scipio attracted more attention when he was unanimously elected consul in 205 BCE at the age of 31, a good 10 years younger than the traditional age of consuls. His ambitious plan to invade North Africa added fuel to envious fires; rumors spread that Scipio meant to sidestep the Senate and obtain the African command by popular vote if the Senate refused him approval. A heated debate ensued between the young commander and the Senate leader, Quintus Fabius Maximus, but ended with Scipio gaining approval, though he had to provide his own supplies and troops. Undaunted, Scipio raised two legions comprised of volunteers and Cannae veterans (that the Senate previously had refused to muster and posted to Sicily) and departed for Africa. In addition, he bolstered his position by making alliances with some of Carthage's old allies, in particular, Masinissa of Numidia, who provided Scipio with a strong and disciplined cavalry.

The Romans slowly fought their way toward Carthage, winning victories at the battles of the Great Plains and Cirta. Anxious with this new turn of events, Carthage recalled Hannibal. The two generals may have met before engaging in battle near the city of Zama. According to Livy,

Hannibal poignantly stated that he was no longer a young man and learned the lessons of successes and failures. Desiring to embrace reason instead of chance, he suggested a truce. Scipio, however, promised the Senate and people of Rome that he would defeat the Carthaginians and refused. Both departed to prepare for battle.

Scipio harnessed the strengths of both traditional Roman tactics and the newer skills acquired throughout the war for a solid but flexible, well-coordinated attack. Placing his most experienced troops on the flanks, the Roman army efficiently accommodated the mad charge of Hannibal's 80 elephants, successfully pushed through the Carthaginian center, and enveloped the entire Punic army with their Roman and Numidian cavalries. Hannibal, for the first time, was defeated.

Scipio's victory over Hannibal and the subsequent ending of the Second Punic War was a monumental victory for any Roman and a remarkable one for such a young and seemingly nontraditional general. Older ambitious Romans tried to pilfer credit for Scipio's accomplishment; the new consul for 201 BCE initially objected to Scipio's peace terms with Carthage and the young commander almost was recalled from Africa before his work was finished. In the end, Scipio's final terms held firm and he was rewarded with one of the most impressive triumphal processions the Republic ever witnessed.

After the war, Scipio assimilated back into political and civil life, becoming censor in 199 BCE and consul for a second time in 194 BCE, this time without any controversy. His achievements over Hannibal, however, forever shadowed his later life; while he had high social standing and great political influence, his past notoriety continued to invite criticism from other Romans, most notably Marcus Porcius Cato the Elder.

Cato served under Scipio in Africa and developed a bitter hostility for his commander. Part of this was due to Scipio's fascination with Greek culture, an interest the traditionalist Cato found dangerous to Roman pride and convention. In addition, it was said that Scipio was moved by dreams, a disposition typically embraced by eastern peoples but deemed superstitious by Romans. When Scipio returned from Asia in 189 BCE after defeating Antiochus III of Syria, Cato accused Scipio of living luxuriously (living like a "Greek"). More to the point, Scipio and his brother, Lucius Cornelius Scipio Asiagenes, were accused of receiving monetary bribes from Antiochus III. Cato also alleged that Scipio allowed his portrait to be

stamped on eastern coins in place of Hannibal's, an action that upset many Romans since the Republic, unlike eastern kingdoms, did not condone portraits of people on their coins, at least at that time. Such provocative accusations against a famous war hero resulted in a trial and though the ruling was in Scipio's favor, damage was already done to his reputation. He retired to his estate at Liternum in Campania and died in 183 BCE.

Scipio and his remarkable career were products of their time. War casualties and the advanced age of some Second Punic War leaders paved the way for Scipio to ascend the career path as quickly as he did; his family connections, talents, and victories made his unprecedented feats tolerable. While the republican system "made" Scipio, it also destroyed him. Scipio's career was too successful, the conqueror of Hannibal was too famous, and later Romans were alarmed at the precedents he created by his anomalous career. The nature and significance of Scipio's accomplishments made it near impossible for other Romans to reach such levels of achievement and therefore, many Romans resented his popularity; magistrates of the Middle Republic were highly competitive and were naturally inclined to prevent citizens, especially war heroes, from becoming too powerful. It is telling that one of the Republic's greatest heroes ended his life in relative obscurity.

Since most of Scipio's Second Punic War contemporaries predeceased him, he became a scapegoat for all of the unc customary actions taken during the war and a target for critics. Though Scipio's wartime career may have inspired the later extraordinary military commands that brought an end to the Republic, he was one of the few Romans to fully succeed in what all aspiring politicians and military commanders hoped for--victory over a talented and extremely dangerous enemy of Rome.

Scotland

The Romans first invaded Scotland in 79 CE, as part of the campaigns of the current governor of Britain, Gnaeus Julius Agricola. First-century Scotland was an Iron Age civilization, politically divided into many different tribes, each in control of its own territory, although the Romans referred to most of them as Caledonians. Agricola and his Roman army of four legions, some 20,000 troops with additional auxiliaries, made a swift advance into Scotland, establishing forts between the rivers Forth and the Clyde, a natural frontier, and rejecting the more difficult western route after investigating it by boat.

Instead the Romans took a route near the east coast, often finding the native tribes elusive and more inclined toward surprise attacks on fortresses and camps than pitched battles. In 83 or 84 CE the Romans met and defeated a concentration of Caledonian tribes at the battle of Mons Graupius, the location of which has never been conclusively identified. Likely suggestions are Bennachie, close to Inverurie, or Craig Rossie in Perthshire. Agricola was recalled from Britain shortly after the battle, and although his successor

began to construct forts and roads in the area, the soldiers were soon transferred to the volatile Danubian provinces. The Romans fell back progressively over the next 40 years, and the building of Hadrian's Wall in the 120s marked their temporary withdrawal from Scotland.

The Roman absence from Scottish territory did not last long. Hadrian's successor Antoninus Pius ordered the legate Lollius Urbicus to push the frontier northward. From 142–143 CE the Romans constructed a new frontier wall 37 miles long between the Forth and the Clyde, complete with fortlets every mile or so and forts at wider intervals. The wall remained the northern frontier of Roman Britain until 160–170 CE, when, either due to disturbances by local tribes or the order of the emperor Marcus Aurelius, the Romans again pulled back to Hadrian's Wall, and many forts to the north were destroyed or abandoned.

The third invasion of Scotland was led by the emperor Septimius Severus in 209 CE, who launched a campaign from Hadrian's Wall which progressed to, we are told, the end of the island. A treaty was made with the Caledonian tribes and Severus, as well as his son Caracalla who had accompanied him, took the title "Britannicus," or conqueror of Britain. Caracalla repressed a rebellion which sprang up soon after the conquest, but when his father Severus died in 211 CE, Caracalla left Scotland to consolidate his succession as emperor of Rome, effectively abandoning the Roman interest in Scotland. The last records of Roman intervention in Scotland come from the late third and early fourth centuries CE, when we hear of raids from hostile northern tribes and a battle with the Picts. Today evidence of Roman walls, ditches, forts, and material culture can still be seen in Scotland, primarily at the Antonine wall, but also as far north as the mouth of the Spey.

Sebasteion of Aphrodisias

The Sebasteion (derived from *Sebastos* = Augustus in Greek) at Aphrodisias in Caria (southwestern Turkey) was a large sanctuary complex, containing a monumental gateway, processional way, and temple honoring Venus Genetrix and the Julio-Claudian emperors. It reflected the special relationship between Aphrodisias and Rome, as initiated by Caesar, who wished to emphasize his family's descent from Venus (that is, Aphrodite), the city's patron deity. In return, Aphrodisias was treated as a free allied city by Rome. Constructed under Tiberius, it was reconstructed under Claudius and then Nero by two local families. The gateway displayed statues of members of the Julio-Claudian dynasty and their mythical ancestors. The processional way was articulated on both sides by a three-story high architectural façade, which friezes depicted mythological, allegorical, and historical scenes of imperial victories, conquered peoples, Olympian gods, and myths of Greece and Rome. The reliefs offer a Greek perspective on Roman imperial power, presenting it as unashamedly monarchical and divinely justified. Allegorical scenes included personifications of Day and Ocean. Emperors of Rome appeared in heroic nudity: Augustus was represented, as might be expected, as conqueror by land and sea, but more incongruous are scenes of Claudius dealing the death blow to Britannia, and Nero to Armenia. Conquered peoples from around the world were represented as women whose distinctive costume and attributes may have been derived from prototype statues at Rome. The overall program visualized the idea of a Roman empire unlimited by time or space, as expressed by Jupiter in Virgil's *Aeneid* and as commemorated by Augustus' *Res Gestae*.

Second Triumvirate

The Second Triumvirate was the political alliance of Mark Antony, Octavian, and Marcus Aemilius Lepidus against their common enemies, namely the assassins of Caesar and their supporters in the Senate. It lasted from 43 to 33 BCE.

In late 44 BCE, Antony had illegally claimed the province of Cisalpine Gaul and in 43 attempted to drive out the legal governor, Decimus Junius Brutus (one of the leading assassins of Caesar), beginning a civil war. Octavian temporarily joined forces with the consuls of 43 BCE, Aulus Hirtius and Gaius Vibius Pansa, to stop Antony. Meanwhile, Lepidus delayed committing himself, allowing Cicero and the Senate to believe he would defend their interests.

Hirtius and Pansa defeated Antony in the battle of Mutina (April 43), but also themselves died, thus leaving Octavian in control of their army. When Octavian demanded the consulship and credit for the victory, the Senate reminded him he was too young to hold office legally and awarded it to Decimus Brutus for defeating Antony. Antony fled to Gaul. A dubious tradition, hostile to Lepidus, says that Antony took over Lepidus' army by force of personality, but a new theory suggests that Lepidus, who had previously been rejected when he offered to ally with Antony on equal terms, was now the stronger, so he forced the weakened Antony to accept him on equal terms. Antony and Lepidus agreed to unite with Octavian and formed the Second Triumvirate (November 43).

The triumvirs forced the Senate to accept Octavian as a candidate for the vacant consulship, and Octavian, crushing Cicero's hopes to guide and mentor him as a fellow consul, chose his own cousin, Quintus Pedius, instead as colleague. In August, Octavian and Pedius took office and immediately prosecuted the assassins of Caesar. They also passed a law formally constituting the Second Triumvirate and assigning the triumvirs the task of reorganizing the Republic. Then they began to proscribe their enemies, as well as many wealthy neutrals, confiscating their property to

raise money to fight the remaining assassins and reward their own troops. Many of the proscribed were hunted down and killed for rewards. Cicero was among the victims, targeted by Antony because of old familial resentments (Antony's wife Fulvia was the ex-wife of Clodius Pulcher, Cicero's old enemy) and because Cicero had vituperated Antony in the *Philippics* orations.

In October 42, Octavian and Antony defeated Brutus and Cassius in the two battles of Philippi, while Lepidus stayed in Italy to supervise affairs at home. Brutus and Cassius committed suicide. The few surviving opponents who would not seek terms joined Sextus Pompeius to continue resisting the Second Triumvirate. The victories at Philippi brought Antony much credit and began the diminution of Lepidus' powers.

Octavian returned to Italy to reward the veterans, while Antony toured the eastern provinces, punishing his enemies. It was during this time that he met Cleopatra, who utterly captivated him. In his absence, his brother Lucius Antonius and Antony's wife Fulvia fought Octavian unsuccessfully in the Perusine War (41–40). Antony returned to Italy, too late to save his brother, but nearly broke apart the Second Triumvirate.

A peace was negotiated between Antony and Octavian by the Cocceius Nerva brothers in the Treaty of Brundisium in 40. As part of the terms, Antony married Octavian's sister Octavia, although she was a widow and pregnant. Antony then persuaded Octavian to make peace with Sextus Pompeius in the Pact of Misenum in 39 and restore the exiles (except for the surviving assassins of Caesar) to their former civil rights, including Sextus who was assigned a consulship (probably for 35) and an augurship. Antony then relocated to Athens with Octavia, where their older daughter was born.

However, Octavian soon wrecked the peace with Sextus in 38. Antony failed to provide much assistance from Greece. Octavia reconciled her brother and her husband in the Pact of Tarentum (37), which also renewed the powers of the Second Triumvirate for an additional five years until December 31, 33. The Second Triumvirate then brought its full forces against Sextus, who was driven out of Sicily after two successive defeats at Mylae and Naulochus in 36. Lepidus' attempt to improve his position in the Second Triumvirate was checked by Octavian, who persuaded Lepidus' soldiers to defect. Lepidus was stripped of all offices and powers except the high priesthood and confined to Circeii. Octavian spared Lepidus so as not

to appear vindictive and assumed that Lepidus would soon die. In fact, Lepidus lived another quarter century.

Meanwhile, with help from Cleopatra, with whom he had renewed his earlier relationship, Antony invaded Persia in 35. The campaign was a disaster. To salvage some semblance of glory, Antony treacherously captured the king of Armenia, whom he paraded in a triumph in Egypt. Antony also formally recognized Cleopatra's oldest son as the son of the Divine Julius and gave Roman territory to all of her children in the infamous Donations of Alexandria. He also divorced Octavia and married Cleopatra.

Octavia initially refused to leave Antony's house and refused to surrender custody of his children and their children, until forced to give up his sons by the courts. Since his support in Italy was initially weak, Octavian used the cause of his wronged sister, as well as anti-Egyptian xenophobia, to whip up popular sentiment against Antony. When the year 33 closed, the Second Triumvirate expired. The successes of Octavian against Sextus had augmented his standing. Many of the most talented men loyal to the Second Triumvirate were now following Octavian, for Antony's reputation had suffered greatly from the Persian War and even more from his frivolity with Cleopatra, from his wasteful spending of monies, from his callous treatment of Octavia, and especially from donating Roman lands to a foreign power. Furthermore, Octavian laid aside his official powers derived from the Second Triumvirate, but Antony continued to exercise them in 32. He was maneuvered into rupturing the alliance for a war that would fight on a far greater battlefield than did the war of 43.

Sejanus (d. 31 CE)

Lucius Aelius Sejanus served as praetorian prefect under the emperor Tiberius (14–37 CE). An equestrian, Sejanus was the son of Seius Strabo who served in the position before him. Appointed in 14 CE shortly after Tiberius came to power, Sejanus initially held power with his father but within two years he occupied the post on his own; contrary to popular belief, the praetorian prefecture was not necessarily collegiate, and that he held the office without a colleague should not be viewed as an anomaly. Sejanus was instrumental in the establishment of a permanent camp in Rome (the *Castra Praetoria*) for the Praetorian Guard in ca. 23 CE. Given that all the cohorts had now been brought into the capital this was certainly a pragmatic decision, although Tacitus (*Annals* 4.2.1) hints at a more malevolent intention, namely that Sejanus wanted to ingratiate himself with the large number of troops now in Rome and under his command to control the city.

When Tiberius decided to leave the capital for the island of Capri three years later, Sejanus stayed in Rome where he apparently monitored events, looking after the emperor's interests and reporting activities via the praetorians, much to the dismay of the senatorial order in particular. In fact, the prefect is associated in the literary sources with many of the malicious actions undertaken in the late 20s by Tiberius, for example, the exile of Agrippina the Elder, widow of the popular general Germanicus, and the death of Tiberius' own son, Drusus. That Sejanus was influential there can be no doubt: he received many honors, including the *ornamenta praetoria* (giving him the rights of a praetor without having held the office), and in 31 CE, he served as consul with the emperor himself. Yet later that same year, his downfall was cleverly engineered by Tiberius; the reasons are unknown. Later literary sources (for example, Josephus, Juvenal, Suetonius; though Tacitus is missing for much of the period 30–31 CE, there are hints elsewhere in the *Annals*) suggest that Sejanus wanted power for himself, though it is doubtful that an equestrian would have been accepted as emperor in the early Julio-Claudian period. In fact, Cassius Dio records that while the prefect was uncertain about Tiberius' attitude toward him, he did not conspire against the emperor. It is more probable that Sejanus had made some powerful enemies in the years after Tiberius left Rome and these men were able to convince the emperor that an individual in charge of so many soldiers (at this point, the praetorians may have numbered as many as

12,000) was a great risk, more to them than to Tiberius himself. The prefect was arrested at a meeting of the Senate and executed along with his family on the same day.

Sejanus was the first of many powerful praetorian prefects. The office grew in importance in the second century, praetorian prefects deputizing for the emperor in civilian administration. Some praetorian prefects, such as Macrinus, Philip, and Carus, usurped the imperial power. Others, such as Sejanus or Septimius Severus' prefect Plautianus, fell to imperial suspicions of treason.

Senate, Senators

The Roman Senate, an aristocratic council with several hundred members or senators, was the major governing entity of the Roman Republic; during the Principate, it lost actual power to the emperors and their staff, but continued to command prestige and influence. During the Republic, the Senate oversaw foreign affairs, military policy, and financial affairs for the growing Roman Empire. In the Republic, the Senate was a check upon the powers of the higher magistrates (consuls, praetors, or dictator). In the empire, the Senate was a check upon the emperors' potential tyranny. That emperors should cooperate with the Senate and respect it (at least, spare the lives of individual senators) became a standard element of Roman imperial ideology, maintained into the later empire. However, executive magistrates and emperors also sought to control the Senate by regulating its composition and changing the qualifications for membership. For various reasons, the Senate failed at natural self-reproduction and had to be

replenished from without, admitting first Italian, then provincial aristocrats. Participation in Roman senatorial tradition was more dependent on the acquisition and display of culture than on genealogical descent from ancient families.

According to Roman tradition, the archaic Senate advised the kings. The Latin *senatus* and *senator* are related to *senex* (old man) and *senectus* (old age), indicating that the Senate was a council of elders; another term for the Senate was the *patres* (fathers). After the overthrow of the monarchy in 510 BCE, the Senate remained an advisory council, though its numbers and exact composition are unclear. Even in this period, all senators were not necessarily ex-magistrates or patricians. As a result of the patrician-plebeian conflict, after 367 BCE plebeians were admitted to the consulship and thus might enter the Senate.

Relief from the Forum of Trajan (ca. 118–125 CE), depicting senators in procession. Though Augustus reorganized Roman military hierarchy and provincial administration to discourage senators from revolting against the emperors, senators

still commanded great prestige in Roman society. Located in the Louvre Museum, Paris, France. (Alinari/Bridgeman Images)

The *lex Ovinia* of 319/318 BCE codified membership in the Senate, probably restricting it to ex-magistrates, at this time ex-consuls and ex-praetors. The *lex Ovinia* required the censors to examine the membership of the Senate and to choose worthy individuals (including plebeians and equestrians) to add to the Senate while demoting unworthy senators. Thus another term for the Senate was *patres et conscripti*, referring to the traditional members and to those who had been chosen for admission. Senators at this time were required to possess at least the equestrian census (landed property worth 400,000 HS).

In the middle and late Roman Republic (from ca. 264 to 27 BCE), the Senate had important political, military, and fiscal responsibilities. The Senate received foreign embassies and thus handled Rome's diplomatic relations with other states, arbitrating disputes between allies. The Senate assigned commanders their *provinciae*, their theaters of war and areas of administration. It assigned consuls and praetors their funding and assistants, including the quaestors, who managed logistics and military pay. The Senate thus had some control over Roman foreign and military policy and over the consuls as commanders-in-chief, even though, given the slowness of communication in the ancient world, the Senate might be out of touch with the consuls or praetors in their provinces. The Senate had competence over state religion, authorizing new cults and receiving reports of portents, such as the birth of deformed animals and humans or plagues of insects, that might require religious expiation.

The powers of the Senate even grew in the last two centuries of the Republic. The Roman people traditionally had the power to declare war and vote on legislation, but in this period the Senate deliberated and voted on such decisions and the popular vote was only a rubber stamp. Occasionally, governors were appointed by popular vote, which gave Marius command of the Jugurthine War and Pompey the command of the campaign against Mediterranean piracy and the Mithridatic War. The Senate also determined the prorogation of magistrates, extending their tenure of command in their provinces.

The Senate might also authorize criminal trials upon receiving complaints from Roman citizens or provincials. However, it did not preside

over such trials during the Republic. From 149 BCE, individual senators might serve on jury boards in the criminal courts (*quaestiones*), though the composition of these juries varied. Sometimes legislation requiring jury panels of equestrians or lower-status citizens was passed to avoid the conflict of interest when senators sat in judgment upon senators.

Above all the Senate was a conservative force, representing Rome's most aristocratic and wealthiest elements; even its plebeian members were well-to-do aristocrats whose interests aligned with the patricians rather than with the lower social strata. The Senate thus was a countering force to the equestrians, the popular assemblies, and the tribunes of the plebs. This remained the case even when Senate membership was opened to former aediles and quaestors (junior magistrates). Procedure within the Senate gave greatest influence (*auctoritas*) to the highest-ranking ex-magistrates, permitting them to speak first in debate, starting with the patrician ex-censor who was termed *princeps senatus*. However, the Senate as a whole had its own *patrum auctoritas*.

In the late Republic, the conflict intensified between the Senate's wealthy and conservative nobles (often termed oligarchs or optimates) versus *populares* (the tribunes, assemblies, and *plebs urbana*, and politicians who supported or exploited them). Marius owed his consulship of 107 BCE to tribune activism; the tribunes and their supporters also played a major role in the Marian-Sullan Conflict. In reaction, Sulla as dictator (82–81 BCE) instituted various conservative reforms intended to shore up the power of the Senate and reduce the influence of the tribunes. He increased the size of the Senate to 600 and opened the Senate to former quaestors; since he also enlarged the number of quaestors to provide Roman commanders and governors with more efficient administration, he added many new senators. Sulla also promoted many equestrians, including Italian aristocrats, into the Senate.

Caesar, as dictator (49–44 BCE) and the triumvirs (43–33 BCE) also increased the size of the Senate, promoting their supporters into the Senate. As a result the Senate's size increased to 900 under Caesar (Dio 43.47.3) and over 1,000 by the end of the triumviral period. As a result, Augustus cut back the ranks of the Senate to 600 and imposed other policies to stabilize the Senate and differentiate it from the equestrian order. He increased the property requirement to 1,000,000 HS and, in the role of censor, examined the qualifications of senators, demoting the unworthy and elevating suitable

new senators from the equestrian order.

The imperial Senate was markedly less powerful, but Augustus sought to mask this reality, presenting himself as cooperating with the Senate. Senate decrees continued to be promulgated and acquired the force of law. The Senate conducted criminal trials involving its own members. Though the senators continued to debate policy in the Curia, in reality decisions were made by the emperor and his staff, and in the provinces by senatorial governors. However, it became part of imperial ideology that “good emperors” treated the Senate with respect; “bad emperors,” such as Tiberius, Nero, or Domitian, persecuted and humiliated senators.

In some respects the imperial Senate resembled a hereditary aristocracy, but it was not exclusive or strictly hereditary. The son of a senators became eligible to wear the *latus clavus* (a broad-striped tunic, traditionally worn by senators) at 17, but he was not yet a senator; he served a year as military tribune and then as a *vigintivir*, a very junior magistracy at Rome. To become senator, he still had to be elected quaestor at age 25. The Senate, rather than the citizen assembly, now voted for quaestors, aediles, and praetors; consuls and governors of imperial provinces were appointed by the emperor. Governors of public provinces were selected by lot.

The republican and imperial Senate notably failed to reproduce itself by natural (hereditary) processes. Political competition in the republican Senate was fierce; a minority of prominent families attained the higher magistracies in every generation, but most senators were unlikely to do so. Roman partitive inheritance, dividing property among all surviving children, meant that a family with many children might fall below the property qualification for senators; on the other hand, a senator with few children might die without sons. Running for office in the Principate was still highly competitive. Furthermore, when some emperors persecuted senators whom they perceived as threats, they extinguished some families and motivated many senators to withdraw from politics until a better regime arrived.

As a result, the turnover of Senate membership was high and resulted in the provincialization of the Senate. The Julio-Claudian emperors promoted wealthy local aristocrats in Romanized Spain and southern Gaul into the Senate. In an edict that survives as an inscription at Lyons (*ILS* 212; compare Tacitus, *Annals* 11.23), Claudius I (41–54 CE) defended the elevation of Gauls to the Senate. By this time, a century after Caesar’s conquest of Gaul, some

Gallic aristocrats had acquired the Roman citizenship and the necessary wealth and education for Senate membership. Later senatorial families hailed from the Greek eastern empire (among them was the historian Cassius Dio) and from North Africa. The Senate of Dio's time probably had very few members who were directly descended from families of the middle or even late Republic. But the Senate maintained its prestige as a guardian of Roman traditions.

In the late second and early third centuries CE, equestrians began to supplant senators in military commands, culminating in the mid-third century with the exclusion of senators from military commands and provincial governorships. The governors and legates were now equestrians. The extent to which the exclusion was formal (attributed to the emperor Gallienus) is unclear; even the Tetrarchs, stereotyped as hostile to the aristocracy, still promoted senators to prestigious posts such as the proconsulship of Africa and the city prefect of Rome. In a period when emperors rarely visited Rome, the city prefect (*praefectus urbi*) governed the city of Rome in their stead. Admittedly these posts lacked military responsibilities.

When Constantine (306–337 CE) chose Byzantium as his new capital and renamed it Constantinople, he also established a Senate equal in prestige to the Roman Senate. In the later Roman Empire, promotion to the rank of senator was now an imperial honor resulting from service in the civilian or military administration that had little to do with presence in Rome or in Constantinople. The numbers of persons with senatorial rank thus greatly increased. However, the senators of Rome continued to play an important cultural role, most notably as defenders of paganism against the increasingly militant Christian emperor Theodosius I (379–395).

Senatus Consultum Ultimum

The *senatus consultum ultimum* (SCU), the so-called last decree of the Senate, was an emergency decree passed by the Roman Senate that gave Roman magistrates leeway to employ unrestricted force against perceived enemies of the state. In form, as with all decrees of the Senate, the SCU was an advisory statement issued to a magistrate, usually the one who presided over the meeting of the Senate at which the decree was passed. The normal wording empowered the presiding magistrate, sometimes together with other executive officers of the Roman Republic, “to defend the state and see to it that the state suffers no harm.” In terms of practical effect, the decree could not in itself institute a state of emergency. The passage of the SCU, however, clearly demonstrated that the magistrate who called for its use believed that a state of emergency was currently in existence, and the magistrate was seeking the approval of the members of the Roman Senate for any actions he might take that would under normal conditions violate the statute law of the Roman Republic. The legitimacy of violence undertaken against public enemies subsequent to the passing of a SCU was hotly disputed.

The first historical attestation of its passage was in 121 BCE, when the consul Lucius Opimius had the Senate pass a decree calling upon him to defend the state in response to the perceived threat of potential violent revolution arising from the activities of Gaius Sempronius Gracchus and his followers, who advocated reforms that threatened the material interests of the oligarchy. Tribune of the plebs in 123 and 122, Gaius was no longer

tribune in 121 and was not protected by tribunician sacrosanctity. Following the passage of the decree, Opimius gathered an armed following and attacked Gaius Gracchus and his supporters, killing many of them. Gracchus' remaining followers were then tried by a special tribunal set up to prosecute them. While it has been argued that the decree gave Opimius the power and authority to take these actions in response to a perceived threat to the safety and security of the Roman state, opinion about the legality of his actions has been debated since ancient times into the current era. Opimius relied mainly upon his powers as consul (*imperium*) to suppress Gracchus, though he also openly flouted both statute law and recognized political customs. The legality of his actions were only confirmed in the aftermath, when Opimius was prosecuted for putting Roman citizens to death without formal trial (a violation of statute law), but was acquitted.

While the passage of this decree might have been only a single exceptional incident, when another tribune of the plebs, Lucius Appuleius Saturninus, and his associates, including the praetor Gaius Servilius Glaucia, threatened open civil war in Rome in 100 BCE, the consul Marius had the Senate pass the SCU. Subsequently, Marius gathered armed forces and suppressed the attempted rising by Saturninus, Glaucia, and their associates. With this second use of the decree, a firm precedent for its use was established.

In the decades following the suppression of Saturninus and Glaucia, the SCU was passed on eight further occasions. In 83 BCE it was employed by the supporters of Marius (who was dead by then) and Cinna in Rome in response to Sulla's invasion of Italy; the Roman Senate considered Sulla a renegade at the time. The SCU was passed in 77 BCE to mobilize support to counter the seditious activity of Marcus Lepidus. It was passed in 63 BCE to rally forces against the conspiracy of Catiline. The SCU was passed again in 52 BCE to suppress the massive street riots that followed the murder of the tribune Publius Clodius Pulcher. In 49 BCE the Senate passed the SCU to counter Caesar's threat to invade Italy. In 47 the SCU was passed against Dolabella and Trebellius. In 43 BCE the SCU was employed to raise an armed force to counter Mark Antony, who was attempting to seize northern Italy by armed force. The Senate also passed the SCU for the last time against Octavian in the same year, as he marched against the city of Rome with an army to force his election as consul.

In summary, the SCU was a public statement by the Roman Senate, in

response to the request of a Roman magistrate, that an emergency existed in Rome. It indicated that the Senate was calling upon the magistrate, along with other public officers, to take any and all actions to see to it that the state suffered no harm. While the Senate could not actually grant magistrates any further powers, nor could it confer any special immunity on magistrates who used extra-legal means which violated statute law to suppress threats against the state, the Senate could provide political cover for a magistrate who went beyond the law to suppress a crisis situation that threatened violence against the government. The SCU thus provided some justification for violent reprisals against perceived threats to public order.

Sentinum, Battle of (295 BCE)

The battle of Sentinum (295 BCE), described in Livy 10.27–30, broke Samnite resistance in the Third Samnite War (298–290 BCE). Sentinum, commanded by the consuls Quintus Fabius Maximus Rullianus and Publius Decius Mus, was the largest battle that the Romans had fought to this date. It featured a remarkable coalition of Rome's enemies. After the battle of Sentinum, the end of the Samnite wars became inevitable.

The Samnites made a remarkable alliance with the Gauls (of Cisalpine Gaul, Italy north of the Po). They also allied with the Etruscans and Umbrians (Livy 10.21.11–15). However, only the Samnites and Gauls appeared at the battle.

Sentinum was the largest battle that the Romans had yet fought. The Roman forces are estimated at 30,000 to 40,000 men. Ancient authors provide exaggerated figures for the enemy (for example, 650,000 in Livy 10.30.5) which are not credible.

In the battle, Publius Decius Mus sacrificed himself by *devotio*, vowing his death in battle to the gods in return for victory and suicidally plunging into the thick of combat to take as many as possible of the enemy with him. The same act is attributed to his father Publius Decius Mus at the battle of Veseris (340).

The Samnite resistance was broken by the battle of Sentinum. The surviving Samnites regrouped and offered battle at Aquilonia in 293, but were also defeated by the Romans. The Romans acquired large parts of Samnium and forced the Samnites to become allies; in this period also the remaining Etruscan cities were conquered.

Septimius Severus (Emperor) (193–211 CE)

Lucius Septimius Severus (emperor 193–211 CE), a victor of civil war and founder of the Severan dynasty, was born ca. 145 in Lepcis Magna, a city in Roman North Africa. His grandfather was a local notable in Lepcis; his father entered the senatorial order. Severus was thus of senatorial rank and prior to 193 followed a regular senatorial career, holding the consulship in 190. He married Julia Domna, a Syrian aristocrat, not many years before 188; their elder son Bassianus (later Marcus Aurelius Antoninus, the emperor Caracalla) was born in 188, their younger son Geta in 189. Severus was appointed governor of Upper Pannonia, the office he held when

Commodus (181–192) was assassinated and Pertinax became emperor.

Pertinax' strictness displeased the praetorians, who assassinated him. 12 days later, Severus was acclaimed emperor by his troops at Carnuntum. Severus marched on Rome claiming to avenge Pertinax. At this time he obtained the support of Clodius Albinus, then governor of Britain.

At Rome, the praetorians "auctioned" off the empire to the man who promised them the largest donative. Sulpicianus, Pertinax' father-in-law, was outbid by Didius Julianus, who became a short-lived emperor. As Severus neared Rome, the Senate supported Severus and condemned Didius Julianus, who was done away with. Severus entered Rome to unanimous support on June 19, 193.

Severus punished the disloyalty of the praetorians (and their impiety for murdering emperors) by disbanding the Guard and discharging its members en masse without benefits. He recruited a new Guard, recruited not from Italy as hitherto had been the case, but promoted from the Danubian legions. He also enlisted three new legions, raised military pay, and granted serving soldiers the right to marry. The Greek historian Herodian (*History of Rome* 3.8.5) represents these measures as catering to the army's demands, but Severus' policy resolved the legal problems of soldiers' families. Soldiers previously had formed de facto marriages with women and had illegitimate children, making it difficult for the women and children to inherit.

Pescennius Niger revolted and was proclaimed emperor in Syria in April 193. After consolidating his position at Rome, Severus marched his army east and defeated Niger at Cyzicus and Nicaea by winter 193. Niger died in spring 194. Severus punished Syria by dividing it into two smaller provinces. Severus then campaigned aggressively against the Persians, perhaps to punish them for supporting Niger, but victory over Persia was also a traditional goal. His campaign was successful, adding Mesopotamia and Osrhoene to the Roman Empire.

Clodius Albinus, Severus' erstwhile ally, revolted and invaded Gaul. Severus declared war on Albinus, invaded Gaul, and defeated Albinus at Lyons in February 197.

Severus then took reprisals against the supporters of Albinus, putting to death 29 senators. He left Rome for another Persian campaign in 198, capturing the city of Ctesiphon. He then organized Mesopotamia as a Roman province, also visiting Egypt and reorganizing the administration.

Severus promoted his two sons as intended heirs, renaming his older son

Bassianus Marcus Aurelius Antoninus (claiming a dynastic link with the admirable Marcus Aurelius) and raising him to the rank of Caesar, then, after the capture of Ctesiphon, co-Augustus. Imperial edicts and correspondence from 198 to 211 name Severus and Antoninus (Caracalla) as co-emperors. Geta was only elevated to the rank of Caesar. Severus stayed in Italy in 203–208, then traveled to Britain with his sons and campaigned in Scotland. He elevated Geta to the rank of Augustus in 210. Septimius Severus died from natural causes at York in north Britain in 211, succeeded by his sons Caracalla and Geta, though Geta would rule only briefly, assassinated by Caracalla (211–217).

Severus has been termed a “military monarch” by modern scholars for his emphasis on military power; he proved a ruthless and aggressive military leader, and on his deathbed he allegedly told his sons, “Be harmonious, enrich the soldiers and despise everyone else.” However, the urban elite at Rome and in other major cities, such as the Greek senator and historian Cassius Dio, had a motive to exaggerate Severus’ favoritism toward the army. In the urban elite’s view, emperors should favor the Senate and other educated elites, not the army, which offered social mobility to relatively low-born men. Severus also promoted the rule of law, promoting highly talented jurists such as Papinian and Ulpian. When Severus’ praetorian prefect Plautianus was suspected of disloyalty and condemned, Severus appointed the jurist Papinian as praetorian prefect (the emperor’s deputy in civilian administration). The tendency for equestrians to attain key administrative posts and military commands becomes apparent in the Severan period.

Severus’ founding of a dynasty was successful in that (except for the emperor Macrinus in 217–218) Severan relatives held the throne until 235, but unsuccessful due to dynastic strife and civil war. Caracalla assassinated Geta, and Caracalla had no sons. Julia Domna’s sister Julia Maesa and her nieces, Julia Soaemias and Julia Mamaea, promoted as emperors Soaemias’ and Mamaea’s respective teenage sons, Elagabalus (218–222) and Alexander (222–235). The resulting weak rule and instability promoted the third-century crisis.

Sertorius (ca. 123–72 BCE)

Quintus Sertorius was unique among the ranks of notable Roman generals for his ability to effectively command irregular forces against other Romans. The highly competitive nature of Roman politics led to intense rivalries between politicians that could and did lead to violence during the last century of the Republic. A Marian supporter, Sertorius played a major role in the Social Wars and the strife between Marius and Sulla. After Sulla’s victory, Sertorius was exiled and made his way to Spain. Once there, he made himself a reputation as a first-rate commander and administrator while leading a guerilla-style campaign against Sullan supporters in Spain. Those supporters included Pompey, and Sertorius proved to be Pompey’s greatest obstacle in his early military career.

Sertorius’ family was part of the aristocracy of the city of Nursia, and he almost certainly was the first of his line to run for office in Rome itself. He served under Marius during the invasion of the Cimbri and the Teutones at the end of the second century BCE, and earned a reputation for bravery while

operating as an undercover spy during the invasion. Sertorius further secured his reputation in Spain in 97 BCE when he quelled an uprising by the Celtiberians and their Oretani allies in the city of Castulo. The rebels had caught the Roman garrison of the city off-guard, and during the chaos Sertorius rallied as many men as he could, held open a city gate, and proceeded to kill every Celtiberian male able to bear arms. This ruthless victory was followed by a shrewd move to punish the Oretani immediately. Sertorius dressed his men in Spanish tunics, and learned enough words of the language to pass as a true Celtiberian. The deception allowed the Romans to be welcomed into the city by a cheering crowd. Many of the Oretani were killed and the majority of the rest were sold into slavery. His exploits in Spain earned Sertorius the election to the quaestorship, once again serving under Marius.

As quaestor, Sertorius was in charge of raising, training, and even leading troops during the Social War. He led boldly from the front, infusing his troops with his contempt for the enemy and trusting his own arms for protection. He became very popular in Rome for his military exploits. After Sulla's march on Rome in 88 BCE, Sertorius remained allied to Marius, but after Sulla's victory, Sertorius was expelled from Rome. He spent a few years wandering the Mediterranean, but after defeating a Sullan army in Mauretania he answered an appeal by Lusitanians in the Iberian peninsula to rid them of their oppressive governor. It was in the wars in Spain from 80–72 BCE that Sertorius fought his greatest battles, largely against other Romans.

Sertorius was heavily outnumbered; according to Plutarch his forces originally mustered only 2,600 legionaries, 700 cavalry, and 4,700 allied infantry compared to the 122,000 infantry and 6,000 cavalry fielded by the Roman governors in Spain. Yet Sertorius proved victorious in battle after battle, defeating both governors in 80 and the replacement governor of Nearer Spain in 79. The replacement for Further Spain, Quintus Caecilius Metellus Pius, could not best Sertorius in combat, and suffered a string of defeats over the next few years. With each victory, Sertorius' army and power grew. Sertorius had a strong relationship with local natives in Spain, and even had a mystical side to his leadership. He kept a tame white doe which became a sort of soothsayer for his men—news would be announced as if it came from the fawn, and Sertorius would also decorate the doe with garlands when he heard about a victory won by a detachment of his men.

These methods greatly impressed his Spanish allies.

By 77, Sertorius was in control of much of Roman Spain. He continued to call himself the properly appointed magistrate of the Roman Republic, even forming his own “Senate” and holding elections. He instilled Roman discipline, formations, and tactics in his mixed army. He also received reinforcements from Italy; remnants from a failed rebellion against the Senate by Marcus Aemilius Lepidus fled to Spain under the command of Marcus Perperna Vento, who eventually joined Sertorius’ forces.

Sertorius faced a new opponent when the Roman Senate appointed Pompey the province of Nearer Spain in 77. Pompey quickly attempted to bring Sertorius to battle. He closed in on Sertorius while the latter besieged the city of Lauron, but was outflanked and withdrew. Pompey then suffered a serious setback when a foraging force was ambushed by Sertorius’ men, and the legion sent by Pompey as reinforcements was also surrounded and crushed. Pompey could only stand by and watch as 10,000 of his men perished.

After the disaster at Lauron, Pompey and Metellus merged their armies. Sertorius again defeated the Roman governors at another major battle near the River Turia in 75, in no small part due to Sertorius personally leading his men. In addition, his white doe, which had gone missing, had been found in a nearby clearing, and the find reinvigorated his soldiers’ morale. Sertorius was able to counter every attempt at trapping his army, eschewing battle in favor of attacking Roman supply lines. Both sides received reinforcements, Pompey getting the Senate to send two legions, while Sertorius made an alliance with Mithridates of Pontus to receive ships and funding—though the alliance failed to amount to anything substantial. Pompey and Metellus still could not win any sort of decisive victory against Sertorius, however.

While Sertorius was not losing the war, it was clear by now he could not win it. Sulla had retired in 79, and the Senate was filled with his supporters. Sertorius and his “Senate” would not be recognized by the official Senate of Rome. With Sulla’s death shortly after his retirement, the cause for fighting the war was gone. Sertorius offered to surrender to Metellus and Pompey on the condition that he be allowed to return to Rome to live as a private citizen. This was refused. The futility of the conflict caused Sertorius’ army to fall apart. Many of his men deserted, and his supporter Perperna spread rumors undermining Sertorius’ authority. Perperna had no intention of

surrendering and tricked Sertorius into joining him for meal and entertainment, where Perperna had him killed. Pompey quickly crushed Perperna's army and ended the war in Spain in 72.

Sertorius had the misfortune of fighting for the losing side during a civil war. He had fought extremely well with limited resources against his fellow Romans, and his gifts as a commander, leader, and administrator were of the finest quality.

Servian Constitution

The Servian constitution, ascribed to King Servius Tullius (578–535 BCE) but probably a development of the fifth century BCE Republic, organized the Roman citizen body according to *classes* (sg. *classis*) and centuries (*centuriae*). This organization assisted military organization, but was not directly descriptive of the organization of the Roman army. It was more closely related to the Roman voting system.

The Servian constitution is described by Livy 1.43 and Dionysius of Halicarnassus, *Roman History* 4.16–18. The first class of infantry, comprised of men with a property rating of 100,000 *asses* or more, comprised 80 centuries, 40 being *seniores* (men aged 46–60), and 40 *iuniores* (men aged 17–45). Class two, worth 75,000 to 100,000 *asses*, comprised 10 centuries of *iuniores* and 10 of *seniores*; class three (worth 50,000 to 75,000 *asses*) and four (worth 25,000 to 50,000 *asses*) likewise; class five (worth 11,000 to 25,000

asses) comprised 15 centuries of *iuniores* and 15 of *seniores*. These five classes, totaling 170 centuries, were all infantry. Cavalry formed 18 centuries; army engineers, two centuries; musicians, two centuries; and *proletarii* (men without property), one century.

Assignment to the classes was determined by the census, another supposed institution of Servius Tullius, which listed male citizens by name and assigned their class and century. The property estimation in *asses* reflects an early stage of Roman coinage, though probably later than fifth century BCE.

Livy and Dionysius relate the centuriate organization to military service: members of the first class were responsible for providing their full armor, including a helmet, a round shield, a breastplate, and greaves; those of the second class provided a helmet, oblong shield, and greaves; those of the third class provided only a helmet and oblong shield. This armament probably reflects fifth- and fourth-century BCE warfare, as it resembles the hoplite panoply of classical Greece. The *iuniores*, as younger adult men, were the front-line soldiers; the *seniores* formed a rear guard.

However, neither the classes nor the centuries map directly onto the structure of the mid-republican legion, ca. 220–170 BCE, which consisted of 4,200 men according to Polybius, including 3,000 heavy infantry and 1,200 *velites* (lighter-armed troops). The number of men in each Servian century is uncertain, as wealthier men in the first and second classes must have been less numerous than those in the subsequent classes. A *centuria* in the Roman legion might well number less than 100 men (usually 60 to 80). In the actual *dilectus* or levy, men assembled according to their tribes, and the magistrates picked out the most suitable men for enlistment. Rather, the Servian constitution provided a basis for taxation and a structure for voting in the centuriate assembly, in which the wealthier citizens (cavalry and infantry in the first class) voted first and *seniores* had precedence over *iuniores*. This voting structure favored the wealthy and older men over the poor and younger men.

Servius Tullius (578–535 BCE)

Servius Tullius was Rome's sixth king, who according to tradition rose from servile origins but may have been an Etruscan adventurer. Many important institutions of the early Republic are attributed to Servius, probably anachronistically.

According to Roman legend, Servius was the son of a Latin captive woman, born in the palace of Tarquinius Priscus and marked by portents that he would one day be king. Tarquinius Priscus and his wife Tanaquil accordingly favored Servius, and when Tarquinius Priscus was assassinated by the sons of Ancus Marcius, Tanaquil covered up his death and declared that Priscus had appointed Servius as his successor. The death of Priscus was then announced, and Servius was accepted as king. Though the legend treats Servius favorably, he appears to be an usurper. The emperor Claudius I (41–54) was a scholar of Etruscan history and argued that Servius was an Etruscan mercenary named Mastarna (*ILS* 212, an address to the Senate advocating the promotion of Gauls into the Senate), possibly identifiable with *Macstrna* in Etruscan inscriptions. Thus an Etruscan warlord may have made himself king, marrying the daughter of Tarquinius Priscus according to legend. The reality of the monarchy was probably not a succession of hereditary dynasts but a succession of “tyrants” in the Greek sense, strong men who negotiated their way into or seized power, being confirmed as kings by the patricians who made up the Senate. In his turn Servius was assassinated by Tarquinius Superbus and by his wife Servius' daughter Tullia. The conventional legend of Servius Tullius is told in Livy's *History of Rome*.

The “Servian constitution,” the “Servian Wall,” the censors and census, the tribes, and Roman coinage and military pay are all attributed to Servius Tullius. These attributions are anachronistic. The Servian Wall dates from the early fourth century BCE, and Roman coinage from the late fourth

century. The Servian constitution and other elements of the Republic's political structure were probably formulated much later than the sixth century BCE. In the opinion of Timothy Cornell, Roman antiquarians ascribed these institutions to Servius Tullius to grant them time-honored antiquity, without incurring the odium attached to the last king, Tarquinius Superbus.

Severus (Emperor) (306–307 CE)

Not to be confused with the emperors Septimius Severus (193–211) or Alexander Severus (222–235) or Libius Severus (461–465), Flavius Valerius Severus was one of the minor Tetrarchs, raised to the rank of Caesar in 305 and becoming Augustus in the western empire on the death of Constantius I (306). However, Severus was unable to cope with his many rivals, Constantine I, Maximian, and Maxentius, all of whom revolted and claimed the title of emperor after the death of Constantius. Charged with ruling Italy and Africa, Severus attempted to suppress the revolt of Maxentius at Rome in 307. He did not reach Maxentius, being deserted by his own soldiers, most of whom were Maximian's veterans and unwilling to fight Maxentius, the son of Maximian. Severus fled to Ravenna, where Maximian forced him to abdicate. Severus was a prisoner for some time until Maxentius forced him to commit suicide.

Sextus Pompeius (ca. 75–35 BCE)

Sextus Pompeius was the youngest son of Pompey the Great. During the Civil War between Pompey and Caesar, Sextus was sent to Lesbos with his stepmother. After Pompey's defeat at Pharsalus in 48 BCE, Sextus traveled with him to Egypt where he witnessed Pompey's assassination. After the defeat at Thapsus in 46 BCE, Sextus and his brother Gnaeus fled to Spain where Caesar defeated them at Munda in 45 BCE. While Gnaeus died, Sextus escaped. Thereafter, Sextus was accused of piracy while gathering men who had served under his father and brother. Eventually, Mark Antony arranged for peace with Sextus by compensating him for his father's confiscated properties and given command of the sea. The peace was short as Sextus was accused again of piracy and took control of Sicily. To secure grain for Rome, a peace was struck between Sextus, Octavian, and Antony. It gave Sextus Sicily and the Peloponnesus and married Octavian to Scribonia, a relative to Sextus by marriage. This agreement collapsed and war resumed between Octavian and Sextus. Sextus twice defeated Octavian off Messana. Octavian then joined with Lepidus' army in Sicily while Agrippa, Octavian's general, defeated Sextus at sea off Naulochus in 36 BCE. Sextus escaped to Bithynia and was executed on Antony's orders in 35 BCE at the age of 40.

Sicilian Slave War, First (135–131 BCE)

The First Sicilian Slave War or First Servile War was a slave revolt in Roman Sicily from 135–131 BCE. It arose due to the growth of large slave-worked estates, where many recently acquired slaves were mistreated and poorly managed. The initial revolt in Enna inspired other rebellions, leading to a crisis that threatened Rome's food supply and briefly the stability of the Republic. Only after several defeats and the loss of many lives did Roman armies suppress the uprising.

As the slave population of Roman Italy rose steeply during the second century BCE, more and more slaves from the Greek-speaking eastern Mediterranean were concentrated on large estates especially in Sicily, a major producer of grain for Roman Italy, providing the opportunity and manpower for the revolt. Many of the slaves were freeborn and some were even soldiers sold into slavery as prisoners of war. According to Diodorus Siculus, the wealthy slave-owners branded them and deprived them of every means of survival, forcing many escapees into a life of brigandage. The survival skills they learned well prepared the future rebels for the upcoming revolt. Although they saw the problem worsening, the Roman governors of Sicily were unable or unwilling to curb the scope of slavery for fear of reprisal from the owners who were Roman equestrians, as equestrians composed the juries when a provincial governor was tried for corruption or extortion (Diodorus 34.2.3, 31). As a result the abuses escalated to the point that Sicily became unsafe for travelers.

A wealthy Sicilian, Antigones of Enna, owned a Syrian slave from Apamea named Eunus, who used to perform magic tricks and make prophecies. Eunus often predicted that he would be king one day and impressed the credulous by using a device to blow fire from his mouth. The slaves of Damophilus and his wife Megallis, driven to extremes by vicious punishments, consulted Eunus as to whether they should revolt. Promising them success, Eunus incited them to kill their masters and take over the city. About 400 slaves with Eunus at their head broke into the houses of the

owners and tortured and killed their masters. Damophilus was publicly beheaded, and Megallis was tortured and thrown off a cliff. Notably, however, the rebels spared their daughter and escorted her to safety because she had always showed kindness to them. To Diodorus, this proved that the slaves abused and killed the masters not because slaves are by nature savage, but in revenge for the ill treatment they had previously suffered.

The slaves then chose Eunus as their king. He ordered the execution of all the citizens of Enna except those who could make weapons for them. Arming 6,000 men, with makeshift weapons such as axes, sickles, stakes, or even kitchen spits, Eunus began to plunder the countryside. He soon attracted another 4,000 followers and inspired the slaves near Acragas to rebel as well (Diodorus 34.2.17, 43). Led by a Cilician slave named Cleon, they overran Acragas. Much to the distress of the Romans, who hoped the two rebels would turn against one another, Cleon and his 5,000 men voluntarily joined forces with Eunus. Eunus now proclaimed himself King Antiochus of Syria, claiming he was not from the island of Sicily, but from the Greek eastern kingdoms and himself a Seleucid monarch. He also elevated to his court a Greek slave named Achaeus who was very skilled in organization and military matters.

The Romans sent Lucius Plautius Hypsaeus with 8,000 men to suppress Eunus, but the larger slave army of 20,000 men defeated him. This victory further swelled the ranks of Eunus' forces, allegedly to the number of 200,000, but this figure seems exaggerated ([Livy] *Periochae* 56.11; Orosius *Against the Pagans* 5.6 puts the figure at 70,000; Florus 2.7 at 60,000). Additionally, the success of the slaves inspired other slave revolts in Minturnae, Sinuessa, Athens, Delos, and even in Rome. The one Sicilian city to avoid disturbances was Messina, where the citizens allegedly treated their slaves better (or the slaves were afraid to revolt).

Many of the cities of Sicily fell to the slave rebels, including Mamertium and Tauromenium, which Eunus made his capital. Only with great difficulty did the Romans recapture the island, city by city in the successive campaigns; the most successful Roman general against the rebels was Publius Rupilius. To reduce Tauromenium, Rupilius allegedly drove the defenders to cannibalism and then executed all those he captured, but Eunus escaped. He was finally captured and died in prison infested with lice. Marcus Perperna received an ovation for ending the war, rather than a triumph, so that the dignity of a triumph not be degraded by a victory over

slaves (as also was the case of Crassus' later victory over Spartacus).

The duration of the First Servile War owes in large part to the distraction of the Romans who were fighting the Numantines in Spain and fighting in Asia Minor, as well as suffering the civil discord of Tiberius Gracchus' tribunate. Anxiety over these different forms of conflict probably made the Roman response harsher in all these cases.

Much of Livy's lost fifty-eighth book contained a detailed history of the rebellion, without which Diodorus, Strabo, Appian, Florus, and Orosius are the surviving sources.

Sicilian Slave War, Second (104–101 BCE)

The Second Sicilian Slave War or Second Servile War was led by the slaves Salvius (Tryphon) and Athenion on the island of Sicily, some 30 years after the First Servile War. The main source is Diodorus Siculus, who focuses on Sicilian affairs.

Diodorus Siculus 36.2–3 mentions several short-lived, minor slave revolts in Italy, the third of which in Capua in 104 BCE, Diodorus describes as a prelude to the Second Servile War. Immediately afterward, Licinius Nerva, the governor of Sicily, rescinded a new decree of the Senate that all citizens

of an allied state held in slavery in a Roman province must be set free (Diodorus 36.3; Dio 27 frag. 101). Wealthy landowners, irritated at the loss of their property, persuaded Nerva to reject all slaves petitioning for their freedom and to tell them to return to their masters. Instead the slaves under one Varius raised a rebellion. Nerva repressed the followers of Varius, but he unwisely ignored a second group of rebels near Mount Caprianus. When Nerva finally sent a force of 600 against the slaves near Heracleia, they were defeated, and the slaves gained both additional recruits to the number of 6,000 and Roman weapons with which to arm themselves. As in the previous Servile War, they also armed themselves with farm implements which could be improvised into weapons.

The slaves now chose as their king a man named Salvius, who claimed to divine the future. Salvius then attacked Morgantina, forcing Nerva to march to relieve the city. At first, Nerva's force of 10,000 captured Salvius' camp, but when Nerva tried to break the siege of Morgantina, he met with defeat. Again the rebels captured many Roman arms and 4,000 captives. This victory brought Salvius even more recruits, with which he renewed the siege of Morgantina.

The successes of Salvius led to more rebellions elsewhere, most notably near Segesta and Lilybaeum, where under a Cilician slave by name Athenion, 200 slaves rose up and attracted 800 followers. Athenion attacked Messina during a public festival and killed many, very nearly capturing the town. He then fortified Macella as his base and ransacked the country, all the while attracting many new recruits. Surprisingly, Athenion was very selective about whom to accept as soldiers into his army, often requiring new recruits to continue their past work to support his army. He also was skilled at astrology, and told his followers he was destined to be king of all Sicily. With a force of 10,000 he laid siege to Lilybaeum, but was unable to take it, so he told his men that the gods had ordered him to withdraw and promised defeat if they did not obey. Very soon after, they were defeated, establishing Athenion's credibility as a prophet.

Meanwhile, Salvius continued to plunder the country. He proclaimed himself king and took the name king Tryphon and assumed the status of a Roman king with a purple toga and lictors as bodyguards. Next, he summoned Athenion to consult, and together they assaulted Triokala, which they made Tryphon's capital. Alarmed at Tryphon's success, the Romans sent Lucullus with 17,000 men to defeat him, although they were at that

time pressured by the campaign against the Cimbri and the Teutones. Tryphon first imprisoned Athenion under charges of conspiracy, then released him and gave him a command against Lucullus.

In battle near Scirthaea, Lucullus completely defeated the slave army many times his size. Tryphon and Athenion retreated to Triokala, and withstood Lucullus' subsequent siege. When Lucullus learned he had been replaced, he razed his camp (which Athenion then captured) and abandoned his province, so as not to assist his successor in any way. For this, he was prosecuted and exiled. A new praetor, Gaius Servilius was unable to recover the situation and even lost his camp to Athenion, who had succeeded Tryphon a king.

The Senate then sent one of the consuls for 102, Gaius Aquilius, to Sicily against the rebels. Following the example of Perperna, Aquilius cut off the slaves' supplies and used hunger to force the enemy to capitulate. Diodorus and Florus differ on Athenion's end: Florus 2.9.12 says he was captured, but accidentally torn apart by different men who wanted the reward; Diodorus 26.10 that he fell in battle. Aquilius then eliminated the remaining 10,000 rebels one siege at a time until the final contingent surrendered to him. Those captives he brought to Rome to fight as gladiators, but many chose to kill each other rather than fight in the arena. A denarius issued by the consul's direct descendant under Augustus commemorates the conclusion of the war.

Although the Slave War threatened the security of Rome, at the same time as the invasion of the German Cimbri and Teutones, it was less of a risk to national security than the previous major slave uprising in Sicily. It probably contributed to Roman anxiety over the invasion of the Cimbri and Teutones, the climate in which Marius introduced recruitment of the propertyless *capite censi*.

Siege Warfare

Although a siege is usually encountered as one event in the larger narrative of a campaign or war, Roman siege warfare was in fact a distinct form of conflict clearly defined in both time and space. The Romans conducted siege warfare by an unwritten set of "rules" and demanded military qualities very different from those of open battle.

Sieges were inherently decisive—the city fell or the besieging army marched away in defeat—and thus lent themselves to increasingly suspenseful narratives, which ancient writers often organized around the dwindling of food supplies, the escalating use of siege machines and defensive countermeasures, or the moral effects of mounting casualties and exhaustion. Sieges fall into two quite distinct operational categories: active sieges, which sought to take the city or fort by assault, often after breaking through the fortifications; and blockades, which aimed to starve the defenders into submission.

For both practical and cultural reasons, the Romans preferred to win a siege by assault (despite the likelihood of heavy casualties for the attacker) since it demonstrated valor and avoided the logistical and strategic problems of keeping an army in one place for a long time—but an active siege could lapse into a blockade after failed assaults. The siege of a city differed not least from other forms of conflict in that the lives of children, women, and the elderly were explicitly at stake. Defeat meant slavery, and fighting men could expect to be killed out of hand. If the siege was a long one, the sack was likely to involve violent pillage, mass rape, and even outright massacre. If the story of the besieger is one of labor, ingenuity, and aggressive valor, the story of the besieged is one of real desperation.

Although the great kingdoms of Mesopotamia had been practicing siege warfare for millennia, serious fortifications and siege engineering were unknown in western Europe during the early years of Rome. The walls of

Italy's small cities and towns deterred surprise attacks by raiders, but the fact that there were few if any proper sieges before the middle Republic is attributable not to the lack of technology (after all, blockading by wall and ditch, or assaulting with siege mounds and ladders did not require much expertise) but rather to cultural preference. Early Roman warfare, like early Greek warfare, usually meant invading and pillaging, until a force marched out to meet the invaders, fighting brief, bloody battles in the open. To stay behind the city walls indicated an unwillingness to fight, a cowardice that was morally equivalent to being already defeated. Since respectable communities were expected to fight "fairly" in the open, harsh treatment of those that refused to surrender was considered just.

The story of Roman siege warfare begins with Livy's account of the siege of Veii, but this was an anachronistic fiction, rather than a legitimate historical account. The siege's Homeric dimensions—it was said to take 10 years—and Livy's anachronisms overshadow a more important association, which is that Veii marked the first time that Roman soldiers were paid. Livy thus associated siege warfare with professionalism, foreshadowing the development in later centuries of the technologies of siege engineering, which required both professional skill and the long labor under fire that early Rome's armies of moonlighting farmers could not provide. But in reality, early Roman sieges rarely lasted longer than weeks and were resolved by stratagem, treachery, starvation, or simple assaults either on gates or, by means of ladders, over the walls.

The Second Punic War brought Rome into full contact with the mature siege technologies of the Hellenistic world, the most significant of which were torsion artillery and siege towers. This artillery consisted of stone- and, later, arrow-shooting engines, crossbow-shaped and ranging widely in size, powered by the spring-like energy of twisted cords or ropes. Torsion artillery was never powerful enough to seriously damage walls, but, in sufficient numbers, artillery could be decisive during assaults. Artillery on the walls could slaughter the assault troops as they approached, or, conversely, artillery could help an assault succeed by suppressing the fire of the defenders. Siege towers, several stories high and wheeled, might suspend a battering ram and/or contain small artillery pieces, but, provided that the defenders did not sally and burn them or undermine their approach, siege towers seem to have been most effective as a means of delivering assault troops to the top of a wall.

Ancient historians and writers of military handbooks lavished much attention on a menagerie of odd, impractical, and even downright impossible devices which might help approach or defend a wall. But real sieges were not decided by enormous “city-takers,” and even the most ingenious or effective machines only enabled the besiegers to approach their enemy, not defeat them. Simple devices that protected soldiers while they approached the fortifications (“mantlets,” or wooden screens, and simple movable sheds, called by a variety of names) were more common and more useful than the super-sized gadgets made famous by Archimedes and the Hellenistic kings.

Detail from the Column of Trajan (ca. 106–113 CE), depicting the siege of a Dacian settlement during the Dacian Wars (101–102 and 105–106 CE). Greco-Roman siege warfare employed torsion weapons such as catapults and ballistae to fling projectiles, as well as siege towers, mantlets, and rams. Located in the Forum of Trajan, Rome, Italy. (Erich Lessing/Art Resource, NY)

Tactically, sieges were simple. The wall protected the defenders, so the besiegers had to go over, under, or through the wall. The real challenge was more motivational than technological: whatever means were used to deal

with the fortifications, small numbers of soldiers would still have to fight their way through well-prepared defenders. Maintaining morale was therefore crucial, and Rome evolved a military culture well-adapted to the particular problem of encouraging highly motivated soldiers to take the lead in siege assaults. To be the first man through a gate or tunnel, the first to climb a ladder or leap from tower to parapet, is a very different thing than fighting bravely in the open surrounded by the men of your unit—and much more likely to be fatal. Roman commanders encouraged this heroic bravery: they gave pointed motivational speeches before assaults, promised promotion and large monetary rewards, and recognized the valor of assault troops both in public ceremonies and in the reports they sent back to Rome. A Roman innovation was to award formal military decorations, and there was a specific award—the “wall crown”—for the first man into an enemy city or camp. If he survived, fame and fortune would await.

The Roman practice of siege warfare, as it solidified in the last centuries of the Republic (it would make more sense to speak of “habits” or “traditions” rather than any formal “doctrine” of siege warfare) made much use of artillery, screens, towers, and ladders, but rarely involved extensive tunneling or the construction of the more outlandish machines. Rather, it depended on two general capabilities: a willingness to labor and strong combat motivation. Just as a legion built a new camp after each day’s march, a proper Roman siege began with the complete encirclement of the target with a ditch and wall—and sometimes a double wall, to defend the besiegers from any relieving army. Rome had a well-earned reputation for relentlessness, and it had the wealth and logistical sophistication to supply a besieging army and build enormous siege works. However impressive the fortifications, Rome would labor until its fiercest fighters could come to grips with the enemy.

In Caesar’s *Gallic Wars* and *Civil War*, and in the histories that describe siege warfare during the empire, the same pattern repeats, albeit with many variations. The Romans first made an intimidating show of force and a demand to surrender. A weak target might be assaulted with the help of nothing more than ladders and supporting missile fire. But if this was impractical, or if an initial assault had failed, the Roman commander, relying on the advice of his increasingly skilled (but never formally trained) engineering officers and perhaps on his reading of histories and handbooks, began to work from the playbook of stratagems, techniques, and

technologies. If a city surrendered before heavy engineering got under way (traditionally, before a battering ram touched the wall) it would be allowed to surrender. If not, the works—most often earth-and-timber ramps topped by siege towers—were continued until the wall could be assaulted by sufficient numbers of assault troops.

The “laws” of siege warfare dictated that the commander give the town or city over to his men to sack, but commanders were probably unable to restrain their enraged assault troops when they finally broke through, despite some stories to this effect in the sources. Mass rape and looting were usually combined with the killing of the remaining men of military age. All survivors were enslaved. The more the besieging army suffered, the more violent the sack was likely to be—some ended with the massacre even of women and children. Rome made effective use of such intimidation (terror would perhaps be a more accurate term), eliciting many capitulations simply by threatening a full siege. The willingness of Roman commanders to press sieges even in the face of relentless resistance, putting their disciplined legions to work building and rebuilding huge ramps and towers until the exhausted defenders could be overwhelmed, maintained the credibility of this threat.

The best way to understand Roman siege warfare is to read any extended narrative by an eyewitness or by a knowledgeable writer who had interviewed participants. Of these there are three: Caesar’s accounts of several sieges of Gallic towns, Josephus’ sensational but still comprehensible rendition of the siege of Jerusalem in 70 CE, and Ammianus’ descriptions of Roman-Persian siege warfare in the fourth century, including his own experience in a city under siege. Each provides compelling descriptions of the terror and suffering of a siege, of the deployment of artillery and machines and the laborious construction of siege mounds, and of the death-defying final assaults, in each case led by a handful of volunteers.

Social War (91–87 BCE)

The Social War (the *bellum sociale* or war of the allies) was fought between Rome and a group of rebel Italian states who revolted against the unequal terms of their alliance with Rome. Appian is the only surviving source to provide a complete narrative of events, though we lack details for many of the key battles and campaigns. After the rebellion of the Italian states in 91 BCE, a Roman expedition against them did not begin until 90 BCE. There were two principal campaigns, one against a rebel alliance centered on the Marsi in central and eastern Italy and one against the Samnites in central and southern Italy. The strategy of the rebels may have been to inflict quick defeats on Rome, encouraging the hitherto loyal Italian states to defect, before Rome's superior manpower (in both Italy and the wider empire) tipped the balance.

This strategy was initially successful. The campaigns of the year 90 BCE resulted in a series of Roman defeats, mostly caused by inexperienced generals rushing to give battle. The heaviest defeat of the year was the battle of the River Tolenus, in which the consul Publius Rutilius Lupus was killed, along with 8,000 men, in battle with the Marsi and their allies. The campaign was rescued by Marius, who was one of Lupus' legates, rescuing the Roman army and inflicting a defeat on the Marsi. A further defeat of another legate, Quintus Servilius Caepio, resulted in Marius' taking sole command for the rest of the year. In another campaign, Gnaeus Pompeius Strabo, the father of Pompey the Great, overcame defeat and besieged the rebel stronghold of Asculum.

The other consul, Lucius Julius Caesar, fared no better in the campaign against the Samnite alliance, suffering defeats at the battles of Aesernia and Taenum. The Samnites followed this up by besieging and capturing a

number of loyal Roman colonies in the region. The winter of 90–89 BCE saw the culmination of the rebel strategy, with revolts in Etruria, Umbria and Transalpine Gaul in support of the Samnite rebels. Though few details survive, it is clear that these rebellions were swiftly crushed, in Etruria and Umbria by Lucius Porcius Cato and in Transalpine Gaul by Gaius Caelius. The Roman victories in these campaigns proved to be crucial to the outcome of the war. They stopped the rebellion from spreading further, allowing Rome to concentrate on suppressing the original rebel states. This was aided by the Senate's and People's decision to offer Roman citizenship to those states that had not yet rebelled.

In 89 BCE, two consuls with proven military records were elected: Pompeius Strabo and Lucius Porcius Cato, both of whom moved against the Marsic alliance. Pompeius won a major victory at the battle of Asculum and his legates defeated a number of lesser rebel states. Lucius Porcius Cato also won a string of victories, but was defeated and killed at the battle of Lake Fucinus, possibly murdered by mutinous elements of his army. To the south, the Samnite campaign was led by Sulla, the future dictator, who also scored a number of victories, driving the Samnites from Campania and back into Samnium itself. The year ended with only the Marsi and Samnites themselves fighting on.

Fighting continued on into 88 BCE, with Quintus Caecilius Metellus Pius scoring a final victory over the Marsi in an unnamed battle, killing the key rebel leader Poppaedi Silo, which ended the Marsic campaign. To the south, however, the Samnites continued to fight on, aided by the outbreak of the Marian-Sullan conflict, the first of the late Republic's civil wars. Rome's attention had also been diverted by the outbreak of the Mithridatic war in Asia Minor. The Social War's fighting continued on into 87 BCE when the surviving rebel leaders launched an audacious bid to invade and capture Sicily as a new base of operations. They hoped to gain support from the slave population, which had revolted twice in the last 50 years. However Gaius Norbanus, the governor of Sicily, swiftly moved to relieve the siege of Rhegium and prevent the rebels from crossing the straits.

The advent of new civil conflict at Rome, this time between the two consuls of 87 BCE, Gnaeus Octavius and Lucius Cornelius Cinna (supported by Marius), resulted in an upswing in the rebels' fortunes. Metellus Pius was recalled to Rome to relieve the siege that Cinna and Marius had established and was unable to come to terms with the Samnites, simply quitting the

campaign. Not only did this relieve the pressure on them, but Cinna and Marius sent envoys, led by Gaius Flavius Fimbria, to negotiate an alliance. Thus the Social War was displaced by the new civil war, with the remaining Italian rebels merely allying with one of the two factions in Rome. When Cinna and Marius seized Rome in 87 BCE, the Senate probably ratified the terms and ended the war with the Samnites. What exact concession the Samnites received is not known, but greater autonomy from Rome has long been postulated.

A postscript to the war occurred five years later during the second phase of the Marian-Sullan Conflict, Sulla's invasion of Italy in 83 BCE. By the following year Sulla and his allies had defeated all the Marian commanders and captured Rome itself. Clearly fearing for the future of their newly won autonomy, the Samnite commanders raised a fresh army of 70,000 men and took to the field against Sulla, aided by the handful of surviving Marians. Marching on Rome, they fought a major battle at the Colline Gate against Sulla. Although Sulla's wing of the battle was defeated, the overall battle was won by Crassus (the future triumvir), annihilating the Samnite army. The prisoners who did survive were executed by Sulla outside of Rome. Whatever terms the Samnites had extracted in 87 BCE were probably annulled by Sulla and the Social War was finally won by Rome, almost by default. The long-term results of the Social War were the integration of Rome's former Italian allies as Roman citizens, and the consequent disappearance of the non-Latin Italic languages and cultural identities.

Spanish Wars, Causes

The Spanish Wars display the gamut of motivations of Roman imperialism. Rome's first involvement in Spain was strategic, intended to weaken and destroy the Carthaginian foothold in Spain so that Hannibal Barca, whose family had extensively colonized the Spanish coast, would be weakened and cut off from Spanish manpower and resources. The Barcids had made alliances with the native Spanish, and Spain was rich in iron and silver. Scipio Africanus succeeded in ejecting the Barcas, neutralizing Spain as a threat.

After the defeat of Carthage in the Second Punic War, the Romans probably held onto Spain to exploit its silver mines, which Polybius says produced 2,500 silver drachmas a day. Individual generals sought commands in Spain to win victories and triumphs and enrich themselves from plunder. This imperialism often took an ugly turn.

During the Lusitanian War, Lucius Licinius Lucullus (consul 151, a possible ancestor of the more famous late republican Lucullus) waged war on the Vaccaeii without authorization of the Senate. Appian (*Spanish Wars* 51) says that Lucullus was motivated by desire for victory and wealth, but the Vaccaeii did not have the gold he wanted. As proconsul the next year, Lucullus teamed with the new consul Servius Sulpicius Galba (ancestor of the 69 CE emperor Galba) in enslaving or massacring thousands of Lusitanians (accounts differ) who had surrendered to the Romans. Such treatment was a breach of Roman *fides*.

These anecdotes may be partisan, for the original source is probably Polybius, flattering his patron and friend Scipio Aemilianus and presenting Scipio's rivals in a bad light. The Spanish Wars had become unpopular, and few young men came forward for the *dilectus* in 151. Scipio created a

popular sensation by volunteering to serve as military tribune. He distinguished himself in Spain, winning a duel with one of the enemy and winning a mural crown. He also seems to have made enemies of Lucullus and Galba.

Cruel treatment at the hands of individual Romans intensified Spanish resistance. Polybius termed the Spanish Wars “fiery,” long-burning and hard to put out. The Lusitanians found a leader, Viriathus, who inflicted defeats on Romans, killing the consul Vetilius. At other times, Romans were forced into humiliating treaties with the enemy. In 137 BCE Gaius Hostilius Mancinus found his forces trapped by the Numantines. To escape, Mancinus made a treaty with the Numantines, without Senate authorization, subsequently rejected by the Senate. In agreement with the treaty, Mancinus had to be surrendered to the Numantines, who let him return to Rome. Tiberius Gracchus (the subsequently famous tribune of the plebs, 133 BCE) had helped Mancinus arrange the treaty, and found his career blighted for a time. The Romans regarded Mancinus’ treaty as a national humiliation. Due to these humiliations, Roman commanders and armies in Spain probably became motivated by vengeance. Vengeance was behind the Roman people’s nomination of Scipio Aemilianus for consul in Spain in 134 and motivated Scipio’s merciless tactics in the siege of Numantia.

The brutal civil wars and conflicts of the 80s (termed the Marian-Sullan conflict in *CAGR*) spilled over to Spain when the Marian supporter Sertorius escaped and established himself in Spain. He resisted all attempts to subdue him until Pompey the Great (a former Sullan supporter) invaded Spain.

Augustus’ motives in the Cantabrian War were to consolidate the conquest of Spain, extending the provinces to the Atlantic Ocean. By this time Spain had become a province in the sense of a region under Roman government, settled by citizens. Many Roman and Latin colonies had been founded in Spain, and the full conquest of the region was probably intended to protect them. Augustus also needed victories over external enemies and the external expansion of the empire to add to his prestige and stability as emperor.

Spanish Wars, Course

The Roman conquest of Spain (Hispania) falls into five phases: the Second Punic War, the Lusitanian or Viriathic Wars, the Celtiberian War, late republican civil wars, and the Cantabrian War. Rome committed military forces to Spain during the Second Punic War (218–201 BCE). During the Lusitanian or Viriathic Wars (ca. 155–139 BCE) and the Celtiberian War (155–133 BCE), the Romans struggled with the conquest of the native Iberians. This phase of the Spanish Wars was often humiliating for the Romans, who reacted with greater than normal brutality. In the fourth phase, Roman civil wars migrated to Spain; Sertorius occupied Spain till defeated by Pompey, and Caesar inflicted defeats on the Pompeians in Spain. The fifth phase (26–19 BCE) represents the final conquest of Spain in the reign of Augustus. After that time, Spain became a Romanized and peaceful province, eventually occupied by only one legion.

The geography of Spain is dominated by a large central plain surrounded by mountains to the north (the Pyrenees) and mountainous country also to the east and south. The land is arid and there are few rivers. The Mediterranean coast was colonized by Greeks, Phoenicians, and Carthaginians. The Carthaginians had first colonized in the eighth century BCE, but in the decades preceding 218 BCE the Barcids, Hannibal's dynasty, expanded an empire in Spain, founding the city of New Carthage (Cartagena), making alliances with the Spanish, building up manpower, and exploiting Spanish silver mines.

Thus the Second Punic War began in Spain. The Romans had an agreement with the Carthaginians that neither would cross the Ebro River, and possibly an agreement that the town of Saguntum was under Roman

protection, though this is disputed by experts. In 219–218 BCE the Carthaginians laid siege to Saguntum. The Romans responded to this as an act of war, and sent Publius Cornelius Scipio (the father of Africanus) and his brother Gnaeus to Spain. Publius and Gnaeus Scipio inflicted a defeat on Hannibal and his army at the Ebro in 217. They recaptured Saguntum in 212, but were defeated and killed by Hasdrubal Barca at the Second Battle of the Ebro.

Seeking vengeance for his father and uncle, Publius Cornelius Scipio (the future Africanus) obtained command of the Roman army for Spain in 209, by popular acclaim even though he was only 26. Scipio Africanus crossed the Ebro and besieged and captured New Carthage. He destroyed the Spanish Carthaginian army at the battle of Ilipa and the Carthaginians withdrew from Spain.

The Romans held onto Spain, though they had far from conquered it. They divided Spain into Hispania Citerior (Nearer Spain) and Hispania Ulterior (Farther Spain). Spain may not have been a high priority for Rome between 193 and 155 BCE, when many Spanish campaigns were commanded by praetors rather than consuls; during this period, the most prestigious wars and triumphs were over the eastern Mediterranean and Carthage. However, Spain's silver mines eventually produced 2,500 silver drachmae a day for Rome (Polybius 34.9.8).

The Lusitanians put up a fierce resistance, known as the Lusitanian War. It is also known as the Viriathic War due to the rise of a Lusitanian leader, Viriathus, who inflicted defeats on the Romans. Viriathus slew a Roman army and the consul Vetilius in 145; the consul of 140, Quintus Servilius Caepio, eventually had Viriathus assassinated. The overlapping war with the Celtiberians (155–133) is known as the Numantine War after Numantia, the settlement that put up the longest resistance to the Romans. The Numantines were eventually defeated by Scipio Aemilianus, the adoptive grandson of Africanus and victor of the Third Punic War (149–146 BCE). Aemilianus was chosen as consul for 134 and assigned to Spain. After imposing severe discipline and training on the Roman army in Spain, restoring Roman morale, Scipio surrounded Numantia with earthworks and starved it out, destroying the city when it fell. After the fall of Numantia, Celtiberian resistance sputtered on but was essentially broken.

The late Republic's civil wars migrated to Spain. The Marian supporter Sertorius established a base in Spain, employing Celtiberians as guerrilla

warriors and separating Spain from republican control from 82–72 BCE, until he was defeated by Pompey. In the civil war between Caesar and the Pompeians (49–45 BCE), Caesar first campaigned against the Pompeian generals Afranius and Petreius in Spain, using the country's arid landscape to trap them without food or water so that they were forced to surrender to him without bloodshed (the "battle" of Ilerda). Spain remained a refuge for the Pompeians, defeated by Caesar at the battle of Munda in 45 BCE.

The final phase of the conquest of Spain was the Cantabrian Wars (26–19 BCE). The Celtiberians were completely defeated. As a result of the Cantabrian wars, Roman Spain was extended to the Atlantic Ocean. Its three provinces were Hispania Baetica, Lusitania, and Tarraconensis, boasting 26 Roman citizen colonies, 24 municipia, and numerous Latin and native communities recognized by the Romans.

Spanish Wars, Consequences

The immediate consequences of Rome's conquest of the Carthaginian territories in Spain was the weakening of Carthage, which lost the

manpower and resources that the Barcids had built up in Spain, and ultimately lost the Second Punic War. Hannibal was forced to fall back upon Carthage's older possessions in Africa, where he was defeated in the battle of Zama. The Romans also acquired access to Spanish silver, which became a major source of Roman wealth.

The organization of Spain into the provinces of Nearer and Farther Spain marked the beginning of the conversion of *provinciae* (military assignments) into geographically demarcated provinces. The western and northern boundaries of Nearer and Farther Spain were allowed to remain vague as the Romans extended into native Spanish territory.

However, other consequences of Roman imperialism in Spain over the next seven decades (from 206 to 133 BCE) were less positive. The individual motivations of Roman imperialism, personal glory, greed, and vengeance, were amply displayed, and the Spanish responded with fierce resistance, inflicting humiliating defeats on the Romans. As a result, young Roman men were less willing to serve in the legions. This "recruitment crisis" has sometimes been viewed as due to an actual shortage of manpower, which is unlikely in demographic terms. The fall in the number of recruits willing to serve motivated the Senate to lower the property qualification for legionary service, leading ultimately to Marius' recruitment of the propertyless *capite censi* as soldiers.

Once the conquest of Spain was completed, however, the provinces became peaceful and populated with many Roman colonies and municipia. City charters (the most famous is from Urso, Colonia Julia Genetiva, a Caesarian foundation) have been preserved. Many Romans and Italians settled in Spain. Their descendants furnished the new senatorial aristocrats of the early empire. Emperors Trajan (98–117) and Hadrian (117–138) came from Roman Spain, as did famous literary authors such as Seneca the Elder, Seneca the Younger, and Martial. The Roman army also recruited in Spain, recruiting *auxilia* from the mountainous areas that had originally put up such fierce resistance to Roman conquest.

Spartacus, Revolt of (73–71 BCE)

Spartacus (d. 71 BCE) was a Thracian gladiator famous for leading one of the largest and most successful slave revolts in the ancient world. According to one ancient author, Spartacus had deserted from a Roman auxiliary unit, was subsequently caught and sold into slavery, and ended up at the gladiatorial barracks of the trainer Gnaeus Cornelius Lentulus Vatia, in Capua. In 73 BCE, Spartacus was one of 74 men who broke out of the school using only farming implements as weapons, and soon became a leader among the band of fugitives. The gladiators moved south down the Via Appia and stopped at Mount Vesuvius, where they obtained weapons, ravaged the rich countryside, and were joined by thousands of runaway slaves. Rome, disdaining the rebels as slaves and barbarians, responded by sending the praetor Gaius Claudius Glaber with a force of 3,000 men. Spartacus and his army of Celtic, Thracian, and German slaves launched a surprise attack and captured Glaber's Roman camp during the night. In the next few months, the growing band of rebels defeated three Roman armies and raided two of their camps, until Spartacus and his co-leader, Crixus, disagreed on strategy. Spartacus wanted to head north, out of Italy, and let each man make his way to his homeland. Crixus wanted to keep plundering and to fight the Roman army following them. As a compromise, Spartacus and Crixus moved south to recruit shepherds and herdsmen to their cause. Shortly afterward they defeated the Roman army led by the praetor Varinius, capturing Roman standards and even the praetor's horse. Spartacus became famous, even revered, among the lower social strata, and even more men joined the revolt.

At the end of the year 73, the Romans sent two consular armies,

consisting of two legions each, to address the crisis of the slave revolt. During 72 BCE Crixus and Spartacus split, the latter taking around three quarters of the army, estimated at about 30,000 men. Crixus and his army were defeated, but Spartacus bested the second consul. He held funeral games for the dead Crixus, using Roman prisoners to fight as gladiators in a humiliating reversal of roles. The army started north, but for unknown reasons, turned south again. By then the Romans had appointed a new commander, Crassus (the future triumvir), who took the offensive against the rebels and defeated a detachment of about 10,000 rebels. Forced down to the very foot of Italy, the rest of the Spartacan army arranged passage to Sicily with local pirates, but were betrayed. Spartacus and his followers made for the Aspromonte Mountains, but that winter the Roman legions under Crassus built a defensive line of fortifications across their path. Although Spartacus was able to break through under cover of a winter storm, the discipline of his troops was waning and a group of Spartacans who attacked without orders was soundly defeated by Crassus' troops. Unable to stop his own men from turning to fight, Spartacus engaged in battle. Even Roman authors marveled at Spartacus' bravery as he threw himself toward Crassus, killing two centurions in his path, before he was overwhelmed. His body was never found.

Standards, Cult of

The *signa militaria* were the military standards of the Roman army. Physically the basic framework of each type of standard was a tall pole, or cross, made of wood. On this frame a range of objects could be placed. Different units carried different standards. From the time of Marius onward the most prominent standard of each legion was the *aquila* (eagle), which

replaced a range of other “animal” standards formerly carried by the legions (Pliny the Elder *Natural History* 10.16; Vegetius, *Military Affairs* 2.13). Each legion could also carry a “heraldic” standard that contained an image of an animal or god associated with the legion. Another common standard was the *signum* (though all standards are spoken of as *signa*). This standard bore objects such as an image of an open hand and medallions and was carried by individual cohorts within a legion and auxiliary units. A linen flag called a *vexillum* was carried by legionary detachments, particularly of cavalry. From the mid-second century CE cavalry units carried a standard called a *draco*, a dragon’s head from which trailed a long banner. In the imperial era all army units also carried an *imago*, a portrait of the ruling emperor.

The most basic role of the standards was to help to identify and distinguish between individual units and to provide a rallying point during battle. However, standards also played a highly symbolic role in establishing group identity. The standards symbolized a unit’s *esprit de corps* and military achievements and bonded the troops together by providing a focal point of group identity. To lose a standard, especially an eagle, was considered the greatest disgrace. Historians record many examples of soldiers undertaking heroic acts to save their standards from the enemy. (Tacitus, *Histories* 3.22.4; Livy 34.46.10–13) A unit that lost its standards effectively ceased to exist and a number of large-scale military campaigns were undertaken to recover lost standards. Germanicus invaded German territory to recover the standards lost during the Varian disaster in 9 CE.

The standards were also objects of great religious significance, with the Christian writer Tertullian even claiming that they were worshipped as gods (Tertullian, *Apology* 16.8, *Ad Nationes* 1.12). Although this claim is exaggerated, the standards were treated with great reverence by the troops. While on campaign the troops saw incidents involving the standards as divinely inspired portents. The historian Dio notes that during Crassus’ invasion of Persia in 53 BCE a standard carrying an eagle became stuck fast in the ground. Later a *vexillum* was blown into the river—both events were viewed with great dismay by the army who believed they were signs that the campaign would fail. (Dio 40.18)

The standards played a formal role in the religious life of the army. They were viewed as sacred objects and stored in the camp shrine (*sacellum*). Troops would deposit a part of their pay “at the standards” (*ad signa*) knowing that nobody would dare risk stealing from this sacred place.

Likewise in the Rhine mutiny of 14 CE the senator Munatius Plancus sought refuge in a camp *sacellum* because he believed he would be safe there from the angry troops (Tacitus, *Annals* 1.39). Numerous inscriptions record individual soldiers' dedications to the standards in the hopes of winning the favor of the gods (for example, *CIL* VII 1031). A number of dedicated festivals were held in honor of the standards. Each year the date on which the legion's eagle was conferred, or the "birthday of the eagle" (*natalis aquilae*) was celebrated (*CIL* II 6183). Also celebrated was the "crowning of the standards" (*Rosalia Signorum*), a festival in which the standards were adorned with garlands of roses. Among all the standards the eagle had the greatest religious significance. The eagle was associated with Jupiter; the god's divine favor was thought to bring the Romans victory (Tacitus, *Annals* 2.17; Suetonius, *Augustus* 94.7, *Vitellius* 9).

Detail from the Column of Marcus Aurelius (ca. 180–192 CE), depicting Roman soldiers with standards. The standards were used as visual markers to keep order on the march and in battle. The standards were also a focus of loyalty due to their sacred nature. Located in the Piazza Colonna, Rome, Italy. (Universal History Archive/Getty Images)

In the imperial age emperors sought to use the intense loyalty the troops felt toward the *signa militaria* for their own political ends. Each unit carried the imperial image somewhere on their standards and from the reign of Tiberius onward the standards were viewed by the troops as an imperial gift (Tacitus, *Annals* 1.42.3). Additionally *vexilla* carried the name of the

reigning emperor on them. (Suetonius, *Vespasian* 6.6; Dio 40.18.3) The emperor was so closely identified with the standards that if a unit wished to mutiny against him they could do so by tearing down his image from their standards (Tacitus, *Histories* 1.55, 2.85; Herodian 8.5.9). The *signa* also played a central role in ceremonies designed to encourage loyalty to the emperor. The troops swore their military oath (*sacramentum*) on the standards and they were also prominently displayed during imperial addresses to the troops and distributions of pay.

States of Emergency

In ancient Rome, there were two formal declarations which officially announced that a state of emergency existed. As is the case with modern states of emergency, while the statute law of the state does not cease to be in effect, executive authorities are authorized to suspend the enforcement of laws that might hinder their attempts to provide for the safety of citizens and the survival of the state. Modern states of emergency have a wider scope of use, being employed as a response to natural disasters as well as man-made ones (war, terrorism, et cetera). In the Roman Republic, the two

declarations were only used in cases of severe military threats to the Roman state. These two declarations are called *tumultus* and *iustitium*.

In extreme cases of sudden danger threatening the city of Rome from nearby or from the Gauls to the north, the Roman government, usually through a senatorial decree or an edict issued by a dictator, if one was in office, could declare a state of *tumultus* to be in existence. The declaration of a *tumultus* signaled that a dire threat which could result in immediate physical harm to the Roman state and its citizens existed, and urgent military action was necessary to counter that threat. After the declaration of a *tumultus*, an emergency draft of men into the army would be held, one that would involve a suspension of the normal rules for conscription. Under Roman law, certain classes of persons, such as priests of the state religion and the personal staff of a Roman magistrate, were by law exempt from all military service while holding that official status. When a *tumultus* was declared, however, all such exemptions could be temporarily revoked for the period of the state of emergency, pressing into service all available men no matter their rank, station, or even age. As an indication of the dire nature of the situation envisioned during a *tumultus*, the Roman military commander as he led his army against the enemy was further empowered to enlist men he met along the route of march on the spot. This was distinct from the regular levy or conscription.

The declaration of a *tumultus*, however, was limited in use as it was only invoked for two clearly defined tactical situations, which formed part of the formal declaration of the state of emergency. The two types of declaration were those of a *tumultus Italicus* and a *tumultus Gallicus*. A *tumultus Italicus* signified that one of the various Italian peoples, Rome's immediate neighbors, had suddenly taken up arms and threatened to attack the Roman state. This declaration could also be employed in response to slave uprisings such as the revolt of Spartacus. A *tumultus Gallicus* indicated that a major invasion of Gauls, the Celtic peoples to the north of Italy, was expected to occur. The Romans took this threat extremely seriously ever since their early, and traumatic, experience in 390 BCE when the city was according to traditional accounts seized and sacked by a marauding army of Gauls. While later tradition may have embellished upon the actual details of the encounter, the psychological effect on the Romans is apparent from their later actions whenever a *tumultus Gallicus* was declared in later times.

The *tumultus* lasted as long as the threat remained. Once the immediate military threat had been neutralized, any soldiers who were irregularly pressed into military service would be released from that service, and the declaration of the *tumultus* would be lifted.

Separate, but often related to a declaration of a *tumultus* was a declaration of *iustitium*, the suspension of all public and private business, including closing the law courts and cancelling meetings of the public legislative assemblies. The presiding magistrate (consul or dictator) passed an edict declaring an *iustitium*. Whenever a *tumultus* was declared, an *iustitium* and a special draft of emergency soldiers would follow, but an *iustitium* could be announced by itself when no state of *tumultus* was in effect, with known historical examples. During the period of *iustitium*, private business, such as public auctions and the opening of shops, would be suspended along with the ban on public actions other than those related to military affairs. Once issued, the suspension of all business could only be revoked by the authority (the consul, dictator or other magistrate working with the Roman Senate) that issued the edict.

While the *senatus consultum ultimum* would later gain greater attention for its role in signaling that a state of emergency was in effect, the passage of that decree was often followed by the declaration of a *tumultus* or *iustitium*, which were the only methods of instituting a true state of emergency, where statute law could be temporarily altered or suspended for the period of the emergency.

Stilicho (d. 408 CE)

Flavius Stilicho was supreme commander (*magister utriusque militiae*) of the western Roman army (394–408). Stilicho was the son of a Roman noblewoman and a Vandal cavalry officer (Claudian, *Stilicho's First Consulship* 35–39). Stilicho's barbarian heritage did not affect his upbringing or career, which was exclusively Roman. His career started under Theodosius I (379–395) and he is first attested on a diplomatic mission to Persia (383–384). He negotiated a crucial treaty between both empires and received the hand of the emperor's niece Serena as a reward. Stilicho rapidly rose through the eastern chain of command, first as commander of the imperial guards (*comes domesticorum*), then as senior general (*magister militum*). Stilicho accompanied Theodosius to the west for the civil war against Eugenius.

After Theodosius' death, Stilicho found himself in the unique position of the most senior commander to have survived the battle of the Frigidus, and indeed the most powerful man in the western empire below the emperor. Stilicho claimed that Theodosius had appointed him as guardian of both his sons Arcadius and Honorius. For the next 13 years Stilicho effectively governed the imperial west in name of the boy emperor Honorius, but his control of the east was heavily contested by Constantinople. Diplomatic relations between both realms soured and led to a phase of "cold war," when Stilicho intervened twice in the Balkans to battle Alaric (395 and 397). On both occasions, Stilicho had to withdraw due to lack of discipline in his army and political maneuvering by his eastern enemies. Despite these setbacks, Stilicho succeeded in making his authority in the west quasi-absolute by bringing the entire western army under his sole command. He further strengthened his control over Honorius, by marrying his elder daughter Maria to Honorius in 398 and, after Maria's death in 407, his younger daughter Thermantia.

Despite his political dominance, Stilicho's military strategy wrestled with the threat of Alaric and other barbarian incursions. After Alaric's invasion of Italy in late 401 and 402, Stilicho managed to fight him twice to a standstill at the battles of Pollentia and Verona in 402. On both occasions,

Alaric was able to retreat with sufficient forces. It is possible that Stilicho either lacked the resources to destroy Alaric or wished to use his Gothic force as auxiliaries for future campaigns. By 405, Stilicho had given Alaric a command in Illyricum, but needed to deal with the invasion of Radagaisus before pursuing his eastern ambitions. Even though he vanquished Radagaisus, Stilicho's neglect of the Rhine frontier allowed barbarian tribes to invade Gaul in 406, which triggered a series of usurpations in Britain. Stilicho had effectively lost control over the transalpine provinces by 407 and meanwhile was pressured by Alaric for subsidies. Stilicho maneuvered the Roman Senate into paying Alaric, which cost him influence.

Stilicho eventually found that he could not outmaneuver his political enemies. When Arcadius died on May 1, 408, Stilicho planned to travel to Constantinople and supervise the imperial succession. His enemies in the imperial court represented him as planning to seize the imperial throne from the infant Theodosius, Arcadius' son. Stilicho and his retinue were arrested on charges of treason. His supporters were massacred at Ticinum. Stilicho did not resist his own arrest and execution at Ravenna on August 22, 408, despite his continued access to barbarian auxiliaries. Notwithstanding hostile accusations of treason, Stilicho ultimately died as a loyal servant of Theodosius' dynasty.

Stratagems

The term “strategy” derives from Greek *strategos* (general) and directly

from *stratagemata*. *Stratagemata* (“stratagems”) were “tricks” or devices used to deceive the enemy. The imperial author Frontinus collects many stratagems, organized thematically. They included shrinking the dimensions of a Roman camp, which was laid out in a standardized format, to make it appear smaller and deceive the enemy into thinking that the Roman force was smaller; the camp could also be expanded for the opposite effect, and camp slaves and followers disguised as soldiers to convey the impression of a larger force. Many other stratagems for deceiving the enemy existed, some rather melodramatic, such as dressing slaves as soldiers and vice versa, or men as women and vice versa, relying on Greco-Roman expectations of social roles. In Greco-Roman literature, stratagems might be contrasted with courage (*virtus*), the more highly valued virtue.

Strategy

Roman “strategy” in the geopolitical sense or “grand strategy” may well be an anachronistic, modern concept, as is the division of strategy into grand strategy, theater strategy, and operational strategy. The Greco-Roman use of the term *stratagemata* (stratagems) is much narrower, comprising techniques or tricks used to deceive the enemy. Nonetheless we can classify as strategic the Romans’ military policies that ensured spatial and political control of the Republic and of the growing empire.

The Republic was marked by a policy of military expansion, endorsed at all social levels, while there were ultimately few checks on the development of civil warfare. In contrast, with a few exceptions the imperial period was much less expansive, and the government and army were organized to discourage civil warfare. Imperial strategy thus emphasized maintaining internal security. Fighting civil wars became a priority, resulting in a deadly

center-periphery instability that nearly toppled the empire in the third century crisis and led to the western empire's downfall in the fifth.

In the Roman Republic, society was organized at all levels for external conquest, regarding it as an absolute good. Both elite and masses served extensively in the army, though before the late Republic (ca. 107 BCE) this was a citizen army recruited from small landowners. Military service was endorsed by codes of masculinity (*virtus* means both "courage" and "manliness") and by elite familial tradition. Elite success in warfare was rewarded by political ascent and fame, though if a consul or praetor lost his battles, his political career does not seem to have been greatly affected because the troops' lack of discipline was blamed. The Romans paid ordinary soldiers and also rewarded them for valor, awarding military decorations and promotions. Especially from the Punic Wars period onward, warfare brought a flood of wealth into Rome from the looting of enemy cities and communities. Such wealth was redistributed to the community, both directly (as military pay and donatives) and in the form of the triumph ceremony's festivities, temples, games, and other amenities.

Another trend in the scholarship of Republican Roman imperialism has emphasized defensive concerns and interstate relationships (see Burton, "Imperialism"). The Republic appears to have stumbled into some of its largest wars, the First and Second Punic Wars and the First and Second Macedonian Wars, out of defensive concerns and to defend allies and client peoples or rulers. Once Rome's growing dominance became apparent, other communities in the Mediterranean sought Roman aid. Such aid, however, often presented the Roman nobility with more opportunities for war. Defensive concerns also were uppermost, of course, in the Second Punic War (Hannibal's invasion of Italy) and died hard; as long as Hannibal and the state of Carthage remained alive, the Romans perceived them as threats.

During the Republic, Roman direct geographic control over the empire was limited. The greatest extent of control was exerted over Italy by building roads, because Italy's rivers are intermittent during the summer months, making water transport infeasible, and by establishing colonies. Elsewhere, Rome established alliances with foreign states and rulers (client monarchs). These alliances depended on *fides* (loyalty), a strategic value for the Romans. Surrendered enemies entered the *fides* of the Romans; client rulers the *amicitia* (friendship) of the Romans. Subjects or external peoples who violated *fides* were punished with extreme severity.

Direct government by Roman magistrates developed, but a provincial “governor” even in the late Republic was still principally a military commander. A *provincia* was originally a military assignment or theater of war, and the sense of *provincia* as a region to be governed arose only gradually. The late Republic saw the tendency to grant magistrates repeated commands (as with Marius’ consulships) or temporally or spatially extended commands to address military challenges that overlapped traditional *provinciae*. This extraordinary commands were a strategic choice that, combined with the problem of rewarding soldiers, led to civil war.

Rome typically conquered and co-opted other Italian peoples, rewarding Italians with plunder and citizens with colonies and virginal land grants. Since the allies aided Rome in conquering even more territory, this policy resembled a modern pyramid scheme (though without fraudulent intent). The “pyramid scheme” was probably sustained for an abnormally long time by the profits of conquest. When Italy was completely conquered and foreign wars became less profitable, as in Spain in the mid- and late second century BCE, the scheme began to collapse. The result was the Social War (91–87 BCE), ended by granting citizenship to the Italians.

Though its causes are still debated, the drop in Roman citizen recruits’ socioeconomic status during the second century BCE suggests a growth in poverty among the citizen lower strata. The policies of the Gracchi brothers, Marius’ recruitment of the *capite censi*, and the Social War all illustrated the need for a new strategy—one that rewarded poor soldiers. As Sulla demonstrated by twice leading his army against the city of Rome, this strategy favored civil warfare and led to the destruction of the Republic. The shortage of land could be addressed by seizing land from its owners, as in the proscriptions of 82–81 and 43–42 BCE.

In contrast, in the Principate Augustus (at least by his death in 14 CE) adopted a much less expansive strategy and reorganized the empire to prevent civil war. Augustus left a directive, part of the *breviarium totius imperii*, instructing his successor Tiberius not to further extend the boundaries of the empire. Tiberius (14–37 CE) obeyed him, but subsequent emperors did engage in external conquest, acquiring Britain, Scotland, Dacia, and (temporarily) Mesopotamia. However, the emperors were now careful to monopolize the credit for conquest. At least in the early and mid-first century CE, emperors did not command in person, but nonetheless were represented as commanders-in-chief and as conquerors in imperial art and

coinage. They (and members of the imperial family) monopolized the triumph.

The administration and elite careers of the Principate were reorganized to deter civil war by discouraging the rise of formidable rival generals. Augustus structured his powers to give himself *imperium* over all the frontier provinces (“imperial” provinces garrisoned with legions), overriding their governors, whom he personally appointed. Members of the senatorial aristocracy, notionally the descendants of the republican nobility, faced more limited military careers, holding posts for only a year to a few years at a time, in rapid rotation to prevent any one officer from building up a power base in a given region. Many senatorial aristocrats only saw minimal military service (the legionary tribunate, preceding entry into the Senate). Eventually, in the mid- and late third century CE, senators were eliminated from military commands and civil and military careers were separated altogether.

Geographical control in the Principate shifted to the fortification of frontiers via *limes* works, most famously Hadrian’s Wall in north Britain, but also the Odenwahl-Neckar *limes*, the *fossatum Africae* or North African *limes* works, and generally the construction of forts and roads along the Rhine and Danube rivers. The significance of such *limes* works has been extensively debated. These, even the walls, were not impermeable barriers intended to exclude the “barbarians” and keep them beyond the frontiers. Peoples were allowed to cross back and forth, subject to monitoring (and customs duties). Nor did the *limes* exclude internal threats, such as bandits and piracy, which governors and the Roman army were expected to repress.

However, the control of the periphery might conflict with internal security. When there was a coup or revolt within the empire, the incumbent emperor’s and the challenger’s first priorities were to eliminate their rivals and maintain their own power, even if doing so required pulling troops from the periphery. Native revolts or external incursions in the periphery might follow. This pattern is clear in events of 68–70 CE, where the revolt of Julius Vindex and Galba in Gaul and Spain encouraged the collapse of Nero; the revolt of Vitellius and Otho’s assassination of Galba followed upon each other, though it is uncertain whether Otho had heard of Vitellius’ revolt by January 15 of 69. Subsequently, Vitellius’ removal of legions from the Rhine to fight a civil war with Otho encouraged the revolt of the Batavians and Gauls.

In the third century crisis and the later empire, external raids and invasions from across the frontier further accelerated this pattern. Instability at the center probably encouraged external peoples to raid and invade the empire. From 235 to 476, the Roman Empire fought as many as 50 separate civil wars (most of them short), which, combined with serious military disasters in external conflicts, such as Julian's ill-fated Persian expedition (363) or the battle of Adrianople (378), debilitated the army and led to the use of federate troops, non-Roman peoples organized under their own native leaders, who were often allowed to settle within the empire. These Germanic federates, in effect client peoples, eventually carved out parts of the western empire for themselves. In a vicious cycle, stripped of geographical extension, the western empire lost the effective ability to tax or recruit a traditional army.

The study of Roman grand strategy has been constrained by the use of modern terminology, which many scholars have argued are anachronistic when applied to antiquity. The most controversial work has been Edward Luttwak's *The Grand Strategy of the Roman Empire: From the First Century A.D. to the Third* (1976, revised ed. 2002). Classical historians have challenged Luttwak as anachronistic, emphasizing the limitations of ancient Roman elites, the limited information available to them, and the modern interpretation of military installations. Modern strategic planning was implausible; in the Republic, the Senate, which bore the closest resemblance to a permanent strategic planning board, nonetheless depended on third-hand information and could not maintain control over generals overseas, who acted largely on their own initiative. Greco-Roman knowledge of nonclassical peoples was often inadequate, marked by stereotyping and credulity, and commanders frequently launched campaigns almost into the unknown, as did Caesar when he invaded Britain in 55 and 54 BCE. Decisions to go to war might be motivated by personal and internal concerns, such as a general's or emperor's desire for plunder or glory, rather than by a rational assessment of external threats. These perspectives have been emphasized by Susan P. Mattern's *Rome and the Enemy: Imperial Strategy in the Principate* (1999). In fact, we do not often know much about how strategic decisions were made, and many ancient historians stereotyped such decisions to glorify or vilify the authority figures involved.

Archaeological evidence for strategy is the hardest to interpret. Luttwak interpreted later Roman military installations in the interior of frontier

provinces as representing “defense in depth,” a strategy allowing external enemies to penetrate the interior, to be repulsed by fast-moving field armies. But such installations may represent the development of more extensive internal security, intended to police and prevent revolts within the empire. The latter argument was made famous by Benjamin Isaac’s *The Limits of Empire* (1988, revised ed. 1992). However, proponents of Luttwakian grand strategy also have put forward their arguments. Strategy continues to be one of Roman military studies’ most vital and challenging areas of scholarship. Related controversies include the role of the Senate vs. general in decision making; the defensive or offensive nature of Roman imperialism; and the reason for the hiatus in conquest in the early Principate.

Succession (Imperial)

In the absence of a hereditary monarchy, the most frequent forms of Roman imperial succession were quasi-dynastic succession, in which candidates from the emperor's family were designated as probable successors, and adoptive succession, in which a nonrelated man might be chosen. These methods were not mutually exclusive. They contrast with usurpation, in which a would-be emperor seized power in a coup, or revolt, in which the new emperor was acclaimed by the army.

In the view of modern scholars, the ancient Roman monarchy (753–510 BCE) itself may have been not so much a hereditary dynasty as a series of tyrants, military leaders who seized power and were backed by the Senate, at that time a body of patricians. Nonetheless, the vicissitudes of the legendary Tarquin dynasty and of the contemporary Hellenistic monarchies poisoned mid- and late republican Roman attitudes toward hereditary monarchy. The principate was never a hereditary monarchy. Thus in the description which follows, the term "heir" is used in its most general sense without the strict connotations of English "heir apparent" or "heir presumptive," terms pertaining to English hereditary monarchy and aristocracy.

Though Caesar adopted his great-nephew Octavian as his heir, a connection exploited by Octavian in his rise to power, Augustus himself had no sons, only a daughter, Julia. Julia was assigned several political marriages—the most prominent being to Marcus Vipsanius Agrippa, Augustus' most reliable deputy—but was exiled for adultery. Agrippa and Julia had two sons, Gaius and Lucius, whom Augustus adopted as sons, marking them out as potential successors. Gaius and Lucius received various titles and honors, such as *Princeps Iuventutis*, and became commanders at young ages. However, both young men died within a few years of each other, and

Augustus was forced to look elsewhere in the family for possible successors. Tiberius (the future emperor) and his brother Drusus were the sons of Augustus' wife Livia by her previous husband. They were grown men who had proven themselves as generals. Since Drusus had also died in a riding accident, Augustus designated Tiberius as potential successor, and upon Augustus' death in 14 CE Tiberius succeeded without incident. Though strict father-to-son succession did not occur, Augustus and Tiberius clearly promoted the concept of the imperial family as an unity through their reigns' coinage and official art and decrees (see Severy 2003; Lott 2012).

Tiberius' brother Drusus the Elder predeceased him, as did Drusus' son Germanicus in 19 CE, whom Tacitus depicts as a popular potential successor contrasting favorably with the unpopular Tiberius. Tiberius' own son Drusus the Younger also predeceased him (23 CE). Running out of adult options, in part because he had extirpated other members of the imperial family for suspected treason, Tiberius chose Germanicus' son Gaius (Caligula) as his eventual successor, who succeeded Tiberius in 37. Indeed Gaius, being young, was at first highly popular with the public. But Gaius designated no successors, and upon his assassination the praetorians elevated Germanicus' brother Claudius, now middle-aged. Due to various physical disabilities, Claudius had held only an augurship and never any military command. The quasi-dynastic principle was so routine by this time that Claudius' accession was accepted without contest. Though Claudius had a son, Britannicus, by his first empress Valeria Messalina, he was persuaded by his subsequent wife and empress Agrippina the Younger to adopt her son Nero (from a previous marriage) and designate him as his successor. Agrippina was the daughter of Claudius' brother Germanicus, giving Nero a hereditary claim. After Claudius' death, Agrippina and Nero proceeded to eliminate Britannicus.

It became conventional for dynastic or adopted potential successors to receive the title of *Caesar* and some of the emperor's formal powers, such as the *tribunicia potestas*, some years before the emperor's death if possible. Such potential successors also advanced more rapidly in their careers, being promoted to military commands and to consulships while still quite young. The Senate affirmed the conferral of these titles, powers, and offices. On accession, the new emperor was confirmed by the Senate and acclaimed by the army (not always in that order).

The death of Nero in 68 revealed the weakness in quasi-dynastic

succession: not only did it demand the designation of family members, it could be challenged by revolt and usurpation. There were no more Julio-Claudian candidates for the role of emperor. Through successful revolt, the elderly Galba became emperor, accepted by the Senate; he then fell to usurpation, via the coup of Otho, aided by the Praetorian Guard. In the Rhineland the army of Vitellius acclaimed him as emperor and began to march on Rome. The resulting civil war is termed the War of Four Emperors (counting Galba, Otho, Vitellius, and Vespasian). The forces of Vitellius defeated Otho at Bedriacum; Otho committed suicide. Acclaimed by his army in the eastern empire, Vespasian directed his ally Antonius Primus to invade Italy and defeat the Vitellians; the Flavian army besieged Rome and Vitellius, having lost all support, was murdered. The Senate ratified the accession of Vespasian (69–79), a successful usurper and the victor of the Jewish War, with the *lex de imperio Vespasiani*, affirming his imperial powers.

In his turn, Vespasian created a quasi-hereditary dynasty, succeeded by his elder son Titus (79–81) and Titus' younger brother Domitian (81–96). The unpopularity of Domitian with the Roman elite meant that for a few generations an alternative form of imperial succession was employed: the adoption of an adult and relatively unrelated man. Nerva (96–98) was probably an usurper from Domitian, being involved in the palace plot against Domitian. However, Nerva adopted the unrelated Trajan (98–117) as his son and designated him as successor, a formula followed by Trajan with Hadrian (117–138); by Hadrian with Antoninus Pius (138–161); and by Pius with Marcus Aurelius (161–180). (In fact Hadrian arranged the adoption of both Pius and Marcus.) There was also a slight dynastic element in that the adoptees married into the adopters' families; adoption and quasi-dynastic succession were not mutually exclusive. Hadrian married Trajan's great-niece Sabina.

Marcus Aurelius reverted to dynastic succession in designating his son Commodus as successor, as did Septimius Severus with his two sons. Marcus also promoted his adoptive brother Lucius Verus as co-Augustus. Though Marcus was clearly the more powerful of the two, Marcus and Lucius are named together in official edicts and correspondence. The Severans' reliance on dynastic principle enabled revolts favoring the great-nephews of Septimius Severus, Elagabalus (218–222) and Alexander (222–235), both of whom were very young men, proving weak rulers who were

assassinated.

The third-century crisis was a period when most emperors were acclaimed by the army. Though individual emperors seem to have favored hereditary succession, elevating their sons as Caesars, Valerian's son Gallienus (junior emperor 253–260, senior emperor 260–268), a mature man at his accession, was the only stable hereditary successor. Gallienus attempted to promote his own sons as Caesars, but they were killed. The army and its powerful generals apparently lacked confidence in boy emperors or Caesars and often overthrew them, a pattern that recurred in the late fourth and fifth centuries.

Diocletian (284–305) made a drastic return to the adoptive mode of succession, first adopting as “son” and then as brother (co-Augustus) his comrade Maximian (286–305), then designating two mature men as Caesars, Galerius and Constantius I, in 293. These Caesars had more powers than previously, being in effect co-emperors, the four rulers enabling greater control of the provinces. It is controversial whether Diocletian intended the two Augusti to abdicate after a set period (20 years) and be replaced by the Caesars, promoted to Augusti, or whether the abdication of Diocletian and Maximian in 305 was unplanned. In any case, the Second Tetrarchy, in which Galerius and Constantius became Augusti, the new Caesars being Maximinus II and Severus, soon fell apart and civil war ensued. The victor, Constantine the Great (306–337), strongly emphasized the dynastic principle, making his three surviving sons Caesars before his death and co-Augusti upon his death in 337.

The quasi-dynastic principle remained strong in the later Roman Empire. However, the army sought emperors by vote of a council of military officers in 363, when Julian (the last of the Constantinian dynasty) died without sons, and in 364 after the successor of Julian, Jovian, died suddenly. This council of officers would choose a military officer without recourse to the increasingly obsolete Roman Senate. After Valens was killed in the battle of Adrianople (378), Valentinian's son Gratian and the officer council settled on Theodosius I (379–95), who founded a dynasty that remained in power until the death of Valentinian III (425–455).

However, the Valentinian and Theodosian dynasties' emphasis on the elevation of family members produced weak child emperors. Gratian (co-Augustus with Valentinian I in 367–375 and with Valentinian II in 375–383) was murdered by the general Magnus Maximus in 383. His even younger

brother Valentinian II (375–392) was elevated to Augustus at the age of four by the army and was probably assassinated in 392 by Arbogast, another powerful general. Theodosius I's civil wars with Magnus Maximus and Arbogast consumed military manpower that the empire could ill afford to lose after the battle of Adrianople. Theodosius died in 395, leaving his young sons Arcadius and Honorius as emperors. The passivity of Honorius promoted the rise of powerful generals in the western empire, the *magistri utriusque militiae* or commanders-in-chief, a pattern persisting in the reign of Valentinian III (425–455), who became emperor at the age of six. After Valentinian III was assassinated in 455, the *magistri utriusque militiae*, especially Ricimer, elevated and deposed a succession of short-lived emperors in a period of instability and civil war that ended the western empire (476).

At no time could a reigning empress succeed to the purple. This exclusion was embedded in Roman tradition: in the Roman Republic, women could not hold political office or military commands, and the role of emperor remained in principle a military commander, acclaimed as *imperator* by the army. The wife of the reigning emperor might receive the title *Augusta*, but lacked any formal political powers. She might, however, exert considerable unofficial influence and control over a figurehead emperor, and be a powerful advisor and patron. The most influential empresses were Livia, the wife of Augustus; Agrippina the Younger, the wife of Claudius; Julia Domna, the wife of Septimius Severus; her nieces Julia Soaemias and Julia Mamaea; and Galla Placidia, the daughter of Theodosius I, sister of Arcadius and Honorius, and mother of Valentinian III.

Suetonius (ca. 69–ca. 140 CE)

Gaius Suetonius Tranquillus was a biographer of the dictator Caesar and the first 11 emperors. Suetonius lived during the Flavian era and the reigns of the first three of the “five good emperors” (Nerva, Trajan, Hadrian). More famous for his sensationalism than his strict historical accuracy, Suetonius nevertheless is one of the leading sources for the early imperial era and was an eyewitness to the reigns of Titus (79–81) and Domitian (81–96).

Suetonius was born in or very close to the “Year of the Four Emperors,” 69 CE. His father Suetonius Laetus was a centurion under the emperor Otho and a participant in the civil war that year until the Vitellian victory at the First Battle of Bedriacum (April 69). Suetonius Laetus knew Otho personally and was present when Otho received the news of the defeat at Bedriacum, upon which Otho chose to commit suicide rather than prolong the civil war and increase the number of deaths of valiant men serving under him. Laetus passed this information to his son the biographer (Suetonius, *Otho* 10). A more distant connection to the general Suetonius Paulinus, who served under Nero in Britain and Otho in the civil war, can be assumed, although the biographer fails to mention him by name (Suetonius, *Nero* 18, 39). Due to the prominence of Suetonius Paulinus in the pages of Tacitus, this is surprising, but not in any way proof that the two were hostile or unrelated.

Much detail in the *Twelve Caesars* originates from primary sources that other extant historians (except perhaps Tacitus or Pliny) seem not to have used. Suetonius employs letters found in the state archives, many of them in the handwriting of the emperor himself. Nevertheless, Suetonius’ authority has been criticized for his preference for scurrilous and sensational content rather than numerical data and strict chronological sequence. The veracity of Suetonius has often been called into question, and rightly so, for assuming the factuality of repeated rumors and character assassinations (such as charges of Agrippina’s incest with Nero). Nevertheless, on some

matters Suetonius is a much closer authority and has correct information in conflict with a later authority such as Dio or Eutropius. In such cases, while there is no universal rule in the absence of other authorities' testimony, Suetonius is often to be preferred as closer to the events in question (especially when he was an eyewitness) rather than disregarded as a scandal-monger. Due to the large lacuna in Tacitus' *Annals*, Suetonius is also one of our few extant sources on the reign of Gaius Caligula and the early years of Claudius' reign.

To illustrate additional problems with Suetonius' method, Suetonius arranges imperial behavior and actions under rubrics or conceptual categories, for example, (to name only a few), birth and childhood, rise to power, accession, comportment toward the Senate, military policy, benefactions, physical appearance, personal habits (including eating, drinking, and sexual behavior), death and last words, and portents. The topical arrangement can make chronology difficult, and also tends to stylize imperial behavior, so that Suetonius' attitude becomes clear. Though an equestrian, Suetonius adopts the "senatorial" point of view that approved of emperors who cooperated with the Senate and treated the army strictly. Conversely, he disapproves of emperors who were too dependent on the army. Suetonius also has a worrying tendency (found in other Latin authors) to generalize plurals from singular incidents.

As a depicter of civil war and usurpation, Suetonius is relatively superficial in contrast with Tacitus. Suetonius covers the civil wars fought by Julius and Augustus in his lives *Divus Julius* and *Divus Augustus* and very briefly in his biography of Tiberius, but war is not his chief preoccupation. The biographies of the emperors Nero, Galba, Otho, Vitellius, and Vespasian form the narrative of the second era of civil war in Suetonius' work, but he focuses not on military strategy and tactics or political forces but on the moral qualities of each emperor that resulted in their defeat or victory. As a result, Suetonius too willingly repeats Flavian propaganda against Vitellius, who is depicted as a monstrous glutton who sought the throne to satiate his appetite, rather than for the true reason all ambitious leaders seek power, ambition to exercise power. Even if Suetonius allows Flavian propaganda to diminish the reputation of Galba, Otho, and Vitellius in his writings, he is still a crucial source along with Plutarch and Tacitus for the "Year of Four Emperors" (for which Dio is fragmentary).

Unfortunately, the biographies in the latter half of the *Twelve Caesars*

are considerably shorter and slighter than those of the first half. Scholars believe that Suetonius' dismissal by Hadrian from the imperial civil service in approximately 120 CE caused him to lose access to the imperial archives, limiting his ability to produce as entertaining works with direct quotations and with the same level of veracity. The loss of access possibly led to his decision not to continue with a life of Nerva and Trajan. Furthermore, due to Hadrian's adoptive relationship to Nerva and Trajan, Suetonius may have elected not to continue his biographies to avoid any prospect of irritating the notoriously sensitive Hadrian.

In addition to biographies of the emperors, Suetonius also produced a series of lesser biographers of famous grammarians, poets, courtiers, courtesans, and a number of other lost works on antiquarian topics such as the Roman year, Roman festivals, and timekeeping. Almost all of the above are lost. Suetonius' *De poetis* survives in part, with biographies of Terence (a dramatist), Virgil, Horace, Lucan, and Pliny, as does his *De grammaticis* and *De rhetoribus*.

Suetonius was a very popular author in the Roman world and beyond. He followed a tradition of biography that includes Cornelius Nepos, but differs in its objective to reach a wider audience. Many other sets of biographies were modeled upon him, including especially the *Historia Augusta*, Einhardt's *Charlemagne*, and Vasari's *Lives of Famous Artists*. Plutarch's *Caesar*, *Galba*, and *Otho* are extant and can be compared with Suetonius; Plutarch has a more overtly moralizing style and constructs coherent narrative arcs focusing on personality and character rather than rubrics.

Suetonius Paulinus (ca. 11–after 69 CE)

Gaius Suetonius Paulinus held governorships in Africa and Britain. His campaigning in the African mountains of Mauretania included military successes and observations of flora and fauna. In Mauretania, he suppressed a revolt of native peoples and claimed the region for Rome as far as the Atlas mountains. Though Paulinus' geographical works have not survived, Pliny the Elder attests his descriptions of the desert area of the River Ger. Paulinus' governorship of Africa ended around 43.

Paulinus became governor of Britain in 58. Unrest in the west led Paulinus to fight the Silures and Ordovices in Wales. His campaign continued north to the island of Mona (Anglesey). Overcoming native resistance, the Romans destroyed sacred groves of the Druids. Around this time, Paulinus became aware of the revolt of the Iceni and other peoples in the east, led by the Iceni queen Boudicca, in 60/61 CE. The British rebels sacked the Roman veteran colony of Camulodunum (Colchester). Allegedly, the rebel forces of up to 230,000 outnumbered the Roman forces of Paulinus, which numbered only 10,000. Therefore, his men were unable to defend Verulamium and Londinium, which the Britons also sacked. The rebellion ended when Paulinus was able to defeat Boudicca and her forces in a set battle.

While Paulinus was in charge during the British revolt, he was not blamed for the revolt. However, Nero did recall Paulinus to Rome shortly thereafter, in 61. The Roman historian Tacitus insinuates that Paulinus had ambitions to match the success of Cnaeus Domitius Corbulo in Armenia. However, the situation in Britain was different.

Although recalled, Paulinus maintained his prestige at Rome. His namesake was given a consulship in 66. Paulinus himself became one of Otho's generals during the civil war of 69.

Suicide

Modern Western societies tend to regard suicide as a pathological action, resulting from clinical depression or other severe emotional disturbances. In Roman culture, though suicide remained an act of extremis, it might be a rational and honorable act, safeguarding the reputation and status of the victim. As such, suicide was preferable to other forms of death or to dishonor. Suicide might be the option taken by commanders and by entire communities who faced certain defeat in warfare. Such honorable suicides are represented as meeting death with calmness and courage. For this reason “forced suicide” or “political suicide” (these are both modern terms) were offered to Roman aristocrats who faced execution, usually as a result of prosecution for treason during the early empire.

Deliberate self-killing should be distinguished from seeking death in combat at the hands of the enemy, whether as *devotio* (consecrating one’s death in combat to the gods) or without such consecration. The enemies of the Romans sometimes committed suicide rather than face defeat and the humiliation of captivity or surrender. Entire communities are represented as immolating themselves rather than be captured and enslaved. The most famous instance of mass suicide is the Jews who were besieged at Masada in 73 CE. Even if the defeated were not killed or enslaved, ritual surrender, *deditio*, humiliated them. In mass suicides, the parties often agreed to kill each other, as at Masada.

Consequently, in the civil wars of the late Republic, Cato the Younger (commanding Pompeian troops in Africa) chose to commit suicide rather than surrender to Caesar and receive Caesar’s clemency. Cato’s suicide was

deliberate and displayed Stoic endurance; when his hosts attempted to bind up his wounds, he tore them open and bled to death. Cato's death was much admired by the Roman aristocracy and set the tone for the "political" suicides of the early empire. Marcus Junius Brutus and Gaius Cassius Longinus, Caesar's assassins and opponents of Caesar's heir Octavian, also committed suicide after defeat in the battles of Philippi in 42 BCE. In 30 BCE, rather than surrender to Octavian, Antony and Cleopatra committed suicide, though Cleopatra's suicide, using poisonous snakes, has been questioned by skeptical scholars who suggest that Octavian had her assassinated. In this tradition, Marcus Salvius Otho (emperor 69 CE) also committed suicide after his army's defeat by the Vitellians, allegedly to spare his army further losses. Also in a military context, the emperors Maximian and Valentinian II may have committed suicide or been forced to do so in 310 and 392 CE, in these cases by hanging, regarded as a shameful form of death. Favored methods of suicide involved bloodletting and the endurance of pain, displaying courage and resembling battle deaths, whether by stabbing oneself or by cutting one's veins.

These "military" suicides should be distinguished from "forced" or "political" suicides associated with treason trials. In the Republic, some Roman aristocrats facing prosecution for extortion, military incompetence, or treason chose to kill themselves. In the early empire, Gnaeus Calpurnius Piso "Pater" was charged in 20 CE with murdering Germanicus and fomenting sedition as governor of Syria. Before his conviction, Piso committed suicide, but apparently of his own volition. The emperor Claudius offered Valerius Asiaticus, who had conspired against him, the "free choice of death" (*liberum mortis arbitrium*) (Tacitus, *Annals* 6.29.1–2; compare 11.1–3, 13.43.3; Dio 60.29.4–6). Asiaticus was required to die, but was thus invited to kill himself, sparing himself and his family the humiliation of public execution and also protecting the emperor's reputation. Republican Romans had been protected from capital punishment by the right of *provocatio*, a right abrogated in the Sullan and triumviral proscriptions; nevertheless the emperors did not wish to appear to butcher their aristocratic subjects. Furthermore, in treason cases, convicted defendants lost their property and lost the right to make a will; their children might also be deprived of civil rights. Suicide prevented confiscation and ensured the continuity of family property. It also ensured that the suicide victim's family would be able to bury and mourn him.

These rights were denied to those executed for treason, whose corpses might be desecrated and who might undergo *damnatio memoriae* (the systematic erasure of their status and public record).

However, especially in the later years of Nero (54–68 CE), “forced” suicide allegedly got out of hand. Many aristocrats who were condemned for or even suspected of sedition against Nero committed suicide (Tacitus, *Annals* 15.68–9, 16.10–11, 21–25). Suicide even became “political” as a statement of opposition to Nero, who was very unpopular with many aristocrats for his murder of his mother Agrippina and condemnation of his formerly trusted advisers Burrus and Seneca (both of whom committed suicide). Many senators also disapproved of Nero’s undignified, un-Roman singing and acting careers. The suicide of Thrasea Paetus (Tacitus, *Annals* 16.21–25) was clearly political. “Forced” suicide reappears in Domitian’s persecution of the Vestals in 83 CE (Suetonius, *Domitian* 8.3–4).

For members of the lower social classes, who had less reputation to defend, suicide held less prestige. The suicide of soldiers in peacetime may have been regarded as an attempt to desert from military service, since the emperor Hadrian had to defend suicide as permissible if a soldier was motivated by depression, sickness, madness, or shame (Digest 49.16.6.7). The suicide of slaves was condemned by the jurists as an attempt to escape bondage, similar to running away (Digest 21.1.17.4–6, 21.1.23.3). Christian condemnation of suicide as violating the first commandment (“Thou shalt not kill”) or as rejecting God’s gift of life may have arisen later (compare Augustine, *City of God* 1.20). However, Christian generals and emperors defeated in later Roman civil wars still sometimes committed suicide.

Sulla, Dictatorship of (82–81 BCE)

Sulla's dictatorship in 82–81 BCE came at a time of crisis for the Roman Republic, and serves as a transitional period in Roman history. It has been viewed alternately as foreshadowing the end of the Republic, as interrupting the proper functioning of the Republic, and even as restoring the Republic. In any interpretation, the dictatorship was for Sulla a means of restoring the authority and influence of the Senate and aristocracy which had been undermined by the growth in power of the tribunate and assemblies in recent decades. Sulla's dictatorship was unusual for several reasons. First, he was appointed dictator not by one of the consuls, but by an *interrex*. Second, no dictator had held office in Rome since the end of the Second Punic War, 120 years earlier. Third, Sulla was appointed dictator *legibus faciendis et rei publicae constituendae* (to make laws and reform the state). Finally, and perhaps as a consequence of the first three oddities, Sulla's office was not clearly limited to six months. Each of these factors marks a change in nature of the dictatorship, setting a precedent for Caesar's dominance in the 40s BCE.

The consuls of 82 BCE, Gnaeus Papirius Carbo and Marius the younger, had both died during the civil war which Sulla fought upon his return from the First Mithridatic War. Lucius Valerius Flaccus (consul 100) was therefore appointed *interrex* to oversee the consular elections for 81 BCE. Following his second march on Rome, though, Sulla urged that the present crisis warranted a dictator; Flaccus agreed and appointed Sulla. By this period, the dictatorship was an archaic relic, a vague constitutional memory, but one which offered a legitimate title and supreme *imperium* with which Sulla could introduce reforms to the Republic. It was, in other words, an office which was both republican and beyond the Republic, not unlike the fifth-century *decemviri* who were also appointed by an *interrex*. As a magistrate beyond the constitution, as it were, the dictator was the only magistrate who could suppress the increasing violence within the constitution and establish a way forward—Sulla's way. It has been argued that Sulla was free from the traditional six-month limit on the dictatorship due to his appointment by an *interrex*; appointment by the *interrex* thus gave him a tenure long enough to complete his mandate. As dictator, he implemented the following reforms, several of which reflect initiatives from his consulship in 88 BCE ([Livy] *Periochae* 87; Appian, *Civil Wars* 1.59).

Although the *lex Villia* of 180 BCE had attempted to formalize the *cursus honorum* with minimum ages for and intervals between curule magistracies, exceptions had been made. Perhaps motivated by Gaius Marius' uninterrupted string of consulships between 104 and 100 BCE despite the law, Sulla reiterated the minimum ages for the quaestorship, praetorship, and consulship and the 10-year interval between consulships. At the same time, the quaestorship and praetorship became more accessible, as Sulla increased the annual number of these magistrates to 20 and 8, respectively. Upon election, quaestors automatically became members of the Senate.

Throughout the second century, the Senate had numbered around 300 members, but after the civil war and the purges of Marius and Sulla, there may have been as few as 150–175 members. Sulla appointed new members from the equestrian order and from the most outstanding of his veterans to bring the Senate up to 600 members. Moving forward, each year's new quaestors may have been intended to offset death among the membership to maintain the enlarged body, but Roman demography suggests that 20 new members every year would not always make up for deaths in battle or of natural causes.

Sulla intended this larger Senate to take a greater role in the operation of the Republic. The Senate's traditional role as a deliberative body became increasingly legislative, though the Senate itself still did not pass laws. Sulla saw the divisive careers of the Gracchi brothers, Sulpicius, and other tribunes, as having undermined the authority of the Senate. Therefore, Sulla now required tribunes to secure senatorial approval before presenting their proposed laws to the people, replacing a traditional expectation with a legal requirement. Most of Sulla's senators, however, were inexperienced "new men" and unlikely to take much initiative (Flower 2010).

Senators regained their monopoly of the standing juries, which Gaius Gracchus had reassigned to the equestrians in the late 120s. Senatorial supervision of aristocratic behavior, particularly in matters of provincial administration and treason, was further increased by the establishment of several new standing courts. This brought the total number of standing courts up to eight, each one to be supervised by one of the year's praetors.

Praetors and consuls were now required to remain in Rome during their year of office, following which they would be allotted a *provincia* for an additional year. As propraeors or proconsuls, their range of activity in their provinces was narrowed: a governor who crossed the boundaries of his

province with or without his army, provoked a war, left his province to return to Rome early, or remained in his province more than 30 days after the arrival of his replacement without senatorial approval could be prosecuted for *maiestas* (treason).

Tribunes of the plebs were also brought more firmly under the authority of the Senate. Tribunes now required senatorial approval for their laws, as above, and faced reductions to the power of their veto and to their right to convene assemblies. Moreover, Sulla barred former tribunes from holding higher offices, which had the effect of preventing ambitious and capable men from pursuing this office. The reduction in the powers of the tribunate corresponded to a reduction of popular power in the assemblies.

Sulla also implemented religious and social reforms. The civil war and urban violence had damaged many of the buildings of Rome, including the Temple of Jupiter Optimus Maximus, destroyed by fire in 83 BCE. Sulla's work on restoring the temples included reforms to the priesthoods. He increased the numbers of pontiffs and augurs, and restored the ancient practice of cooptation, replaced by election through a *lex Gabinia* of 139–138 BCE. Sulla also enacted a series of sumptuary laws, but it is unclear to what extent he expected these laws to be implemented. He limited the expenses of feasts and funerals (and was accused of violating both), and he may have reformed Rome's marriage laws.

During the proscriptions which preceded the dictatorship, Sulla had confiscated a great deal of land in the name of the Republic; he now used this land to settle the veterans of approximately 23 legions from the civil war. Depending on their rank, veterans received packages of land of between 10 and 100 *iugera*. Plutarch suggests that many of the recipients were not successful farmers, and returned to the cities as landless citizens or took up lives as brigands (Plutarch, *Cicero* 14); their land was bought up by larger landowners.

Varied and wide-sweeping, Sulla's reforms were not the haphazard changes of a military dictator, but rather constitutional enactments intended to undo reforms and developments of the second century which had undermined the supremacy of the Senate, and particularly the belief-turned-practice that the popular assemblies were sovereign and could therefore overrule the Senate, tradition and law. Sulla's earlier career, though, ensured that his reforms could not last. For all that he attempted to restore an aristocratic Republic directed by an active Senate, Sulla could not prevent

his own career from becoming a dangerous precedent, nor could he undo the empowerment of the tribunate. As a whole, the Senate may have approved of Sulla's reforms and intentions, but was highly critical of the means by which he had implemented them. Cicero, for instance, notes "all was basically admirable, though temper and moderation were somewhat lacking" during Sulla's dictatorship (*Letters to Atticus* 11.21.3).

Ancient and modern scholars are divided on Sulla's dictatorship. It was reactionary or conservative, antiquated or revolutionary, republican or monarchical depending on one's view of the demise of republican politics in Rome. The proscriptions and land redistributions associate Sulla closely with the traditional image of a tyrant. Appian thus calls Sulla a "king or tyrant in deed, but not elected" (Appian, *Civil Wars* 1.11.97). Cicero suggests that Sulla's dominance depended on force, but was incomplete (Cicero, *On His House* 79). Caesar, on the other hand, famously derided Sulla's folly in surrendering the dictatorship (Suetonius, *Iulius* 77). Sulla's own attitude to the dictatorship may be suggested by his actions: he implemented his reforms from a traditional office, and he seems to have resigned that office once he viewed his task as complete. The date of his resignation as dictator is unclear, but falls sometime between late 81 and 79 BCE. Since he was consul for the second time in 80 BCE (within 10 years of his first, it should be noted), he may have resigned the dictatorship toward the end of 81 BCE.

Sulla, Lucius Cornelius (138–78 BCE)

Lucius Cornelius Sulla (consul in 88 and 80, dictator in 82–81 BCE) was one of the most charismatic and divisive leaders of the late Republic. A rival to Marius, an instigator of civil war, and the first dictator in over a century, he violated law and tradition, and inflicted bloody reprisals on his enemies to shore up a tottering Republic.

A patrician by birth, Sulla belonged to an impoverished branch of the Corneli which had not produced a consul since the third century BCE. Legacies from his stepmother and his first mistress relieved his youthful poverty and enabled a political career. Although Sulla aimed to restore his family to the highest circles of the *nobilitas*, he nevertheless continued to socialize with the humble companions of his youth throughout his career.

As quaestor (106 BCE), Sulla served under Gaius Marius in the Jugurthine War, in which his most notable deed was the capture of Jugurtha in 105 with the aid of Bocchus of Mauretania. This achievement has often been seen as the beginning of the rivalry between Marius and Sulla. Nevertheless, he continued to serve under Marius during the invasions of the Cimbri and Teutones. He enjoyed some successes under Marius and distinguished himself by his conduct, but transferred his services to Quintus Lutatius Catulus, Marius' consular colleague in 102.

Sulla's first bid for the praetorship (probably that of 98 BCE) failed, but he won the praetorship of (probably) 97, allegedly through extensive bribery. His praetorship was particularly known for the extravagant *Ludi Apollinares*, games advertising both his public role and his reputation. Following his praetorship, he was governor of Cilicia, still a haven for pirates despite the efforts of Marcus Antonius in 102. As propraeor with proconsular *imperium*, Sulla may have taken action against the pirates, but his major achievements were his resistance to the ambitions of Mithridates VI of Pontus in Cappadocia and the establishment of diplomatic contact with the Arsacid Persians. Around this time Sulla began to emphasize his special relationship with the gods (particularly Fortuna and Apollo), leading to his adoption of the cognomen *Felix* (fortunate, lucky, blessed).

Sulla's patrician birth, his successes in the east, and Marius' recent lack

of success, made Sulla more acceptable to the *nobilitas* to counter Marius' plebeian presumption, fostering his hopes for the consulship. In 91, Bocchus of Mauretania dedicated a sculptural group depicting the capture of Jugurtha and emphasizing Sulla's role, further supporting Sulla's pursuit of the consulship. The Social War (91–87 BCE), fought over the citizenship rights of the Italian allies, provided additional opportunity for advancement. He and Marius commanded armies as legates of the consuls of 90 and even cooperated to defeat the Marsians in that year. After the death of one of the consuls of 89, Sulla received proconsular *imperium* and captured several important cities of the Italian rebels. These successes led to his first consulship of 88 BCE and the prestigious command against Mithridates VI of Pontus (the First Mithridatic War).

The end of the Social War did not settle the question of Italian citizenship. When Sulla, as consul, blocked Publius Sulpicius Rufus' tribunician legislation to allot Italian citizens equally in the voting tribes, Sulpicius incited a brawl, driving Sulla from the forum and the city. Sulla returned to his army at Nola, where he learned that Sulpicius had passed his legislation and transferred the Mithridatic command to Marius.

Bust of an unidentified Roman aristocrat, long thought to be the dictator Sulla. In his conflict with Gaius Marius, Sulla captured Rome in civil war in 88 and 82 BCE. In 82–81 BCE, Sulla established himself as dictator, inflicting vicious reprisals on the surviving Marians. Located in the Glyptothek, Munich, Germany. (PHAS/UIG via Getty Images)

The loss of Sulla's command, following the use of violence against his consular authority, threatened an ignominious end to his career. Sulla therefore gambled on his army, carefully ascertaining his soldiers' loyalty before marching on Rome. All but one of his officers deserted Sulla, preferring desertion to the sacrilege of marching against Rome; similarly, the Senate as a whole rallied, if not behind Marius, at least against Sulla. Nonetheless, Sulla occupied Rome as Marius and Sulpicius fled into exile.

During his occupation of Rome, Sulla stressed his desire to protect the citizens from the violence of Marius and Sulpicius, who, along with 10 others, were declared public enemies. He then introduced a series of reforms resembling those of his later dictatorship, to strengthen the Senate and weaken the tribunate. He also promoted a limited remission of debts, new restrictions on interest rates, and the creation of 12 new colonies for veterans of the Social War. The aristocracy and the people may have supported these reforms, but Sulla had little opportunity to establish them: Lucius Cornelius Cinna, as consul in 87, reversed them.

Sulla had also declared Sulpicius' legislation invalid and recovered the command against Mithridates. He was on campaign in the east for several years, and in his absence, Cinna recalled Marius and declared Sulla himself a public enemy. Marius became consul for 86, but died in early January 86; his consular replacement, Lucius Valerius Flaccus (suffect consul 86 BCE), was dispatched to replace Sulla as proconsul. Sulla, however, refused to acknowledge Flaccus' legitimacy, and instead continued his efforts against Mithridates' general in Greece, Archelaus. Deprived of Roman support, Sulla funded his campaign by confiscating temple treasures from, among other sanctuaries, Delphi and Olympia. He captured and sacked Athens on March 1, 86 BCE, before confronting Mithridates' remaining forces in Boeotia. Here, Sulla defeated a larger force of Pontic troops, attributing his victory to his own skill but also to *felicitas* (good luck). Following a second victory in Boeotia, Sulla imposed a tribute on the region which would repay the despoiled sanctuaries and negotiated a peace treaty with Mithridates. In exchange for retaining his kingdom and becoming a Roman client, Mithridates withdrew his forces within the traditional boundaries of Pontus, paid an indemnity of 2,000 talents and provided Sulla with 70 ships. Sulla's status as a public enemy and the presence in the east of Flaccus' army, which had mutinied in favor of Gaius Flavius Fimbria, complicated both his ability to offer such terms and his arrangements for the Greek cities in Asia. He was able to win over the Fimbrians, but only in 83 could he return to Italy, marching on Rome for a second time.

Although Marius and Cinna had died in 86 and 84, respectively, Sulla's return prompted civil war with the surviving Marians. Sulla won a series of victories, supported by several senators and *equites*, including Pompey, who had fled Cinna's regime, and Crassus, who played the central role in the final Sullan victory at the Colline Gate. The leaders of the Marians, Gnaeus

Papirius Carbo (consul in 85, 84, 82) and Marius the younger (consul in 82), fled Rome, leaving Sulla the undisputed master of the city for a second time.

Sulla began with the proscription of his enemies, a bloody purge of the Senate and aristocracy which resulted in the deaths of as many as 2,000 senators and *equites*, though the exact figure is disputed. Nothing like this had been seen before at Rome. However, Sulla's aim was pragmatic: to remove "dangerous" figures from the state. Communities as well as individuals were punished: the younger Marius had found refuge in Praeneste after his defeat, prompting Sulla's execution of all male citizens of the town. Once begun the proscriptions got out of hand, as Sulla's lieutenants and friends settled personal grudges and enriched themselves.

After the suicides of both Carbo and the younger Marius, Lucius Valerius Flaccus (consul 100 BCE) was appointed *interrex* to oversee the consular elections for 81. Sulla, however, persuaded Flaccus that the only solution to the violence in Rome was the revival of the dictatorship, an office unused for 120 years. Flaccus accordingly appointed Sulla dictator *legibus faciendis et rei publicae constituendae* (to make laws and organize the Republic) and sanctioned Sulla's earlier actions. As dictator, Sulla occupied a unique position of authority from which to enforce his efforts to strengthen the Senate and reduce the power of the tribunes. Sulla's dictatorship was not limited by the traditional six-month term, but the date of his resignation is disputed. Since he held a second consulship in 80, he may have resigned late in 81, but he may also have retained the office as late as 79. Sulla died of illness soon after at his estate in Dicaearchia in 78.

The proscriptions and violence which Sulla used to impose his reforms as dictator in 82–81 have colored almost all ancient and modern assessments of him. However, Sulla should not be dismissed as a bloodthirsty tyrant. He conceived a solution to the "crisis" of the Republic and spared no effort in implementing it. In his attempt, three trends stand out. First, he was in all things practical, ready to do whatever he believed necessary (or expedient) to accomplish his personal and political goals. His marches on Rome and the proscriptions are, perhaps, the best examples. Second, his emphasis on *felicitas*, Fortuna, and Apollo suggest a belief that his actions were approved and justified by the gods. He displayed piety toward the gods and loyalty toward his friends, repaying the confiscated dedications in Greece and retaining the humble friends of his youth even at the peaks of success. Most importantly, Sulla was a master of command, understanding the collective

and individual temperaments of his soldiers. He understood when and how to restrain his troops, and when not to try. Thus, Sulla permitted their sack of Athens in 86, but carefully guarded against a similar treatment of Rome in 82. He won and retained the loyalty of his troops even as he undertook revolutionary actions, such as his two marches on Rome. However, he was not a military despot: for Sulla, soldiers and armies were tools for the betterment of the Republic.

For all his good fortune and charisma with his troops, though, Sulla was in some ways a failure. His efforts to restore the Republic did not long survive him, and his own supporters undid many of his measures. Republican politics did continue for about a generation after Sulla, but his career set a precedent for ambitious generals which his reforms could not limit. He had shown Rome that soldiers and violence could bring supreme power. Thus, Cicero remarks on the frequency of Caesar's comment, *Sulla potuit, ego non potero?* (if Sulla could, why can't I?) (Cicero, *Letters to Atticus* 9.10.2). Sulla has been seen as a savior of the Republic and an illegitimate usurper who suspended the Republic, as the "last republican" and an "unelected tyrant."

The major sources for the life and career of Sulla are Sallust's *Jugurthine War* (ca. 40 BCE), Plutarch's *Life of Sulla* (mid- to late first century CE) and Appian's *Civil Wars* and *Mithridatic Wars* (ca. 120 CE). The narratives of Livy and Cassius Dio survive only in epitomized form. Sulla's memoirs have also been lost, though our major sources will have relied on this to varying degrees.

Sulpicianus (d. 197 CE)

Sulpicianus, the father-in-law of Helvius Pertinax, was an imperial candidate in 193 CE but failed to become emperor. Pertinax was murdered in March 193. In what became known as the “auction of the empire,” the praetorians offered the role of emperor to the man who promised them the largest donative. Sulpicianus bid against Marcus Didius Julianus, who outbid him and so became emperor. However, Didius Julianus soon lost the support of all groups at Rome. Septimius Severus, then governor of Pannonia, was acclaimed by his troops and marched on Rome to avenge Pertinax and secure his own bid for power. The Senate backed Severus, and Didius Julianus was condemned and executed.

T

[Tacfarinas \(d. 24 CE\)](#)

Tacfarinas was a Numidian leader of a North African revolt against Roman rule in 17–24 CE. He had served in the *auxilia*, a pattern displayed by other native leaders of revolts such as the German Arminius and the Gauls Julius Civilis and Julius Classicus (leaders of the Gallic revolt in 70 CE). A deserter from the *auxilia*, Tacfarinas organized his followers in Roman military fashion. He could not win against the Romans in open battle and after some defeats, resorted to guerrilla type attacks, a common strategy of Rome's native enemies. To police these attacks, the Roman commander Junius Blaesus dispersed his forces for longer-term occupation. In 24 CE, Publius Cornelius Dolabella succeeded in ambushing and destroying Tacfarinas' forces; Tacfarinas chose to fall in battle rather than be captured by the Romans.

[Tacitus \(ca. 56–after 113 CE\)](#)

Tacitus is one of the most important Roman historians of the early Principate. His works are fundamental for understanding the history and politics of the first century CE, as well as contributing to our understanding of other subjects such as the ethnography of the ancient Britons and Germans. Yet the historian himself remains an enigma. It is immensely difficult to reconstruct the life and career of Tacitus using his works. Fortunately, his funerary inscription (*L'Année Épigraphique* 1995, 92) provides some supplementary biographical information for this elusive historian.

Tacitus was probably born in 56 or 57 CE, in northern Italy or southern Gaul, to an equestrian father who had been procurator of Gallia Belgica and the German provinces. In 77 CE Tacitus married the daughter of Gnaeus Julius Agricola. He may have served as a legionary tribune under Agricola. Tacitus pursued a normal political career during the reign of Domitian (81–96), to his later embarrassment. Tacitus became quaestor in 81 or 82 CE, praetor eight years later, and was suffect consul late in 97 CE. In this role he delivered the funeral oration for Verginius Rufus, who had famously rejected the offer of imperial power after the death of Nero. Tacitus' last recorded post is the proconsulship of Asia in 112–113 CE.

Tacitus' first work, the *Agricola*, was published in 98 CE. The *Agricola* takes the form of a biography of his father-in-law with particular emphasis on the latter's tenure as governor in Britain, and describes the conquest, administration, and pacification of Britain in the first century CE. Tacitus' account of the battle of Mons Graupius is particularly important for our understanding of how the imperial army actually fought. The text also carries an important political message in that good men (like Agricola) can still conduct themselves well and win renown, even under bad emperors like Domitian. (Tacitus, *Agricola* 42) Since Tacitus' own career may have been advanced by Domitian, he needed to apologize in this manner. Tacitus depicts Domitian in the *Agricola* as a paranoid tyrant in contrast to his more enlightened successors.

Tacitus' second work, the *Germania*, is an ethnographic study of the peoples of Germany. His choice of topic may have been influenced by the importance of military campaigns in Germany during the reign of Domitian, which seemed likely to continue under Trajan. It is possible that Tacitus had visited the German provinces during his military service. The *Germania* covers a range of subjects including German customs, political

system and dress. It also shows an acute understanding of the different German tribes.

Possibly attributed to Tacitus, the *Dialogus de oratoribus* is of uncertain date, most likely around 102 CE. It is an unusual text and unlike his other work. In the *Dialogus de oratoribus*, Tacitus explores the state of contemporary oratory in comparison to that of the past.

By 107 CE, Tacitus was working on the text which is perhaps most valued by military historians, the *Histories*, which covers the events in Rome and the provinces from the beginning of 69 CE through the first few months of 70 CE. Tacitus traces the brief reigns of Galba, Otho, and Vitellius, as well as the Flavian seizure of power. The text breaks off during an account of the Batavian Revolt. The *Histories* remains our most useful source for the War of Four Emperors in 69 CE. Part of the value of Tacitus' text lies in his depictions of the actions of a wide range of individuals from common soldiers to generals such as Antonius Primus, as well as the imperial candidates themselves. The *Histories* also contains a number of detailed descriptions of battles, most notably the First and Second Battles of Bedriacum. Tacitus skillfully demonstrates that "emperors could be made elsewhere than at Rome" (*Histories* 4) by the powerful provincial armies.

After completing the *Histories*, Tacitus decided to examine the history of the early Principate rather than contemporary events, as he had previously promised. Tacitus' decision to refrain from writing about the reign of Trajan has prompted much discussion among modern scholars. The *Annals* describes the consolidation of the Julio-Claudian regime after the death of Augustus. It originally encompassed 18 books, although not all of these are still extant. Tacitus records the reigns of the Julio-Claudian emperors with particular emphasis on their impact upon the upper classes. Despite its focus on the political arena, the *Annals* has much to offer the military historian. In particular, Tacitus describes the campaigns of Germanicus and Corbulo in Germany and Mesopotamia, respectively. He also discusses military activities in Britain after the Claudian invasion. Tacitus shows a particular interest in the career of Domitius Corbulo and indeed claims to have used the general's autobiography as a source.

The dates of the writing of the *Annals* and the death of Tacitus remain a source of contention among modern scholars. Traditionally, the historian was not believed to have outlived Trajan (d. 117). Ronald Syme argued forcefully for a Hadrianic date for the *Annals* and claimed that the Tiberian

section of that text can be read as a critique of the emperor Hadrian. In the absence of new evidence, it seems likely that the death of Tacitus, like so much of his life, will remain an enigma.

Tactics

The Roman army grew from the small army of the early Republic to the multiple divisions familiar in the imperial period, including 25 or more legions, the Praetorian Guard, the *auxilia*, the fleets, and other specialized corps. During the Republic, the legion was internally reorganized to adapt to changing tactics. The divisions of the imperial army may have had different tactical roles. The Roman army underwent further reorganization in the third century and later empire. Much is not well known about Roman military organization and tactics during the early and middle Republic. Latin and Greek authors, writing centuries later, essayed antiquarian reconstructions. The documentary sources that provide so much information about the Roman army of the Principate did not yet exist.

The army of the earliest Republic (ca. 509–400 BCE) probably resembled the hoplite phalanx, which characterized Greek city-state armies of the sixth and fifth centuries BCE. Attributed to King Servius Tullius, the archaic Roman legion was drawn from the three wealthiest classes in the Servian

constitution who could provide their own equipment, resembling hoplite equipment (Livy 1.44; Dionysius, *Roman History* 4.16–21). The hoplite phalanx was employed by the Etruscan cities, Rome's nearest neighbors, so it is not surprising to find it at Rome as well. The hoplite phalanx was a relatively rigid close-order formation in which warriors overlapped their shields to protect one another and withstand shock when the phalanx collided with its opponent. This formation required flat, level ground, and maneuvered poorly, in contrast with the later maniples and cohorts. Hoplites were armed with heavy, thrusting spears; sword-fighting was secondary. Rome's defeats during the early Republic and her expansion into mountainous central Italy may have motivated the abandonment of the hoplite phalanx.

During the conquest of Italy and down to 311 BCE, Rome's legions grew in number to two, then four, each consul commanding two legions. As Rome expanded into Italy and took on allies, she could field as many allied contingents, organized into *alae* ("wings," not necessarily all cavalry), creating a combined force as large as 40,000 at the battle of Sentinum (295 BCE).

Perhaps between the late fifth century and the early third century BCE, the manipular legion superseded the hoplite phalanx. Each legion consisted of 30 maniples, more maneuverable units that employed missile javelins and swords rather than thrusting spears. Each maniple comprised two centuries of 60 to 80 men each. Within each maniple, the troops were divided into groups characterized by their age and experience, ranked in three lines. The *hastati*, young men armed with javelins, made up the first line of battle. The *principes*, mature men somewhat more heavily equipped, made up the second line and carried out the brunt of the fighting. The *triarii*, older and experienced men, made up the third line and were expected to stand their ground in the fighting. Therefore the phrase "it has come to the *triarii*" signified desperate straits. The three-rank battle line that resulted, *hastati*, *principes*, and *triarii*, was termed the *triplex acies*. A corps of *velites* or light-armed troops, recruited from the poorest property-owning stratum, was responsible for scouting and skirmishing ahead of the main force. Polybius 6.19–42 describes the manipular legion of ca. 220–170 BCE.

Livy 8.8.5–8 may describe an intermediate stage, dividing the line of the *triarii* into *triarii*, *rorarii*, and *accensi*. Livy thus describes five classes, corresponding to the five Servian census classes. Recent research argues that

the *rorarii* should probably be identified with the “light troops” (*velites*) stationed to skirmish in advance of the legion. It has also been argued that the *accensi* were not light troops as Livy claims, but rather noncombatant assistants, as is the connotation of Latin *accensus*. Possibly Livy was confused about the manipular legion, as he wrote a century after it became obsolete.

In a much debated passage of Livy 8.8.5–8, the maniples deploy in a formation termed *quincunx* by modern scholars, in which maniples alternated with open spaces so that the entire *triplex acies* resembled a checkerboard pattern. After the *velites* completed skirmishing, they would retire through the open spaces. Then the maniples of *hastati* would close their gaps, causing the legion to present a solid line at the front. When the time came for the *hastati* to retire, every other maniple would fall back into the gaps between the maniples of *principes*, who would then move forward into the space created by the *hastati*, thus maintaining a solid front. The remaining *hastati* would repeat this maneuver, allowing all of the *princeps* to come to the front of the legion, while the *hastati* retired behind the *triarii*. This type of maneuver required excellent discipline and no doubt extensive drilling. It was most practical on level, flat ground, as any lack of coordination would enable the enemy to outflank and surround the Roman maniples by entering the open spaces. The *quincunx* maneuver hence has been suggested to be a parade ground drill, poorly attested in actual battles. Indeed, the advantage of maniples was that they could cope with rough, uneven ground better than the Macedonian phalanx, allowing Romans to defeat the Macedonians at Cynoscephalae (197) and Pydna (168).

In a manipular legion’s typical battle, the *velites* would range ahead, scouting and stirring up the enemy; when both forces were ready for battle, the Romans advanced at a steady pace, forming the *triplex acies*. At a signal, the *hastati* cast javelins (*pila*) at the enemy. If this did not rout the enemy, both sides then drew swords and began hand-to-hand combat. If the enemy was routed, the Romans pursued the enemy, often killing them. However, no battle was really “typical,” varying depending on the layout of the ground, the available troops, and the numbers and fighting methods of the enemy. Fighting was probably not continuous; though some battles are said to have lasted for hours, the effort of hand-to-hand combat can only be sustained for a short time, and periods of intense fighting probably alternated with periods of relative inaction (Sabin 2000).

In this period, military discipline emphasized remaining in formation, but with less rigidity than the hoplite phalanx. Discipline was maintained by the military oath (*sacramentum*) and probably by peer pressure. Soldiers swore oaths not to flee and not to leave the line of battle—except to advance to retrieve a weapon or strike down the foe. They might move relatively freely within the line to engage the enemy in hand-to-hand combat. Soldiers prized skill, experience, and courage (*virtus*), displayed in hand-to-hand combat.

In the late Republic, the legion transitioned to the use of cohorts, 10 per legion. Cohorts appear as early as the Second Punic War (218–201 BCE)’s Spanish campaigns, but did not become dominant before the early first century BCE. Marius was not the first to use cohorts, but he emphasized their use, and his military successes made maniples obsolete, last used by Metellus Numidicus in the Jugurthine War. Cohorts, being larger than maniples, more easily withstood shock; they were still small enough to maneuver easily, especially on rough ground. With the cohort system, the old division of *hastati*, *principes*, and *triarii* was abolished; the *velites* were also superseded. Within cohorts, all legionaries were divided into centuries, but otherwise the legionaries were treated alike. Cohorts continued to be used in infantry into the later empire.

The army’s command hierarchy played a major role in inducing soldiers to fight and obey. Each century of 60 to 80 men was commanded by a centurion—officers who obtained their commands by promotion through the ranks (very much like modern noncommissioned officers). Each cohort thus had six centurions, and the sixty centurions of the legion were promoted in an elaborate hierarchy. Centurions led their men from the front, engaging in battle alongside them. In this way, soldiers and their small-unit commanders maintained a close relationship, sustaining social pressure to obey and display valor. The centurion’s second-in-command, the *optio*, usually made sure the men held their ground from the back of the unit. As the centurion personally selected the *optio* from among his men, the second-in-command probably also held the same respect as the centurion, further inducing the soldiers to obey.

Every unit in the army had its own battle standards, which were regarded as sacred. Each unit followed their standard—carried by a standard bearer—into battle. Because the standards were sacred, they also induced soldiers to fight. Having a standard captured was one of the highest forms

of dishonor for a unit, and indeed many probably considered it better to die than to have their standard captured. Because of this, troop movement and engagement could be carefully controlled by the placement of the standards.

The Roman army also had an extensive system of reward and punishment, which played a major role in inducing soldiers to fight and obey. Made from precious metals, military decorations were both valuable in themselves and signified great honors. Decorations included crowns (wreaths) for being the first to scale a wall during a siege, saving a fellow citizen's life, and for rescuing Romans from a besieged city. Other rewards included necklets, armbands, bronze sculpted discs, spears, and horse trappings. Monetary bonuses were likewise a form of reward, and they too were often presented for bravery. In this way, soldiers were motivated both to hold the line and to display valor.

Punishments (s.v. military discipline) on the other hand were severe, including fines, corporal punishment, reduction in rank, and the reduction of rations (or replacement of wheat with barley). The collective punishment of decimation, in which a few were selected by lot from a cowardly or disobedient unit for beating or stoning to death, was one of the worst possible punishments, but shaming punishments might be imposed on troops who showed cowardice.

Caesar's *Gallic Wars* and *Civil War* illustrate the role of the general in the late Republic. He commanded from just behind the front lines, where he was not occupied fighting the enemy in person but could move about (on horseback) to observe the battle and encourage his men. Occasionally, generals of the late Republic fought alongside their men in the front, boosting their morale; however, such a location made it hard for a general to observe the course of a battle.

Caesar's soldiers were well trained and could orient themselves according to the standards carried by the centuries. At the battle of the Sambre Caesar's men, out of fear, had become too crowded together to fight effectively; he urged them to move their standards apart, enabling a looser formation where each man had space for combat. He urges his men away from low points in the topography, "unfavorable ground" which an army burdened with the weight of arms and armor would have to fight its way uphill to escape. In contrast, "favorable ground," being higher than the surrounding topography, gave soldiers more impetus when running downhill against the enemy (see Lendon 1999). Caesar ensured that his

soldiers were highly motivated, rewarding them with donatives and the plunder of Gaul (in contrast, he downplays plunder in the civil war with Pompey).

Roman tactics against non-Romans varied with the people and their fighting methods. Barbarians' rash mass attacks usually resulted in their defeat by the Romans, whose soldiers were better disciplined. Gauls, Germans, and Spanish were more successful when they launched guerrilla attacks and ambushes, especially when Roman forces were more vulnerable when strung out on the line of march (*agmen*), though the Romans had ways to organize the *agmen* so that it was more defensible. Converting a line of march into a line of battle was also a vulnerable undertaking that might take hours.

In the Principate, the main controversy over tactics is whether the *auxilia* had a different tactical function than the legions. Tacitus (*Agricola* 35.2) asserts that at the battle of Mons Graupius (83 or 84 CE) victory was achieved without shedding Roman blood, the noncitizen *auxilia* carrying out the fighting. This doubtless rhetorical statement has been taken seriously, based on Trajan's Column where legionaries are depicted at work on engineering projects, while auxiliaries (distinguished by their equipment) are seen more often in combat. However, documentary and archaeological sources do not suggest that legionaries and auxiliaries had different tactical purposes. In fact, both were eventually recruited from the same pool, the frontier provinces and especially the military zone.

Another feature of the middle and later empire was a resurgence of the use of the phalanx or "shield wall," described for example in Arrian's *Ectaxis contra Alanos*. The Alani were a Central Asian barbarian people who invaded the Danube region. The motivation for the use of the phalanx is debated; it may have reflected nostalgia for classical Greece in a period when the Greco-Roman elite venerated classical texts (Lendon 2005).

Tactics shifted to an emphasis on cavalry in the third-century crisis and later empire. The emperor Gallienus (260–268) organized a central field army based on cavalry, able to move faster than infantry to crisis areas of the empire. Because of the behavior of horses, cavalry tactics are different from infantry tactics; horses will not run into a massed object (such as a battle line) but will swerve around it, making cavalry battles faster moving and more fluid. The Romans employed light cavalry to tire out Persian mounted cataphracts, heavy-armored cavalry where both riders and horses

wore elaborate armor. Also good against cavalry were slingers and archers, striking at a distance. The emphasis on cavalry meant that the *spatha* or long cavalry saber replaced the infantry *gladius*. However, all Roman cavalry were hampered by a lack of stirrups, which would not be invented until later in the Middle Ages.

In the later empire, regular Roman troops seem to have been trained in the usual way as infantry and cavalry. Though Vegetius, author of the early fifth-century *Epitome of Military Science*, laments that present-day soldiers do not train, this was a stock complaint used to praise commanders by claiming that their predecessors had let training slide. The Germanic *foederati*, however, retained their native fighting methods and organization.

Tarentum, Pact of (37 BCE)

The Pact of Tarentum was a renewal of the Second Triumvirate in 37 BCE between Octavian, Mark Antony, and Lepidus. It was managed in large part by Octavia, sister of Octavian and wife of Mark Antony. It was intended to unite the triumvirs in a naval effort to suppress Sextus Pompeius.

Following the short-lived Pact of Misenum, Octavian had renewed his war against Sextus Pompeius. However, he met with several defeats. Antony returned to Italy officially to help his colleague, but actually to raise troops for a campaign against the Persians. The two commanders began to dispute and blame the other's lack of cooperation for their military setbacks, but Octavia was able to reconcile them. Appian, *Civil Wars* 5. 95 says Antony was to supply Octavian with 120 ships against Sextus, while Octavian was to provide 20,000 legionary soldiers against the Persians (Plutarch, *Antony* 35.4 says only two legions and 100 ships). Octavia secured an additional 1,000 picked praetorians for Antony and 10 light triremes for her brother. In addition, they renewed the Second Triumvirate for an additional five years without seeking ratification from the people. Furthermore, they stripped Sextus of his augurship and the consulship that he had been promised (probably 35 BCE).

As with the Treaty of Brundisium, a marriage bond settled the treaty. Octavian betrothed his infant daughter Julia to Antony's older son, and Antony betrothed his older daughter by Octavia to the son of Domitius Ahenobarbus, his lieutenant.

Dio 48.54 believes that neither party planned to respect the terms of the Pact of Tarentum, but that both were acting out of expediency and planned to violate the agreement.

Tetrarchic Civil War (305–312 CE), Causes

There is no accepted name for the civil conflicts of the Second Tetrarchy (305–312) in which Constantine the Great (306–337) rose to power despite his exclusion from the Tetrarchic succession. The conflicts are termed the Tetrarchic Civil War in this encyclopedia.

Besides the personal ambitions of the individual leaders, the Tetrarchic Civil War was driven by the tension between the Tetrarchic model of nondynastic succession and a more standard model of dynastic imperial succession. It was probably not driven chiefly by religion, despite the perspective and claims of the Christian historians Lactantius and Eusebius.

The Second Tetrarchy might have continued longer if Constantius I (Caesar 293–305, Augustus 305–306) had not died in 306, enabling his troops to acclaim his son Constantine as emperor. It was routine for usurpers to claim that their armies acted spontaneously rather than that they instigated their revolts. Constantine's intense personal ambition is confirmed by Aurelius Victor (40.2) and Eutropius (10.5, 7). However, the support of his father's army shows the popularity of dynastic succession, in contrast with Diocletian's nondynastic Tetrarchic arrangement in which nonrelated adult men were tapped to become Caesars and intended successors of the Augusti. In the creation of the Second Tetrarchy, both Constantine and Maximian's son Maxentius had been passed over for Caesars. Subsequently at Rome, Maxentius was also elevated to emperor by popular sentiment and the support of the praetorians.

Despite the Christian emphasis of Lactantius and Eusebius, it is unlikely that the entire Second Tetrarchic conflict was motivated by religion. The depth and extent of Constantine's initial Christian sympathies and conversion before the battle of the Milvian Bridge remain debated by scholars. Lactantius and Eusebius wrote in hindsight, glorifying Constantine and the Church. Without the imposition of Christianity, the Tetrarchic Civil War resembled other Roman imperial civil wars (compare the War of Four

Emperors, 69 CE; the wars of Septimius Severus, 193–197; and the third-century crisis).

However, differing religious sympathies and the persecution of the Christians may well have divided the rival Second Tetrarchs further; Galerius and Maximinus were fervent pagans and harsh persecutors of the Christians, whereas Constantius was allegedly sympathetic to Christianity.

Tetrarchic Civil War (305–312 CE), Course

Constantine first allied himself with Maximian Herculius (Augustus 286–305), and, after the deaths of his other rivals, defeated his main rival in the western empire, Maxentius, in the battle of the Milvian Bridge on October 28, 312. Constantine then faced Licinius and Maximinus II Daia as rivals; after the elimination of Maximinus, Constantine and Licinius ruled the empire until 324, when Constantine overthrew Licinius. The conflicts of the Second Tetrarchic period are attested in relatively extensive but highly partisan Christian narratives, due to Constantine's conversion to Christianity. Pagan sources, such as the *Panegyrici Latini* and the epitomators, present their own difficulties.

The Second Tetrarchy was established on May 1, 305 when Diocletian, the senior Augustus, and his co-Augustus Maximian abdicated in favor of

the Caesars Galerius (305–311) and Constantius I (305–306) who became the new Augusti. Two new Caesars were elevated: Severus and Galerius' nephew Maximinus. The two young men who had hoped to be appointed Caesar, Maximian's son Maxentius and Constantius' son Constantine, were passed over.

In 306 Constantine joined his father in the northwestern empire. After Constantius' death, Constantine was acclaimed emperor at York by his father's soldiers. This was the first rupture with the Tetrarchic system. However, Constantine seems to have been content with the title of Caesar, which his father as senior Augustus had been able to confer and which Galerius reluctantly confirmed.

On October 28, 306, Maxentius revolted, supported by the inhabitants of Rome, the Praetorian Guard, and the Italians. A short time later Maximian came out of retirement, which he had probably not regarded with enthusiasm, and claimed the title of emperor again. Galerius dispatched the Caesar Severus to invade Italy and suppress the revolt of Maxentius. Maximian confronted Severus. The troops of Severus included many of Maximian's veterans, who refused to fight their former leader. Abandoned by his army, Severus fled and took refuge at Ravenna, where Maximian captured and imprisoned him; Subsequently Severus died, allegedly put to death by Maxentius.

Around this time Constantine allied with Maximian and Maxentius. A panegyric to Constantine and Maximian addresses Maximian as "eternal emperor" and links Constantine with the Herculian dynasty. Constantine was betrothed to and in 307 married Fausta, Maximian's young daughter. Maximian apparently conferred the title of Augustus on Constantine, but the other Tetrarchs probably did not regard his title as legitimate. Even so, it is conventional to date Constantine's reign from 306 to 337.

In April 308 Maximian attempted to depose Maxentius, but failed and fled to Constantine for protection. Galerius invaded Italy with the goal of suppressing Maxentius, but was forced to turn back. In November 308 Galerius, attempting to keep the Second Tetrarchy together, called a conference of the current and retired emperors at Carnuntum in Pannonia, including Diocletian, Maximian, Galerius, Maximinus, and Constantine. Maxentius was not included, and was even declared a public enemy. Galerius probably hoped that Diocletian would resume the purple and restore order, but Diocletian refused to become emperor again. He

persuaded Maximian to abdicate for the second time. Galerius appointed Licinius, an old friend of his, as Augustus to replace Severus and accepted Constantine and Maximinus as Caesars, technically *filii Augustorum* (“sons of the Augusti”), which failed to satisfy them.

In 310 Maximian revolted against Constantine in another bid to regain the imperial power. He was besieged at Massilia and defeated by Constantine. Captured by Constantine, Maximian may have been put to death by hanging or may have been forced to commit suicide. After the death of Maximian, Constantine’s panegyrists depict Maximian as a traitor and instead claim that Constantine’s father Constantius was descended from Claudius II Gothicus (268–270), one of the great (but short-lived) emperors of the third-century crisis, creating a dynastic lineage and greater legitimacy for the house of Constantine.

In 311 Galerius died from a long and painful illness. He issued an edict on his deathbed rescinding the persecution of the Christians. After Galerius’ death, Constantine adopted the title of Augustus, a title also claimed by Maxentius; in the eastern provinces, Licinius and Maximinus were now rivals headed toward civil war. Constantine forged an alliance with Licinius, to whom he betrothing his sister Constantia.

In the western provinces, Constantine and Maxentius were now open rivals. Constantine invaded Italy and fought and defeated Maxentius on the outskirts of Rome at Saxa Rubra and at the Milvian Bridge on October 28, 312. Maxentius was forced to retreat across the Tiber River and drowned (variant accounts exist). Constantine entered Rome and was accepted as emperor.

According to Eusebius (*Vita Constantini* 1.28), before the battle with Maxentius, Constantine saw a cross of light appear in the sky and regarded it as a sign that the Christian God would bring him victory. He painted the labarum (the Chi-Rho monogram, standing for Christ) on his soldiers’ shields. According to Lactantius (*DMP* 44), Constantine was inspired by a dream to do this before the battle. After defeating Maxentius, Constantine proceeded to pass edicts of toleration and restitution, restoring to the Church and to Christians property that had been seized in the persecution of 303–311.

Around this time (311 to 313) Diocletian died; Lactantius claims (*DMP* 39, 41–2) that he lived long enough (after the death of Galerius in 311) to learn how his wife Prisca and daughter Valeria were mistreated by

Maximinus and Licinius, who forced them out of Galerius' court and into exile. Licinius subsequently apprehended and put Prisca and Valeria to death.

In 313 Maximinus invaded Thrace and besieged Byzantium (not yet Constantine's capital). Forced to abandon the city, Maximinus was defeated in battle at Adrianople (not to be confused with the more significant battle of Adrianople in 378) and, after attempted flight, committed suicide or died of a disease at Tarsus. Constantine and Licinius were left as Augusti. They maintained an uneasy coexistence, breaking into civil war in 316–17; in 324, when Licinius allegedly invaded Constantine's territory, Constantine rapidly defeated him, exiling Licinius to Thessalonica where he was executed the following year.

Tetrarchic Civil War (305–312 CE), Consequences

The collapse of the Second Tetrarchy destroyed the credibility of adoptive or nondynastic succession, and subsequently the later Roman emperors from Constantine through the Theodosian dynasty (379–455) relied on dynastic succession, elevating family members to Caesars or co-Augustus.

Constantine himself elevated his three sons, Constantinus II, Constantius II, and Constans, and a nephew, Delmatius, to Caesars during his reign. After his death, the four were supposed to reign as co-Augusti, an arrangement that soon succumbed to a purge of the collateral branch of the dynasty (including Delmatius), civil war between the sons, and the usurpation of Magnentius, leaving Constantius II (337–61) as sole ruler. Constantius elevated his cousins Gallus, then Julian, as Caesars; Gallus was accused of conspiracy and executed, while Julian, successful in his wars against the Germans, was acclaimed Augustus by his troops and was spared a civil war by Constantius' death from illness. Subsequently, Valentinian I (364–75) elevated his brother Valens to co-Augustus, and Valentinian's sons, Valentinian II and Gratian, later became co-emperors. Selection of unrelated, adult candidates for the purple occurred only when dynasties terminated without candidates, as after the deaths of Julian in 363, Jovian the following year, and Valens in the battle of Adrianople (378). After Adrianople, the unrelated Theodosius I (379–395) was chosen by Gratian and a council of officers, but subsequent reliance on dynastic succession eventually weakened the Theodosian dynasty and contributed to the fall of the western empire.

The farthest-reaching consequence of the Tetrarchic Civil War was Constantine's conversion and promotion of the Church, ushering in a new age of history. It is difficult to imagine the Byzantine Empire, the European Middle Ages, and the European Renaissance and Baroque eras without Christianity. No people of the time could have foreseen these ages. In the short term, Constantine's conversion had less impact than Lactantius and Eusebius claimed. They heralded Constantine as a savior and ruler of a Christian golden age. Eusebius' *Vita Constantini* (Life of Constantine), a eulogy written after the emperor's death, is perhaps most exaggerated in its claims for Constantine's conversion, projecting backward from the later years of a long reign. Constantine took more interest in theological controversies later in his life, summoning the Council of Nicaea (325) to settle disputes over the relationship of Christ to God.

At the time of the Tetrarchic Civil War in 312, Constantine staked his belief in the Christian God on his victory over Maxentius. After Constantine achieved this victory, he declared edicts of toleration of the Christian religion, restored to Christians property seized in the persecution, and bestowed vast wealth and estates on the Church. But Constantine still

treated the Christian God as one god among many worshipped in the empire. His personal conversion is undoubted, but he did not persecute paganism or attempt to impose monotheistic Christianity on all inhabitants of the empire. Theodosius I (379–395) would attempt this. For a few years Constantine also continued to depict Sol Invictus (the Invincible Sun) on his coinage, a pagan solar deity with eastern origins worshipped by the emperor Elagabalus (218–222) and Aurelian (270–275). Constantine even permitted individuals to continue to worship him in the imperial cult, and perpetuated the exalted ceremonial that surrounded the emperor from the Tetrarchic period onward.

The main narratives for the Second Tetrarchic conflict are Lactantius' *On the Deaths of the Persecutors* (DMP), written around 316–17; and Eusebius' *History of the Church and Life of Constantine*, written in Constantine's reign. Both Lactantius and Eusebius are highly favorable to Constantine, depicting him as a savior of the empire and of the Christians, rather than as a usurper who began the destruction of the Second Tetrarchy. The pagan emperors are depicted as tyrants, including Diocletian, Galerius, Maximian, Maxentius, and Maximinus. The *Panegyrici Latini*, a collection of Latin orations praising the later Roman emperors, includes orations to Constantius I, Constantine and Maximian, and Constantine alone after his defeat of Maxentius. Pagan in outlook, the panegyrics have the advantage of contemporaneity and show the shifting of alliances and claims of legitimacy.

In contrast, the Latin epitomes (mini-histories) Eutropius' *Breviarium*, Sextus Aurelius Victor's *De Caesaribus*, and the anonymous *Epitome de Caesaribus* were written decades later, in the middle and late fourth century. They also cover the First and Second Tetrarchy and Constantine's rise to power. Eutropius and Aurelius Victor were secular in their approach and are much more favorable to the pagan emperors, especially Diocletian and Galerius, but their narrative of the Second Tetrarchy clearly derives from a source favorable to Constantine.

Written in the late fourth century, the pagan historian Ammianus Marcellinus' *History of Rome* is not intact for this period. On the other hand, the early fifth-century Greek historian Zosimus (*New History*) is very unfavorable to Constantine.

Theoderic (ca. 454–526 CE)

Flavius Theodericus, in English Theoderic, was the first king of the Ostrogoths (471–526) and from 493 to 526 ruled Ostrogothic Italy, one of the earliest prominent successor kingdoms. Theoderic was probably born in Pannonia around 454. During the disintegration of Attila's Hunnic Empire, several Gothic tribes separated from the Huns and settled inside the Illyrian provinces of the eastern Roman Empire. Theoderic's father was leader of one of these tribes and made a treaty with the Romans, in which the young Theoderic was sent to Constantinople as a hostage. In this period, though little is known, Theoderic presumably acquired an exposure to classical culture.

In 470–471, Theoderic returned to the Pannonian Goths and became their king. Throughout the 470s and 480s Theoderic repeatedly ran into conflict with Goths settled in Thrace, but by 484 had gained leadership over both Gothic confederacies. The eastern Roman emperor Zeno solicited his support against various rivals, for which Theoderic was appointed *magister militum* and even received the consulship. Both parties were intermittently also at odds, however. Eventually Theoderic and Zeno reached a compromise: the Ostrogothic leader would march to the west and replace Odoacer, former supreme commander of the western Roman army, who had deposed the last western Roman emperor and governed Italy autonomously.

Theoderic defeated Odoacer's forces in 489 at the Isonzo River and at Verona. However, during the winter of 490, Odoacer besieged Theoderic at Ticinum (Pavia). A timely intervention of the Visigoths broke the siege. Theoderic defeated Odoacer a third time at the Adia River in 491, followed by a two-year siege at Ravenna. Only after assassinating Odoacer during a banquet that ostensibly celebrated a negotiated peace, did Theoderic gain complete dominance over Italy in 493.

The Vandals had attempted to take over Sicily during the war in Italy, but Theoderic's forces evicted them and seized most of the island. In the following years, Theoderic concluded several marriage alliances with the royal families of various successor kingdoms: his sister married the Vandal king, his daughter married a Visigothic king, and his other daughter married a Burgundian prince, while Theoderic himself married a sister of the Frankish king. This did not prevent the Franks from attacking the Visigoths in 507, so that the Visigoths lost most of their Gallic territories. Theoderic sent an Ostrogothic army that secured the Mediterranean coast and preserved the rule of his Visigothic relatives in Spain.

By 513, Theoderic directly controlled Italy, Sicily, Provence, and the western Illyrian territories, while exercising the regency of his grandson in Spain. This effectively meant that for the first time since the death of the western Roman emperor Majorian (461), one ruler's hegemony in western Europe stretched from the Atlantic to the Danube. Though he significantly chose to be a king rather than a Roman emperor, Theoderic left intact many of the governmental and social institutions of late Roman Italy, preserving elements of classical culture. Toward the end of his reign, tensions rose between Theoderic and both the eastern Roman government, to which he nominally was still subservient, and members of the Italian elites. After his death, these mounting crises would culminate in full-scale war between the Ostrogoths and Constantinople. Nevertheless, during his life and reign Ostrogothic Italy proved to be the most formidable of all post-Imperial kingdoms.

Theodosius I (Emperor) (379–395 CE)

Theodosius I (known as the Great) came from a Spanish family and was promoted from relative obscurity to rule of the eastern Roman Empire. Born ca. 345, he reigned from 379 to 395 and he was the last emperor of a unified Roman Empire.

At Adrianople, in 378, the eastern Roman army was smashed by the Visigoths and the emperor Valens was killed, leaving no heir. The young western Roman emperor Gratian (375–383) appointed Theodosius I as *magister militum* for the eastern empire in 378. Faced with a power vacuum in the eastern empire, Theodosius rebuilt his army with mass conscription and recruited barbarian allies as client armies, the *foederati*. For his success, Theodosius was made Augustus in the eastern empire in the year 379. He fought a protracted campaign against the Visigoths for the next three years.

Gold solidus of Theodosius I (379–395 CE), the last Roman emperor to rule a unified empire. At his death, the empire was divided between his sons, Arcadius in the East (395–408) and Honorius in the West (395–423). Located in the Yale University Art Gallery, New Haven, Connecticut. (Yale University Art Gallery)

In 382, after several victories, Theodosius concluded an alliance with the Visigoths, granting them federate status. He settled them in Moesia, where they lived under their own laws, but they were obligated to fight as allies of the Roman Empire. This federate system became an important means of maintaining Roman military power, and it also led to an increased barbarian presence in the Roman Empire.

In 383, Magnus Maximus, the governor of Britain, proclaimed himself emperor of the western empire. Maximus routed Gratian's army and killed Gratian, becoming emperor of Britain and Gaul. Maximus sought to

peacefully reconcile with Gratian's brother, the child emperor Valentinian II (b. 371, reigned 375–392). Delaying tactics gave Valentinian's troops time to secure the Alps. Maximus accepted this standoff, allowing Valentinian to remain the ruler of Italy and Africa. During these years, Theodosius recognized Maximus as a co-emperor

In 387, Maximus invaded Italy. Valentinian II fled to Thessalonica. There, Theodosius I sealed his alliance with Valentinian by marrying his sister Galla. Theodosius invaded Italy by land and by sea, defeating Maximus' army at the battles of Siscia and Poetovio in 388. The triumphant Theodosius sent Valentinian to Gaul, with his trusted general Arbogast. Theodosius ruled from Milan for three years, attempting to provide some stability in the western empire. His older son, Arcadius, stayed in Constantinople to administer affairs in the eastern empire. In 391, Theodosius restored Valentinian II to his throne and headed east.

In 392, Valentinian II was found dead. Ancient sources claim that his *magister militum* Arbogast killed him or forced him to suicide by hanging. Arbogast, a pagan Frank, made a teacher of rhetoric named Eugenius western Roman emperor. Eugenius' regime (although, Eugenius was at least superficially a Christian) might have been based on anti-Christian sentiment among pagans, though this is now disputed by several historians. Eugenius and Arbogast revived pagan cults in Rome. The two were defeated and killed in 394 at the battle of the River Frigidus. Many of Theodosius' Visigoth troops fought on the front line and took heavy casualties at the battle, which led to their defection under Alaric, who would later sack Rome. Theodosius I died the next year from natural causes. He divided the empire up among his sons, Honorius in the western empire, and Arcadius in the eastern empire.

Theodosius I was deeply involved in Christian religious politics; he was a devout orthodox Nicene Christian and the Church had a great deal of influence over his policy, particularly in the person of Ambrose of Milan. In 380, Theodosius issued an edict recommending that all subjects of the Roman Empire become orthodox Nicene Christians. Theodosius actively intervened in church politics, deposing the Arian bishop of Constantinople. He was relentless in the pursuit of heretics; he sought to deprive them of their rights wherever possible. In some cases, they were even to be hunted down and killed. Theodosius had also convened ecumenical councils in Constantinople to resolve the differences between eastern and western

version of orthodox Christianity.

During the first half of his reign, Theodosius I was considered relatively tolerant of paganism, despite the fact that sacrifice was now illegal. Local officials would sometimes force pagans to convert and destroy pagan temples, but this was at least alleged to not be the explicit policy of the imperial government. In 391, Theodosius issued a new ban on all forms of sacrifice and closed pagan temples to public access, in essence banning paganism. Despite Theodosius' laws, paganism persisted, because of lax enforcement. This was a turning point for the empire, since even the ceremonial pagan rites of the city of Rome were now banned. Theodosius presided over an imperial government that had begun to see itself as overtly Christian and whose policy explicitly advanced Christianity.

Theodosius II (Emperor) (408–450 CE)

Theodosius II was the son of the eastern Roman emperor Arcadius and his wife Aelia Eudoxia. Born in 401, he became eastern Roman emperor in 408. Theodosius II is remembered as a weak emperor, who was dominated by regents, first the praetorian prefect Anthemius, then his older sister

Pulcheria, followed by his wife Aelia Eudocia. In 413, Anthemius built a circuit wall around Constantinople that survives to this day. This wall proved crucial when the Huns invaded the eastern empire.

Early in Theodosius' reign, persecution of Christians in Mesopotamia led to a war with the Sassanian Empire from 421–422. In 422, with imperial troops preoccupied, the Hunnic king Rua invaded Thrace. Theodosius began paying him an annual subsidy not to attack. In 423, following the death of Honorius, Valentinian III arrived in Constantinople, fleeing the usurper Johannes. In 424, Theodosius II's army defeated Johannes and returned Valentinian to power in 425. Valentinian married the daughter of Theodosius II, sealing their alliance.

In 431, Theodosius again sent troops west to combat the Vandal invasion of North Africa, attempting to halt the Vandal advance on Carthage. Defeated, they ceded the province to the Vandals, who invaded Sicily around 440. Theodosius dispatched a naval force to Sicily and after some initial success was forced to retreat due to a simultaneous invasion by the Huns and the Persians. Theodosius' return allowed the Vandals to cement their control over Africa. The Vandals also increasingly became a naval power in the western Mediterranean.

With the death of Rua and the accession of Attila to kingship over the Huns, the subsidy increased. In 447, Attila renewed the offensive, taking advantage of famine and plague in the eastern empire. He decisively defeated the eastern Roman army in 443, overrunning the Balkans and threatening Constantinople. Attila imposed a steep subsidy upon the eastern empire and annexed the territory a five days' ride south of the Danube.

Theodosius II died in a riding accident in 450. His successor was the general Marcian, who married his sister Pulcheria.

Theodosius II was legendarily pious. He passed stringent laws against heretics and pagans, though they seemed to have mattered little in reality, since many Arian Christians (Gaias, for instance) still served in his army. Paganism continued during his reign. Theodosius found himself entangled in Christian doctrinal disputes, originally supporting the bishop of Constantinople Nestorius, who emphasized the humanity of Christ, but after the council of Ephesus in 431 and Nestorius' expulsion, Theodosius threw his support behind Cyril of Alexandria's faction, which stressed the godhood of Christ.

Theodosius II is associated with the Theodosian Code, which collected

and arranged laws by topic and in chronological order, beginning with Constantine. It later became the basis for the barbarian law codes and ultimately, those of medieval Europe. Work on this code began in 429 and it was published in 438. Theodosius is also responsible for the creation of the University at Constantinople.

Third-Century CE Crisis, Causes

The immediate causes of the third-century crisis were the invasions by Sassanid Persia and the Germanic barbarians. The long-term causes were embedded in the geography of the empire. The Roman Empire covered a wide geographic area, from Britain in the west to the Rhine and Danube; in the south, North Africa; in the east, Asia Minor, Syria, Egypt and the Mesopotamian frontier. Travel and communications were slow and unreliable. Not trusting the central power to respond in time, frontier regions faced with a local invasion or with civil war elsewhere might support their own imperial candidates to restore local order. At the center, subjects might then lose confidence in an emperor who was unable to control the periphery. A vicious cycle of revolts and coups ensued, with breakaway “empires” in Gaul and the Near East.

Another long-term cause was the evolution of the Principate. Augustus sought to partially demilitarize senators by limiting their access to military commands. The emperors promoted a relatively small number of senators as experienced military commanders; most senators spent only a year or two

as high-ranking but inexperienced officers. The emperors increasingly promoted equestrians as military officers and civilian administrators. The result was a cadre of experienced military officers of equestrian rank or promoted into the Senate (Decius and Valerian were senators at their accessions), with a close relationship with their armies. These men regarded imperial authority as created by the army, and during the crisis they were elevated and (often) deposed and assassinated by the army. The Senate itself was now remote and ineffectual.

Another cause was economic weakness, particularly in the money supply. The Roman Empire had relatively low taxation (compared with modern societies). It furthermore was a patronage society, where the emperors and their delegates could remit taxation or grant immunities from taxation to reward or privilege individuals, communities, and status groups (the population of Italy had not been taxed since 167 BCE). Revenues were thus uncertain; emperors might resort to ad hoc measures, such as auctioning imperial property or confiscating the property of wealthy persons accused of sedition (an unpopular policy). The empire also relied on its silver coinage, the denarius. There was no paper money and no concept of deficit spending. Rather than raise taxes, the emperors of the crisis resorted to debasing the coinage: adulterating the silver content of the denarius with base metal to mint more coins. As the public lost confidence in the coinage, inflation rose, weakening the economy further. Invasions and civil wars also caused local economic disruption. In these conditions, armies were probably motivated by donatives and gifts to support imperial candidates, as in previous, better-documented civil wars.

Third-Century CE Crisis, Course

The third century crisis was a period of chronic warfare, invasions, and political instability in the Roman Empire. It is usually reckoned from the death of Alexander Severus in 235 CE to the accession of Diocletian in 284. During the years of the crisis, there were about 20 legitimate rulers (the persons mentioned by name in this summary) and many short-lived pretenders or usurpers; the two emperors with the longest reigns (Valerian and Gallienus) ruled only eight or nine years, and many others ruled for only a few years. Of all these emperors and pretenders, only a few died of natural causes; the rest were assassinated or died in battle. A resurgence of Persian expansionism led to Roman defeats and the capture of the emperor Valerian (260). Parts of the empire broke away as quasi-separate Gallic and Palmyrene Empires. Germanic barbarians invaded the empire along the northwest frontier and from the Black Sea. Reforms to the army and the heroic efforts of emperors Gallienus (260–268), Aurelian (270–275), and Probus (278–282) resulted in the reconquest of the Roman Empire and expulsion of the Goths, Alamanni, and other peoples.

The onset of the crisis begins (conventionally) with the events of 235–238 CE. A weak ruler influenced by his mother Julia Mamaea, Alexander Severus (222–235) was campaigning on the Rhine frontier against the Germans. When Mamaea and her advisers suggested paying the Germans subsidies to avoid fighting, the troops became angry with Alexander, and assassinated him and Mamaea early in 235. In Pannonia, the legions elevated Maximinus I (235–238), a career soldier and officer who was nicknamed Thrax, “the Thracian.” Thracians had a tough and warlike reputation. Maximinus raised money for the army through confiscations of senatorial property. Accordingly the pro-aristocratic literary sources depict

Maximinus as cruel and barbaric. Modern scholars have somewhat revised this evaluation.

In response to the accession of Maximinus, landed aristocrats in Roman Africa elevated the elderly senator Gordian I and his middle-aged son Gordian II. The Gordians did not rule very long. Capelianus, the legate of Numidia, supported Maximinus and crushed the younger Gordian in battle; the elderly Gordian I committed suicide when he heard of the defeat. To oppose Maximinus, the Roman Senate then elevated two elderly senators, Pupienus and Balbinus. The Roman populace forced them to elevate Gordian I's young grandson, Gordian III, as Caesar. In response, Maximinus and his army marched on Italy, besieging Aquileia. Here Maximinus' own troops mutinied against him and assassinated him (238). Subsequently, the praetorians became dissatisfied with Pupienus and Balbinus and assassinated them. The 13-year-old Gordian III became emperor (238–244).

After 238, the Carpi and Goths invaded Moesia and Dacia, and Ardashir, the new Sassanid king of Persia, invaded the eastern empire (241). Gordian III and his praetorian prefect, Timesitheus, launched a new Persian campaign. Timesitheus died and was replaced by Philip, who deposed and killed Gordian III (the details are unclear) and was acclaimed as emperor by the army. Philip (244–249) made peace with the Persians, conceding control over Armenia and paying a large subsidy. He may have had little choice, as the Roman Empire was descending into crisis. However, Philip also returned to Rome to celebrate Rome's 1,000th birthday (248).

Decius had been appointed by Philip to suppress a revolt and fight the Goths and Carpi. He defeated them and was hailed as emperor by his troops. Decius and Philip went to civil war, Decius defeating Philip in the battle of Verona (249). To appease the traditional gods of Rome, Decius authorized a persecution of the Christians, requiring all subjects of the empire to sacrifice to the gods or the emperor. Decius made his son Herennius Etruscus co-emperor, but entrusted his other son Hostilianus to Licinius Valerianus (Valerian). Decius, however, fell in battle with the Goths (251).

In Moesia, the legions revolted and raised to emperor the provincial governor Trebonianus Gallus (251–253). Gallus and his son prepared to fight Aemilian, a pretender, but instead the soldiers killed Gallus and his son and went over to Aemilian. Aemilian then prepared to fight Valerian, but was assassinated by his own soldiers, conveniently for Valerian, who became

emperor (253–260).

Valerian elevated his adult son Gallienus to co-Augustus and assigned him the western empire, turning to the eastern frontier and the invasion of Shapur, the new Sassanid king. Valerian's Persian campaign ended in disaster for the Romans when, during negotiations, Valerian and many of his officers were ambushed and captured by Shapur (260). Shapur kept Valerian alive as a prisoner of war. According to Roman legend, Shapur deliberately humiliated Valerian by using him as a footstool and, when he died, stuffing his body with straw and keeping it on exhibit (or flaying him and hanging his skin in a temple).

Gallienus became sole emperor (260–268), though faced with the revolts of many would-be emperors, the most prominent being Postumus, the governor of Gaul, who established a virtually independent "Gallic Empire." Though he is depicted unfavorably in the literary sources, Gallienus addressed the crisis with many of his policies. He organized fast-moving cavalry strike forces that could move more quickly than legionary infantry to address a crisis. He organized a cadre of talented officers, the *protectores*, who could be marked out for further promotion. Gallienus removed senators, who lacked the experience and the connection with the troops that were needed at this time, from military commands. Gallienus also attempted unsuccessfully to reform the currency.

Gallienus was obliged to tolerate both Postumus and to recognize the Palmyrene Empire, governed by Septimius Odenathus. To combat the Sassanids, Gallienus conferred on Odenathus the titles *dux Romanorum* (giving Odenathus command of Roman troops in the Near East) and *corrector totius Orientis*. Odenathus campaigned successfully against Persia and liberated Nisibis. However, Odenathus was killed in 268 and was succeeded by his widow Zenobia, ruling for her son Vaballathus.

Gallienus succumbed in 268 to a conspiracy of his own officers, subsequent to the revolt of Aureolus, his field army commander. Around this time the Black Sea Goths invaded the Aegean Sea and attacked cities in Greece and Asia Minor. Gallienus was succeeded by his officers' choice, Claudius II (268–270), surnamed Gothicus from his decisive defeat of the Goths at Naissus. Unfortunately, Claudius died from the plague. He was initially succeeded by his brother Quintillus, but the army supported the acclamation of Aurelian (270–275).

Aurelian first defeated the Juthungi and Vandals (Germanic peoples) in

Raetia and suppressed a conspiracy of the moneyers at Rome. He then built Rome a wall, the “Aurelian Wall” which still stands today, as much to maintain civilian morale as to actually defend the city. Aurelian then went to war against the Palmyrene Empire, reconquering the Near East for the Roman Empire and defeating Zenobia’s forces. He captured Zenobia and exhibited her in his triumph at Rome.

Aurelian then reconquered the Gallic Empire, now ruled by Tetricus. Postumus had been assassinated in 269 by his own troops. Postumus’ successor Victorinus (who ruled with his mother Victoria) had been assassinated, succeeded by Tetricus. Aurelian defeated Tetricus in 273–274. Minor revolts of pretenders continued to occur.

Aurelian then evacuated the province of Dacia, which lay north of the Danube and was indefensible, moving the inhabitants south of the Danube. The exact date of this policy is uncertain. Aurelian also promoted the cult of *Sol Invictus* as the chief state god, though he did not suppress other cults or persecute Christians. He campaigned against Persia in 275, but was assassinated by a cabal of his own officers, who mistrusted his perceived arrogance and cruelty.

After a period of deliberation, Aurelian was succeeded by Tacitus, an elderly senator who may have been another Illyrian army officer. Tacitus punished the murderers of Aurelian, but died soon afterward, either from natural causes or in an assassination.

Tacitus was succeeded by Florian, his half-brother, and then by Probus (278–282), another highly active military emperor. Probus expelled the Germanic Vandals and Burgundians from Gaul, then fought Germans on the Danube. He was assassinated by his troops when he put them to work draining swamps and planting vines in the Danubian provinces. Alternately, Probus’ praetorian prefect, Carus, may have engineered Probus’ assassination.

The emperor Carus (282–283) died when he was mysteriously struck by lightning during his campaign against Persia. He was succeeded by his sons Carinus (283–285) and Numerian (283–284), both young men, Carinus in charge in the western empire, Numerian attempting to continue Carus’ Persian campaign on the eastern frontier. Forced to retreat, Numerian died in his tent under mysterious circumstances. He may have been poisoned by his praetorian prefect Aper, though the story that his body was concealed until the odor of decay revealed it is probably fantastic (resembling the

death of Tarquinius Priscus in Livy). The commander of the emperor's bodyguard, Valerius Diocles, arrested Aper and accused Aper of murdering Numerian. Diocles stabbed Aper to death in front of the army, and was elevated as emperor by the troops. As emperor, Diocles took a new name: Diocletian (284–305). He faced civil war with Carinus, who was killed at the battle of Margus (285), leaving Diocletian as emperor. Gaul was overrun by bandits, and Britain was lost to a usurper, Carausius. That Diocletian's accession marked the end of the third-century crisis was apparent only in hindsight.

The third-century crisis is a poorly documented period. Textual sources for the period are unsatisfactory. The Greek historian Herodian includes events of 235–238, but after that the fragmentary contemporary Dexippus, the fifth-century historian Zosimus, and the twelfth-century chronicler Zonaras are the main Greek sources. In Latin, the epitomators (authors of mini-histories) Eutropius, Aurelius Victor, and the anonymous *Epitome de Caesaribus* cover the period briefly. The part of Ammianus Marcellinus' *Roman History* that probably covered the crisis is lost. The *Historia Augusta* provides biographies of the emperors (and usurpers) down through Numerian (283–284). However, the *Historia Augusta* for the crisis period is very unreliable. Accordingly, the narrative history of the crisis is often thin and conflicted. It can be supplemented somewhat with legal and other documents, especially coins, as even the most ephemeral emperors issued coins in their names. Some of the emperors of the crisis period are known to us mainly from their coins.

Third-Century CE Crisis, Consequences

One of the consequences of the third-century crisis was the reorganization of the Roman army. The crisis emperors (Gallienus and successors) created mobile cavalry forces that could reach areas of crisis faster than the traditional legionary infantry. This emphasis on cavalry persisted through the later empire.

An aspect of this reorganization was the removal of senators from military commands and provincial governorships, attributed to Gallienus. The policy does not seem to have taken place uniformly (experienced equestrian officers had been promoted to senatorial rank in previous decades). However, senators no longer held the ranks of laticlavian tribune or legionary legate. Governors, formerly termed proconsuls or *legati Augusti pro praetore*, were now termed *praesides* (sg. *praeses*). Wider, solely military commands were created, extending across provinces; such commanders might be termed *duces* (sg. *dux*). Diocletian (284–305) consolidated the exclusion of senators from military commands and governorships, with the exception of Italy where senatorial appointees had no military role.

Another consequence was the advantage of multiple co-existing emperors. Gallienus had accepted this practice in a de facto sense, tolerating Postumus in Gaul and Odenathus in the Near East. Multiple emperors were able to control the periphery of the empire, and their cooperation discouraged revolts and usurpations by outsiders. Thus the Tetrarchy's four emperors. Constantine himself tolerated Licinius, his de facto co-emperor in the eastern empire, until 324. However, Constantine and subsequent later Roman emperors, reverting to the dynastic principle, resorted to family to provide multiple rulers; Constantine elevated his three sons as Caesars.

Another consequence of the crisis was the temporary loss of confidence in dynastic (hereditary) succession. Many of the crisis emperors had young sons whom they elevated to Caesar and designated as successors. As seen with the boy emperor Gordian III, assassinated by Philip, the sons were unable to hold onto power; most were assassinated. Diocletian elevated an unrelated adult colleague, Maximian, in 286, and created the Tetrarchy in 293, elevating two unrelated adult men and experienced commanders as Caesars. The Tetrarchy, however, fell apart in civil strife after 305 and Constantine the Great (306–337) reverted to dynastic succession.

A speculative consequence is that the crisis motivated emperors to espouse beliefs in transcendent deities, as Gallienus did with Neoplatonism, Aurelian with Sol Invictus, and eventually Constantine with the Christian God. However, not enough is really known about the crisis emperors to examine their religious motivations.

Thrasea Paetus was a Roman senator opposed to the reign of Nero (54–68 CE) on philosophical grounds, eventually committing political suicide. He was an adherent of Stoic philosophy and admirer of the traditional Republic. He at first supported Nero, but became hostile to the emperor and refused to vote on motions in the Senate as a mode of protest. He was condemned in 66 and committed political suicide. His downfall is chronicled by Tacitus (*Annals* 13.49, 14.12, 48–9, 16.21–35). His son-in-law Helvidius Priscus continued his tradition.

The “Stoic opposition” to the emperors was motivated in part by nostalgia for the traditional Republic. In this nostalgic view, republican Roman senators had been able to pursue political careers and seek triumphs unhindered by the emperors’ monopoly of victory; their *libertas* (freedom of speech) had not been restrained by fear of tyrannical emperors. In fact, these senators had as often been hindered by the political rivalry of their peers, for example, prosecuting each other for alleged misgovernment and attempting to deny each other triumphs.

Tiberius (Emperor) (14–37 CE)

A Roman military and political leader, Tiberius succeeded Augustus as the second emperor of Rome from 14 to 37 CE. Born in 42 BCE, Tiberius was a Claudian by birth. His mother Livia divorced his father, Tiberius Claudius Nero, and married Octavian (later Augustus) in 39 BCE, although pregnant at the time with Tiberius’ brother Drusus. A talented commander, Tiberius was less successful as emperor, being remembered for his increasing paranoia and persecution of members of the Senate and imperial family for treason.

In the military sphere, Tiberius excelled, being a highly skilled field

commander. Accounts of his military leadership depict Tiberius as a true soldier's soldier. During the Cantabrian War (26–19) Tiberius first tasted Roman military life, most probably under Augustus' direct leadership of the campaign (26–25). In 20–19, Tiberius commanded an expeditionary force to Armenia. With this force Tiberius placed Tigranes upon the Armenian throne, and collected the standards captured by Persia from Crassus at Carrhae (53 BCE), the return of which Augustus had successfully negotiated. In 19, Tiberius was appointed governor of Transalpine Gaul, a highly volatile region due to tribal feuding. In 15, Tiberius joined forces with his brother Drusus in campaigns against various Alpine tribes, successfully conquering the Raeti. In 6, Tiberius' list of conquests was expanded in Pannonia, being credited with the conquest of the Breuci and Dalmatae. For his triumphs Tiberius received an ovation in 9 and a triumph in 7 BCE.

Bust of the emperor Tiberius (14–37 CE). An experienced general, Tiberius (born in 42

BCE) became emperor in late middle age. Persecuting dynastic relatives for suspected treason, Tiberius depleted his possible heirs and finally designated his young great-nephew Gaius (Caligula) as intended heir. Located in the Getty Villa, J. Paul Getty Museum, Malibu, California. (The J. Paul Getty Trust)

After his sudden retirement from official duties between 6 BCE and 4 CE, Tiberius returned to the military stage, undertaking several campaigns in Germania (4–6). There he continued the work of his brother Drusus in pacifying the region as far as the River Elbe. In 6, Tiberius was sent to crush the Illyrian revolt, halting his German campaigns. After three years of fierce conflict, Tiberius, in command of 15 legions, finally succeeded in subduing all of Illyricum. Immediately following the Varian disaster (9) Tiberius was instrumental, along with his nephew Germanicus, in stabilizing the situation on Rome's northern frontier.

Tiberius' political career marked him as the probable successor of Augustus. Directed by Augustus, Tiberius held the posts of quaestor (24 BCE), praetor (19), and consul (13 and 7), and was given tribunician power in 6 and 4 CE, clearly highlighting him as a candidate for the succession. By 13 Tiberius was effectively co-emperor with Augustus.

Tiberius acceded to the imperial power in 14, but proved not to be a proactive ruler. Respecting Augustus' last wishes, Tiberius did not undertake any major military operations to expand the empire. His first challenge was the Rhine and Danube mutinies (14 CE) which were pacified by his son Drusus and nephew Germanicus. Rather than acting as a strong moral and political leader like Augustus, Tiberius encouraged the Senate to take control of most political matters in his name, and rarely overruled them. Consequently, Tiberius' political reluctance made him easily manipulated by those around him, most famously by Lucius Aelius Sejanus, Tiberius' praetorian prefect. Sejanus became powerful enough to persuade Tiberius to retire from Rome in 26, giving Sejanus free rein at Rome. Sejanus' position became so strong as to pose a direct and severe threat to Tiberius' position as emperor, and he met his violent and bloody downfall in 31.

Tiberius' difficulties extended into the familial sphere. Following Agrippa's death in 12 BCE, Tiberius divorced his beloved wife Vipsania and married Augustus' daughter Julia. Although the marriage advanced Tiberius' prospects regarding the succession, the marriage was an unhappy

one, arguably embittering Tiberius' character. The breakdown of the marriage strained Tiberius' fragile relationship with Augustus, partially explaining Tiberius' first retirement to Rhodes in 6, and Augustus' reluctance to then recall him. Tiberius had one son by Vipsania, Drusus (the Younger).

Although close to his brother Drusus, Tiberius did not possess the same affection for his nephew Germanicus. Rather, Tiberius appears to have been suspicious of Germanicus' actions on many occasions, complaining publicly to the Senate at Germanicus' unauthorized visit to Egypt in 19 CE. To discourage revolt, senators were not permitted to visit Egypt without imperial authorization. Tiberius frequently attempted to diminish Germanicus' military achievements, suggesting his envious resentment of Germanicus' success. Following Germanicus' sudden and suspicious death in 19 CE, for which Gnaeus Calpurnius Piso was officially blamed, Tiberius' poor relationship with Germanicus caused suspicion to be openly directed at him. Suspicions were compounded by Tiberius' absence from Germanicus' funeral, and his antagonism toward Germanicus' widow Agrippina and their children.

Tiberius' relationship with his mother Livia was also tense, being irritated by her great political influence and suspecting her of wishing to be his co-ruler. Consequently, Tiberius vetoed a series of political honors to Livia. Ultimately, Tiberius appeared fearful of seeming to be controlled by his mother, and strongly opposed any reference that supported such an idea. Tiberius often publicly argued with Livia, and resented her to such an extent that he visited her just once in the last three years of her life. Tiberius did not attend her funeral, and opposed her deification.

The combination of Tiberius' political reluctance with his challenging familial relations help to explain his motives for retiring to the island of Capri in 26, escaping the strains, stresses, and boredom of public life. Tiberius' retirement to Capri was an event that forever blackened his character and overshadowed the successes and strengths of his youth. The Roman elite, offended by their *princeps'* withdrawal, spread nasty rumors about his immoral activities on the island. Nevertheless Tiberius remained on Capri until his death in 37, and was succeeded by Germanicus' son Gaius (Caligula).

Of the extant biographical accounts of Tiberius, that of Tacitus is undoubtedly the most infamous. Tiberius receives a highly negative

portrayal in Tacitus' *Annals*, being depicted as arrogant, sly, and morally corrupt. Tacitus portrays Tiberius as a tyrant, his reign becoming increasingly despotic and his character increasingly debased and corrupt. Consequently, Tacitus uses Tiberius' reign to illustrate the inherent corruptibility of the Principate.

Tiberius Gracchus (ca. 163–133 BCE)

Tiberius Sempronius Gracchus was one of the most famous tribunes of the plebs, introducing radical land reform in 133 BCE and being killed in office by a senatorial mob. His career began a trend of radical tribunes of the plebs, including his younger brother Gaius (tribune in 123–122), who was also

killed by the Senate; Lucius Appuleius Saturninus, a partisan of Gaius Marius; Marcus Livius Drusus the younger, whose agitation on behalf of the Italians started the Social War; and, among others, Publius Clodius Pulcher, Cicero's arch-enemy.

Tiberius Gracchus hailed from one of Rome's most illustrious plebeian families. His father, Tiberius Sempronius Gracchus, held the offices of consul (177, 163) and censor, while his mother Cornelia was a daughter of Scipio Africanus; his sister Sempronia married Scipio Aemilianus, the adopted grandson of Scipio Africanus.

Prior to embarking on a political career, Tiberius served in the Third Punic War (149–146 BCE) under Scipio Aemilianus and in the Numantine War in Spain around 137–135. Tiberius Gracchus subsequently returned to Rome to run for the tribunate of 133. As tribune he addressed one of the most important issues of his time: a perceived manpower shortage in recruitment to the Roman legions. Recruitment to the legions was restricted to *assidui* or small property owners, meeting a minimum property requirement, which had already been lowered during the second century BCE. Contemporaries and many modern historians, most famously Arnold Toynbee, have believed that due to the depredations of the Hannibalic War (218–201 BCE) and overseas military service, the *assidui* became unable to manage their farms in absentia and lost their land, becoming landless and ineligible for military service. The landless poor, termed *proletarii* or *capite censi*, drifted to Rome and joined the urban populace, feared and despised by the nobility. The land lost by the *assidui* was bought up by wealthy owners, who created large estates worked by large numbers of slaves.

Recent archaeology of second-century BCE Italy has questioned the impoverishment of the *assidui* and growth of large estates throughout the second century. Nathan Rosenstein has proposed that, instead of the depopulation supposedly caused by the Hannibalic War, wealth from Rome's conquests caused a population overshoot in the second century, with impoverishment in the following generations. So what Tiberius Gracchus is said to have observed—the impoverished small farmers and the slave plantations—may have been a relatively recent development and may have been localized. He is said to have noted the growth of slave-worked estates in Etruria (Tuscany). Elite anxiety over popular unrest was high due to the slave rebellion in Sicily (135–131 BCE), a revolt which had shocked the Roman elites.

Gaius Laelius, a friend of Scipio Aemilianus, had raised the issue of land redistribution earlier, but his proposal had been dropped in the face of opposition from the landowners. Therefore Tiberius Gracchus used his tribunate to raise the issue once more, backed by his family and their supporters in the Senate. Reenacting ancient legislation, Tiberius proposed a *lex Sempronia agraria* limiting the amount of *ager publicus* (public land owned by the state) possessed by any one individual to 500 *iugera* (the Roman acre). Any public land above this amount would then revert to the state which would distribute it to landless citizens, enabling them to meet the property qualification for military service. This measure would restore the legions' manpower base, and would also reduce the numbers of the urban poor in Rome and the growth of slave plantations.

Nevertheless Tiberius Gracchus' proposal was opposed by the great landowners and even by their tenants, as well as by political enemies of Tiberius Gracchus and his family connections. Both the Senate and centuriate assembly and some of the tribunes opposed Tiberius Gracchus' program. If the law itself was controversial, then Tiberius Gracchus' methods only inflamed the situation. Facing opposition in the Senate, he did not present the law to them, but took it straight to the popular assembly (*concilium plebis*), which although legal was against accepted tradition and a clear snub to the Senate. When vetoed by a fellow tribune, Marcus Octavius, rather than resolve the issue by negotiation, Tiberius Gracchus had the man deposed from office by popular vote, claiming that Octavius was betraying his office by obstructing a measure which clearly benefited the people. This was perhaps the most outrageous step Tiberius took, claiming a theory of popular sovereignty, which had no precedent. Although in theory the popular assembly could vote out a tribune, there was no precedent; it undermined centuries of Roman political practice and turned many in the Senate against him.

Since the remaining eight tribunes did not present vetoes, Tiberius' agrarian legislation was passed and a three-man commission set up to administer the process, composed of Tiberius Gracchus, his younger brother Gaius, and his father-in-law, which hardly mollified his opponents. The funding of the agrarian legislation, which may have included farm equipment with the land grants, posed a new crisis. Attalus III, king of Pergamum, had just died and left his entire kingdom to Rome. It was the Senate's traditional prerogative to administer such bequests. Once again

Tiberius Gracchus broke with tradition and overrode his opposition by proposing that Attalus' bequest to Rome be used to fund the agrarian legislation. This proposal extended tribunician authority over matters of foreign affairs and state finance, both within the Senate's oversight. Again, Tiberius was backed by popular vote; his opponents were powerless to prevent this, though they accused him of *regnum*, aspiring to "monarchic" or tyrannical power.

With his year in office coming to close, Tiberius Gracchus faced the danger, first of all, of stepping down, for tribunes were protected by *sacrosanctitas*, inviolability of person; second, that his opponents would back a tribunician candidate who would oppose his program, present counter-legislation, and even prosecute him for corruption in appropriating the Pergamene legacy. Again Gracchus chose to break with custom and practice and ran for a second and consecutive tribunate, which had not occurred for several centuries and was synonymous with the radical tribunes from the early Republic. Again his opponents were faced with no legal means of preventing this, but at the electoral assembly for the next year's tribunes, rival supporters became violent. Needing only this pretext, Publius Cornelius Scipio Nasica claimed that Tiberius Gracchus was acting tyrannically and that to save the Republic direct action was needed. Nasica led a senatorial lynch mob that attacked Gracchus and 300 supporters at the assembly and beat them to death, throwing their bodies into the Tiber.

The deaths of Tiberius and his supporters were followed by the establishment of a consular commission to try the surviving Gracchan supporters, resulting in many condemnations, executions, and exiles. Tiberius Gracchus' legislation itself was left intact as was the commission that had been set up to distribute the land and equip the farms, but it was not able to do its work for long; it was opposed by Scipio Aemilianus, who died suddenly in 129.

The murder of Tiberius Gracchus and his supporters continued to dominate the Roman political scene in the years following his death, and came to a head when his younger brother Gaius became tribune himself in 123 BCE. Contemporaries and subsequent Roman commentators saw the death of Tiberius Gracchus as ushering in an era of violence and bloodshed into Roman politics, which culminated in the civil wars of the first century and the fall of the Republic. Many modern historians have shared this view.

Tigris (River)

The Tigris River is one of the two great rivers of Mesopotamia, east of the River Euphrates. The Tigris was occasionally an eastern frontier of the Roman Empire, forming a boundary with the Arsacid or Sassanid Persian Empires. More usually, the Romans of the late Republic and empire exerted indirect control of Mesopotamia, the area between the Tigris and Euphrates rivers, through client kingdoms that served as buffer states. The campaigns of Trajan against the Persian Empire won Mesopotamia for the Roman Empire; however, due to revolts in the new eastern provinces, Trajan’s acquisitions were immediately abandoned by his successor Hadrian (117–138). Septimius Severus also campaigned against Arsacid Persia, establishing Mesopotamia as a Roman province in 197. However, these gains were soon lost. Severus’ son and successor Caracalla, who also campaigned against Persia, was assassinated, resulting in civil war during the reigns of Macrinus (217) and Elagabalus (218–222). In the reign of Alexander Severus (222–235), a new and more aggressive dynasty, the Sassanids, took control of the Persian Empire and soon overran Mesopotamia and made incursions into

more permanent Roman territory in the Near East. Other parts of the Roman Near East were lost to the Palmyrene Empire, governed by Odenathus and his widow Zenobia.

Defeating the Palmyrene Empire, Aurelian (270–275) began to reestablish Roman control in the Near East, but the campaigns of Galerius (Caesar 293–305, Augustus 305–311) against the Sassanid Empire in 296–298 resulted in a great victory that extended Roman control eastward to the Tigris, established in the Peace of Nisibis (299). However, in the later fourth and fifth centuries, beginning in the reign of Constantius II (337–361), the region between the Euphrates and Tigris rivers continued to be contested between Rome and Sassanid Persia, with occasional aggressive Roman campaigns such as Julian's (363).

Tiridates I (d. ca. 72 CE)

Tiridates I was king of Armenia during the latter half of the first century CE (56–60 and 63–72). His reign is often cited as part of the diplomatic compromise that ended Nero's eastern wars (58–63 CE). Following his accession, Rome and Persia entered into an uncharacteristically long period of peaceful relations which lasted until Trajan's Persian campaign (114 CE).

Tiridates was first installed on the Armenian throne by his brother, the Persian king Vologaeses I. Doing so, however, violated a long-standing Romano-Persian treaty which gave Rome the right to choose Armenia's successor. In response, Nero dispatched Domitius Corbulo to the eastern frontier. After capturing Armenia's capital, Corbulo forced Tiridates to flee, replacing him with a pro-Roman candidate.

But Rome's candidate quickly became unpopular, prompting additional Persian meddling. Moreover, Nero's next choice for eastern commander,

Caesennius Paetus, had none of Corbulo's military skill. Paetus foolishly allowed Vologaeses to ambush him while wintering Rome's troops at Rhandeia. The Rhandean disaster persuaded Nero that the Armenian succession crisis required a diplomatic solution. He thus agreed to recognize Tiridates as Armenia's king if the prince traveled to Rome and received his crown personally from the emperor.

Vologaeses consented, and in 66 Tiridates journeyed to Rome to pay homage to Nero. The emperor not only crowned him amid an elaborate public ceremony, but showered him with gifts, including 500,000 sesterces to rebuild his capital. Tiridates remained a faithful client-king of Rome until his death ca. 72 CE.

Titus (Emperor) (79–81 CE)

The emperor Titus (Titus Flavius Vespasianus, 79–81 CE), the second of the Flavian emperors, enjoyed a popular but short reign. According to Suetonius, Titus was born in 41, the year Gaius Caligula was murdered; other sources show that he was born on December 30, 39. Titus was the oldest son of Vespasian and was brought up in the imperial palace with Britannicus, the son of Claudius. Titus married Arrecina Tertulla, the

daughter of Caligula's praetorian prefect; after Tertulla's death, Titus married Marcia Furnilla. He had no sons and his presumed successor was his younger brother Domitian (the emperor Domitian, 81–96).

The young Titus had extensive physical and mental talents, including a good memory, artistic talents, horsemanship, music, and skill with weapons. He began his military career as a laticlavian tribune in Germany and Britain, where he served with distinction. His next office was the quaestorship of 67 CE. Titus was then promoted to legionary legate in Judaea, assisting his father who commanded the suppression of the Jewish revolt (66–70 CE).

At the same time, in the western empire, Julius Vindex revolted in Gaul and Servius Sulpicius Galba revolted in Spain; Nero, losing all support, fled the imperial palace and committed suicide (68). The Senate and People of Rome accepted Galba as emperor. Vespasian dispatched Titus to congratulate Galba on his accession, but Titus, prudently avoiding the civil war (War of Four Emperors, 69 CE) returned to Jerusalem. Titus remained in Jerusalem when Vespasian was proclaimed emperor in Alexandria on July 1, 69. While his father was preoccupied with planning for civil war, Titus was in complete control of military operations in Judaea and completed the suppression of the revolt, destroying Jerusalem and the Jewish Temple in 70. Titus' troops acclaimed him as emperor, but out of modesty and loyalty to his father, Titus refused the imperial role. The Jewish Flavius Josephus, subsequently the author of the *Jewish War* and *Jewish Antiquities*, became a client and friend of Vespasian and Titus, and prophesied Vespasian's accession as emperor. Vespasian celebrated a triumph which is depicted on the Arch of Titus at Rome.

Titus was clearly his father's loyal subordinate and presumed successor. It became quickly apparent that he would work closely with his father to administer the empire. Titus was granted tribunician power (an attribute of the emperor, often conferred on potential successors) on July 1, 71 and later held the office of censor with his father. Along with his brother Domitian, Titus received the honor of *Princeps Iuventutis*, or "leader of young men," a title that had been given to Augustus' grandsons and possible successors Gaius and Lucius. Titus and Domitian also held consulships (now honorific offices only). The existence of Titus and Domitian guaranteed the survival of the Flavian dynasty.

Vespasian further distinguished Titus by conferring the praetorian

prefecture on him in 71 CE. This office was one of great responsibility, as the praetorian prefect was not merely commander of the Praetorian Guard, but the emperor's deputy in civil administration. Though proven as a commander, Titus was still relatively young. The prefecture earned Titus the hatred and jealousy of some men. Specifically, Aulus Caecina Alienus (a former adherent of Vitellius and thus enemy of the Flavians) and Eprius Marcellus plotted against Titus but the plot was quickly exposed and both men were executed.

Vespasian died on June 23, 79, and Titus finally became emperor. By this time the Senate looked with misgiving on the succession of young heirs as emperors, having witnessed the misgovernment of Gaius (Caligula) and Nero. However, Titus proved to be a very capable emperor like his father. One of the things Titus is famous for is the completion of the Colosseum, begun by his father. Titus was reputed for generosity, bestowing gifts and favors on his subjects; once, when forced to admit that he had not benefited anyone on that day, Titus said, "Alas, I have wasted a day!" (Suetonius, *Titus* 8)

Titus died on September 13, 81 from natural causes, despite rumors that his brother Domitian had assassinated him.

Training, Military

The Romans regarded military training as one of the reasons why Rome had conquered the world (for example, Vegetius, *Military Affairs* 1.1.2; compare Josephus, *Jewish War* 3.70–5). Roman military training emphasized both hand-to-hand combat and mass exercises. Discipline was what distinguished Roman soldiers from “barbarian” warriors who also employed swords and spears. However, the warrior element of combat was also

necessary to victory. Less is known about training in the Republic than in the empire, when documentary and archaeological evidence are more abundant.

Modern mass armies emphasize an institutionalized period of “basic training,” often temporally and geographically distinct. In the traditional Roman Republic, when military service ritually began in March, the consuls held the *dilectus* and soldiers carried out training exercises on the Campus Martius. Another traditional exercise was the *transvectio equitum*, in which all of the *equites* (aristocratic cavalry) paraded on the Campus Martius.

However, later military service was year-round, and though some sources mention a *tirocinium* (apprenticeship or training) for recruits (*tirones*), training appears to have been ongoing and routine. Recruits accustomed to farming and hunting probably already possessed basic physical fitness and did not need extensive additional conditioning. In the traditional Republic, Roman fathers taught their sons how to ride, swim, endure extremes of weather, and use a sword and spear. Cato the Elder instructed his son Marcus in this manner (Plutarch, *Cato Maior* 20.4). In any case, the *dilectus* or levy was a “selection” and not a conscription *en masse*; the officers conducting the *dilectus* could select the most promising recruits. In the early and middle Republic, men probably experienced social pressure to display physical fitness and competence with weapons and to prove their courage and prowess in battle.

Commanders also imposed training in the field, with various benefits. Besides the physical benefits, training was thought to restore obedience and reinforce discipline and morale; it also displayed and enforced the commander’s authority. After quelling the mutiny of his troops, Scipio Africanus put on a display of training at New Carthage. On the first day, soldiers ran in armor for four miles; on the second day, they cleaned and tended their arms and armor; on the third day, they practiced combat and mock battles; and on the fourth day, they rested (Polybius 10.20.2–3; Livy 26.51.4). To still his senatorial critics, Scipio Africanus put on a similar display of military exercises at Syracuse (Livy 29.22.1–3). Scipio Aemilianus imposed training to restore the demoralized Roman army at Numantia (for example Appian, *Spanish Wars* 85; Frontinus, *Stratagems* 4.1.1), stressing the construction of camps, ditches, and walls preparatory to the circumvallation of Numantia, as toil on building projects played a similar role in discipline.

Roman combat training probably altered as the tactics of the republican legion changed, from the “phalanx” phase of the early Republic, attributed to the Servian constitution, to the period of the manipular legion, and thence to the use of cohorts. But details are lacking on how these changes were implemented and what new drills were required.

The commander’s personal participation in physical training, including marches and hand-to-hand combat training, became a stock subject of praise in classical authors. Such participation and example-setting helped the general to bond with his troops, an important feature as armies of the late Republic more and more resembled the personal armies of their generals. Both Marius and Pompey were praised for their active role as leaders of their troops.

The training of Roman soldiers was believed to produce courage, preparing soldiers to experience the shock of combat and accustoming them to the use of weapons. Practice could prepare a new recruit for the shock of actual combat, risking and enduring his own wounds (Cicero, *Tusculan Disputations* 2.37–8) and inflicting wounds on the enemy. Except in psychopathic individuals, killing at close range is not a natural human impulse; learning to do so requires extensive training. For their part, the enemy (if barbarian) had less training and discipline and might be inclined to flee in terror.

Soldiers also needed to practice to maintain formation and battle order while simultaneously fighting hand-to-hand combats with individual enemy. Such training in mass movement was particularly important because after the early Republic, Roman formations were not reinforced by extreme close order as in the archaic hoplite phalanx (or early modern infantry, where close-order formation was designed to enhance the effectiveness of coordinated volleys). A Roman line of battle was probably more spread out to give individual soldiers the space to engage the enemy. It was kept in line visually by the standards, which soldiers orientated themselves by; if the standards became too close together, the soldiers were huddled together out of fear and could not use their weapons effectively. Officers rode up and down the lines directing troops to spread out and get back into line or move to where they were most needed against the enemy. Flight from the line of battle was punished by death (in theory, according to Roman lawyers in the Severan period). In practice, commanders took into account whether their soldiers were well trained or recent recruits.

Additional training may have been necessary for infantry soldiers to coordinate movement in close formations such as the *testudo* (“tortoise,” in which soldiers overlapped shields to form an impenetrable surface) or the revival of the phalanx or “shield wall” in the second century CE and later empire.

In the imperial period, inscriptions attest *campidoctores*, specialists in combat training, who instructed regular soldiers. In the late Republic in 105 BCE, Rutilius Rufus first hired gladiatorial trainers to assist with combat training (Valerius Maximus 2.3.2). The archaeological excavation of Roman camps has reconstructed training grounds, some under cover to enable wintertime training. Larger-scale exercises, *exercitationes* or *decursiones*, may have resembled mock battles. It is likely that within a legionary or auxiliary unit, all soldiers underwent physical and combat training; the *immunes* attested in documentary and legal sources were exempt from Roman-style fatigues, heavy labor usually on building projects. As in the Republic, such labor on building was regarded in itself as a form of training and discipline.

Training for aristocratic officers is less well attested. Augustus instituted or revived the *iuventus*, paramilitary groups for senatorial youths that demonstrated riding and perhaps weapons skills. In combat, senatorial officers could still display the *virtus* of their ancestors; two of Domitian’s legates died in the first Dacian War. This ethic, also displayed by the political suicides of various aristocrats in the reigns of Julio-Claudian and Flavian emperors, may later have waned, a possible reason for the displacement of senatorial officers from military commands in the third century CE.

In contrast, the emperors as commanders took a prominent, if often symbolic, role in training. The emperors apparently did not fight in combat before Maximinus I (235–238), but Domitian, Trajan, Marcus Aurelius, Severus, and Caracalla campaigned in person, and the emperor’s exertions on campaign, including participation in training, became a subject of panegyric (for example, Trajan, Pliny, *Panegyricus* 13–16; Hadrian, *Historia Augusta*, *Hadrian* 10). In the third century onward, emperors not only actively campaigned but fought in battle; some died in combat.

Training may not have differed among the branches of the service, except for the obvious differences of cavalry training. Some scholars asserted that by the late first century CE, legionaries were deployed less often

in combat than auxiliaries. The auxiliaries were recruited from less Romanized peoples and were thus more natural fighters. This assertion is based on Tacitus' depiction of the battle of Mons Graupius (Tacitus, *Agricola* 35.2), a victory won "without shedding Roman blood," and on the depiction of soldiers on Trajan's Column, where legionaries more often build projects and auxiliaries more often fight in battle. However, the preferential deployment of auxiliaries in combat is not supported by other sources. *Vexillationes* (detachments) of legionaries were often transferred to fight in campaigns.

Other divisions of the army were also trained for combat. The Praetorian Guard accompanied the emperor on campaign; at least by the reign of Domitian, and certainly after Severus began promoting legionaries into the Guard, praetorians were experienced in combat. The duties of fleet soldiers were primarily logistic, but they are recorded as *milites* in funerary inscriptions and they were probably trained in hand-to-hand combat for ship-boarding operations. The Romans had few naval battles after Actium in 31 BCE, but the fleets also combated piracy. Only the *vigiles* may not have been combat-trained, since their duties were to fight fires instead of people (even angry owners who did not want their buildings demolished).

Cavalry training is illuminated by a famous inscription at Lambaesis in Roman North Africa (*ILS* 2487, 9133–9135; Speidel 2006; Document 23). In his tour of Africa around 128, Hadrian (117–138 CE) addressed the Roman army in a speech that was subsequently inscribed on a monument; the surviving text describes, praises, and criticizes the cavalry exercises of Roman soldiers, which included the use of weapons (throwing spears at a target while riding past) and coordinated exercises. Cavalry training is also depicted by Arrian's *Tactica*, which describes *hippika gymnasia* (Greek for "cavalry exercises") as a colorful spectacle in which the riders wore elaborate armor and uniform. Examples of the armor, such as full-face silver portrait masks, have survived. In battle, cavalry tactics are necessarily more speedy and fluid, since horses will swerve to avoid obstacles such as an enemy line of battle. There is also archaeological evidence for cavalry training grounds.

In the *Epitome of Military Affairs* (ca. 400 CE), Vegetius asserts that the Roman army no longer sufficiently trains its soldiers, but this complaint may be paralleled with many others at an earlier date. What was more deleterious after 395 was the recruitment of the *foederati* or Germanic

“allies,” who did not receive Roman-style training but fought in the manner characteristic of their ethnicities.

Trajan (Emperor) (98–117 CE)

Born in 53 CE, Marcus Ulpius Traianus (Trajan, 98–117 CE) second of the “Five Good Emperors,” was one of the most aggressive Roman emperors, conquering Dacia (Romania) and large parts of the Middle East and thus extending the Roman Empire to its maximum size. He is regarded extremely favorably by the Roman authors Pliny the Younger, Suetonius, and Tacitus who wrote during his reign or later and who contrasted him with the unpopular Domitian. Trajan also was known for various beneficent and monumental projects, including the famous Column of Trajan in Rome.

Trajan was born in Italica, Spain to local gentry (descended from Roman settlers) on September 18, 53, making him the first emperor born outside of Italy. His father's military service under Vespasian earned an honorary consulship, triumphal *ornamenta*, and patrician status for the family. Trajan served in the army as military tribune for many years and held a consulship in 91 under Domitian (81–96). Domitian's successor, the childless Nerva (96–98), appointed Trajan as governor of Upper Germany. In 97, the Praetorian Guard mutinied against Nerva, whom they disliked because Domitian had favored the praetorians. Nerva hastily adopted Trajan as a son and potential successor, elevating him to Caesar or junior emperor (as with Titus under Vespasian). Therefore, Nerva and Trajan held the ordinary consulship in 98. During Trajan's return to Germany, news came that Nerva had died on January 27, leaving Trajan sole emperor.

Trajan first sent a letter to the Senate conciliating the senators and promising not to execute any senator without good cause, thus pledging not to repeat the evils of Domitian. He then embarked on a tour of the provinces and gave a donative to the army and a distribution of money to the people of Rome before entering Rome. His wife Plotina, upon entering the palace, won praise for her modesty, by saying "I enter here such a woman as I would wish to be when I leave" (Dio 68.5.5). His wife and sister Marciana both received the title Augusta.

Trajan enjoyed a warm working relationship with the Senate and lobbied successfully for the deification of Nerva. Trajan also had his natural father deified, and also deified Marciana after her death with the Senate's approval. Pliny the Younger delivered the famous *Panegyric of Trajan*, which commences an era of literary output that includes the great historian Tacitus and the biographer Suetonius. These authors all regarded Trajan very favorably in contrast with Domitian. Pliny is also known for Book 10 of his *Letters*, which chronicle his exchange of letters as governor of Bithynia (in Asia Minor) with Trajan and illustrate Trajan's policies. Trajan also expanded the *alimenta*, a system of endowments granted to Italian towns to support children. This "child welfare" measure had been begun by Nerva. It is commemorated on the Arch of Trajan at Beneventum.

Bust of the emperor Trajan (98–117 CE). Trajan commanded the First and Second Dacian Wars (101–102, 105–106), adding the new province of Dacia (modern Romania) to the Roman Empire. His war against the Persian Empire had less lasting success. Located in the Capitoline Museums, Rome, Italy. (Araldo de Luca/Corbis)

Trajan's moderate approach to absolute power can be seen by the fact that he held only four consulships as emperor, in 100, 101, 103, and 112 (not counting those held under Domitian and Nerva), just as had Nero and Claudius. By contrast, the Flavian emperors had tended to monopolize the consulship. Trajan received all the usual titles and offices (*Pontifex Maximus*, *pater patriae*, et cetera) but at a slower pace than Claudius, Nero or Domitian.

When King Decebalus of Dacia, who had formerly agreed to a truce with Domitian, renewed hostilities with the Romans, Trajan declared the First Dacian War (101–102) and forced Decebalus to yield. Decebalus became a client monarch of the Romans. The Romans also recovered the

legionary eagle lost under Cornelius Fuscus in Domitian's Dacian war. However, peace did not last, and a Second Dacian War (105–106) broke out, in which Trajan sacked Decebalus' capital, Sarmizegetusa. Trajan survived an assassination attempt instigated by Decebalus, and thereafter intensified the destruction of Dacia. Decebalus, at the moment of capture, killed himself. For this victory the Senate gave Trajan the title *Dacicus*. Highlights of the Dacian Wars are depicted on the Column of Trajan, providing rich detail about the Roman army at this time.

The victory over Dacia brought immense spoils into the Roman treasury, which funded a massive building project in downtown Rome. Much of the Esquiline Hill was dug out to make room for a huge, new Forum of Trajan (designed by Apollodorus of Damascus), which included an immense market of over 100 shops—the world's first shopping mall—a temple, a basilica, two libraries, and Trajan's Column. A few other projects of note include the Arch of Trajan at Beneventum; a war monument, the *Tropaeum Traiani*, at Adamklissi (Romania); new harbors at Ostia, Centumcellae, and Ancona; new baths in Rome; and a road linking Beneventum and Brundisium—the *via Traiana*.

Relations with the Mediterranean world's other superpower, Persia, deteriorated in the last few years of Trajan's life. Trajan decided to go to war with the Persians in 112 on the pretext that the Persians had installed a new king of Armenia, a task Trajan claimed for the Romans (Tiberius and Nero had tried to characterize it as a Roman right). Assembling a large force, Trajan wrested Armenia away from the Persian nominee, Parthamasiris, and placed Armenia under a Roman governor, Catilius Severus. Trajan refused to reinstate Parthamasiris, who had hoped to be reinstated as king as Nero had done for Tiridates. Advancing from Armenia into Persia in 115, Trajan conquered Mesopotamia, for which the Senate gave him the title *Parthicus*. At the end of the season, Trajan withdrew to Antioch, where he wintered before renewing hostilities.

That winter, a great earthquake struck Asia Minor, killing thousands. According to Dio 68.24, Trajan himself narrowly escaped death by crawling out a window. Nevertheless, after directing relief programs for the rest of the winter, the undeterred Trajan reinvaded the Persian Empire in spring 116. He pushed on as far as the capital Ctesiphon, which he captured and sacked. This was the first time in history that the Romans had penetrated so deeply and so successfully into Persia. Trajan divided his new

Mesopotamian conquests into two additional provinces and explored as far as the mouth of the Tigris on the Persian Gulf, but decided that he was too old to push on to India, as had his role model, Alexander. In his absence, some of the territory behind him had revolted, so he divided his army into three forces and marched back to quell the rebellions. His general Lusius Quietus very effectively repressed the revolts and subsequently was sent to put down a rebellion of the Jews in Alexandria. Fearing that the Persians would invade in his absence, Trajan decided to enthrone Parthemaspatēs over the Persians in return for peace.

Trajan planned to return to Rome to celebrate a triumph for his eastern campaign, but fell ill in Selinus in Cilicia. He believed he had been poisoned, but Dio 68.31 suggests that he suffered a stroke. Upon Trajan's death, his kinswomen circulated a story that on his deathbed Trajan had adopted Hadrian. According to detractors in the Senate, Hadrian succeeded by means of a palace coup. Hadrian immediately purged several capable senatorial rivals, which generated plausible rumors that the adoption was spurious, at the expense of the true heir (one of the executed men), and cast a shadow on Hadrian's reign. Hadrian's decision to evacuate Trajan's new eastern conquests further clouded Hadrian's reputation among contemporary and subsequent generations. Hadrian had Trajan deified and held a triumph in Trajan's name with an effigy of Trajan in the victor's chariot.

Treason

Treason, *perduellio* in archaic Rome and the early Republic, later known as

maiestas (*laesa populi Romani*), “harm to the greatness of the Roman people,” covered a wide range of crimes, including aid to the enemy in wartime, obstruction of the political process, and threats to the public safety in peacetime. In the Principate, *maiestas* found its most notorious application as “harm to the greatness” of the emperor, abused by tyrannical emperors and corrupt courtiers. *Maiestas* trials represented an exception to the usual scale of penalties that protected the physical bodies and status of the elite; in cases of treason, elite persons might be liable to torture and execution.

The crime of *perduellio* is known to us from Livy 1.26, recounting the legend that Horatius killed his sister for mourning one of the Curiatii, enemies of Rome. Horatius was accused of *perduellio* (not the more appropriate *parricidium* or killing a close relative). In the punishment of *perduellio*, two specialized minor magistrates, *duumviri*, judged the case, and the guilty man was tied to an *arbor infelix* or “fruitless” tree and scourged with rods till he died. The next instance is from the late Republic. In 63 BCE Caesar and his friend Labienus proposed to try Gaius Rabirius for *perduellio* for having murdered the radical tribune Lucius Appuleius Saturninus in 100 BCE. Cicero defended Rabirius (Cicero, *Pro Rabirio perduellionis*) and the trial was aborted procedurally. In his speech, Cicero emphasizes the horror of the archaic penalty. Since Caesar later advocated mercy toward the Catilinarian conspirators, he is unlikely to have carried out the cruel death of the elderly Rabirius; the proposal may have been a political stunt (the way contemporary opponents of the death penalty might suggest the revival of public hanging). Though the Romans crucified rebellious slaves, and governors and emperors sometimes inflicted the equally archaic “sack” (*culleus*) penalty, sewing a parricide into a leather sack and throwing it into the sea, otherwise the Romans seem not to have inflicted the punishment of the *arbor infelix*, which may be entirely an antiquarian reconstruction.

In the late Republic, the term *perduellio* was replaced with *maiestas minuta* or *laesa populi Romani*, “damage to the greatness of the Roman people.” *Maiestas* as treason was codified by the *lex Appuleia de maiestate* (a law moved by the same Saturninus, ca. 103), which established a standing court for treason (*quaestio de maiestate*). The *lex Iulia de maiestate*, usually attributed to Julius Caesar (sometimes Augustus), remained the prevailing statute throughout the Principate (Digest 48.4.1).

CAGR separates “war crimes” (crimes in warfare) from civilian treason, but the Romans may not have made this distinction. In the late Republic, individual cases of “war crimes” (the massacre or enslavement of surrendered enemies, or outright cowardice or aiding the enemy) and of extortion from subjects were sometimes prosecuted as *maiestas*. The dictator Sulla (82–81)’s *lex Cornelia de maiestate* defined as treason a governor’s trespassing the boundaries of his province with an army, and also covered extortion. The *lex Iulia de maiestate* covered extortion, abuse of subjects, and abusive billeting. (Lintott 1993)

Prosecution of *maiestas* depended on private accusers and was, like the other public prosecutions, used for political purposes. Appuleius Saturninus used the *maiestas* law to prosecute his political rival Servilius Caepio for violently obstructing the vote. For less dangerous forms of *maiestas*, the penalty was usually exile or a fine rather than the death penalty. Thus, the *lex de maiestate* was not the most powerful weapon in the arsenal of the state to repress threats to its safety. More severe public threats were dealt with as policing matters, through the declaration of a state of emergency and passing of the *senatus consultum ultimum*, or through the declaration of certain persons as *hostes publici* (public enemies) in the proscriptions of 82–81 and 43–42 BCE. Perceived public threats might be countered entirely through self-help, the recourse of a mob to lynching, as in the deaths of Tiberius Gracchus or Clodius Pulcher.

In the early empire, treason was not usually prosecuted in the *quaestio de maiestate*, which (like other standing courts) fell into disuse. Treason was prosecuted by the Senate in the Julio-Claudian period, usually dealing with fellow senators and other members of the upper orders. An unhealthy dynamic developed: as with other public crimes, *maiestas* depended on delation, in which private citizens came forward with accusations. The *lex Iulia de maiestate* rewarded delators with property confiscated from convicted persons. Corrupt courtiers thus had a personal interest in lodging accusations of treason. Seeking to gain influence, they played on the anxieties of suspicious emperors such as Tiberius, Gaius, Claudius, and Nero. Rival senators even delated against each other (Harries 2007).

Due to the emperors’ anxieties, trivial cases were also accused, such as the treason of Marcus Scribonius Libo Drusus. Libo Drusus was a young man whose dabbling in astrology and magic, encouraged by his flatterers, motivated him to allegedly conspire against Tiberius (Velleius 2.129–30;

Tacitus, *Annals* 2.27–30; Suetonius, *Tiberius* 25; Dio 57.15). The accused Libo Drusus committed suicide. The story shows that the treason trials under Valentinian and Valens (below) were not just a case of the greater “superstition” of the later Roman Empire; consulting astrologers or magicians about the imperial succession was always regarded as treason.

The new view of *maiestas* as “harm to the emperor’s greatness” expanded the definition of treason to include not just sedition, revolt, or attempted assassination, but also dissent, defamation, and insults to imperial images. Defamation included humorous or scurrilous verses attacking the emperors and serious historiography critical of the transition from Republic to empire (Tacitus, *Annals* 1.72.3–4, 4.34–6; Suetonius, *Augustus* 35; Dio 55.4.4, 57.24.2–4). Insults to imperial images (statues, paintings, et cetera) were possible because images of the emperor were focuses of loyalty and veneration (Tacitus, *Annals* 1.73). It was seriously proposed whether taking an emperor’s coin (bearing his image) into a public latrine constituted *maiestas* (Suetonius, *Tiberius* 58).

Attacks on members of the imperial family might also be prosecuted as *maiestas*, as in the recently rediscovered senatorial decree (20 CE) condemning Gnaeus Calpurnius Piso, governor of Syria, who was accused of murdering Germanicus, the nephew and putative heir of Tiberius, in 19, and of subverting the army. The trial of Piso is also attested in Tacitus’ *Annals*.

Maiestas accusations cut a swathe through the Julio-Claudian imperial family. Tacitus emphasizes that Tiberius also persecuted other members of the imperial family (notably Agrippina the Elder, Germanicus’ wife) for suspected disloyalty, eventually exiling and eliminating them. Claudius I (41–54) put to death his first empress, Valeria Messalina, and her lover Silius for adultery and suspected conspiracy; Messalina was ordered to commit suicide, but lacked the courage and was killed by a soldier. Nero, notoriously, had his mother Agrippina the Younger assassinated, claiming to the public that she conspired against him.

One of the most damaging features of *maiestas* prosecutions was the violation of senators’ and equestrians’ legal privileges. During the late Republic, the Romans rarely inflicted the death penalty on citizens, preferring to impose exile and confiscation of property. Torture to produce evidence and execution were imposed on slaves. An exception was the proscriptions, when the victims, decreed *hostes publici* (public enemies),

were killed out of hand. In the early empire's *maiestas* trials, high-status persons frequently faced death sentences; they escaped execution through suicide, which enabled them and their families to salvage their reputations and estates.

Above all Tacitus, but also Suetonius and Dio, are the main sources for these abuses of the *maiestas* law in the Julio-Claudian period and the reign of Domitian. *Maiestas* prosecutions were much less frequent the reigns of Vespasian and Titus and during the second century CE. Emperors swore that they would do no harm to senators. Nonetheless, significant conspiracies and revolts continued to occur and might result in treason trials, presided over by the emperors and their deputies rather than the Senate; their judgment might be summary.

In the later empire, Constantine the Great (306–337) put to death his eldest son Crispus on suspicion of conspiracy; his wife Fausta may also have been implicated and put to death. More treason trials occurred in the reigns of Constantius II (337–361), Valentinian I (364–375), and Valens (364–378). Constantius II elevated as Caesar Gallus, a remote cousin and the older brother of Julian; Gallus fell amid suspicions of revolt. Constantius also persecuted other suspected conspirators (Ammianus 19.12). Valentinian and Valens persecuted the aristocracy for suspected use of magic, whether to harm the emperors or to determine the imperial succession (Ammianus 28.1). Ammianus dwells on the horrors of the torture of members of the aristocracy. Throughout the imperial period, treason trials showed the worst face of the autocracy and undermined the advances of the Romans in the field of law.

Treaties, Rome and Carthage

Carthage and Rome had a long history of treaty relationships before the First Punic War. From the Greco-Roman sources, it is possible to reconstruct three or four different treaties, dating to 509/508, 346, 306, and 279 BCE. Three of these treaties are recorded in a continuous narrative written by Polybius in which he describes the history of treaties between Carthage and Rome. The fourth, that of 306 BCE, is attested only in alternate sources (Philius of Agrigentum and Livy), and is deliberately attacked as a fabrication by Polybius.

In 509/508 BCE, Rome and Carthage concluded their first treaty, according to Polybius. In this treaty, the Carthaginians established a commercial relationship with Rome on very strict terms of interaction. Rome is only allowed permission to enter into Carthaginian territories in Sicily, Sardinia, or North Africa for the purpose of conducting trade or if blown of course by a storm. In exchange, Rome required that Carthage not conduct warfare against the Latin peoples subject to Rome or make any attempt to build a colony in Roman territory.

A second treaty between Rome and Carthage in 346 BCE is an important document for the reconstruction of the Carthaginian Empire. The terms of the treaty appear to establish an exclusive zone of Carthaginian commercial control in the western Mediterranean, as Carthage greatly restricted the number of ports that Roman traders could access compared to the earlier treaty. Carthage claimed all of North Africa and Sardinia as its exclusive zone of economic control and prohibited Roman traders from all of these ports except Carthage itself. Even preexisting Phoenician city-states near Carthage, such as Utica, appear as part of the Carthaginian Empire rather than independent city-states in the text of the treaty. From this document, therefore, it is possible to argue that Carthage had established a large home territory for its empire in North Africa by this point in its history. In

addition, it is evident that Carthage believed its control of Sardinia to be absolute by this period. In this treaty the Carthaginians appear to harden their stance toward Roman commerce and traders. In exchange, the Romans appear to have gained very little from this treaty, other than a guarantee that the Carthaginians would respect Roman territorial claims in Italy. The Romans also claimed the right to emancipate any Roman subject who the Carthaginians held as a slave if that slave was brought into a Roman or Latin port on a Carthaginian ship.

The treaty of 306 is known only from Polybius' attack on its veracity, but it was originally recorded in the writings of Philinus of Agrigentum. Livy mentions a "renewal" of the treaty between Carthage and Rome for the same year, but does not reveal the explicit terms. According to Philinus, as preserved in Polybius, the terms of this treaty state that Rome had to avoid all activity in Sicily. In turn, the Carthaginians agreed to cease all activities in Italy. Philinus further stated that the Carthaginians believed that Rome had broken this treaty specifically when it invaded Sicily at the start of the First Punic War.

A final treaty was concluded in 279 BCE during Pyrrhus' invasion of Italy. In this treaty, the Romans and the Carthaginian reaffirm the conditions of their earlier agreements and add a new clause concerning military affairs. In this new clause, the Romans and the Carthaginians agree to assist each other if invaded by an enemy force.

It should be noted that no epigraphic evidence has been recovered to prove the existence of any of these treaties.

Treaties and Alliances

Treaties (Latin *foedera* [sing. *foedus*]) typically refer to treaties of peace (*pax*) and treaties of alliance (*societas*) entered into and formally ratified by the Roman people. Although one of the principal outcomes of a successfully

agreed *foedus* is friendship (*amicitia*), there were no “treaties of friendship” as such; friendship was the transcendent bond that was established by the successful striking of a *foedus* and performance of its terms. *Foedera* are also to be distinguished from temporary *pactiones* (sing. *pactio*), “agreements to surrender,” sometimes involving the exchange of hostages and/or oaths, *indutiae* (sing. *indutia*), “truces,” and *sponsiones* (sing. *sponsio*), “battlefield agreements,” entered into by a Roman general in the field without senatorial approval and subject to ratification by the Roman people.

It used to be thought that *socii*, “allies,” and *socii et amici*, “allies and friends,” were distinguished from *amici* by their possession of formal treaties with Rome, but this has now been shown to be a false dichotomy; not all states referred to as *socii* and *socii et amici* in the sources necessarily possessed *foedera*. Also disproven is the imaginary formal-legal division of Roman treaties into *foedera aequa* (“equal treaties”) and *foedera iniqua* (“unequal treaties”). It is now generally acknowledged that *foedera aequa* and *iniqua* are rhetorical descriptions by Roman historians and do not refer to a technical-legal difference between two types of treaty: Italian treaties of alliance, and extra-Italian treaties (Republican period).

The once common scholarly division of Italian *foedera* into “equal” treaties, especially the *Foedus Cassianum*, enjoyed by members of the Latin League from 493 to 338 BCE, and “unequal” treaties, referring to the status of the nonannexed Latins after 338 and the rest of Rome’s Italian allies throughout the Italian peninsula, is no longer tenable, not only for the reason just mentioned, but also because the number of known Italian *foedera* is so small. Of the Latin states, only Praeneste and Tibur were known to have possessed individual treaties of alliance with Rome after 338 (Polybius 6.14.8), while the total number of Italian states possessing such treaties is around 30 (far fewer if dubious cases and multiple treaties with the same people are deducted). This seems rather small relative to the total number of 125–150 known Italian allies (listed in the *formula togatorum*, “the list of togate peoples,” kept at Rome, specifying the number of troops each ally had to contribute to the Roman army on an annual basis).

There are also relatively few securely attested extra-Italian treaties of peace (8) and alliance (28) with the Romans. Treaties of peace typically laid down the conditions under which relations between Rome and the other signatory or signatories could establish or revert to a position of friendship. A peace treaty usually included stipulations for the payment of a war

indemnity to Rome and sometimes for the delivery of hostages.

It is much harder to generalize about treaties of alliance. Some, such as Rome's first treaty with Carthage, dated to 509, were designed to establish exclusive zones of influence and activity whose purpose was primarily commercial and economic (Polybius 3.22–23). The Ebro treaty between Rome and Carthage (ca. 226) established similar territorial restrictions, but for more obviously military-strategic purposes (Polybius 3.27.9). Some treaties of alliance, such as those between Rome and the Aetolian League in 211 against Philip V of Macedon (Livy 26.24.8–14; *SEG* 13.382), and between Rome and Carthage ca. 280 against Pyrrhus of Epirus (Polybius 3.25.1–5), may be more precisely characterized as mutual defense pacts, since their primary purpose was to ensure that each party would come to the aid of the other when threatened by a common enemy (if they were able), that neither would make a separate peace with the common enemy without consulting the other, and that both would have the same enemies and friends. Treaties of alliance also meant different things to different parties at different times. So, the pre-183 Achaean League treaty, struck on Achaean initiative and reluctantly granted by the Romans, who wished to avoid being tied down by formally articulated obligations, was meant to advertise the formal equality of the signatories. The Rhodians practically had to beg, on repeated occasions over many years, for the treaty of alliance that was formally granted them by Rome in 164 or 163. For the Rhodians, the treaty was meant to signify to the rest of the world that all was well between themselves and Rome after a period of tension; for the Romans, whose power in the eastern Mediterranean was now uncontested, it was a token gesture they cost them very little. The much later treaties with insignificant states, such as that with tiny Astypalaea in 105, were, from the Roman perspective, similarly tokenistic, but from the perspective of the inferior parties, prestigious markers of international esteem. Some treaties, such as the peace with the Aetolian League in 189 (Livy 38.11; compare Polybius 21.32), and the alliance with Spanish Gades in 78 (Cicero *Pro Balbo* 35), contained a “*maiestas* clause,” that is, a statement that pledged Rome's treaty partner “to preserve readily and without fraud the majesty of the Roman people” (*maiestatem populi Romani comiter et sine dolo malo conservare*). This clause was clearly designed to ensure performance in treaties of peace, and, in the case of alliances, to articulate an otherwise unarticulated hierarchy of power.

Triarii

The *triarii* were the third and final line of defense in the manipular Roman army of the early and middle Republic. There were 600 *triarii* in each legion, deployed as 10 maniples, and they composed of the oldest and most experienced of Rome's soldiers. Their task was to remain in the rear of the fighting line to stem the enemy's onslaught and, if necessary, to cover the retreat. Thus, to fall back upon the *triarii* (*ad triarios redisse*) was a Roman expression meaning to be in dire straits. The *triarii* were equipped with bronze helmet, pectoral, and greaves, and carried an oval shield and a thrusting spear called a *hasta*. As with the other two ranks of the manipular army, the *hastati* and *principes*, the age and equipment distinctions of the *triarii* were abolished with the establishment of the cohortal legion in the late second century BCE. In the cohortal legion, all infantry were equipped the same way.

Tribune

A legionary tribune (Latin *tribunus*, pl. *tribuni*) was a high-ranking officer subordinate to the commanding magistrate and his *legati* during the Republic. In the Principate, tribunes were high-ranking officers subordinate to the legionary legate or commander of the legion. The legionary *tribunus* should not be confused with the tribune of the plebs (*tribunus plebis*), a representative of the popular assembly (*concilium plebis*), an office that had no military responsibilities and that faded into obscurity during the Principate.

In the early Republic, for some years (ca. 444 BCE, 408–394, 391–367) military tribunes with consular power (*tribuni militum consulari potestate*) held summary executive authority, resembling the dictator or consuls but numbering more than two per year, normally six per year but sometimes three or four. This office represented a departure from the normal tier of magistracies and was not revived after 367 BCE. It was a compromise during the period of the patrician-plebeian conflict, as it allowed plebeian military tribunes with consular power to share the office with patricians. A more radical interpretation suggests that the *tribuni militum consulari potestate* were competing clan leaders in the prestate period of the archaic Republic (see Drogula 2015).

By the middle Republic, *tribuni militum* were senior officers of legions, six per legion, subordinate to the consul, praetor, or promagistrate in the field. The “consular” legions, numbered I–IV, the first four to be raised in the yearly *dilectus*, required 24 tribunes; 14 had to have served at least five campaigns, while 10 had to have served 10 (Polybius 6.19.1–4). These tribunes were elected by the *comitia tributa*, though the consuls also had the right to appoint tribunes. In this period, *tribuni militum* could be senators or equestrians. Their authority over legions was displaced by the *legati*, the commander’s deputies, in the late Republic. As their name suggests (from *legere*, “to choose”), *legati* were chosen by the commander rather than elected by the assembly.

In the Principate, each legion had six tribunes. The highest-ranking tribune, second-in-command to the legionary legate, was the *tribunus laticlavius* or “broad-striped tribune,” named because as the son of a senator, he wore the *latus clavus* or broad-striped tunic of senatorial rank. The *tribunus laticlavius* was between 17 and 24 years old and had not yet entered the Senate. He obtained the post of tribune through patronage, and held it for a year.

The broad-striped tribune’s second-in-command authority must have been nominal. Though expected to replace the legate if the legate died or was incapacitated, he was also expected to learn from the legate and his nominal inferiors, the *praefectus castrorum* and the equestrian tribunes. Distinction in combat added prestige to his record, but was probably not necessary. For many imperial senators, the laticlavian tribunate represented their only military experience. After it, they proceeded to run for the quaestorship and so enter the Senate, but only a few (who usually held the praetorship first) became legionary legates in their late 20s or early 30s.

The other five legionary tribunes were equestrians, termed *tribuni angusticlavii* (narrow-striped tribunes) from the narrow-striped tunic that that equestrians wore. The narrow-striped tribunes were somewhat older than the broad-striped tribune, and had usually served for some years, though the formal *militia equestris* or *tres militiae* did not appear until the mid-first century CE or a little later. The *militia equestris* comprised *praefectus cohortis* (commander of an auxiliary infantry unit); legionary tribune; *praefectus alae* (commander of an auxiliary cavalry unit). Each post was held for three or four years, so that the *tribunus angusticlavius* was at least in his late twenties. The responsibilities of equestrian tribunes were chiefly administrative. However, each tribune commanded two cohorts. Each century in a legion had its own tactical command structure (headed by a centurion).

An equestrian who completed the *tres militiae* would either enter the civilian imperial service at the rank of procurator, or seek service as an officer in the Praetorian Guard or urban cohorts. Eventually he might attain the peak of an equestrian career as *praefectus annonae* (prefect of the grain supply), *praefectus vigilum* (prefect of the fire brigade at Rome), *praefectus Aegypti* (governor of Egypt), or praetorian prefect, the highest ranking post open to equestrians. The emperors might promote equestrians with distinguished careers into the senatorial order; he then could appoint them to senatorial posts such as provincial governor or legionary legate. In the mid-third century CE, when senators were excluded from military commands, equestrian tribunes could be promoted directly to legionary commanders or provincial governors, though the exact structure of the more fluid hierarchy of this period is not known.

Career inscriptions and epitaphs provide our main evidence for the hierarchy of the legions and *auxilia*. Literary authors provide some evidence, but did not bother to explain organizational structures that must have been familiar to everyone.

Tribune of the Plebs

The tribunate of the plebs was a highly distinctive office of the Roman Republic, which had its origins in Rome's early social conflict, but came to play a central role in the republican system and ultimately destabilized the Republic. The office originated in the early years of the Republic and grew out of the struggle between the patricians and the plebeian order, whose exact nature in this period is difficult to determine. This clash, labeled the struggle of the orders, resulted in a plebeian secession from the city of Rome in 494 BCE, in protest at the levels of debt and military service they were burdened with. Dissatisfied with the response from the consuls and the Senate, they chose their own magistrates; the tribunes of the plebs, to guard their own interests and check the official magistrates.

Between its creation and suspension for the Decemvirate in 451 BCE the office existed outside of the official structure of Roman politics, only representing the weight of the plebeian order. The exact number of tribunes chosen each year is a matter of debate; the most common stance being initially two, then five, then finally 10. Following the fall of the Decemvirate in 449 BCE the office was re-established with the official recognition of the Senate, but remaining open only to men of the plebeian order.

From 449 to 287 BCE, the office held an anomalous position, still being the chief plebeian magistracy and the main tool for the pursuit of the plebeian

political and economic agenda, but also a recognized office of state. This dual role was enhanced by the plebeian elite gaining access to the Senate and becoming part of Rome's ruling nobility. The Senate itself soon saw the potential of the office for domestic legislation and as a counterweight to the consuls. Following the *lex Hortensia* of 287 BCE the tribunes gained the ability to legislate for all the Roman population rather than just the plebeian order, ending the struggle between patrician and plebeians.

However the office never really moved away from its dual nature and by the mid- and late Republic was simultaneously the highest plebeian magistracy and a junior post for the political class. An analysis of the office holders reveal that the majority hailed from nonsenatorial families, who went no further than the tribunate. The plebeians from senatorial families generally held the office between the quaestorship and the aedileship, and usually around the age of 30. The candidates ran for election in the tribal assembly and took office on December 10 each year.

Yet for such a relatively junior office the tribunate's powers were potentially unlimited in the domestic sphere. Its primary proactive power came from the right to legislate in the tribal assembly, with laws requiring only a majority of the 35 tribes to pass, making it Rome's most efficient method of legislating. Any or all of the 10 tribunes could propose legislation, though the sources do indicate that initial discussions were held within the tribunician college to work out a program and ensure that all 10 were in agreement. Following 287 BCE, tribunician legislation was binding on the citizen body, whereas prior to this it had been restricted. As the Republic expanded then so did the scope of tribunician legislation, which was originally limited to domestic matters in or around Rome. However various individual tribunes expanded this scope to meet their own agendas, usually at the expense of the Senate's authority; conquered lands in Italy, state finances, colonization programs, state subsidies, military reforms, and ultimately military commands. In practice there were no limits to the scope of tribunician legislation.

The tribunate also had a great range of reactive powers; they could veto official actions and protect individuals. The former was the *ius intercessio*, which any tribune could use to block an official action or proposal by any magistrate, the Senate or even a colleague. The *ius auxilii* was the power to intervene and protect an individual from any official action, backed up by the personal tribunician sacrosanctity.

In terms of limitations, the greatest formal one was that tribunes were not allowed to leave the city, beyond the first milestone, or spend the night outside of Rome itself, without special dispensation. The greatest practical restriction was the number of tribunes itself, which always gave rise to internal struggles or opposition, with tribunes being able to veto their colleagues actions or proposals. There are numerous examples of this happening throughout the Republic, which would paralyze the college until the next elections. While there was no formal ban on tribunes being re-elected to consecutive tribunes, it was a practice that had fallen out of custom in the fourth century, until the time of the Gracchi in the second century BCE.

Although there had always been clashes between individual tribunes, or groups, and the Senate, the late Republic saw a number of ambitious politicians use the office in increasingly aggressive ways, resulting in violence and ultimately bloodshed in Roman domestic politics. This began with Tiberius Sempronius Gracchus, who had one of his colleagues removed from office, and continued through to Sulpicius in 88 BCE. Following his two coups, Sulla passed legislation limiting the powers of the tribunate between 88 and 79 BCE, but these were overturned and this cycle continued, taken to new heights by Clodius in the 50s BCE. However, the role of the tribunate in causing the fall of the Republic can be overstated. Generals and their armies did more directly to topple it.

This use, or misuse, of the tribunate was only ended by Augustus when he took tribunician powers for himself for life, without holding the office itself and used them as one of the two pillars of the Principate. Tribunician power continued to be an important tool to the emperors throughout the imperial period. The office itself continued, though a shadow of its former self, to at least the fourth century CE.

Triplex Acies

The *triplex acies*, or “triple battle line,” was the standard deployment of infantry in the Roman army from the mid-Republic through the imperial period. In the earlier Republic, due to Etruscan influence, the Romans employed the Greek-type hoplite phalanx formation, in which men maintained close order with overlapping shields and thrust with heavy spears. The phalanx was inflexible and could not maneuver easily; it required flat ground.

The phalanx was superseded by the manipular legion, which prevailed down to the late second century BCE. Study of the manipular legion has focused on Polybius and on a problematic passage in Livy (8.8.5–8). They describe a three-line formation in which each line was differentiated by the age, experience, and equipment of the soldiers that comprised it. In the first line stood the *hastati*, younger soldiers armed with javelins.

The second line consisted of the *principes*, men in the prime of life. According to Polybius, the third or rearguard line consisted of the *triarii*. Livy 8.8.5–8, which may represent an earlier phase of the manipular legion, divides the third line into three additional ranks, the *triarii*, *rorarii*, and *accensi*. The *rorarii* and *accensi* are skirmishers, so that their presence in the rear line is implausible. Livy also states that the maniples were arranged in a checkerboard pattern, alternating with empty spaces in between the

maniples, accomplishing a complex maneuver to allow fresh soldiers to replace tired ones during the course of a battle. The subject of extensive academic debate, this maneuver would require intensive drilling to achieve perfect coordination and would work only on a level, unobstructed surface. Gaps between maniples might allow enemy units to surround the first-line maniples or cohorts and cut them to pieces. Consequently, it seems more likely that the legions presented a solid battle line when they engaged their enemies. The *triplex acies* then allowed them to replace the front line quickly from reserves, and this was probably done during the lulls in battle that our sources mention on occasion.

In practice, Roman battles were adapted to the layout of the ground and any obstructions; the deployment of maniples, and even more so of cohorts, enabled a greater degree of flexibility. The commander was not restricted to a three-line deployment. A longer two-line or single-line deployment was possible. One of the drawbacks of the *triplex acies* was that any deep formation took time to deploy from the looser marching formation. Enemies frequently attempted to ambush Roman armies on the march, because the Romans would not be able to form up for battle immediately.

Triumph

The triumph was the ceremonial procession through the city of Rome in honor of a Roman general's victory. It displayed the war's material plunder, representative captives, and captive enemy leaders. The victorious general, who in the role of *triumphator* received much-debated symbolic honors, was accompanied by his soldiers. The procession often culminated with

religious rites in honor of Jupiter and sometimes with the sacrificial death of captive enemy leaders. The triumph was also a festival for the people of Rome, often marked by largesse, lavish feasts, and public games.

The Roman triumph was also a significant cultural institution. In the Republic, the Roman aristocracy competed for triumphs and regarded them with ambivalence, especially from the period of overseas conquest onward, for the escalating display of military glory, wealth, and extravagance in the triumph aroused envy and jealousy. In the late Republic's civil wars, triumphs, furthermore, were tainted by the opprobrium of victory over fellow citizens. After Augustus became the first emperor, triumphs were restricted to the emperor and his deputies, members of the imperial family. Senatorial commanders were allowed a lesser honor, triumphal ornaments (*ornamenta triumphalia*). Triumphs became an important element in imperial iconography, often alluded to in abbreviated form as the emperor's victory titles or in coin legends and images. Triumphal imagery was an important aspect of Roman public or historical art, both in the urban center and in the provinces of the empire.

No one ancient source attests all of the features of the triumph which modern scholars have reconstructed, focusing on the anthropological or religious significance of the ceremony. In this reconstruction, the *triumphator* was elevated to the status of a king (suggested by his ceremonial purple toga decorated with gold) or a god (equated with Jupiter) for the duration of the rite. Other features of the ceremony, such as the derisive songs sung by his soldiers, were intended to deflect human or divine envy. According to Suetonius, Caesar's soldiers sang songs deriding his youthful misconduct as the sexual partner of the client monarch Nicomedes of Bithynia (*Iulius* 49). According to another source, a slave stood behind the monarchic or godlike *triumphator*, whispering in his ear: "Remember, you are only a man!" Such details are preserved in late and antiquarian classical sources, written often many centuries after the actual events.

The triumph contained many religious elements. The *triumphator* ascended the Capitoline hill and made sacrifices to Jupiter, the king of the gods; these rites sometimes included human sacrifice of enemy leaders. However, the triumph was also an opportunity for the display of the wealth obtained by conquest. The *triumphator* redistributed some of this wealth to his soldiers in the form of triumphal donatives and to the civilian

inhabitants of Rome as largesse, public feasts, and gladiatorial games. The triumph even served to educate the public, as the parade might feature floats and paintings depicting the campaigns and the landscapes and peoples of the conquered regions.

The triumph was also a divisive cultural institution. In the Republic, Roman generals competed for the right to hold a triumph. It is possible that a victor had to declare 5,000 enemy casualties to be voted a triumph by the Senate; he had to negotiate for this right, which his jealous peers in the Senate might deny him. The jealousy may motivate the ambivalence with which Roman authors regarded the triumph, admiring prowess in war but doubtful of the moral value of the immense wealth on display. They often claimed that the moral decline of the Republic (a stock theme in literary authors) began with a certain general's triumph, varying from author to author. The relationship of war to wealth was unmistakable, but wealth and luxury were believed to corrupt *virtus*, courage (Sallust, *Bellum Catilinae* 11).

The Gemma Augustea, a cameo, early first century CE. In the imperial period, the triumph was monopolized by members of the imperial family and symbolically by the emperors. This cameo (a carved sardonyx gem), known as the Gemma Augustea,

depicts a mythologized version of the imperial triumph. Located in the Museum of Art History, Vienna, Austria. (Erich Lessing/Art Resource, NY)

When the civil wars of the late Republic began, many of the Roman elite regarded triumphs over fellow Romans with distaste. In elite discourse on the triumph, more virtuous generals of the past had even declined triumphs which the Senate offered to them. Caesar's triumph over the Pompeians allegedly displayed paintings of the suicides of his rivals, which increased the bitterness of his surviving opponents (Appian, *Civil Wars* 2.101).

With the Principate, the emperors and their immediate families monopolized the triumph. Senatorial commanders were no longer permitted to triumph; instead, a victor of senatorial rank could merit *ornamenta triumphalia* (triumphal ornaments), a lesser honor. In the Republic, a lesser version of the triumph, the ovation, had been granted to commanders who did not merit a full triumph.

Triumphal culture persisted beyond the immediate triumphal ceremony. The triumph became part of imperial iconography, often alluded to in abbreviated form such as the victory titles of the emperors: Germanicus, Britannicus, Dacicus, or Parthicus, referring to the emperor as conqueror of Germany, Britain, Dacia, or Persia. Emperors tended to retain the victory titles of their predecessors.

Triumphal imagery became an important aspect of imperial art, featured on victory monuments and historical reliefs. Some monuments (such as the Arch of Titus) depict the triumphal procession itself; others use more abbreviated imagery. The Roman triumphal procession has also inspired more recent European art, especially during the Renaissance and neoclassical periods. In short, though gladiatorial games are often thought of as quintessentially "Roman," the triumph is also a focal point of Roman society and culture.

Tropaeum Traiani

Termed also the Adamklissi Monument from its location near Adamklissi (Adamclisi) in Romania, the *Tropaeum Traiani* is a large drum-shaped monument 100 feet in diameter, erected by the emperor Trajan in 107–108 CE in celebration of his victory over Dacia. The monument, dedicated to Mars Ultor (Mars the Avenger), shows 54 scenes representing the Dacian Wars, emphasizing Roman battle with Dacians. In one, Trajan on horseback rides down a Dacian, a scene that presents the emperor as heroic warrior rather than the emperor (as on Trajan's Column) as commander. In contrast with the Column of Trajan and the Great Trajanic Frieze, monuments completed by expert sculptors and exhibited at Rome, the style of the *Tropaeum Traiani* reliefs is provincial and rough. The emphasis on combat is perhaps expressive of the sentiments of ordinary soldiers. The reliefs were probably completed using locally available sculptors, perhaps military artisans.

The *Tropaeum Traiani* is located near, but distinct from, an earlier monument erected on the site of a Roman defeat in Domitian's Dacian War in 90 or 91. This altar (*CIL* III 14214 = *ILS* 9107) lists the names of over 3,000 Roman soldiers who died in this battle. It is unique in commemorating the Roman war dead rather than Roman victory, in contrast with Greek war monuments (compare Perikles' Funeral Oration) and with modern war monuments, particularly those of the twentieth century.

Turma

A *turma* (plural *turmae*) is a subunit of a Roman cavalry regiment. The mounted *equites* of the early republican legion were divided into *turmae* of approximately 30 cavalrymen, as were the allied cavalry. In the imperial period, the auxiliary *alae* and *equites singulares Augusti* (the emperor's mounted bodyguard, dating to Flavian times and later) were divided into *turmae* of 32 cavalrymen each. Each *turma* was commanded by a decurion. The *turma* is roughly the equivalent of the legionary century. As with the century, the *turma* served to identify individual cavalrymen.

U

Urban Cohorts

Augustus (27 BCE–14 CE) created three urban cohorts (*cohortes urbanae*) as a supplement to the nine Praetorian Guard cohorts created earlier. The urban cohorts grew in size (four cohorts of 1,000 men each in Rome by the late first century) and became increasingly distinct from the praetorians. They seem to have shared the praetorians' camp until getting a separate base in the late second or third century. Their terms of employment (pay, years of service) were better than legionaries' but not as good as praetorians'. Like praetorians, urban-cohort soldiers (*urbaniciani*) mostly came from Italy, until Septimius Severus took power in the 190s. Thereafter, the urban prefect who commanded the urban cohorts accrued considerable policing jurisdiction throughout Italy. Augustus had created or revived this office to be held by eminent consular senators, perhaps as a political concession to the senatorial order since equestrians commanded the *vigiles* and praetorians. *Urbaniciani* exercised law-and-order functions such as providing security at the games, but little is known of their basic routine.

Units styled "urban cohorts" were sometimes posted in other cities during the first and second centuries CE, including Ostia (Rome's nearby port) and Puteoli in Italy, and in Lyon and Carthage. They seem to have supported local stability and imperial interests, such as the mint at Lyon, and major hubs of Rome's grain supply. On a few known occasions (esp. under Domitian in the 80s) individual urban cohorts served actively in frontier wars.

Usurpation

Usurpation (in which one emperor displaced another) is here distinguished from provincial resistance or rebellion against Roman rule in general. A usurper might choose the path of revolt, rebelling against the existing emperor. He might succeed in displacing the incumbent emperor, becoming a successful usurper. The accessions of Galba, Vespasian, and Septimius Severus are all instances of usurpation achieved through military revolt and subsequent civil war (luckily for Galba, Nero committed suicide). If he failed and lost, he was an unsuccessful usurper (such as Avidius Cassius and Pescennius Niger). A successful usurpation might also occur through a coup: an assassination or other displacement of the incumbent ruler without a military uprising, for example, a palace conspiracy such as the assassinations of Claudius, Domitian (supplanted by Nerva), or Commodus.

Civil war propaganda usually downplayed the fact that the new, successful usurper had committed revolt and usurpation, by presenting his predecessors as illegitimate in some way, usually in moralistic terms: tyrants of cruelty, greed, or folly. The truth of such stories is often unavailable, since history is written by the victors. Such a systematic character assassination of Vespasian's immediate predecessors is visible in Tacitus' *Histories*, flattering Vespasian, victor of the War of Four Emperors. Since usurpers were stereotypically bad characters, the *Historia Augusta*, with its typical tongue-in-cheek humor, writes flattering biographies of the unsuccessful usurpers (rivals of Severus) Pescennius Niger and Clodius Albinus.

To succeed, a usurper needed to secure the support of his armies, through the bestowal of donatives and/or privileges, and he was careful not

to alienate the soldiers. He was equally careful, at least in the first two centuries CE, not to alienate the Roman Senate. A successful new emperor sought the Senate's approval and promised not to execute senators (a promise that many rulers could not keep). He advertised his accession through the customary media, minting coins with his name and portrait and disseminating his imperial statues and painted portraits to the provinces. He encouraged literati to propagandize his reign by delivering panegyrics or writing histories. He was greatly assisted by wealth from legitimate sources, not obtained by looting temple treasures or confiscating aristocratic estates. He assured himself of probable successors, whether family members or adopted heirs, promising political stability. His pleasant disposition and good morals reassured his subjects, particularly the sensitive urban elite, that he would not insult or outrage them. Above all, he was lucky. He needed military and personal success to stabilize his regime; defeat in war or other disasters might cause his supporters to melt away or turn on him. We use "he" advisedly: where empresses succeeded in ruling the Roman Empire, they employed a male relative as figurehead.

On the one hand, it became doctrine that a good emperor had no fear that he would be usurped; Trajan legendarily handed his praetorian prefect a sword, saying, "If I rule well, use this for me; if not, against me" (QQ 33). On the other hand, a bad emperor saw potential threats to his power everywhere, elevating possible successors only to eliminate them, as Constantius II did with his cousin Gallus, elevating him to Caesar and then executing him for suspected conspiracy. Gallus' brother Julian, elevated to Caesar in his term, quoted Homer, "By purple death I'm seized" (QQ 39).

In the crisis of the third century, usurpation seems to have become widespread, though due to the skimpy nature of the sources the details of how one emperor supplanted another are often not known. Many emperors ruled only a few years; young emperors (raised to Caesar or Augustus by their fathers) were particularly vulnerable to usurpation. The pattern of usurpation seems to have merged with provincial revolts, the Gauls establishing a "Gallic Empire" with their own emperors (Postumus and others); in the east, Zenobia of Palmyra claimed rule of Arabia, Syria, and Egypt. However, we cannot know the extent to which these breakaway empires were supported by provincials dissatisfied with Roman rule.

The fourth and fifth centuries CE also boasted a particularly large number of usurpers, leading eventually in the mid-fifth century to the end

of the western Roman Empire; the last usurper, Odoacer, chose to become king of Italy rather than Roman emperor. Modern scholars have sometimes attempted to map religious controversies onto revolts and provincial unrest in the fourth century CE. Such a correlation is particularly difficult to assess. Two examples will be discussed here. In Roman Africa the Donatists, a Christian sect regarded as heretical by the Nicene Christians (Roman Catholics), became a source of routine low-intensity conflict with the Roman authorities. However, religion was their foremost concern; they do not seem to have been political separatists. In the civil war of Theodosius I (379–395) with Arbogast and Eugenius, earlier modern scholarship suggested that Arbogast and Eugenius supported the pagan cause, revolting against Theodosius’ crusading Catholicism. In fact, Eugenius seems to have been Christian and was above all Arbogast’s figurehead, Arbogast being a usurper in all but name.

V

Valens (Emperor) (364–378 CE)

Flavius Valens was the emperor of the eastern Roman Empire between March 28, 364 and August 9, 378. He was born at Cibalae in Pannonia ca. 328 and was the son of the general Gratianus and brother to the emperor Valentinian I (364–375). Valens' preimperial career was undistinguished. He served as a low ranking army officer and was only named emperor after the army forced his brother Valentinian to choose an imperial colleague (Ammianus 26.4.3). Valentinian's choice of Valens was not a popular one, and in 365, Julian's relative Procopius revolted, challenging Valens' rule. Procopius enjoyed early success and attracted a range of military units to his cause. However in 366, he was defeated by Valens' forces and subsequently executed. This event left Valens increasingly fearful of betrayal, and in 371–372, he executed high-ranking officials who he believed were engaging in magical practices designed to remove him from power.

Valens was an able administrator who kept taxation under control and fought against entrenched patrimonial corruption among public officials, albeit with limited success (Ammianus 31.13.1–3). Valens' religious impact was limited, although some Christian writers state that he was an aggressive supporter of the Arian cause (Theodoret 4.12.1–4; Sozomen 6.7; Socrates 4.1). Valens was active on the empire's frontiers. In the east, he forcefully intervened in the internal politics of Armenia in an effort to counter Persian claims on the kingdom. He was only dissuaded from launching a full-scale invasion due to troubles with the Goths on the Danubian frontier, which had been problematic throughout his reign. From 367 to 369, Valens had campaigned against the Goths but limited success meant he was forced to negotiate for peace. In 376 he allowed Gothic tribes

to settle in Thrace in return for providing military recruits. However, when local officials mistreated the Goths, they attacked Roman forces and heavily defeated them. Because he was based at Antioch preparing a campaign against the Persians, Valens was not able to move immediately to meet the Gothic threat and only personally moved into Thrace in 378. On August 9, he ignored advice to wait for military assistance from Gratian and engaged the Gothic army at Adrianople. In the course of the battle, the Roman army was annihilated and Valens himself was killed. Accounts differ as to the manner of his death (Ammianus 31.13.12–14; Zosimus 4.24.2). He was succeeded by Theodosius I, another high-ranking army officer (emperor 379–395).

Valentinian I (Emperor) (364–375 CE)

Flavius Valentinianus was emperor of the western Roman Empire between February 26, 364 and November 17, 375. He was born in 321 CE at Cibalae in the province of Pannonia Secunda and was the son of the elder Gratian, a leading military commander under the House of Constantine (Ammianus 30.6.6). Little is known of Valentinian’s youth, although it is likely that he accompanied his father when the latter served in Africa. Valentinian may also have served as an imperial bodyguard. Valentinian definitely served as

a tribune under Julian in Gaul, where in 357 he was sent home in disgrace after failing in a mission (Ammianus 16.11.6). The next stage of Valentinian's career is uncertain although some Christian sources claim that he was exiled by Julian due to his adherence to Christianity (Orosius 7.32.2). More certain is that Valentinian served under Jovian (363–364), who promoted him to the command of an imperial bodyguard unit and sent him west to proclaim news of his accession. Upon the death of Jovian, Valentinian was chosen to be Augustus by a conclave of military and civil leaders. He was formally accepted as Augustus by the army in a ceremony held at Nicaea on February 26, 364 (Ammianus 26.1.5; Zosimus 3.36.2). Shortly afterward he appointed his brother Valens as co-Augustus and gave him responsibility for the eastern half of the empire.

Valentinian was militarily active throughout his reign. He based himself in Trier to be closer to the Rhine frontier and even chose to continue campaigning in the west instead of marching to Valens' aid during the Procopian revolt (Ammianus 26.5.12–13). He sent commanders to campaign in Africa and Britain and himself led successful campaigns against the Alamanni and the Quadi as well as constructing significant new fortifications on Rome's northwest frontier. Although Valentinian was an orthodox Nicene Christian, his religious policy was generally one of tolerance towards Christian controversies and paganism. He did however move to outlaw certain sects, most prominently the Donatists and Manichaeans (*Codex Theodosianus* 16.5.3, 6.1).

Valentinian's reign was marked by a number of internal political upheavals. In 367 he was afflicted with a serious illness, causing rampant speculation in the imperial court regarding his potential successor. Upon recovering, Valentinian was forced to proclaim his young son Gratian Augustus (co-Augustus with Valentinian I in 367–375, co-Augustus with Valentinian II in 375–383) to secure his family's grip on power (Ammianus 27.6.4–16). In 372 Firmus, a Roman military commander serving in North Africa, rebelled against Valentinian, who sent Theodosius the Elder (the father of Theodosius I, emperor 379–395) to end the revolt. Valentinian also had strained relations with the senatorial aristocracy of Rome. As well as advancing Pannonian adherents to powerful positions usually reserved for aristocrats, Valentinian tried and tortured numerous senators for supposedly engaging in witchcraft, a practice considered as treason against the emperor. Valentinian's economic policies were generally restrained and he is credited

with being an able administrator who sought to end rampant corruption (Ammianus 30.9.1) However, the later years of Valentinian's reign were marked by an increasingly heavy taxation burden (Ammianus 30.5.5–10; Zosimus 4.16.1).

Although ancient writers lauded Valentinian as a strong emperor they roundly criticized him for his temper, cruelty and irrational hatred for the cultured and educated (Ammianus 27.7.1–4, 30.8.2–10). Valentinian died on November 17, 375 at Brigetio in Pannonia after suffering an aneurysm reportedly induced by his rage at the arrogance of Quadi envoys (Ammianus 30.6.3). A dubious legacy of Valentinian I's reign was the elevation of two young emperors, his sons Gratian (367–383) and Valentinian II (375–392, raised after his father's death by the army), who both succumbed to usurpers, unleashing civil wars that the later Roman Empire could ill afford.

Valentinian II (Emperor) (375–392 CE)

Valentinian II, the younger son of Valentinian I, became a western Roman emperor at age four, reigning from 375 to 392 CE. He was apparently acclaimed by the army, the soldiers favoring the continuance of Valentinian I's dynasty. Originally, he shared power with his half-brother Gratian (375–

383). After Gratian's assassination in 383 by Magnus Maximus, Valentinian retreated from Gaul and ruled Italy. Valentinian and his ally Bishop Ambrose of Milan succeeded in delaying Maximus from invading Italy until 387. In 388, the eastern Roman emperor Theodosius I and the forces of Valentinian defeated Maximus at the Save, Siscia, and Poetovio; Maximus surrendered and was executed at Aquileia. Theodosius I appointed the Frankish general Arbogast as Valentinian's *magister militum*. The ambitious Arbogast increasingly dominated the young emperor, and Valentinian's courtiers slipped away from him. After Valentinian's failed attempt to dismiss Arbogast, Valentinian II was found dead by hanging in his chambers in 392. It is not clear whether his death was an assassination, voluntary suicide, or forced suicide. Having thus burned his bridges, Arbogast supported a new puppet emperor, Eugenius (a mature man but a rhetorician rather than a general) in open revolt against Theodosius I. Arbogast and Eugenius were defeated at the battle of the River Frigidus in 394; Arbogast fled into the wilderness where he committed suicide.

Valentinian III (Emperor) (425–455 CE)

Born in 419 CE, Valentinian III (425–455) was the son of Galla Placidia, half-sister of the western Roman emperor Honorius, and Constantius III (emperor in 421). After Constantius' death in 421, Galla Placidia and Valentinian fled to Constantinople. Honorius died in 423 and Valentinian's throne was usurped by Johannes. Supporting Valentinian's claim to the

western throne, Theodosius II married Valentinian to his daughter Eudoxia, and the six-year-old Valentinian became emperor in Ravenna in 425.

Valentinian fell under the influence of successive de facto regents, first his mother Galla Placidia, and then a series of commanders-in-chief, culminating in the de facto regency of the *magister utriusquemilitiae* Aetius, known as the “last of the Romans.” Valentinian inherited an empire that was already partitioned by barbarian tribes. He was forced to recognize Vandal rule in Africa and the permanent settlement of Visigoths, Burgundians, Franks, and Alans in Gaul.

By 450, Attila’s powerful army of Huns had turned west, threatening the empire. Aetius convened a massive coalition of barbarians and Romans, who defeated Attila at the battle of Châlons in 451. Gaul was saved, but in 452, Attila moved into Italy. After ravaging northern Italy, Attila and his army turned back because of famine and plague. They spared Rome. Attila’s death in 453 cemented Aetius’ position.

In 454, Valentinian betrothed his daughter to Aetius’ son. Later that year, fearful of Aetius’ growing power, Valentinian and his alleged fellow conspirator Petronius Maximus killed Aetius in a private audience. In March 455, Valentinian was assassinated at the instigation of Petronius Maximus, who seized control of the throne.

Valerian (Emperor) (253–260 CE)

Publius Licinius Valerianus was a senator from an old and distinguished family, born around 193 CE. In 253 CE, he became the emperor Valerian I. His rule marks one of the most disastrous and volatile periods of the third-century crisis. At least five usurpers claimed the throne in various parts of the empire during Valerian's reign. Plague was rampant. The Roman frontiers were under attack from a multitude of enemies, including the Goths in Greece and Asia, the Franks and Alamanni in Gaul, the Saxons on the North Sea, the Persians in Syria, and the Quadi and the Marcomanni in Pannonia. Valerian sent his son and co-emperor Gallienus to take care of the military threats in the western provinces, while he himself went to the eastern frontier, where by 257 CE he had recovered Antioch from the Persians. At this point he faced the Gothic invasion of Asia Minor in 258, then in 259 moved to Edessa to address a renewed Persian attack. Many of his soldiers died of the plague, and in 260, he became the first Roman emperor to become the prisoner of a foreign power when he was captured during negotiations by Shapur I of Persia. According to the Christian writer Lactantius, he was then subjected to humiliations, such as being used as a footstool for Shapur to mount his horse. When he died, we are told that his body was stuffed with straw and mounted in a Persian temple as a trophy. These humiliations may not have actually happened, but Valerian remained a prisoner of the Sassanids for the rest of his life.

Vandals

The Vandals were a Germanic people who played a key role in the

dismemberment of the Roman Empire in the fifth century CE. Originating in southern Scandinavia, the Vandals, who consisted of a group of Germanic tribes, distinctly appear in the historical record of the Mediterranean world in the first century CE. By the second century, the Vandals had migrated to central Europe and settled on the northern border of Dacia, where they became Roman allies. Vandal warriors were primarily cavalrymen equipped with lances, swords, and shields. Some also carried war axes. There is no sign, however, that they used archery in combat.

In 270, bands of Vandals and other barbarians crossed the Danube and invaded Roman Pannonia, where they were badly defeated and surrendered the following year. Although Roman authorities provided provisions for their return journey to the vicinity of Dacia, a band broke away from the main Vandal force and plundered the Roman province of Moesia, where they were again defeated by Rome. Vandal leaders placated the Romans by killing the survivors of this band. Two thousand Vandal cavalrymen subsequently served as auxiliaries with the Roman army. One unit was even deployed to Egypt. In 277, and again in 278, Rome defeated Vandal bands threatening the Rhine frontier. Captured Vandals were enlisted in the Roman army and assigned to Britain, where they served reliably. In the late fourth century when the Huns defeated the Goths, the Vandals were swept up in the resulting flight of barbarian refugees to the west. Although some Vandal tribes forced their way across the Danube into Roman Pannonia in 400, their great opportunity occurred in 406, when Roman forces were fighting the Goths in Italy.

Vandals and other warrior bands took advantage of the opportunity presented by insufficiently manned Roman defenses along the Rhine River and crossed the river near Mainz on New Year's Eve. The invaders subsequently rampaged across Gaul for three years. In 407, a Roman force from Britain crossed the English Channel and rallied the remaining Roman forces in Gaul. They subsequently attacked the Vandals, pushing them to the south. In 409 the Vandals and other barbarians crossed the Pyrenees Mountains into Spain. Twenty years later they crossed the Straits of Gibraltar and swept across Roman North Africa to the city of Carthage and beyond. At sea their ships conducted piratical raids against northern Spain and around the Mediterranean, including the Aegean Sea. In 440, they attacked Sicily, and in 455 they even plundered the city of Rome. In 533, the eastern Roman emperor Justinian launched an invasion of North Africa that

quickly destroyed the Vandal kingdom. Vandal prisoners were then sent to serve on Rome's eastern frontier with Persia.

Varian Disaster (9 CE)

In the Varian disaster, one of Rome's worst military defeats, three Roman legions commanded by Publius Quinctilius Varus were ambushed and destroyed by Germans in the Teutoburg Forest near Kalkriese in 9 CE. The disaster halted a policy of Roman imperial expansion dating back to the fourth century BCE, and in particular expansion into Germany, beginning with Caesar's crossing of the Rhine in 55 and 53 BCE and continuing with Augustus' expansion into German territory as far as the Elbe. In preparation for the conquest of Germany, Augustus directed the construction of military bases along the Rhine between 16 and 13 BCE. To pacify the region, the Roman army conducted a series of campaigns east of the Rhine from 11 BCE onward, with mixed success. In 3 BCE a Roman army crossed the Elbe River and constructed an altar honoring Augustus. In 5 CE another Roman force reached the Elbe, where it was met by Roman warships coming upriver from the North Sea.

When Augustus appointed Varus to civil and military command of Germany east of the Rhine in 7 CE, most of the German tribes appeared to have been pacified. Two years later, near the end of a summer campaign in northern Germany, Varus was leading his command of approximately 20,000 Roman soldiers—consisting of the Seventeenth, Eighteenth, and Nineteenth Roman legions, as well as additional cohorts and auxiliary units. Accompanying the Roman force was Arminius, a prince of the Cherusci

tribe as well as a Roman auxiliary veteran, who led a Roman auxiliary force of fellow German tribesmen. Using the experience gained in years of Roman military service, Arminius planned and organized an ambush of Varus' Roman force by approximately 18,000 German warriors. As the Roman column followed a route through the forest between the steep Kalkriese Hill and the Great Bog, located near the modern city of Bramsche, it was tricked into turning onto a narrow path along the base of the Kalkriese Hill. Along the path was a sod wall constructed to aid the ambush.

Marching into the ambush, the Roman column, as often with Roman marching columns, was probably strung out over more than two miles. Cavalry and auxiliary units were likely positioned at the front and rear of the column, with the three Roman legions guarding the baggage wagons in the middle. Roman legionaries typically marched between nine and four abreast, and on the narrow forest track hemmed in between the sod wall and the forest and swamp, the column's width probably narrowed to four or five abreast. Mounted auxiliary troops serving as scouts, but loyal to Arminius, failed to warn of the impending ambush. The battle likely commenced with a massive volley of spears hurled by German warriors located behind the sod wall. The Romans column was thrown into chaos. Dead and wounded Roman soldiers, as well as panicked horses and mules, brought the front of the column to a halt while the rest of the Roman force continued to advance—not realizing the trap. The Germans launched an infantry assault into the disorganized but tightly packed Roman ranks at the front of the column. Thousands of additional German warriors next swarmed against the rest of the Roman force, which lacked sufficient space to deploy for battle. When Varus and other senior officers realized the situation was hopeless they committed suicide rather than face capture and torture at the hands of the Germans.

The bloody struggle raged for three days, leaving 16,000 dead and wounded Romans on the battlefield. The Germans suffered relatively few casualties—only about 500 killed and 1,500 wounded. In the chaos many Roman soldiers seeking to escape the battlefield were pursued and killed, while others drowned in nearby swamps. Approximately 1,500 Romans were captured and enslaved; others were sacrificed to German gods or thrown into nearby marshes. Some fortunate Romans escaped, eventually reaching the sanctuary of Roman positions along the Rhine River. Wounded Roman soldiers found on the battlefield were killed by the victors. The

Germans removed their own dead from the battlefield and took them back to their home villages, where their bodies were burnt on funeral pyres.

At Rome, Augustus was shocked by the disaster. He swiftly dismissed his personal German bodyguards, and reinforced and reorganized Roman defenses along the Rhine. Due to their disgrace, the three lost legions were not replaced. The disaster appears to have conditioned Augustus' directive, in the *breviarium totius imperii*, to Tiberius to not further extend the frontiers of the empire.

In 15 CE Germanicus launched an expedition across the Rhine in retaliation for the Varian disaster, and visited the site of the disaster which was covered with scattered human remains and weapons. After interring many of the Roman dead, Germanicus and his army departed. The Germans then returned to what they considered a sacred site and dug up the bones, scattering them once more. Germanicus pursued and defeated Arminius at the battle of Idistaviso (16 CE).

The site of the battlefield, containing weapons, military equipment, and coins, as well as human and animal remains, was rediscovered in 1987. The Museum und Park Kalkriese, located on the battlefield to the east of the city of Bramsche, contains an exhibit of materials recovered during archaeological excavations.

Varus, Publius Quinctilius (d. 9 CE)

Despite an otherwise distinguished senatorial career, Publius Quinctilius Varus is most remembered as the Roman commander who lost three legions and his life in Germany in the *clades Variana* or “Varian disaster” of 9 CE, one of Rome’s worst defeats.

Varus was well connected, holding a consulship in 13 BCE with Tiberius (the future emperor), and marrying a daughter of Marcus Vipsanius Agrippa. Subsequently Varus married Claudia Pulchra, a grandniece of the emperor Augustus. He held the post of proconsul of Africa in 7–6 BCE, and later was legate of Syria.

In 9 CE Varus was legate of the Rhine army. According to Cassius Dio, Varus’ imposition of taxes angered the Germans, and Varus was overly complacent that the new province had been pacified and failed to keep his troops together and on guard. His forces were lured into the Teutoburg Forest by news of an uprising, a rumor planted by the Germans Arminius and Flavus, both veteran auxiliary officers who remained loyal to their original people rather than to Rome. The Germans ambushed and destroyed the Roman forces; Varus committed suicide rather than be captured. The site of the Varian disaster is near modern Kalkriese, located by archaeologists who found the remains of Roman military equipment.

Vegetius (Active Late Fourth Century CE)

Publius Flavius Vegetius Renatus was a Roman writer and author of *De Re Militari* (*Concerning Military Affairs*), also termed *Epitoma rei militaris* (*Epitome of Military Affairs*). He probably wrote during the reign of Valens (364–378) and Theodosius I (379–395), but a later date, in the early fifth

century, has been suggested. The contrary argument is that if the sack of Rome (410 CE) had already occurred, Vegetius would have mentioned the empire's military disaster.

Vegetius was probably of high rank; some of the extant manuscripts give him the rank of *comes*, a honorific borne by senior bureaucrats and by senior military officers. He apparently had no practical military experience, ruling out the latter. The *Epitoma rei militaris* draws heavily on former military treatises, possibly going back to Cato the Elder's *De re militari*, now lost, and other lost treatises. It is a highly literary work, with digressions of a rhetorical type familiar in Latin historiography, despite preserving technical detail that historians of the Roman army can still use with caution. The *Epitoma* needs to be used with caution because, though Vegetius may depict practices of the traditional Roman army of the Principate (27 BCE–235 CE), he is steeped in nostalgia for a period which he did not witness himself.

Vegetius' overriding editorial concern is that Roman armies are no longer able to defeat Rome's enemies. In the *Epitoma rei militaris*, Vegetius advocates the rebuilding of Roman military power through traditional practices. Vegetius begins with an analysis of the Roman army of his time, which he concludes lacks discipline in comparison with earlier Roman legions. Vegetius recommends several reforms to restore Roman armies to ancient standards, beginning with recruitment. Recruits, Vegetius argues, should be drawn from the rural population because peasants from birth learn to endure all kinds of weather and are inured to heavy labor. Once conscripted, soldiers should undergo strict discipline and regular training in arms. Specifically, Vegetius argues that soldiers should be required to march in formation a minimum of 20 miles in five hours at regular cadence, and 24 miles in the same time at quick cadence. In addition to the issues of discipline and training, Vegetius argues that the organization of the contemporary Roman army is faulty. The legion, Vegetius argues, were the perfect military machine in which heavy infantry were superior to the cavalry and light-armed troops in combat. This system has declined, according to Vegetius, because losses in legionary units have not been made good by conscription, and Roman volunteers have preferred enlistment in auxiliary units with laxer discipline. The solution, according to Vegetius, is to return to the ancient legionary organization of 10 cohorts supported by ballistae (bolt-throwing machines) drawn on carriages.

Vegetius provides no information about the Roman military organization of his own day, in which the *Notitia Dignitatum*, a roster of civilian and military ranks drawn up around the same time, shows that legions continued to exist but were subordinated to the mobile field force or *comitatenses*, supported by frontier forces or *limitanei*.

Veii, Siege of (406–396 BCE)

The siege of Veii was a turning point in early Republican Rome's wars with the Etruscans, Rome's neighbors to the north. Though Veii was not closely allied with the other Etruscan cities, it was one of the most powerful. After the capture of Veii, Rome's victory in the Etruscan Wars was inevitable. The siege was commanded by Marcus Furius Camillus, and the town was captured by digging a tunnel under the walls.

Roman tradition on the capture of Veii illustrates the close relationship of Roman religion and warfare. The Romans sought to promote the capture of the city by *evocatio*, a religious ritual persuading Juno Regina, the patron goddess of Veii, to abandon the Etruscan city and come to Rome (Livy 5.22). After the city was captured, its cult statue of Juno Regina in Veii was brought to Rome.

Another tradition linked the siege of Veii with later important economic practices. At the siege, pay (*stipendium*) for Roman troops was instituted for the first time (Livy 4.59–60; Dionysius *Roman History* 14.16.5). The Romans did not yet coin money at this date, so the anecdote is anachronistic.

Camillus also sold the captives of Veii into slavery (Livy 5.22.1). The sale of captive enemy would become a major source of wealth for the Romans.

Velites

The *velites* are probably the best-known example of light infantry in the republican Roman army, although they only appear in the mid-Republic. Polybius (6.22) tells us that they were the youngest and poorest soldiers and were armed with a sword, a small round shield and several javelins. They wore a helmet, usually adorned with some sort of animal skin, so that the individual would be recognizable to his officers, particularly when performing deeds of valor. Their body armor consisted only of a chest protector, a plate or disc worn over the heart, attested in Italic archaeology from the mid-Republic.

Regarding their organization, from Polybius we also know that the *velites* were not divided into maniples, and from this that they were not assigned any centurions or *optiones* either. Rather, he tells us that the *velites* were “divided equally among all the companies” (Polybius 6.24) although this must have been only for administrative purposes since we know that they started the battle as skirmishers, ahead of all the maniples. According to Polybius, there were probably about 1,200 *velites* in a paper-strength manipular legion.

The *velites* probably existed by 255 BCE, the date for the battle of Tunis, where Polybius first mentions them. However, it is nevertheless impossible to determine the exact date of the *velites*’ establishment, particularly because

of the confusion between the Polybian and Livian accounts (Livy 8.8.5–8) of the Roman legion. Another term for the *velites* was the *rorarii*, attested in Livy and antiquarian authors. However, as Oakley has put it “decisive proof in favor of Polybius is wanting, but, given Livy’s unreliability elsewhere, he is clearly to be preferred” (Oakley 1988: 465). The last we hear of the *velites* is during the Jugurthine War, under Metellus, just before the military reforms attributed to Marius. Their role as light-armed troops, used for skirmishing, was replaced by the noncitizen *auxilia*.

Vengeance

The main Latin terms for vengeance are *ultio* and *vindicatio*, extending from retribution for wrongs or injuries to vengeance in the sense of acting as a champion for another. Romans felt revenge to be part of the natural order, and the principle of *talio* (equivalent retribution) appears early in Roman law. Vengeance was often an explicit motive for Roman conquest and conflict.

Cicero explicitly links vengeance and warfare: “except for the cause of avenging (*ulciscendi*) or of repelling enemies, it is possible to wage no just war” (Cicero, *Republic* 3.35). Indeed, the archaic fetial rituals for declaring war assumed Rome to be seeking retribution or recompense for some grievance. Vengeance is cited as a reason for war when the Romans

intervene for an ally—for example, for Saguntum against Carthage in 218 BCE. Avenging mistreated Roman citizens, above all ambassadors (*legati*), was a fairly frequent *casus belli*, employed in conflicts against Samnites, Gauls, Tarentines, Illyrians, and above all the sack of Corinth in 146 BCE. The destruction of Carthage the same year, prompted by fears of Carthaginian strength, was by the latter first century ideologically justified as revenge on the long-dead Hannibal. The tendency to avenge was well-known enough to use cynically: Polybius tells us that Gnaeus Octavius, ambassador to the Seleucids, was killed in 162 BCE by a certain Leptines, who was handed over to Rome for punishment, but Leptines was kept alive by the Senate to keep open a possible grievance against the Seleucids in case it were needed (Polybius 31.11–12).

Vengeance was not an unproblematic good. In the later Republic and imperial period, it needed to be tempered by clemency, justice, and humanity. Lucius Opimius was criticized for his harsh handling of Gaius Gracchus and his followers as seeking revenge for a private feud, but the distinction between private and public was often one of scale rather than kind. Caesar describes his initial invasion of Gaul in 58 as revenge for the deaths of Lucius Cassius Longinus and Lucius Piso (Caesar's great-grandfather-in-law) in 107, as taking revenge for a private wrong (Caesar, *Gallic Wars* 1.12–13). Sulla was perhaps regarded as the most vengeful of the Romans, taking terrible reprisals upon the followers of Marius. According to Plutarch, his memorial bore the epitaph “No man ever did more good for his friends, or more harm to his enemies” (Plutarch, *Sulla* 38.4). Both Sulla and Caesar were later viewed as avenging their honor and personal wrongs in launching civil wars. The theme of clemency toward one's enemies became even more cogent in the Principate, due to the emperor's autocratic power and the abuses of prosecution of *maiestas* (treason).

Octavian, in the war between the Second Triumvirate and the assassins of Caesar, shows the positive ideological value of military vengeance most clearly—revenge for his adoptive father's murder was his avowed aim and justification. Even after Augustus established his sole rule, the war of revenge was canonized in the temple of Mars Ultor (Mars the Avenger) in his new Forum. The temple became a favored locale for declaring wars and conferring grants of *imperium*. Subsequent emperors continued to present vengeance as a justification for warfare. The Augustan and Tiberian wars

against the Germans and Trajan's Dacian Wars were represented in terms of vengeance for raids; Trajan built another monument dedicated to Mars Ultor, the *Tropaeum Traiani* near Adamklissi, in connection with his conquest of Dacia, and the goddess of retribution, Nemesis, was associated with imperial power as early as Claudius' reign.

There is of course a difficulty in perceiving whether the urge to avenge was a *real* motivation for war or just a pretext, but it is clear that the Romans considered revenge a legitimate cause for war, and presented themselves as acting upon it.

Vercingetorix (Gallic Leader) (d. 46 BCE)

Vercingetorix was an Arvernian noble, son of Celtillus, and leader of the major Gallic revolt against Caesar in 52 BCE. After forcefully expelling Vercingetorix' opposition, his supporters proclaimed him king. He allied with many Gallic tribes and attempted to keep Caesar, who was returning from Rome, from the bulk of his army. He also attacked Caesar's Gallic allies to loosen his coalition. Vercingetorix suffered many initial setbacks and he changed strategies. He cut the Romans off from supplies by evacuating and destroying unprotected Gallic towns and attacked the Roman foraging parties.

At Gergovia, Vercingetorix took the high ridge surrounding the town. Caesar's forces attempted to give the Gauls the impression that they were surrounded but the Romans were overwhelmed and Caesar withdrew from

the greatest defeat he would suffer in Gaul. Vercingetorix then attacked the Romans on the march with their supplies, but was driven back and forced to withdraw to Alesia near the end of 52 BCE. Caesar's army followed and invested Alesia with elaborate circumvallations. At Alesia, Vercingetorix sent out riders to gather allies to attack the Romans, thus attempting to pincer them between two armies before his provisions ran out. However, the attack by Vercingetorix' allies was repelled and with his supplies exhausted, Vercingetorix surrendered. He was executed at the end of Caesar's triumph in 46 BCE.

Verres, Gaius (ca. 114–43 BCE)

Gaius Verres was a governor of Roman Sicily in 73–71 BCE, who has become notorious to history chiefly through Cicero's *Verrine Orations* (*In Verrem* I and II), one of the most elaborate examples of invective in classical literature and the most famous depiction of Roman corruption.

Little is known of Verres outside the *Verrine Orations*. He was quaestor in 84, a legate in Cilicia, and urban praetor in 74. Cicero claims that as quaestor Verres embezzled and was implicated in Sulla's atrocities, and that in Cilicia Verres extorted money and looted art objects; as urban praetor Verres also took bribes and abused his office. These claims cannot be proven or disproven.

As proconsul of Sicily in 73, Verres allegedly extorted from the

provincials, abusing his role as judge, robbing temples, looting art objects, and molesting the wives of respectable citizens. Verres was authorized to combat piracy in the waters of Sicily, but instead appropriated the funds intended for ships and sailors and even took money from the pirates not to pursue them. A type of pirate himself, Verres exploited the wealth and luxury of Roman Sicily, colonized by the Greeks before Roman rule.

The Senate passed a decree condemning Verres' actions, but Verres succeeded in extending his command. In 70 Cicero prosecuted Verres in the *quaestio de repetundis* (the standing court on corruption) for extortion, delivering the speeches known as *In Verrem* I. His reputation demolished, Verres was now unable to secure support. Before Cicero could deliver *In Verrem* II, Verres fled into exile at Massilia in southern Gaul. However, Cicero made public *In Verrem* II. Little more is known of Verres; he lived in obscurity at Massilia until the Second Triumvirate's proscriptions targeted him in 43 BCE.

The scope of Cicero's invective against Verres is exceeded only by Cicero's *Philippics* against Mark Antony. However, Verres was certainly not the only corrupt Roman magistrate and governor; corruption and extortion were frequent, especially under the chaotic conditions of the late Republic.

Veseris, Battle of (340 BCE)

The battle of Veseris decided the Romano-Latin war and resulted in the dissolution of the Latin League. Veseris is near Mount Vesuvius though modern scholars have suggested a more northern location for the battle. The

Roman commanders were consuls Titus Manlius Torquatus and Publius Decius Mus. Torquatus became notorious for executing his son before the battle for disobeying his orders and leaving the battle line to fight a duel with the enemy. Decius Mus became famous for committing *devotio*, vowing his death to the gods in return for victory and plunging suicidally into the thick of the battle.

After Vesperis, the Latin League was dissolved. From this time forward, Rome made individual treaties with allied communities, a “divide and conquer” approach.

As a result of the battle of Vesperis, Roman citizenship was granted to many Latin communities. The inhabitants of Lanuvium, Aricia, Nomentum, Pedum, and Tusculum all were granted the Roman citizenship; so were the inhabitants of Velitrae and Antium, though their governing elites were punished, and Antium surrendered its fleet. To the Campanian communities of Capua, Suessula, and Cumae, which had been allied with the Latins, the Romans granted *civitas sine suffragio*. The extensive grants of Roman citizenship greatly increased Roman manpower.

Vespasian (Emperor) (69–79 CE)

Vespasian (Titus Flavius Vespasianus, 69–79 CE) was born on November 9, 9 CE near Reate in Sabine Italy and raised by his paternal grandmother, a woman named Tertulla. Before the reign of Claudius, Vespasian’s senatorial career was unremarkable. He served as legionary tribune in Thrace, as quaestor to the provinces of Crete and Cyrene, as aedile, and as praetor. He

married Flavia Domitilla, a woman of only Latin status, until her father Flavius Liberalis proved her Roman citizenship in a lawsuit.

Under Claudius, Vespasian commanded a legion in Germany and then moved to Britain. He benefited from his friendship with Narcissus, a freedman of Claudius. While he was in Britain, Vespasian was able to subdue two powerful British peoples and numerous other communities. This earned him triumphal decorations, the highest honor accorded to senators in this period; he was also rewarded with two priesthoods. He held a governorship in Roman Africa, where he was unpopular.

The reign of Nero brought forth change for Vespasian as he accompanied the emperor on his tour of Greece in 66 CE. Vespasian did not find the same favor under Nero as he had under Claudius because he often fell asleep during Nero's musical and theatrical performances. Around late 66 CE, Nero appointed Vespasian to subdue the Jewish rebellion in Judaea. Nero allegedly wanted to send away competent potential rivals for the imperial power, though Vespasian's small-town origins made him a low risk.

Aureus of Vespasian (r. 69–79 CE), ca. 74 CE. Vespasian and his son Titus commanded the suppression of the Jewish revolt known as the Jewish War (66–70 CE). Vespasian became emperor as victor of the civil war termed the War of Four Emperors (69 CE). Located in the Yale University Art Gallery, New Haven, Connecticut. (Christopher Gardner/Yale University Art Gallery)

Another reason Vespasian was chosen to subdue the revolt in Judaea was his military ability as a leader and disciplinarian. In two years, 67–68 CE, Vespasian had subdued the rebellion for the most part except for Jerusalem. While in Judaea, Vespasian met a Jewish prisoner named Josephus who declared that Vespasian would become emperor. Vespasian made no move toward seizing imperial rule, although his troops were ready to follow him and he doubtless paid close attention to events in Italy, where Galba, Nero's successor, was assassinated by Otho, who in turn was defeated by the army of Vitellius in April 69. While still in Judaea with his son Titus, Vespasian was declared emperor by the legions at Alexandria on

July 1, 69 CE. The acclamation was probably stage-managed by Tiberius Julius Alexander, the prefect of Egypt. Two days later Vespasian's troops in Judaea followed the lead set by the legions in Alexandria and hailed him as emperor. Vespasian's allies, Licinius Mucianus the governor of Syria, and Antonius Primus in the Balkan provinces, led armies into Italy to fight the Vitellians. Primus defeated the Vitellians at Cremona in October 69 and besieged Rome.

After the downfall of Vitellius in December 69, the Senate declared Vespasian emperor on December 22. The rebellion in Judaea was left for Titus to subdue as Vespasian headed for Rome to quell any remaining disharmony left by the civil wars. Vespasian accomplished this by discharging soldiers loyal to Vitellius and punishing others but, to maintain balance, he did not indulge his own soldiers.

A successful usurper, Vespasian desired legitimacy and the reputation of a traditional emperor, along the lines established by Augustus. He caused a law to be passed, the *lex de imperio Vespasiani*, preserved in fragments, that conferred on him the traditional powers of the emperor. His relationship with his son Titus was very close as Titus was clearly his designated successor and assistant. Vespasian even conferred the praetorian prefecture on Titus. This, however, angered certain senators who disapproved of dynastic rule. Vespasian thus had to deal with certain Stoics and Cynics, led by Helvidius Priscus, by exiling and executing Helvidius. However, there was a more serious plot to overthrow Vespasian but it was discovered and defeated by Titus in 79 near the end of Vespasian's reign.

Vespasian began a restoration program that began in 70 CE with the rebuilding of the Capitoline Temple, destroyed in the capture of Rome in December 69. Other works include a temple of Peace, a temple to the Deified Claudius, and an amphitheater that was begun by Augustus. Vespasian also began construction on the Colosseum. This extensive building required more efficient taxation and exploitation of unoccupied public land. Vespasian became notorious throughout the empire for his imposition of financial austerity, both imperial and senatorial.

Vespasian's small-town origins were never a source of embarrassment for him. In fact, Vespasian was amused by people who corrected his accent or reworked his ancestry. Vespasian was a rough, honest and blunt man whose competence earned respect from most of the senatorial order as there were few internal conflicts during his reign.

In 73 CE, Vespasian became censor with his son Titus. Vespasian conferred honors on highly distinguished Italians and provincials by elevating them to the Senate, refilling its ranks which had thinned because of the civil wars. Through such patronage, he obtained the loyalty and favor of the new senators. Vespasian also gave Latin rights to all of the towns of Spain and founded many provinces throughout his reign. The focus of strategy shifted to securing the frontiers while keeping the number of legions at 28. Wales was completely brought under Roman rule, which advanced as far as Scotland. While in the western empire, the Germanic frontier was enhanced by creating new roads and forts between the Upper Rhine and the Danube.

Vespasian died on June 23, 79 of illness; his alleged last words were “Alas, I’m becoming a god!” He was deified by his son and successor, Titus. Tacitus speaks highly of Vespasian, the man and emperor. His legacy was the Jewish War and the subsequent peace, advertised on his coinage. With his sons, Titus and Domitian, the Flavian dynasty created a legacy of imperial stability.

Veteran Settlement

The settlement of Roman citizens, who might be veterans, in Latin or Roman colonies during the Republic is distinct from the allotment of land to discharged veterans as a specific reward for service, which is a phenomenon of the late Republic, from Marius through the triumvirs, and early empire. It was discontinued by the late first century CE and replaced by cash payments.

In the mid-Republic, Rome planted colonies (*coloniae*) in newly acquired

territory at least partly as a means of holding down such territories. Cicero later called such colonies *propugnacula imperii*, “bulwarks of empire” (Cicero, *On the Agrarian Law* 2.73). These colonies might be Roman citizen colonies, in which the citizens retained their full rights, though the colonies themselves were self-governing and the citizens were not expected to vote at Rome. In Latin colonies, the colonists did not possess Roman citizen rights.

Roman and Latin colonies may have had some military role. Many male settlers may have been veterans, having served for some time in the Roman army. The settlers in colonies in hostile country were probably expected to defend their new cities, many of which had formidable walls. Many of these Roman citizen colonies were located on the Italian coast and termed *coloniae maritimae*. One of their functions may have been to guard the coast. The locations of Latin colonies in the early fourth century BCE suggest that they were probably sited to intimidate the Samnites during the Samnite Wars.

However, Roman and Latin colonies were not military as such. Especially the physical form and institutions of Roman colonies echoed the city of Rome, with forums, senate houses, basilicas, assembly areas, temples, and other amenities; Roman colony charters from other areas of the empire show that they had magistrates and elections like those at Rome, on a smaller scale. These magistrates (typically two *duoviri*) were responsible for internal administration.

These colonies contrast with the mass viritate (per man) assignments of land to reward discharged veterans in the late Republic and early Principate. These were begun by Marius to reward his soldiers recruited from the landless *capite censi*. Marius allied with the populist tribune of the plebs Lucius Appuleius Saturninus to force through a law authorizing land distributions to his veterans in 103 BCE. Due to Saturninus’ violent methods of popular agitation, Marius dissociated from Saturninus but still obtained more land distributions by popular vote in 100.

To reward his followers, Sulla as dictator passed a law that confiscated land from 18 Italian towns and assigned it to his veterans. These individual distributions planted veterans in towns that already existed, allegedly with the purpose of intimidating the townsfolk in regions that had supported Marius. Pompey also attempted to secure land for his veterans, but met opposition until his alliance with Crassus and Caesar, forming the First

Triumvirate. He obtained land for some of his veterans.

Having observed the hostility to land redistribution in Italy, Caesar as dictator created citizen colonies outside Italy, notably Urso in Spain (where a charter inscription has been found), Carthage, and Corinth. He allegedly settled 80,000 veterans, both Caesarian and Pompeian. After Caesar's death, Octavian was able to call up the Caesarian veterans in Italy to serve in his army (since the maximum length of service in the republican army was 16 years, many were still of fighting age).

The Second Triumvirate (Octavian, Antony, and Lepidus) made extensive confiscations from their enemies and rewarded their veterans with confiscated land, allegedly following the Sullan practice of assigning land in areas that were hostile to the triumvirs *pour encourager les autres*.

The settlement of veterans in colonies and on individual land grants peaked in the Augustan period, declining thereafter. As emperor (27 BCE–14 CE), Augustus faced the problem of demobilizing some 60 legions that had accumulated during the civil wars. He reduced their number to 28 legions by dismissing over 3,00,000 men between 31 and 2 BCE. Instead of making confiscations, Augustus bought land with his own fortune, spending 860 million HS for the mass discharges of 31 BCE and 14 BCE, followed by 400 million HS between 7 and 2 BCE (*Res Gestae Divi Augusti* 16, 28). Augustus also created 28 colonies in Italy and many outside Italy, particularly in the eastern Mediterranean.

To regularize pensions for veterans, Augustus created the *aerarium militare* or “military treasury,” capitalizing it with 170 million HS of his own money (*Res Gestae* 17), and funding it permanently with a five percent tax on inheritances and one percent tax on the sale of slaves. By the time of his death in 14 CE, however, the *aerarium* was experiencing a shortfall, the initial fund being exhausted. Augustus and Tiberius adopted the policy of extending legionary service, so that natural mortality would reduce the number of veterans who claimed pensions. However, this extended service was one of the grievances of the legionaries in the Rhine and Danube mutinies (Tacitus, *Annals* 1.17.2). They also complained that their land grants took the form of marginal land (1.17.3).

During the early empire, more Roman citizen colonies with veterans as colonists were founded, such as Timgad in Numidia and Colchester and Lincoln in Roman Britain. In Nero's reign, veterans were deducted to Tarentum and Antium (Tacitus, *Annals* 14.27.2–3). But Tacitus says that the

veterans did not stay there, preferring to return to the locations where they had served. Because of this factor, it became usual for veteran pensions to be commuted to cash grants, and allotments of land were abandoned. The founding of Roman colonies continued, but not for the purposes of veteran settlement.

Veterans (Status)

During the Republic, legionary veterans were not accorded a special status; recruited from small landowners, when discharged they returned to their farms. The decline in the social and economic status of recruits in the late Republic meant that veterans' benefits became a major issue. Little is known about veterans' special legal status during the Republic; probably it was not different from other Roman citizens.

Imperial Roman soldiers who reached the end of their term of service underwent honorable discharge and became veterans, receiving a substantial financial bonus (the *praemium militiae*) and various legal

privileges, instituted by the emperors in their roles as patrons of the army. These privileges defined veterans' status in imperial Roman society, especially with respect to taxation and criminal penalties. In the Principate, most of these privileges were also accorded to veterans who had been discharged early for medical reasons (*missio causaria*). In the later empire, the greater fiscal and manpower demands of the state meant that veteran privileges were graduated more stringently according to the years that they had served in the army and their records as soldiers. In the middle empire, veterans were a modestly well-off and privileged group. They remained a distinct social group, tending to settle near where they had served, though many merged with local landowners.

The most famous legal privilege for veterans of the Roman army was the right to marry the women with whom they had been cohabiting during service. From the reign of Augustus, serving soldiers were not permitted to contract legal marriages, but documentary sources show that many soldiers cohabited with women whom they regarded as wives. Military diplomas (inscribed bronze tablets) given to praetorian, auxiliary, and fleet veterans state that each veteran is given *conubium* (the right to marry) with the woman with whom he has been living, or any woman whom he takes in marriage afterward, and that the children of this marriage are legitimate and Roman citizens. Hundreds of these diplomas (copies of official documents kept at Rome) have been found. Legionary veterans did not receive diplomas and there is also controversy over whether they received the right of *conubium*; perhaps they were assumed to marry Roman citizen women with whom this would be unnecessary.

Veterans who received *honesta missio*—praetorians after 16 years, legionaries after 20 years (25 years after the late first century CE), auxiliaries after 25 years, fleet soldiers after 26 to 28 years—were granted other legal privileges by the emperors. The emperors thus displayed favor to their soldiers on whom their power depended. The Principate had various forms of taxation, many of which were administered locally at municipal level. Veterans were exempted from most forms of local taxation, including tolls, corvée labor, and poll tax, but not from the fees that they would have to pay if they sought municipal office. The emperors also granted veterans exemptions from other legal obligations, such as guardianship or the assumption of some public offices.

Veterans were also exempted from various exacerbated or degrading

punishments. Criminal law in the Principate stratified into a two-tier system, in which the upper stratum or *honestiores* were exempt from the corporal punishment, hard labor, and exacerbated death penalties to which the *humiliores* (“the more lowly”) were subject. Veterans were among the *honestiores*: they could not be beaten with rods, condemned to hard labor in mines or on roads, or thrown to wild beasts in the arena. Since soldiers in the Roman army were subject to corporal punishment and the death penalty as part of military discipline, their status as veterans markedly improved in this respect.

Veterans who were discharged early from the army for medical reasons (*missio causaria*) might seek reinstatement if they could prove that they were physically fit to serve, attested by at least two physicians and a magistrate. However, there must always have been some soldiers who left the army permanently for medical reasons, whether due to chronic illness or due to permanent disability from combat injuries or occupational accidents. In the Principate, the emperors permitted these veterans with *missio causaria* to enjoy most of the privileges of regular veterans; they received the *praemia militiae* and legal privileges.

In the later empire, from Diocletian and Constantine onward, the state’s increased demands for manpower and fiscal resources meant that tighter controls were placed on veteran privileges. Only those veterans who had served their full term of service (now set at 20 to 24 years) could receive the full complement of privileges. Personnel who had left before completing their full term received lesser privileges on a scale graduated according to length of service. Lesser privileges were also accorded to veterans of the *auxilia* in the Tetrarchic period, and, with the Constantinian reorganization of the army, to veterans of the *limitanei* or border troops. The later Roman army also required the sons of veterans to enter the army in their turn, though this may have been less onerous than it seems because the descendants of veterans had long tended to enter the service voluntarily.

In the Principate, especially from the late first century CE to the early third century, veterans became a modestly well off and privileged social group. Many veterans became local landowners or business owners, though few of them entered careers in municipal politics, which perhaps would require a social and educational background they lacked and which were, in any case, expensive. Veterans tended to settle in the provinces near the frontiers; they preferred not to settle in dedicated veteran colonies, as the

historian Tacitus remarks (*Annals* 14.27). Veterans tended to marry into each other's families. Their sons formed a recruiting pool for low-ranking officers. In this way the Roman army afforded intergenerational social mobility as well as direct social ascent for talented soldiers.

Victoria (Goddess)

Victoria was the Roman goddess or personification of Victory, the equivalent of the Greek goddess Nike. Victoria is conventionally depicted as a winged female figure. She appears in Roman triumphal art and coinage, often bearing a wreath or crowning the victorious general or emperor. For instance, on Trajan's Column scene 78, Victoria inscribes a record of Trajan's conquests on a shield.

Other personifications in triumphal art might be female, such as Nox (Night) who appears in a scene (no. 38) on Trajan's Column depicting a nighttime exploit where the Romans ambushed the Dacians. The personifications of conquered regions and peoples were also often female (typically, a woman in native dress), as were representative captives, such as the native women being taken prisoner by Roman soldiers on the Column of Marcus Aurelius. The cultural significance of these symbolic women is

thought-provoking, given that the Romans excluded actual women from military service.

Victory

Victory was central to Roman warfare and imperialism, structuring elite values and careers and the public image of the emperors. It was also a value shared by the Roman population, a remarkably high proportion of which served in the army in the last two or three centuries of the Republic.

During the Republic, Roman consuls and praetors (also consular tribunes during the relevant period) were military commanders, as were the prorogued magistrates (*pro consule*, *pro praetore*) usually translated “governors.” They sought victories to further their careers and bring fame (*laus* or *gloria*) to their names and their families. Victory demonstrated a commander’s *virtus* (his courage, prowess, or manliness). If a commander’s victory was significant enough, the Senate might award him a triumph, the height of his career and which ensured him an entry in the triumphal *fasti*, the inscribed lists of triumphant generals and their victories. It is likely that soldiers identified with their generals’ victories; the third-century BCE Latin dramatist Plautus created a play termed *Miles Gloriosus*, or “boastful soldier,” after its chief character.

Victory also brought material benefit to Roman generals, their soldiers, and the public. Successful campaigns brought home plunder, in the form of gold and silver, art objects, other movable goods, and slaves. The sale of the slaves yielded more money. Generals gave donatives, cash gifts, to their soldiers after a victory and at triumphs. The triumphing general was expected to spend lavishly on the triumphal procession and associated festivities. Individual Roman aristocrats made more permanent use of plunder to build first temples and shrines to gods, later public amenities

such as forums. In such public places, statues and historical reliefs reminded viewers of the victories that had enabled their creation. With the resources of an empire at their disposal, the Roman emperors expanded this conversion of victory into architecture and memorial art. The Forum of Augustus, the Temple of Mars Ultor, the Arch of Titus, the Forum of Trajan and Trajan's Column, and the Column of Marcus Aurelius are the best known of these monuments. The proceeds of victorious warfare were also redistributed on games (chariot races, gladiatorial, and beast shows), baths, and free rations for the poor.

Though victory over foreign enemies was an indisputable good, the right of individual commanders to celebrate their victories with triumphs was hotly contested during the classical Republic. The Roman nobility was jealous and competitive; at this time, individual senators were not encouraged to aggrandize themselves over their peers. The Senate could evaluate an individual general's victory and grant or deny him a triumph, based on the enemy body count and other criteria.

In the late Republic and in the empire, victory in civil war was regarded with greater ambivalence. At best, the victor was praised for restoring peace and justice, for typical civil war propaganda depicted his rivals as cruel and unjust. If the victor could display clemency toward his defeated rivals, so much the better. It was preferable for the victor to begin an aggressive external campaign that would bring victory over external enemies. In his last year, Caesar is said to have planned a campaign against Persia, but he was assassinated before he could begin. Augustus followed up his victory over Mark Antony with the conquest of Illyricum and parts of Germany.

The emperors emphasized their role as victors. They might not campaign in person, but nonetheless their public images often presented them as warriors, wearing military dress or personally subjugating barbarians. A common coin motif depicts the emperor standing with one foot on the head of a barbarian. Imperial victories were advertised through imperial titles such as Germanicus (Conqueror of Germany), Britannicus (Conqueror of Britain, adopted by Claudius I, Septimius Severus, and Caracalla) and Parthicus (Conqueror of Persia). The title *Parthicus* was an exaggeration, as the boundary between the two empires fluctuated but Rome could never be said to have "conquered" the Persian Empire. Nonetheless, the importance of victory required that Roman generals and emperors attempt to defeat Persia to erase previous humiliating defeats (the defeat of Marcus Crassus at

Carrhae, 53 BCE; the defeat and capture of the emperor Valerian, 260 CE). In the third century CE and later, imperial titles expanded to add *maximus* (greatest) as in Parthicus Maximus, and even *invictus* (unconquerable).

As this description shows, the quest for victory motivated many republican generals' and emperors' strategic planning, often regardless of cost/benefit analysis. By the early first century CE, the material benefits of further conquests were doubtful. The conquest of the wealthy Hellenistic eastern Mediterranean had brought untold riches, and even the conquest of relatively primitive Gaul had brought great wealth (not least from the sale of slaves; Caesar's wars were said to have killed one million Gauls and taken one million captive). The conquest of Germany or Britain seemed less profitable. Trajan's conquest of Dacia luckily brought with it the gold of Dacia, both King Decebalus' treasure and the mines in the Carpathian Mountains. The conquest of Judaea also brought great wealth for Rome. Nevertheless, emperors and their generals continued to pursue victory, an ideology that grew more important in the late second century CE onward as the external threats to the Roman Empire grew.

Vigiles

The *vigiles* were Rome's fire brigade, recruited at least originally from freedmen and charged with preventing the spread of fires in the crowded megalopolis of imperial Rome. Before Augustus' reign, Rome had no permanent fire brigade. Fire was common in the city, especially in *insulae*, multiple-storied apartment blocks. Notoriously, Crassus (a member of the First Triumvirate) maintained a private fire-fighting force of 500 slaves. When a building was threatened by fire, he offered to buy it from the owners; only if the owner accepted would Crassus allow his fire brigade to suppress the fire by destroying the building (Plutarch, *Crassus* 2). Marcus Egnatius Rufus, aedile for 21 BCE, gained more popularity by organizing a fire brigade from his own slaves (Dio 53.24). Disapproving of Rufus' popularity, Augustus then provided the aediles (the magistrates responsible for public amenities and order) 600 slaves to fight fires (Dio 54.2).

In 6 CE Augustus organized a fire brigade of freedmen on a permanent basis. Their organization is associated with Augustus' partition of the city of Rome into 14 *regiones* and 265 wards in 7 BCE, making the magistrates of each ward (usually freedmen) responsible for firefighting. The *vigiles* were 7,000 men strong, organized in cohorts of 1,000 men. Each cohort was responsible for two *regiones*. The commander of the *vigiles*, the *praefectus vigilum*, was an equestrian. He also had jurisdiction in minor criminal cases, so it is thought that the *vigiles* also served as a police force, though this is uncertain. The *vigiles* may not always have been recruited from freedmen after the early empire.

The tactics of firefighting in imperial Rome relied on demolishing buildings to make fire breaks and prevent the spread of fire, though the *vigiles* also used bucket brigades and a rudimentary water-pumping engine. Despite the efforts of the *vigiles*, the Great Fire of 64 CE in the reign of Nero burned a large part of the city.

Vindolanda

The Roman military fort at Vindolanda was established in ca. 85 CE and occupied into at least the fifth century CE. It was originally part of the military consolidation of northern Britain along the Tyne-Solway isthmus after Agricola's campaigns to the north. Vindolanda was part of the earliest frontier here, a fortified road between modern Corbridge and Carlisle with forts monitoring activity in the area. The first fort at Vindolanda was a timber construction for a quingenary (500-man) auxiliary unit of Tungrian troops raised in northern Gaul. The site has four periods of pre-Hadrianic occupation, all of which were forts of varying sizes built in timber. The Period 4 fort, ca. 105–120 CE and leading up to the construction of Hadrian's Wall, was a very substantial oak construction, and some evidence points toward the occupation of more than one unit at this time, perhaps part of preparation for the massive construction to the north.

Wooden writing tablets from Vindolanda (ca. 100 CE). This particular document

depicts the Britons as "nude" (unarmored) horsemen, fighting without swords, and as "nasty little Britons" (*Brittunculi*). This description of the enemy may have been a Roman intelligence report. *Tab. Vind.* II 164, early second century CE, located in the British Museum, London, United Kingdom. (The Trustees of the British Museum/Art Resource, NY)

An inscription found at Vindolanda for Titus Annius who died in combat is one piece of evidence that may show the volatility in the area leading up to the construction of Hadrian's Wall. Vindolanda remained in use throughout the shifting occupation of the area in the mid-second century, at which point the first of three stone forts was constructed. The site played a part in the movements of Septimius Severus to the north into Scotland in the early third century, with an unusually small fort equipped primarily with barracks and workshops, and an extensive ditch suggesting heightened defense at this time. The last fort was built in 213 CE and remained occupied with additions and alterations to the end of Roman Britain and later. One of the most notable finds at Vindolanda is extensive letters and documents written on thin wood tablets, preserved in bog-like conditions.

Virgil (70–19 BCE)

Publius Virgilius Marois the author of the *Eclogues*, the *Georgics*, and the *Aeneid*, the latter of which became the national epic almost immediately upon publication, for which Virgil is thought by many to be the greatest Roman poet.

Virgil (or Vergil) was born near Mantua in the suburbs of Andes on October 15, 70 BCE. Our knowledge of Virgil's life comes from the commentators Donatus and Servius and a brief biography by Suetonius, whose lost sources including Varius Rufus. Mantua escaped the earlier ravages of civil war during Virgil's early upbringing. Quintilius Varus Cremonensis sponsored his education in Cremona—Greek and possibly some knowledge of Etruscan. The influence of Lucretius' Epicureanism with the desire to escape from the anxiety and danger of war and politics in favor of tranquility and peace of mind permeates much of Virgil's work. As an adult, Virgil benefited from the patronage of Asinius Pollio, a general of Caesar and patron of the arts, but was later lured away by Maecenas, when Virgil's literary talent became widely known from lesser works.

Virgil's *Eclogues* ("Chosen Poems," also called the *Bucolics*) serve as a Roman version of Theocritus' *Idylls*. The *Eclogues* react to the chaos and violence of the Roman world in the 40s BCE by praising and preferring a life removed from the dangerous, urban world of power politics in favor of a rustic world of agriculture, ranching, and simple pleasures. The most famous of them, the *Fourth Eclogue*, predicts a great leader to be born ca. 39 BCE who will bring peace and justice to the world. Many scholars believe that Virgil was predicting a yet-unborn son of Mark Antony and Octavia, but they had two daughters.

The *Georgics* ("On Farming") also praise the rural life (Virgil's *dolce vita*), following the style of the archaic Greek poet, Hesiod. Like the *Works and Days*, the *Georgics* serves as a farmer's almanac and tells how to cultivate bees. After the publication of the *Georgics*, Augustus encouraged Virgil to write an epic about Rome, Horace having declined the project.

The original opening of the *Aeneid* well illustrates Virgil's complete *volte-face* from the poetry of the rural Italy to the theme of war, civil war, and empire. With this poetic transformation Virgil revived epic in a distinctly new Roman style, far beyond what Lucretius had done with allusions, interplay, adaptations, sequels, and corrections to the Homeric epic cycle. Furthermore, although the *Aeneid* occurs in the remote mythological past of over 1,000 years earlier, it frequently alludes to historical events from the lifetime of the audience and to mythology outside the Aeneas theme (Daedalus carving the doors of the Sibyl, for example). The *Aeneid* is justifiably the masterpiece of Roman literature because it invokes themes and events that reverberated with the Romans for

generation after generation, long beyond Virgil's lifetime, such as survival, self-sacrifice, utilitarianism, tyranny, and justice run awry. Although the *Aeneid's* chief theme is the glorious founding of the Roman people after the Fall of Troy, Virgil repeatedly details the hardships of the Trojan refugees, striving to reach their new home through numerous privations and dangers. Virgil addresses formerly one-sided themes such as betrayal, treachery, the conflict of duty and desire, and false hope, even arousing sympathy for the defeated or wrongdoers. Virgil emphasizes the destructive nature of war, no matter how justified. Virgil drew from personal experience, for his family farm had been confiscated and handed to a veteran of the civil wars. Eventually, through the intervention of Maecenas (or possibly Asinius Pollio), the farm was returned, but after this experience, Virgil shunned a military or political career.

To complete his research, Virgil returned to Greece in 20 BCE, subsequently joining Augustus on the latter's return from the eastern empire. On the voyage home, Virgil fell ill and upon landing in Italy, died on September 21, 19 BCE in Brundisium. His famous epitaph read "Mantua gave birth to me, the Calabrians took me, now Naples holds me. I sang of pastures, the countryside, and commanders." The so-called Tomb of Virgil has been discovered in the Parco di Virgilio in Piedigrotta, near the Mergellina harbor of old Naples in the direction of Pozzuoli.

In the Middle Ages, Christians believed that Virgil was divinely inspired to prophesy of the birth of Christ. They considered Virgil a pagan sage and the foremost Roman poet. Virgil's elevated status and the events in *Aeneid* 6 made him the logical choice for Dante to guide the poet through the Inferno and into Purgatory in *The Divine Comedy*.

Viriathus (d. 139 BCE)

Viriathus (also spelled Viriatus) was a notable opponent of the Romans during the 140s BCE, when he led the Lusitanians and other tribes in the Iberian peninsula (*Hispania*, today Spain and Portugal, where he is considered a national hero). He survived a treacherous Roman massacre of his people in 150 BCE, and went on to use guerrilla tactics to defeat a number of Roman generals. The Senate and people of Rome ratified a peace treaty with him in 141–140, but ficklely reopened hostilities the next year. The Roman commander Gnaeus Servilius Caepio then finally eliminated Viriathus not by arms but by treachery, bribing insiders to assassinate him in 139 BCE. By this point Viriathus had helped stir up the Celtiberian tribes, who would keep their Roman opponents occupied for most of the decade as the main bulwark against Roman expansion.

Viriathus' career highlights Rome's dark record in their lengthy, difficult conquest of Hispania. His appearance in a diverse array of sources shows the deep impact he had on Roman memory. Historians Velleius Paterculus (2.1) and Cassius Dio (22.73) saw him as the quintessential bandit-king; despite his mean origins, they admired his robust physical bravery and mental acuity. Frontinus mined Viriathus' maneuvers to teach his readers stratagems (*Stratagems* 2.5.7, 13.4, 3.10.6, 11.4). Cicero mused on the philosophical meaning of Viriathus' relative success (*On Duties* 2.40), as did Ammianus Marcellinus (14.11.33) over 500 years after the death of this memorable Roman enemy.

Virtus, or “manliness/courage,” was an important value in Roman military culture. It derives from the Latin *vir*, “man” or “male,” so that *virtus* in its oldest sense signifies “manliness.” In the traditional Republic, *virtus* also signified courage or prowess in battle. A Roman soldier showed great *virtus* if he fought the enemy boldly and killed many of them, risking his own life, or if he also risked his own life to save fellow citizens in combat. Roman aristocrats were expected to fight in combat in the early Republic (509–264 BCE) and middle Republic (264–146). Many of them died in the Republic’s bloodiest wars such as the Second Punic War (218–201 BCE). Displaying *virtus* in combat, rather than unconditional military success, brought Roman aristocrats prestige, fame, and elections in the race for office. *Virtus* was also rewarded in ordinary soldiers, who received military decorations for brave exploits.

However, modern scholars have devoted more attention to shifts in the semantic and cultural meaning of *virtus* in the last two centuries of the Republic. Its parallel Greek term, *arete*, originally denoted the excellence of the victor in battle or in athletic contests, but came to connote any form of excellence. Similarly, *virtus* may have expanded in scope to mean any excellence or “virtue,” especially in the plural, *virtutes*. This shift occurred in the late Republic as Latin literature developed and became more sophisticated, incorporating Greek philosophical concepts and technical disciplines (McDonnell 2006).

It is possible that with this expansion of *virtus* into other activities, the Roman elite became less focused on military participation as the route to manliness. Cicero allegedly boasted, “Let arms yield to the toga” of the orator (Cicero, *On Duties* 1.77). However, this passage is often taken out of context; as governor of Cilicia, Cicero also boasted of his siege of Pindenissum and sought a triumph from the Senate. The civil warfare of the late Republic also left bitter memories. Many civil war leaders and followers had displayed great military *virtus* (in the sense of courage or prowess) in the process of destroying the Republic, a far from virtuous goal. In the *Conspiracy of Catiline*, the late first-century BCE historian Sallust emphasizes the martial *virtus* and courage of Catiline, who attempted to overthrow the state. The mid-first-century CE poet Lucan in his *Pharsalia*, an epic poem on the civil war of Caesar and Pompey, emphasizes a similar paradox.

Though he had risen to power through conquest, Augustus chose to stress moral *virtus*. The *clipeus virtutis* or “Shield of Virtue” of Augustus depicted four moral virtues that spoke more of his aspirations and public image as emperor than of his role as a conqueror. Furthermore Augustus imposed at least a partial demilitarization on the senatorial order. Young senatorial aristocrats served as laticlavian tribunes, but the number of senators who pursued significant long-term military careers is small. Equestrian officers, lower in status than senators, were more likely to display military *virtus*.

The senatorial historian Tacitus disapproves of this demilitarization. However, Tacitus did not endorse its alternative, civil warfare and usurpation. He also depicts *virtus* in civilian resistance to unjust emperors, in which some Roman aristocrats were sentenced to political suicide and displayed great courage in taking their own lives.

In a military context, the technical sense of *virtus* as prowess in combat was not abandoned. During the Principate’s intervals of peace, *virtus* may have undergone expansion to refer to the efforts of the emperor as commander, toiling besides his soldiers, or the muscular power (in Latin *vis*, plural *vires*) of soldiers erecting fortifications. When the crisis of the empire arrived in the mid-third century, imperial coins advertised the *virtus Illyrici* or prowess of the Illyrian armies who reconquered the empire.

Vitellius (Emperor) (69 CE)

Born in 15 CE, Aulus Vitellius, governor of Lower Germany in 68, was acclaimed emperor by his troops and by the legions of Upper Germany on January 2–3, 69. He was emperor for less than a year. His legates, Aulus Caecina and Fabius Valens, advanced into north Italy and defeated the army of Marcus Salvius Otho in the First Battle of Bedriacum on April 14, 69. Otho committed suicide shortly thereafter, leaving Vitellius as emperor in Italy. Vitellius was then faced with the revolt of Vespasian in the eastern empire in July 69. He made some preparations to resist the Flavian army, but overall was an ineffectual leader. His army was defeated in the Second Battle of Bedriacum (October 69) near Cremona. The Flavians advanced on Rome; Flavian supporters within the city of Rome occupied the Capitol and fought the Vitellians within the city. As the main Flavian army neared Rome, on December 20, Vitellius attempted flight and was lynched by the Roman *plebs urbana*.

Aulus Vitellius was notable mainly for his father, Lucius Vitellius, who had courted and retained the favor of Tiberius, Gaius, and Claudius. On the strength of this distinguished ancestry, Aulus Vitellius held a consulship in 48, then governorship of Africa. As governor of Lower Germany in 68, Vitellius was open-handed and generous, bestowing favors on many, and thus contrasted favorably with the parsimonious, harsh Galba. The soldiers of Upper Germany stoned Galba's images at the annual oath to the emperor on New Year's Day, and both Upper and Lower Germany acclaimed Vitellius as emperor seemingly spontaneously, though Tacitus depicts Aulus Caecina and Fabius Valens as exerting influence.

Vitellius' legates Aulus Caecina and Fabius Valens were energetic, unscrupulous leaders. They advanced rapidly through Gaul and northern Italy, failing to maintain order in their armies (legionaries quarreled with auxiliaries), and plundering the countryside and several local communities. This may not have been merely anti-Vitellian propaganda, as Tacitus depicts the Flavian army led by Antonius Primus, Vespasian's general, as behaving similarly.

Caecina and Valens entered Italy by different routes, but joined up near

Cremona and decisively defeated the Othonians in the First Battle of Bedriacum on April 14. Otho committed suicide at dawn on April 16, leaving Vitellius emperor. Vitellius was accepted by the Roman Senate and people. The Vitellian soldiers were lodged in private houses in Rome and their riotous behavior alienated the city residents.

In the pro-Flavian sources, Vitellius has the reputation of a glutton and a spendthrift, squandering 900 million sesterces on banquets during the year of his reign (Tacitus, *Histories* 2.95). Beneath the invective, Vitellius appears to have adopted the rule of a lavish patron and perpetual *triumphator*, progressing through Italy in the manner of a victor. In conventional Roman ideology, a general should not indulge in triumphal celebrations before he wins a decisive victory. As patron to his soldiers, Vitellius granted generous leave and reinstated personnel who had been demoted in rank; he failed to restrain the soldiers' disorder, drunkenness, and violence. This representation of Vitellius is colored by Flavian propaganda, especially since Vespasian as emperor emphasized parsimony, restored military discipline, and sought to restore the finances of the empire. Nonetheless, the invective emphasizes Vitellius' failure as a leader, retreating into a drunken stupor rather than lead his civil war against the Flavians.

Vespasian revolted from Vitellius in July of 69. He remained at Alexandria to blockade grain shipments to Rome, while his supporter, Licinius Mucianus, the governor of Syria, marched his legions eastward through the Danubian provinces. Antonius Primus, legate of Legio VII Gemina, supported Vespasian and was able to invade Italy first, leading the Danubian legions, and fought and defeated the Vitellians in the Second Battle of Bedriacum (October 69), near Cremona. After their victory, the Flavian army sacked Cremona, enslaving, raping, and killing the civilian inhabitants. Aulus Caecina's troops surrendered to Antonius Primus, diminishing the forces available to Vitellius.

Vitellius prepared for the defense of Rome by blockading the descent from the Apennine passes, but his forces were further diminished by his brother Lucius Vitellius' suppression of the Misene fleet's mutiny. Vitellius attempted to abdicate, but was prevented by his praetorians and the crowd in Rome. Flavian supporters, led by Vespasian's brother Flavius Sabinus, then city prefect, occupied the Capitoline Hill. They were besieged by the Vitellians in Rome; the Capitoline Temple of Jupiter was destroyed by fire. Vitellians and Flavians fought throughout the city. On December 20,

Vitellius, despite his attempts to hide and escape, was discovered by the Roman mob, publicly humiliated, and killed. He left a six-year-old son, allegedly assassinated by Licinius Mucianus. Mucianus entered the city shortly after Vitellius' death and established order. Vespasian himself did not reach Rome until later in 70.

The sources for the life of Vitellius are Tacitus' *Histories*, Suetonius' *Vitellius*, and Cassius Dio's *Roman History*. Suetonius emphasizes Vitellius' vulgarity and cruelty. Tacitus presents a more nuanced characterization of an essentially passive man whose genial temperament was insufficient to make him an effective leader; he was unable to restrain his officers or troops and thus was passively responsible for much of the destructiveness of the civil war.

W

War Crimes

The modern definition of war crimes is based on international law and upheld by international nongovernmental organizations such as the United Nations. No such organizations existed in classical antiquity, and common law, *ius gentium*, was ill-defined and accepted the enslavement of captives, a practice of many peoples in the classical world. The Romans perpetrated many actions that today would be considered genocidal, killing, and enslaving conquered peoples on a large scale. Nonetheless, the Romans did develop a concept of war crimes, focused on the breaking of treaties, mistreating citizens and allies, military incompetence and cowardice, aiding the enemy, and fighting without authorization. The prosecution of such crimes was sporadic and depended on individual initiative. In the Republic, prosecution of a commander for “war crimes” was frequently a tactic of political rivals. The Senate might also prosecute the unauthorized actions of commanders. In the empire, the emperor monitored the actions of his commanders, and “war crimes” were most likely to arise in civil war or against barbarians.

In the traditional Republic, a Roman magistrate (consul, praetor, or promagistrate) originally had unrestricted *imperium militiae* and could take whatever actions he saw fit as a military commander. Nonetheless, his *imperium* was restrained by the Roman concept of *fides* (loyalty, good faith). When enemy communities formally surrendered (*editio in fidem*), they entered Roman *fides*, establishing mutual obligations: the Romans would provide protection to their new allies or subjects, who owed loyalty in return. A Roman commander could be prosecuted for violating this treaty-relationship and killing or enslaving the surrendered community. In

189 BCE the Rhodians appealed to Cato the Elder as their patron, and Cato advocated against the abuse of allies (Livy 37.54.15–17; compare Polybius 21.23.4–9). As governor of Gaul, Lucius Quinctius Flamininus beheaded a prisoner (in some accounts a hostage) at his banquet table to gratify a prostitute. As censor in 184 BCE, Cato expelled Lucius from the Senate (Seneca, *Controversiae* 9.2.25; Livy 39.42.5–43.1; Plutarch, *Cato Maior* 17, *Flamininus* 18.7–19.4).

In 173 BCE Marcus Popilius Laenas accepted the *deditio in fidem* of the Statellati, a Ligurian people (in the modern Italian Riviera). He then destroyed their towns and sold 10,000 Ligurians as slaves. The Senate condemned his cruelty and freed the Ligurians (Livy 42.8.1–9.6, 21–22). In the Third Macedonian War, Roman commanders inflicted similar abuses on the Greeks ([Livy] *Periochae* 43.4.8–11, 7.10–8.1). Greek communities complained, and the commanders were prosecuted. In the Spanish Wars in the 150s BCE, Servius Sulpicius Galba, praetor in 149 BCE, accepted the *deditio* of the Lusitanians and then enslaved or killed 30,000 Lusitanians (Livy 43.21.1–12; [Livy] *Periochae* 49; Appian, *Spanish Wars* 60; Suetonius, *Galba* 3.2).

However, the Romans also severely punished breaches of *fides* by allies or subjects. The Romans punished the Campanian Revolt harshly (214–211 BCE). After the battle of Pydna (168 BCE), Aemilius Paullus sacked 70 cities in Epirus and allegedly enslaved 150,000 Epirotes for supporting Perseus in the Third Macedonian War. In the Social War (91–87 BCE), Sulla targeted the Samnites for supporting the Marian cause, massacring 8,000 Samnites after the battle of the Colline Gate and killing more at Praeneste and Antemnae ([Livy] *Periochae* 88; Plutarch, *Sulla* 29–30; Appian, *Civil Wars* 1.93–95, 4.28–29).

A commander might also be tried for cruel treatment of fellow Romans, as was Quintus Pleminius, the Roman commander who occupied Locri in southern Italy during the Second Punic War (205 BCE). Pleminius' troops sacked Locri brutally. His military tribunes attempted to check them, and Pleminius' soldiers mutinied against the tribunes. Pleminius had the tribunes arrested and flogged. The tribunes' men attacked Pleminius and cut off his ears and nose. Scipio Africanus arrived and restored Pleminius' command, ordering the tribunes to be sent to Rome for trial. As soon as Scipio left, Pleminius seized the tribunes and tortured them to death. At the urging of Locrian envoys, the Senate sent a 10-man commission to Locri to

investigate both Scipio (Pleminius' superior) and Pleminius. Scipio exonerated himself. Pleminius ran away (accounts differ slightly) and was caught, imprisoned at Rome, and died in prison (Livy 29.7–9, 16–22; Diodorus Siculus 27.4).

However, severe military discipline was not usually regarded as criminal, depending on the cause and the credibility of the commander who inflicted it. A commander would be regarded as at fault who pursued a personal vendetta or who exceeded standards of punishment for free Romans, as did Pleminius.

A commander could be prosecuted for military incompetence (losing an engagement). In the First Punic War, Publius Claudius Pulcher was prosecuted for losing the Roman fleet at Drepana and also with impiety for drowning the sacred chickens. The Romans sought favorable omens before battle by offering grain to sacred chickens and observing how eagerly they fed. The chickens in this instance refused to eat and Pulcher became angry and threw them into the sea, saying "If they will not eat, then let them drink!" (Cicero, *De natural deorum* 2.7) Fulvius Flaccus was prosecuted in the assembly after his disgraceful defeat in the Second Punic War (Livy 26.1–3). He fled into exile before the verdict was given. The defeat of Arausio (105 BCE) motivated the tribune of the plebs Gaius Appuleius Saturninus to prosecute the consuls of 106 and 105, Quintus Servilius Caepio and Gaius Mallius Maximus, for military incompetence. The consul Mallius was immune from prosecution, but Caepio was convicted and exiled ([Livy] *Periochae* 67; Cicero, *Rhetorica ad Herennium* 124).

A commander could be prosecuted for cowardice. Gaius Plautus, governor of Spain in 146 BCE, lost four legions but survived the defeat by running away; he was prosecuted by the Senate (Appian, *Spanish Wars* 64; [Livy] *Periochae* 52). Gaius Popilius Laenas was prosecuted in 106 BCE for surrendering to the enemy (Cicero, *De inventione* 2.72–3, *Laws* 3.30, *Rhetorica ad Herennium* 1.25, 4.34). In the Spanish Wars, Gaius Hostilius Mancinus surrendered his army to the Numantines and made a treaty with them which the Senate rejected, trying Mancinus and giving him up to the Numantines (Appian, *Spanish Wars* 80; [Livy] *Periochae* 55).

Since the Senate authorized the *provinciae* of magistrates, restricting the *imperium* of promagistrates to these regions, a commander or governor who exceeded the boundaries of his *provincia* (for example, making war beyond its borders) also committed a war crime, ratified by a law of Sulla the

dictator, the *lex Cornelia de maiestate*. Aulus Gabinius was prosecuted for invading Egypt and restoring the Ptolemaic king to his throne without Senate authorization; because Ptolemy rewarded Gabinius with 10,000 talents, Gabinius was prosecuted for extortion and forced to surrender the money (Dio 39.55.5–6). The Senate prosecuted Marius Primus, governor of Macedonia, for making war without its authorization (Dio 54.3.3).

Commanders might be accused of treason for aiding the enemy. The emperor Tiberius accused Vibius Serenus and Gaius Silius, legate of Upper Germany, of abetting the revolt of Sacrovir in Gaul (24 CE) (Tacitus, *Annals* 4.13, 18–20; Dio 57.24.8). In the Principate, commanders and governors might be prosecuted for sedition against the emperor or his family; the most famous case is that of Gnaeus Calpurnius Piso in 20 CE, accused of murdering Germanicus, Tiberius' putative heir, and of attempted revolt (*SC de Cn. Pisone patre*; Tacitus, *Annals* 2.55). "Civilian" treason cases are not discussed here.

The most frequently prosecuted "war crime" was extortion of money, goods, or services from provincials. This began to be criminalized in the period of Rome's wars with the Hellenistic world; formerly, looting and plundering had been accepted, and extortion was more common in active war when troops needed to be raised, supplied, and paid on the spot. In the Second Punic War, Marcus Claudius Marcellus' sack of Syracuse was criticized. In 187–184, the Scipios (Africanus and his brother Lucius) were prosecuted for alleged embezzlement of monies during the war with Antiochus III. As in many of these cases the trial was political in nature, instigated by the rivals of the Scipios.

Extortion trials are attested in the 170s, when a board of senatorial *recuperatores* was established. The *Lex Calpurnia de repetundis* established a *quaestio de repetundis* or standing criminal court on extortion in 149 BCE. The ambit of the *quaestio de repetundis* was revised and extended by many subsequent laws to include other abuses that were not strictly pecuniary, overlapping with the development of a law on *maiestas* (treason). Extortion and other war crimes might be construed as "diminishing the majesty (*maiestas minuta*) of the Roman people." As the *provinciae* of Roman commanders developed into geographically bounded regions to be governed rather than conquered, extortion became more unacceptable and was discouraged as a cause of revolt. The *Lex Calpurnia de repetundis* did not specify positive rules, but subsequent more specific laws pertaining to

individual provinces, such as the *lex de provinciis praetoriis*, pertaining to Asia and Macedonia, did so.

Civil war brought new scope for “war crimes” (see “proscriptions”), justifying the conflict. In his account of the civil war, Caesar emphasizes the cruelty of Pompeian commanders toward their soldiers, such as Marcus Petreius who punished the fraternization of his men with the Caesarians in Spain after the battle of Ilerda, or Marcus Calpurnius Bibulus who captured Caesarian transport ships that were crossing the Adriatic and burned the ships together with their crews (Caesar, *Civil War* 3.16.3). Most of the accounts of “war crimes” in the imperial era are during civil wars (see “War of Four Emperors”). Outside civil war, the emperors determined the scope of senatorial commanders’ military actions and also monitored abuses by governors and their subordinates.

War Dead

The burial or other disposal of the war dead (Romans and enemies) is sharply differentiated between foreign wars and civil war or violent civil conflict. In foreign wars, the Roman war dead probably received cremation

or burial at the battlefield, but individual families were allowed to take home the ashes for funerary rites. Victory monuments tended to celebrate victory rather than focus on the war dead. In contrast, in civil war and other violent civil conflicts, the victims went unburied and were even desecrated.

Greek tradition emphasized providing rites for the dead after battle. Homer depicts the combatants pausing during the Trojan War to recover their dead and give them funerary rites. In contrast, the Roman disposal of their war dead after battle is surprisingly poorly attested; Roman casualties were often relatively low, and Roman memorialization of war tended to focus on victory (below). However, Roman culture honored the individual dead, whose families revered them as the *Di Manes*, deified spirits. Hence it is likely that after the burning of the Roman dead, as was the custom in the Republic and early empire, families were allowed to take home family members' ashes, as Agrippina did with Germanicus (who died in Syria not in battle but from alleged murder). Only if the battle resulted in such great losses that few or no personnel remained on-site to care for the dead, as at Cannae or the Varian disaster (9 CE) would the bodies go unburied. In 15 CE, Germanicus visited the site of the Varian disaster and buried the Roman remains (Tacitus, *Annals* 1.61–2).

Roman public institutions that memorialized war included *tropaea*, funerary processions and *elogia*, triumphal processions, and victory monuments. Only *tropaea*, originally a Greek custom, might be erected at the battle site, and in fact the Romans erected most monuments distant from the actual battle sites. A monument near Adamklissi in Dacia (Romania), *CIL* III 14214 = *ILS* 9107, lists over 3,000 names of soldiers who died in the Dacian Wars. It is unusual in memorializing the war dead as individuals. Most other forms of war monuments were located at Rome. In contrast with Athenian funerary orations for the collective war dead, Roman funerary processions and orations were held for individual Roman aristocrats and glorified family lineages and their military deeds. Triumphal processions also emphasized Roman victory rather than death, as did triumphal monuments (arches, the Column of Trajan, et cetera). The only cultural form that emphasized Roman deaths was historiography, narrating important battles, including historic defeats such as the battle of Cannae (216 BCE), dramatizing notable deaths, and listing the number of casualties. Most private funerary monuments of military personnel do not mention

death in combat.

On the other hand, in civil wars, the bodies of the dead went unburied as a stark symbol of the horrors of civil war. Cicero tries to present the unburied dead at the battles of Philippi (42 BCE) in a more positive light: to be unburied “when incurred for one’s country, is not accounted miserable” (Cicero, *Philippics* 14.34). However, the imagery of the unburied dead more usually emphasizes the horror of civil warfare. Vitellius himself visited the site of the First Battle of Bedriacum, 40 days after the battle, to find it littered with unburied bodies of men and horses (Tacitus, *Histories* 2.70). Instead of showing respect, Vitellius gloated that “only one thing smells sweeter than a dead enemy, and that’s a dead citizen” (Suetonius, *Vitellius* 10.3). The Flavians were no better, plundering the bodies of their enemies after the Second Battle of Bedriacum (Tacitus, *Histories* 3.17).

In violent civil conflicts (proscriptions, lynchings, usurpations), the bodies of victims were often desecrated and went unburied. The bodies of Tiberius Gracchus (d. 133 BCE) and Gaius Gracchus (d. 121 BCE) and their followers went unburied and thrown into the River Tiber. In the Marian-Sullan conflict, the Marians killed many Sullans and left their bodies unburied; the Sullans took their revenge in the proscriptions (82–81 BCE), prohibiting the victims to be buried or mourned. The heads of the proscribed were often decapitated to claim rewards. A similar fate met the victims of the triumviral proscriptions in 43–42 BCE. Cicero’s head and hands were cut off, nailed to the Rostra (the speaker’s platform in the Roman Forum), and gloated over by Antony, one of Cicero’s worst enemies. Many of the bodies of the proscribed were thrown into sewers or the Tiber. In the violent assassination of Galba (69 CE), Galba’s head was cut off and paraded on a pole; Otho, Galba’s usurper, handed over the head and body to the riff-raff to mock (Suetonius, *Galba* 20). In the Severan conflicts, the corpse of the deposed Elagabalus was thrown into a sewer (222 CE).

The bodies of those who succumbed to accusation of *maiestas* (treason) in the Principate were also desecrated. The body of Lucius Aelius Sejanus, Tiberius’ unpopular praetorian prefect, was thrown down the Gemonian Steps in Rome and left unburied. Such mistreatment of the dead was part of *damnatio memoriae*, the comprehensive erasure of the victims’ reputation and history; their descendants were forbidden to mourn them.

Suicide by the losing generals and officers in civil war was regarded as preserving their heroism and honor, sparing their bodies from mistreatment.

Famous such suicides included Cato the Younger, Brutus and Cassius, and Otho (emperor in 69 CE). Suicide by aristocrats who were accused of or condemned for *maiestas* (treason) ensured that they would receive normal burial and mourning and that their property would pass to their heirs, maintaining family continuity.

War of Four Emperors (69 CE), Causes

The War of Four Emperors (69 CE) was the first major civil war during the Principate, involving Spain, the Rhineland and Gaul, the Danube, and the east, though the major battles of the war occurred in Italy. The War was preceded by the revolts of Julius Vindex and Galba (68 CE), triggering the

downfall of Nero (54–68). In January 69, Galba succumbed to the coup of Otho at Rome, and in the Rhineland, the legions revolted against Galba and acclaimed Vitellius. Otho and Vitellius then waged a civil war, the Vitellians defeating Otho in April 69. Vitellius then was challenged by Vespasian, who revolted in the eastern provinces and whose troops marched on Italy. By late December 69, the Flavians had captured Rome, Vitellius was dead, and Vespasian was the final victor.

The immediate cause of the War of Four Emperors was the downfall of Nero, leaving a power vacuum at the heart of Rome. Nero, the last of the Julio-Claudian dynasty, had no surviving children and left no potential dynastic successors. His unconventional behavior and persecution of suspected conspirators had alienated the Roman aristocracy. He was, however, popular with the Roman populace. Having relied for so long on dynastic succession, the Principate had no established model for the transfer of power in the absence of a dynastic heir. Instead, the empire learned that, in Tacitus' words, "emperors could be made elsewhere than at Rome" (Tacitus, *Histories* 1.4) in revolts supported by provincial armies.

A pattern had established itself in the late Republic in which soldiers expected and depended upon material pay, benefits, and rewards from successful generals. This pattern is seen through the hindsight of imperial sources, who regarded it as the cause of civil war and blamed the venality of the common soldiers, to whom generals had to give gifts or risk mutiny. Tacitus shares this view, though he also regards the pattern as inescapable; Galba's attempt to reverse it, saying, "I levy my soldiers, I don't buy them," earned his assassination by the praetorians.

In the civil war that followed, events depended very much on the personality of the emperors. Reacting to these personalities, the soldiers were not simply motivated by self-interest. They saw their relationship to the emperors in personal terms. At Rome the praetorians reacted against Galba's parsimony and contempt, preferring the younger and more generous Otho; in the Rhineland, the legions reacted against Galba, preferring the easy-going Vitellius. In their turn, Otho and Vitellius both failed as leaders; Otho won respect from his men mainly due to his courageous suicide, traditional for losing generals in civil wars. Their failure had a longer-term cause: during the early Principate, most of the emperors did not command in person, assigning the role of field commander to relatives or other trusted generals. This model was acceptable in external

wars, but did not work well in civil war, when personal leadership was desirable. In contrast, Vespasian and his son Titus had already proven themselves as military leaders in the Jewish War. Their choice to let Antonius Primus prosecute the war against Vitellius did not harm their cause.

Larger, structural causes of the civil war also existed. The Roman Empire was spread over a wide geographic area, extending from Britain in the north to North Africa in the south, from Spain in the western empire to Egypt, Syria, and the frontier with Persia. Travel and communications were relatively slow and inefficient. A power vacuum or instability at the center often provoked revolts in the periphery; even a strong power at the center might be unable to respond in time. In a vicious cycle, one coup or revolt encouraged others. This pattern recurred in the civil wars of Septimius Severus (193–197) and the late Severans (218–222) and particularly in the third-century crisis (235–284), when barbarian invasions exacerbated the cycle.

War of Four Emperors (69 CE), Course

In March 68 Julius Vindex, governor of Gallia Lugdunensis, revolted. He did not call himself an emperor; as a Gallic nobleman, he was not a credible imperial candidate in this period. He sought the aid of Servius Sulpicius

Galba, the elderly governor of Hispania Tarraconensis. Revolting in his own name, Galba was acclaimed as emperor by his legion (VI Victrix). Galba collected recruits for another legion, VII Galbiana, and marched on Rome. Vindex' rebellion was suppressed by Verginius Rufus.

At Rome, the Senate declared Nero a public enemy. Nero was abandoned by his praetorians and by the populace. Nero panicked, fleeing Rome, and committed suicide (June 68). A patrician of illustrious family, with a stern and authoritarian reputation, Galba was accepted as emperor by the Senate. He had no sons and adopted a young aristocrat, Lucius Calpurnius Piso Frugi Licinianus, as his prospective successor. Galba's supporter, Nymphidius Sabinus, had promised the Praetorian Guard a large donative in Galba's name. Galba now refused to give this donative, for the imperial treasury had been depleted by Nero's extravagances, and responded with a harsh parsimony, saying, "I levy my soldiers, I don't buy them" (Tacitus, *Histories* 1.5). This angered the praetorians, causing them to support Marcus Salvius Otho, a younger man who gave them gifts and promised donatives. Otho allegedly had expected to be adopted by Galba.

In the Rhineland, on New Year's Day, the legions took their annual oath to the emperor. The legions in Lower Germany did so with reluctance, but those of Upper Germany stoned Galba's portraits that were attached to the legionary standards. On January 3, the Rhineland legions acclaimed Aulus Vitellius, the governor of Lower Germany, as emperor. Vitellius had a lenient, genial reputation, and the legions remembered Galba's harshness as governor of Upper Germany in ca. 39–43.

On January 15, the praetorians carried off Otho to their camp in Rome. In the ensuing confusion, Galba and Piso tried to regain control of the situation. Believing a rumor that Otho had been killed, Galba left the palace and was seized by the praetorians and assassinated; Piso and others of Galba's followers were also killed. Otho was acclaimed by the praetorians as emperor, and was accepted by the Senate.

In the Rhineland, Vitellius' legates, Aulus Caecina Alienus and Fabius Valens, assembled their armies (Caecina had about 22,000 legionaries and auxiliaries, Valens about 19,000) and marched south rapidly through Gaul. Their soldiers mistreated local communities on the way. Crossing the Alps, they descended into north Italy. Vitellius himself followed more slowly.

Otho prepared for civil war with the Vitellians. Since legions were not normally stationed in Italy at this time, he had only Legio I Adiatrix and the

praetorians and urban cohorts, totaling about 10,000 men, commanded by Otho's brother Salvius Titianus and Annius Gallus. Otho chose not to wait for more legions to arrive from the Danube. The Othonians met the Vitellians in battle on April 14, near a town called Bedriacum, on the River Po near Cremona. Otho did not command in person, but awaited events at the neighboring Brixellum. The Othonians were outnumbered and defeated, and Otho committed suicide on April 16, intending to spare his men further conflict. The Othonian officers swore allegiance to Vitellius, as did the Senate and people of Rome.

Displaying his typical inaction, Vitellius himself did not reach Rome until July 18. He entered Rome in a festive parade resembling a triumph. He rewarded his men not with money but with privileges such as unrestricted furlough and the reinstatement of rank for demoted personnel. According to Tacitus, Vitellius' indulgences did not cause his men to respect him, but demoralized them. Vitellius allegedly wasted enormous sums on extravagant eating and drinking, behavior which disposed him further to inaction.

In the eastern provinces, Vespasian's powerful acquaintances, Tiberius Julius Alexander the prefect (equestrian governor) of Egypt, and Licinius Mucianus the governor of Syria, encouraged his acclamation. Tiberius Alexander and his troops took an oath of loyalty to Vespasian on July 1; Vespasian's soldiers acclaimed him as emperor on July 3, and Mucianus persuaded his soldiers and the civilian inhabitants of Syria to swear allegiance to Vespasian before July 15. Vespasian's acclamation was also encouraged by prophecies. Mucianus persuaded the Syrian legions to support Vespasian by spreading the rumor that Vitellius intended to transfer them to the Rhine frontier.

Vespasian moved to Alexandria to blockade grain shipments to Rome, while Vespasian's general Antonius Primus led the Syrian legions through the Danubian provinces, adding the Danubian legions as he went. Primus' arrival in north Italy induced Caecina to defect to Vespasian, adding his forces to the Flavian army. Fabius Valens still commanded the other Vitellian army, and met the Flavian forces in a protracted night battle (the Second Battle of Bedriacum or battle of Cremona) in October 69. The Vitellians were defeated and many of their officers defected to the Flavian side. Elated by their victory, the Flavian soldiers sacked the city of Cremona, an atrocity later blamed on Primus (Tacitus, *Histories* 3.33).

At Rome Vitellius was ineffectual. He retained the praetorians, but had lost Caecina's officers and troops and retained only part of Valens' forces; his Rhine legionaries had been debilitated by lack of training and Rome's endemic diseases. As Primus and the Flavians approached Rome, many Vitellian officers defected to them. Antonius Primus offered Vitellius the opportunity of surrender and a wealthy retirement, but Vitellius only vacillated. Primus attempted to recruit Flavius Sabinus, the city prefect and Vespasian's brother, urging him to stage a coup and hand the city over to the Flavians, but Sabinus refused, distrusting violence and not wishing to upstage Vespasian. On December 18, Vitellius made a spontaneous attempt to abdicate, but was forestalled by the derision of the Roman crowd. On the same day Sabinus and his followers occupied the Capitoline Hill, where they were besieged by the Vitellians.

The Flavian army reached the outskirts of Rome by December 20. Within the city of Rome, the Flavian supporters and Vitellians fought each other. In the siege of the Capitoline Hill, the Capitoline Temple was burned down. Flavius Sabinus was captured and put to death by the Vitellians. The Vitellian army (mostly praetorians) clashed with the Flavian troops outside Rome, and the Flavians forced the Vitellians to fall back to the city.

On December 20, Vitellius, now abandoned by everyone, was dragged out of the imperial palace by the Roman crowd, which stripped him, mocked his physical appearance, and lynched him, beheading his body. Antonius Primus entered Rome with his army on December 21, and the Senate accepted Vespasian as emperor. Order was restored to the city when Licinius Mucianus arrived with his Syrian and Danubian legions. Vespasian himself did not arrive at Rome until the autumn of 70.

The main source for the War of Four Emperors is Tacitus' *Histories*, written a generation later (around the turn of the second century CE). He relates events in perceptive detail, though prone to moralizing, reflecting the Flavian propaganda effort against Vitellius. The extant *Histories* break off part way through the narrative of the Gallic revolt in 70 CE. They are supplemented by Suetonius' biographies of Galba, Otho, Vitellius, and Vespasian. Plutarch's biographies of Galba and Otho are less valuable.

War of Four Emperors (69 CE), Consequences

The most obvious consequence of the War of Four Emperors was the accession of Vespasian and his establishment of a new dynasty, the Flavians (69–96). He was accepted by the Senate, army, and people, but sought legitimacy; the Senate passed an enabling law, termed by modern scholars the *lex de imperio Vespasiani*, surviving in fragments. Vespasian also took the praenomen *Imperator*, which had been adopted by Augustus but not by his successors. To some degree, the Flavian emperors adopted a more military persona; Vespasian and Titus did not need to prove their ability to command, but Domitian, who had been too young at the time of the Jewish War and War of Four Emperors, campaigned against the Germans and Dacians.

The civil war of 69 CE had refreshed the horrors of civil war, last experienced in the triumviral wars (44–31 BCE). Vespasian's financial exactions gave him a reputation for avarice, but he needed to rebuild, and emphasized the rebuilding of the Capitoline Temple at Rome as a symbol of the restoration of order.

An immediate consequence of the civil war was the Gallic Revolt (70 CE), led by assimilated Gallic nobles who had served in the Roman auxiliary forces, and encouraged by the Vitellians' withdrawal of legions from the Rhine. The revolt was suppressed by Petilius Cerialis.

Warlike Peoples

In the Greek and Roman literary tradition, northern peoples were more warlike than those of the south, and western Europeans more fierce than peoples of the eastern Mediterranean. To some extent, this doctrine appears to have influenced recruitment policies. Haynes (2013) on the recruitment of the *auxilia* argues that native peoples from mountainous areas or with warlike traditions were preferentially recruited, giving ethnic or regional names to their auxiliary regiments, for example, *ala Thracum* (“ala of Thracians”) or *cohors Batavorum* (“cohort of Batavians”). Mountainous areas were difficult for the Romans to control. Being thinly settled and often impoverished, mountainous regions lacked powerful native rulers or communities to intimidate or co-opt. Mountainous areas offered refuges for bandits. Banditry might be hard to distinguish from native peoples with raiding traditions and hostility to Rome. Recruiting the native peoples as Roman auxiliary troops was a good way to bring them under control and into the empire, as long as the recruitment was handled without giving offense. Tacitus relates that the Batavian revolt in 70 CE was sparked by Roman recruiters’ mishandling of the levy of Batavian recruits (Tacitus, *Histories* 4.14, 22). However, the extent to which Roman soldiers were “warlike” is blurred by classical elite authors’ regarding them (both legionaries and auxiliaries) as uncultivated and prone to violence even off the field. Cassius Dio writes, in Maecenas’ imaginary speech advising Augustus, that “soldiers ought to be recruited from the part of the population that is strongest and most in need of a livelihood, for otherwise they will turn to brigandage” (52.27.5).

In contrast with the *numeri*, the non-Roman auxiliary units do not seem to have maintained their native traditions of dress, appearance, or weapons

and other equipment. Archaeological evidence suggests that the *auxilia* presented a relatively standard Roman appearance; the ethnic equipment (such as the flowing robes of Syrian archers) depicted on Trajan's Column is probably fanciful or else denotes *numeri*, not *auxilia*.

Z

Zama, Battle of (202 BCE)

The battle of Zama took place in 202 BCE between the forces of the Roman Republic, led by Publius Cornelius Scipio, and the forces of Carthage, led by Hannibal Barca. It was the final battle of the Second Punic War, decisively marking its end.

After having won several major victories in Spain, Scipio took the war to the Carthaginian homeland in Africa. When the opposing armies met at Zama, Scipio's forces totaled approximately 34,000 infantry and 6,000 cavalry, while Hannibal's totaled slightly more at 45,000 infantry and 6,000 cavalry as well as over 80 war elephants. Hannibal's forces were of mixed ethnicity with men from Gaul, Liguria, and the Balearic Isles, as well as Carthaginians and Libyans. He placed them in three lines with his least reliable troops in front and his veterans at the rear. He stationed his cavalry on the wings, as was standard practice, and he had his elephants stationed in front of all his forces. Scipio used the standard Roman deployment of having the *hastati* in the front line and the *principes* behind them, with the *triarii* taking up the rear. On this occasion however, Scipio did not deploy these lines in the standard *triplex acies* or "three line" formation with the *principes* covering the gaps in between the maniples of the *hastati* and the *triarii* doing the same for the *principes*. Rather, he made sure his maniples were stationed one behind the other, creating gaps between them, which he then filled with the *velites*, or the light javelin men of the Roman Republican army. Scipio also had his cavalry on the wings.

The cavalry were the first to engage and they skirmished with each other for some time. Then, Hannibal ordered his war elephants to charge the Roman infantry. The *velites* drew the elephants into the gaps between the

maniples and showered them with their darts. Though the Roman javelin men did not come out of this encounter unscathed, they successfully led the elephants through the gaps and, as per their orders, they then took refuge among the line infantry, allowing the frightened and injured elephants to flee in panic beyond the rear of the Roman forces, thus ceasing to be a threat.

The battle between the line infantry then began and it was particularly hard fought. The mercenaries that held the front ranks of the Carthaginian lines managed to wound many *hastati* with their skill at arms, but the Romans relied on their discipline to continue to push forward. This tactic proved to be effective as it eventually drove the mercenaries back on their own men, confusing both battle lines as some mercenaries fought Carthaginians in desperate attempts to flee. As a result, both commanders reorganized their lines into one solid, long line, and the forces re-engaged.

Once again, the battle was toughly contested, and it was not until the Roman cavalry, who had by this time routed their Carthaginian counterparts, returned from their pursuit to crash into the Carthaginian rear, that Hannibal's forces collapsed. About half of the Carthaginian army was killed in the defeat, and almost as many were taken prisoner. The loss was total for Carthage and it decisively won the war for the Romans.

After their defeat, Carthage sued for peace and the Romans granted it with particularly harsh terms. These terms included the stipulation that Carthage was not to make war without Rome's consent. This would later lead to the Third Punic War, when Carthage defended themselves against Numidian attacks, prompting Rome to carry out their long-desired complete destruction of Punic power.

Zenobia (ca. 240–ca. 275 CE)

The ruler of Palmyra, Septimius Odenathus, was married to Septimia Zenobia (born ca. 240). They had several children, at least two sons, Septimius Herodianus and Septimius Vaballathus. Other children may have existed, poorly attested. When Odenathus was assassinated under mysterious circumstances in 268, he was succeeded by his younger son Vaballathus (born ca. 258), and by Zenobia, who governed for her son. Vaballathus and Zenobia began aggressively to extend Palmyrene power in the Near East, conquering Roman Arabia, Egypt, and Syria, and extending in to Asia Minor. Aurelian, now emperor (270–275), could not tolerate this threat and made war upon the Palmyrene Empire, reconquering it and capturing Zenobia, whom he displayed in his triumph in 274.

Zenobia took an active role as queen of Palmyra, and is said to have worn armor when she reviewed her troops, but she did not command her own army, employing a Palmyrene general, Septimius Zabdas. Zabdas first invaded Roman Arabia, defeating the Roman governor in battle and taking the provincial capital of Bostra. He advanced to Egypt, driving out the governor of Egypt, Tenagino Probus; taking Alexandria; and defeating Probus in combat. Zabdas, Zenobia, and Vaballathus then took control of Roman Syria and extended their power into Asia Minor.

These events can be followed also from documents and from the coinage minted at Alexandria and Antioch (see Southern 2008). Documents show that Vaballathus bore the titles Ruler of Tadmor (Palmyra), King of Kings, and *corrector totius Orientis*. The Alexandrian and Antiochene mints first produced coins with Emperor Aurelian on one side, Vaballathus on the other, and did not use the title Augustus for Vaballathus. The coins then back-dated Vaballathus' reign to his father's death in 268. They named Vaballathus *imperator* and *dux Romanorum*, titles that he was not entitled to use and that showed him to be a usurper. Finally, the coins of Antioch displayed Vaballathus alone (omitting Aurelian; other coins displayed Zenobia) and named Vaballathus and Zenobia Augustus and Augusta. These

coins were probably produced in defiance after Aurelian declared war on Palmyra. Inscriptions in Greek also named Vaballathus and Zenobia Sebastos and Sebaste, the Greek forms of Augustus and Augusta.

Aurelian first entered Asia Minor and encountered resistance at Tyana, a city in Cappadocia. He captured it by siege, but spared the human inhabitants (having said, "I will not leave a dog alive," he let his soldiers kill the dogs). He then met in battle with the Palmyrene forces outside Immae, a town on the route between Antioch and Beroea. He defeated Zabdas by forcing the Palmyrene cataphract (heavy armored) cavalry to chase the Romans, and then doubling back and slaughtering the exhausted Palmyrenes. Zabdas and Zenobia escaped and fell back on Emesa. Aurelian approached and captured Emesa; Zenobia escaped and fled to Palmyra. It is possible that Vaballathus escaped with his mother, and also escaped from Palmyra with her (below), and was taken prisoner with her by Aurelian, but the literary sources are interested mainly in Zenobia.

As Aurelian approached Palmyra, Zenobia seems to have decided to flee to the Persians, seeking aid there, though Persia was involved in its own succession crisis at that time and could lend little help to Palmyra. She fled across the desert on camels, but was apprehended by a Roman cavalry force. Palmyra surrendered to Aurelian, who spared the citizens but put Zenobia and her advisers and generals on trial. He put to death many, but spared Zenobia's life because he wanted to exhibit her in his triumph. He left for the European Roman Empire, taking Zenobia with him as a prisoner. In his wake Palmyra revolted; Aurelian punished it harshly, taking reprisals and allowing the Romans to loot the city. Palmyra never recovered, and the western hub for the Silk Road trade moved northward to Batnae.

The literary sources conflict on the fate of Zenobia. According to one author, she died on the way to Rome; the other sources state that she lived and was displayed in Aurelian's triumph in 274, laden with golden chains. She probably survived afterward and was allowed to settle in or just outside Rome for the rest of her natural life.

As with much of the history of the third-century crisis, the literary sources for Odenathus and Zenobia are difficult to use and conflicted. Zosimus (writing in the early fifth century) and the *Historia Augusta* are closest in date to events. Late authors, such as John Malalas and Zonaras, provide detail from unknown sources. The *Historia Augusta's* later biographies (from ca. 218 onward, and especially Loeb SHA III) are

notoriously unreliable. The reigns of Odenathus and Zenobia also can be studied through provincial coinage and documentary sources.

Zosimus (Active Late Fifth–Early Sixth Centuries CE)

Zosimus was a Greek historiographer who wrote a “new history” (*Historia Nova*), which was the last major pagan history and described the history of Rome from its mythological origins in the Trojan War to the sack of Rome in 410. Zosimus probably held a position in the imperial chancellery at Constantinople during the reign of Anastasius I (491–518). Zosimus writes from a militant pagan stance and treats the reigns of Constantine I and Theodosius I with scorn. His work is valuable because it draws upon the lost histories of Dexippus, Eunapius, and Olympiodorus, whom Zosimus copied extensively, while providing the only continuous secular history for the period 378–410. The scale of his work increased as Zosimus drew nearer his own time, as Book 1 covered the period from Augustus to Probus (278–282); books 2–4 covered the fourth century CE to 395, and books 5–6 covered the period 395–410.

Appendix: Quotable Quotes—Romans on War

Introduction

The quotations below are a mix of famous and less well-known ancient Roman quotations relating to conflict. They are organized chronologically by speaker. The quotations are drawn from the Loeb Classical Library series and, in the case of Livy, from the Everyman's Library editions.

Cato the Elder (234–149/148 BCE)

1. Cato the Elder reproached his fellow citizens for demanding a (probably anachronistic) grain dole:
“It is a hard matter, my fellow citizens, to argue with the belly, since it has no ears.”

Source: Plutarch, Cato Maior 8.1; adapted by Sara E. Phang.

2. On the subject of women, Cato the Elder said:
“All other men rule their wives; we rule all other men, and our wives rule us.”

Source: Plutarch, Cato Maior 8.2; adapted by Sara E. Phang.

3. [When King Eumenes visited Rome and was welcomed, Cato was critical.] “Surely,” someone said to him, “he is an excellent man, and a friend of Rome.” “Granted,” said Cato, “but the animal known as king is by nature carnivorous.”

Source: Plutarch, Cato Maior 8.7–8; adapted by Sara E. Phang.

4. Cato the Elder said of his Spanish campaign:
“The war will be self-supporting.”

Source: Livy, History of Rome 34.9.12; adapted by Sara E. Phang.

5. Cato the Elder is said to have often ended speeches in the Senate with some variant of this expression:
“Carthage must be destroyed.”

Source: Plutarch, Cato Maior 27.1; adapted by Sara E. Phang.

Marius (157–86 BCE)

6. Marius exercised his army many kinds of running and long marches, and forced them to carry their own baggage and to cook their own food. Hence ... soldiers who enjoyed hard work and did whatever they had to do with contentment and without protest, were called Marius’ mules.

Source: Plutarch, Marius 13.1; adapted by Sara E. Phang.

7. After Marius defeated the Teutones at Aquae Sextiae (102 BCE) the Cimbri sent demands to the Romans, asking for land for their brothers. When Marius asked the [Cimbri] ambassadors whom they meant by their brothers, they said they meant the Teutones. At this, all the other Romans who heard them burst out laughing, and Marius scoffingly said: “Then don’t trouble yourself about your brothers, for they have land, and they will have it forever—land which we have given them.”

Source: Plutarch, Marius 24.3; adapted by Sara E. Phang.

8. The Marians took harsh reprisals on their enemies at Rome. Marius decided to kill Lutatius Catulus, formerly his fellow consul, and Catulus’ friends begged Marius to spare him. But Marius only replied: “He must die.”

Source: Plutarch, Marius 44.5; adapted by Sara E. Phang.

Sulla (138–78 BCE)

9. Sulla's epitaph:

"No man ever did more good for his friends or more harm to his enemies."

Source: Plutarch, Sulla 38.4; adapted by Sara E. Phang.

Crassus (115–53 BCE)

10. Crassus said:

"No man can call himself rich who cannot support an army from his own assets."

Source: Plutarch, Crassus 2.7; adapted by Sara E. Phang.

Pompey (106–48 BCE)

11. On raising troops against Caesar during the civil war, Pompey said:

"...wherever I stamp upon the ground in Italy, armies of cavalry and infantry spring up."

Source: Plutarch, Pompey 57.5; adapted by Sara E. Phang.

Cicero (106–43 BCE)

12. Cicero said of Octavian:

"He should be praised, honored, and removed."

Source: Cicero, Letters to His Friends 11.20.1; adapted by Sara E. Phang.

Caesar (100–44 BCE)

13. Allegedly said by Caesar:

"Sulla could do it, why can't I?"

Source: Cicero, Letters to Atticus 9.10.2; adapted by Sara E. Phang.

14. Caesar addressed the mutinous Tenth Legion as follows:

But with a single word, calling them “citizens,” instead of “soldiers,” he easily brought them round and bent them to his will; for they at once replied that they were his “soldiers” and insisted on following him to Africa.

Source: Suetonius, Julius Caesar 70; adapted by Sara E. Phang.

15. Caesar describes his war against Pharnaces, son of Mithridates VI:

“I came, I saw, I conquered.”

Source: Suetonius, Julius Caesar 37.2; adapted by Sara E. Phang.

16. Caesar’s alleged words, which the conspirators against him particularly resented:

“...the state was nothing, a mere name without body or form.”

Source: Suetonius, Julius Caesar 77; adapted by Sara E. Phang.

17. Caesar’s last words:

“This is violence!” and to Brutus, “You too, child?”

[There is probably no truth to the legend that Brutus was Caesar’s illegitimate son.]

Source: Suetonius, Julius Caesar 82; adapted by Sara E. Phang.

Sallust (86—ca. 35 BCE)

18. “At Rome all things are for sale.”

Source: Sallust, The Jugurthine War 8.1; adapted by Sara E. Phang.

Octavian/Augustus (63 BCE–14 CE)

19. When the Senate hesitated to confer the consulship on the 19-year-old Octavian, his centurion, Cornelius, leader of the embassy, threw back his cloak and showed them the hilt of his sword, and declared, “This will make him consul, if you do not.”

Source: Suetonius, Augustus 26.2; adapted by Sara E. Phang.

20. Octavian to the captives of the Perusine War:

“You must die!”

Source: Suetonius, Augustus 15.1; adapted by Sara E. Phang.

21. To a relative of a proscription victim who asked to bury the body, Octavian said:

“The birds will soon settle that question.”

Source: Suetonius, Augustus 13.2; adapted by Sara E. Phang.

22. After the Varian disaster in 9 CE, Augustus cried:

“Quintilius Varus, give me back my legions!”

Source: Suetonius, Augustus 23.2; adapted by Sara E. Phang.

23. Augustus’ last words (one variant):

“I found Rome a city of brick; I leave it to you of marble.”

Source: Cassius Dio History of Rome 56.30.3; adapted by Sara E. Phang.

Tiberius (42 BCE–37 CE)

24. Tiberius describes the Senate:

“How ready these men are for servitude!”

Source: Tacitus, Annals of Imperial Rome 3.65; adapted by Sara E. Phang.

Galba (3 BCE–69 CE)

25. Galba to the Praetorians:

“I levy my soldiers, I don’t buy them.”

Source: Tacitus, Histories 1.5; adapted by Sara E. Phang.

Vespasian (9–79 CE)

26. Vespasian speaking on his deathbed:
“Alas, I think I’m becoming a god!”

Source: Suetonius, Vespasian 23.4; adapted by Sara E. Phang.

Caligula (12–41 CE)

27. Caligula describes his subjects:
“Let them hate me, as long as they fear me”

Source: Suetonius, Caligula (Gaius) 30.1; adapted by Sara E. Phang.

Vitellius (15–69 CE)

28. Vitellius, visiting the site of the First Battle of Bedriacum:
“Only one thing smells sweeter than a dead enemy, and that’s a dead fellow citizen.”

Source: Suetonius, Vitellius 10; adapted by Sara E. Phang.

Domitius Corbulo (d. 67 CE)

29. Domitius Corbulo, after Claudius recalled him from the German frontier:
“Once they were fortunate, the generals of Rome”

Source: Tacitus, Annals of Imperial Rome 11.20; adapted by Sara E. Phang.

Antonius Primus (Active 69 CE)

30. After the Second Battle of Bedriacum, the Flavian general Antonius Primus went to use the baths at Cremona. Finding that the water was lukewarm, he said:
“They’ll soon be burning hot!”
[This allegedly touched off the sack of the city.]

Source: Tacitus, Histories 3.32; adapted by Sara E. Phang.

Domitian (51–96 CE)

31. Domitian said of the Nasamones, a Numidian tribe:

“I have forbidden the Nasamones to exist.”

Source: Cassius Dio History of Rome 67.5.6; adapted by Sara E. Phang.

Calgacus (active 80s CE)

32. The Scottish leader Calgacus exhorts his army against the Romans:

“They make a wasteland, and call it peace”

Source: Tacitus, Agricola 30; adapted by Sara E. Phang.

Trajan (53–117 CE)

33. Trajan to a praetorian prefect, handing him a sword:

“If I rule well, use this for me; if not, against me.”

Source: Cassius Dio History of Rome 68.16.1b; adapted by Sara E. Phang.

Hadrian (76–138 CE)

34. Hadrian was accosted by a woman with a petition. “I haven’t time,” he said, whereupon she retorted, “Then don’t be a king!”

Source: Cassius Dio History of Rome 69.6.3; adapted by Sara E. Phang.

Marcus Aurelius (121–180 CE)

35. Marcus Aurelius’ last words:

“Go to the rising sun; I am setting.”

Source: Cassius Dio History of Rome 72.34; adapted by Sara E. Phang.

Septimius Severus (ca. 145–211 CE)

36. Septimius Severus' praetorian prefect to the bandit chieftain Bulla:
"How did you become a bandit?" Bulla retorted, "How did you become a prefect?"

Source: Cassius Dio History of Rome 77.17.4; adapted by Sara E. Phang.

37. Septimius Severus' instructions to his sons:
"Be of one mind, reward the soldiers, and despise everybody else."

Source: Cassius Dio History of Rome 77.15.2; adapted by Sara E. Phang.

38. A variant on Septimius Severus' last words:
"Come, give it here, if there is anything to do."

Source: Cassius Dio History of Rome 77.17.4; adapted by Sara E. Phang.

Julian (331–363 CE)

39. Julian, appointed Caesar by Constantius II, who had elevated Julian's half-brother Gallus to Caesar and then executed him for suspected conspiracy:
"By purple death I'm seized and fate supreme."

Source: Ammianus Marcellinus History of Rome 15.8.17 (from Homer, Iliad 5.83); adapted by Sara E. Phang.

Primary Documents

The document selections in this section are ordered by author, with the content in rough chronological sequence. Excerpts from 21 works by 14 authors have been selected, plus two inscriptions from the *Corpus Inscriptionum Latinarum*. With the exception of the inscriptions, all of the authors included here have a separate, more detailed entry in the body of this encyclopedia. Where a work is divided into books, chapters, and sections, the document is divided by chapters—a number in square brackets in the text indicates the book and chapter. Anything else in square brackets is an explanatory note inserted by the translator or editor and not part of the original work. A gap or omission in the document is indicated by The author's date is given in the author's main heading; the date of the event in the document is in the document heading.

Livy (59 BCE–17 CE)

Titus Livius, from Patavium in north Italy, wrote during the reign of Augustus (27 BCE– 14 CE), and was the author of the *Ab urbe condita* (*From the Founding of the City*), best known as the *History of Rome*. The *History* spans the period from the legendary founding of Rome (753 BCE) to the reign of Augustus, but only part of it is extant: the surviving text ends in the mid-second century BCE. Livy was a prolific writer and filled out sparse accounts of early Rome with vividly imagined detail.

1. Livy *History of Rome* 1.57, 2.1: Overthrow of the

Monarchy (510/509 BCE)

Introduction

According to Roman tradition, the last king of Rome, Tarquinius Superbus (534–510) ruled as a tyrant. His son Sextus Tarquinius raped Lucretia, the wife of Tarquinius Collatinus (a more distant relative of the king). Overcome by shame, Lucretia disclosed the rape to her father and husband, and then stabbed herself. The angry citizens, led by Lucius Junius Brutus, drove out the king and established the Republic (509). The Senate decreed the exile of all members of the house of Tarquin from Rome, and prepared for war with the Tarquins, who returned to Etruria. The following passage illustrates the traditional Roman hostility to monarchy.

Document

[1.57] While they were absorbed in grief, Brutus drew the knife from Lucretia's wound, and holding it ... in front of him, said, "By this blood ... I swear, and you, O gods, I call to witness that I will drive out Lucius Tarquinius Superbus, together with his cursed wife and his whole family, with fire and sword and every means in my power, and I will not permit them or anyone else to reign in Rome." Then he handed the knife to Collatinus and then to Lucretius and Valerius ... They swore as they were directed; all their grief changed to rage, and they followed the lead of Brutus, who summoned them to abolish the monarchy at once.

[2.1] [Lucius Junius Brutus'] first act [as consul] was to protect the people ... from being influenced by any entreaties or bribes from the king. He therefore made them take an oath that they would not permit any man to reign [as king] in Rome. The Senate had been thinned by the murderous cruelty of Tarquin, and Brutus' next goal was to strengthen its influence by selecting some of the leading equestrians to fill the vacancies; thus he brought it up to the old number of three hundred. The new members were known as "conscripti," the old ones retained their designation of "patres." This measure was remarkably effective at promoting public harmony and bringing the patricians and plebeians together.

2. Livy *History of Rome* 1.42–3: The Servian Constitution (Early Republic)

Introduction

Though attributed to King Servius Tullius (578–535 BCE), the organization of the early Roman army probably reflects the fifth-century BCE Republic. The description of the armor suggests the hoplite phalanx phase of Roman warfare (Etruscan Wars period). The aes (plural asses) denoted bronze or copper metal by weight, used as a precursor of coinage in the early Republic. The Servian arrangement persisted in the organization of the centuriate assembly (comitia centuriata), in which wealthier centuries voted first. It is unlikely that each “century” contained just 100 men; many must have contained far more.

Document

[1.42–3] From those whose property rating was 100,000 *asses* or above, he created eighty centuries, forty of men of military age (17–46) and forty of older men (47–60). All of these centuries were known as those of the first class. The older men were to be available for guarding the city and the younger for campaigns in the field. He ordered this class to equip themselves with helmet, a round shield (*clipeus*), greaves, and a breastplate, all of bronze. This would be their defensive equipment; against the enemy they would use the heavy thrusting spear (*hasta*) and the sword.

He added to this class two centuries of workmen who would perform their military service unarmed; they were assigned to construct engines of war.

The second class was formed of those whose rating was between 100,000 and 75,000 *asses* and from these were enrolled twenty centuries, ten of younger and ten of older men. They were to carry the rectangular shield (*scutum*) in place of the round one and except for the corselet all their other equipment matched that of the first class.

The rating of the third class was 50,000 to 75,000 *asses*. They were to have the same number of centuries as the second and the same distinction between younger and older men. Their armament was the same as the second except greaves were omitted.

The fourth class was rated at 25,000 to 50,000 *asses* and had the same number of centuries, but their equipment was different. They carried only

the heavy thrusting spear and the *verutum* [a short throwing spear].

The fifth class was larger as it consisted of thirty centuries and it carried slings with stones for missiles. Attendants, buglers, and trumpeters belonged to it and were divided into three centuries. The class was rated at 11,000 to 25,000 *asses*. The multitude whose property was rated at a lower value, were placed in one century and excused military service.

He [Servius Tullius] enrolled twelve centuries of cavalry from the leading men of the city. He likewise created six other centuries under the same names, which had been consecrated by augury, three of which had been established by Romulus. He gave the cavalrymen 10,000 *asses* each. Unmarried were assessed to pay 2,000 *asses* per year each to provide food for the mounts.

3. Livy *History of Rome* 8.8: Manipular Organization of the Legion (ca. 340 BCE)

Introduction

This description of the manipular organization of the legion is attributed to the Roman-Latin War, ca. 340 BCE, but is probably, as with Polybius' description of the Roman army, of third/second century BCE date. Of note is the tripartite division into ranks, hastati, principes, and triarii, which are also age classes (youngest, mature, and older men, respectively). The inclusion of rorarii and accensi with the triarii may represent an earlier phase of the manipular legion or simply Livy's confusion, as the manipular legion was obsolete by his day. The elaborate maneuver described in the last section was workable only on flat and level ground.

Document

[8.8] The foremost line consisted of the *hastati*, formed into fifteen maniples, stationed at a short distance from each other. These were called the light-armed maniples, as while one-third carried a long spear (*hasta*) and short iron javelins, the remainder carried shields. This front line consisted of very young men just old enough for service. Behind them were

stationed an equal number of maniples called *principes*, made up of mature men, all carrying shields and equipped with superior weapons. This body of thirty maniples were called the *antepilani*. Behind them were the standards under which were stationed fifteen *ordines*, which were divided into three sections called *vexillae*, the first section in each was called the *pilus*, and they consisted of 180 men to every standard (*vexillum*). The first *vexillum* was followed by the *triarii*, veterans of proved courage; the second by the *rorarii*, or “skirmishers,” younger men and less distinguished; the third by the *accensi*, who were least to be depended upon, and were therefore placed in the rearmost line.

When the battle formation of the army was completed, the *hastati* were the first to engage. If they failed to repulse the enemy, they slowly retired through the intervals between the *ordines* of the *principes* who then took up the fight, the *hastati* following in their rear.... If the *principes* were also unsuccessful, they slowly retired to the *triarii*, which has given rise to the proverbial saying, when people are in great difficulty “matters have come down to the *triarii*.” When the *triarii* had admitted the *hastati* and *principes* through the intervals separating their *ordines* they rose from their kneeling posture and instantly closing their *ordines* up they blocked all passage through them and in one compact mass fell on the enemy as the last hope of the army.

4. Livy *History of Rome* 22.45–51: The Battle of Cannae (216 BCE)

Introduction

The battle of Cannae (216 BCE) was one of Rome’s worst defeats. Lucius Aemilius Paullus, the consul in this scene, was the father of the Aemilius Paullus who is featured in an entry in this encyclopedia. The Senate, refusing to ransom Roman prisoners, also repudiated as cowards the Roman soldiers who fled from the battle of Cannae.

Document

[22.45–51] On the right, nearest the river, the Roman cavalry were posted, then came the infantry; on the extreme left were the cavalry of the allies, their infantry were between them and the Roman legions. The javelin men with the rest of the light-armed auxiliaries formed the front line. The consuls took their stations on the wings, Terentius Varro on the left, Aemilius Paullus on the right.

At dawn Hannibal sent forward the Balearics and the other light infantry. He then crossed the river in person and as each division came across he assigned it its place in the line. The Gaulish and Spanish horse he posted near the bank on the left wing in front of the Roman cavalry; the right wing was assigned to the Numidian troopers. The center consisted of a strong force of infantry, the Gauls and Spaniards in the middle, the Africans at either end.... Hasdrubal was in command of the left wing, Maharbal of the right; Hannibal himself with his brother Mago commanded the center....

When the battle shout was raised the auxiliaries ran forward, and the battle began.... [Hannibal's Gallic and Spanish cavalry repelled the Roman cavalry.] Just as this cavalry battle was finished, the infantry became engaged, and as long as the Gauls and Spaniards kept their ranks unbroken, both sides were equally matched in strength and courage. At length after long and repeated efforts the Romans closed up their ranks, straightened out their front, and by the sheer weight of their deep column bore down the division of the enemy stationed in front of Hannibal's line, and which was too thin and weak to resist the pressure. Without a moment's pause they followed up their broken and hastily retreating foe till they fled headlong. Cutting their way through the mass of fugitives, who offered no resistance, they penetrated as far as the Africans who were stationed on both wings, somewhat further back than the Gauls and Spaniards who had formed the advanced center. As the latter fell back the whole front became level, and as they continued to give ground it became concave and crescent-shaped, the Africans at either end forming the horns. As the Romans rushed on incautiously between them, they were attacked by the two wings, which extended and closed round them in the rear. On this, the Romans, who had fought one battle to no purpose, left the Gauls and Spaniards, whose rear they had been slaughtering, and commenced a fresh struggle with the Africans. The contest was very one-sided, for not only were they surrounded on all sides, but tired by the previous fighting they encountered fresh and vigorous opponents.

[The Numidians staged a diversion. The fatally wounded consul Aemilius Paullus told Cn. Lentulus to return to Rome and warn the Senate and people, and returned to the battle, where he died; the other consul escaped.]

Such was the battle of Cannae, a battle as famous as the disastrous one at the Allia; not so serious in its results, owing to the inaction of the enemy, but more serious and more horrible in view of the slaughter of the army.

5. Livy *History of Rome* 28.24: Mutiny at Sucro (206 BCE)

Introduction

Late in the Second Punic War (218–201 BCE), Scipio Africanus (so termed to distinguish him from other Scipios in this encyclopedia, though the cognomen Africanus was given him after his victory over Hannibal) had taken command of the Roman army in Spain. While Scipio Africanus was ill, his soldiers mutinied over arrears in their pay. That idleness causes mutiny was a cultural stereotype.

Document

[28.24] ... The vague rumors of their commander's death were not however the primary cause of their mutiny. A long period of inactivity had, as usual, demoralized them, and they resented the restraints of peace after being accustomed to live on the plunder captured from the enemy. At first their discontent was confined to murmurs among themselves.... Then they demanded their unpaid wages with an insolence quite inconsistent with military discipline or the respect which soldiers should show towards their officers..... They drove the tribunes from their official seats, and then out of the camp, and amidst universal acclamation gave the supreme command to the chief ringleaders of the mutiny, two common soldiers whose names were [Gaius] Albius of Cales and [Gaius] Atrius, an Umbrian....

E. Phang.

6. Livy *History of Rome* 45.29: Rome Partitions Macedon (167 BCE)

Introduction

Following the defeat of King Perseus of Macedon's forces in the Battle of Pydna (168 BCE), the Roman consul Lucius Aemilius Paullus and 10 deputies from the Roman Senate reorganized Macedon. Another outcome of the Third Macedonian War was that from this time onward Roman citizens did not pay tributum (tax).

Document

[45.29] Aemilius [Paullus] ordered the councils of ten from all the cities to assemble at Amphipolis and to bring with them all their archives and documents, and all the money due to the royal treasury. When the day arrived he advanced to the tribunal, where he took his seat with the ten commissioners, surrounded by a vast crowd of Macedonians. Though they were accustomed to the display of royal power, this novel assertion of authority filled them with fear.... After the herald had called for silence Paullus, speaking in Latin, explained the arrangements decided upon by the Senate and by himself together with the ten commissioners; Gnaeus Octavius, who was also present, translated the address into Greek. First of all, the Macedonians were to be a free people, possessing their cities and fields as before, enjoying their own laws and customs and electing their annual magistrates. They were to pay to Rome half the tribute which they had been paying to the king. Secondly, Macedonia was to be broken up into four separate cantons.

Polybius (ca. 200–118 BCE)

Polybius of Megalopolis was a Greek politician and military officer who became a hostage of the Romans following the Third Macedonian War. He

befriended important Romans and was freed around 150. He wrote a history of Rome from the First Punic War (264–241 BCE) that emphasized Rome's growth into a world power in the ancient Mediterranean. His main focus is narrative, emphasizing military and diplomatic affairs, but his sixth chapter contains a long description of Roman political and military institutions.

7. Polybius *Histories* 6.19, 21, 26 (excerpts): Organization and Recruitment of the Legion (Third–Second Century BCE)

Introduction

Polybius describes how the Romans organized the dilectus (levy) and recruited officers and allied forces. His description of the division of the manipular legion into age-grouped ranks resembles that of Livy 8.8, but probably is more reliable than Livy, as Polybius was able to observe the manipular legion for himself, whereas it had been obsolete for almost a century when Livy wrote.

Document

[6.19] After electing the consuls, they appoint military tribunes, fourteen who have five years' service and ten who have ten. As for the rest, a cavalry soldier must serve for ten years in all and an infantry soldier for sixteen years before reaching the age of forty-six, with the exception of those whose census is under four hundred drachmae.... In emergencies twenty years' service is demanded from the infantry. No one may hold any political office before he has completed ten years' service.

Source: Polybius. 1923. *Histories*. Translated by W. R. Paton. Loeb Classical Library. Cambridge, MA: Harvard University Press; adapted by Sara E. Phang.

[6.19, continued] When the consuls in office wish to hold a levy they announce to the people that day on which all men of military age must assemble. This is done each year. On the appointed day, when those fit for service have arrived in Rome and after they have assembled on the Capitoline, the more junior tribunes divide themselves up in the order in which they were elected or appointed by the consuls into four groups, because the primary division of their force is into four parts. They assign the

four tribunes elected first to the first legion, the next three to the second, the following four to the third and the last three to the fourth legion. The first two senior tribunes are assigned to the first legion, the next three to the second. Then two are assigned to the third and the last three to the fourth. Such is the division and assignment of the tribunes that each legion has the same number of tribunes.

After this, the tribunes have separated and been grouped according to the legion to which they are assigned. They summon the tribes one by one according to lot. From the first tribe they select four young men as like each other as possible in age and physical condition, The four are brought forward and the tribunes of the first legion select one of them, then those of the second legion choose the next, then the tribunes of the third legion make their choice and finally those of the fourth make their selection. Then another four are brought forward and the tribunes of the second legion have first choice and so forth with the tribunes of the first legion choosing last. After this another four men are brought forward and the tribunes of the third have first choice while those of the second have last choice. So with this rotation of choice it results that the men in each legion are approximately the same. They continue until they reach the required number of men, that is 4,200, sometimes 5,000, when the situation is especially serious. They used to choose the cavalry last; now they do it first, and the selection is now done by the censor on the basis of wealth, with 300 assigned to each legion.

...

[6.21] When the recruits arrive on the appointed day, they [the tribunes] divide them up. The youngest and poorest form the *velites* [light-armed]. The group next to them is assigned to the *hastati*. Those in the prime of life make up the *principes* and the oldest men are allotted to the *triarii*. These are the differences within the four groups in the Roman legion that differ in name, age, and equipment. They divide them in the following manner [in each legion]: the oldest men called the *triarii* number 600, the *principes* 1,200 and they assign an equal number to the *hastati*. The remainder who are the youngest are the *velites* [light-armed]. If a legion larger than 4,000 men is required they increase the number of men in each line in proportion except for the *triarii*. These always number 600.

Source: Sage, Michael M., ed. 2008. *The Republican Roman Army: A*

Sourcebook. London/New York: Routledge, pp. 122–23; 70–71. Used by permission of Taylor & Francis.

[6.26] The allies having now assembled also at the same places as the Romans, their organization and command are undertaken by the twelve officers appointed by the consuls known as *praefecti sociorum*. From all the assembled allies, they first of all select ... the horsemen and infantry most fitted for actual service, these being known as *extraordinarii*, that is “select.” The total number of allied infantry usually equals the Roman [infantry], while the cavalry are three times as many. Of these they assign about a third of the cavalry and a fifth of the infantry to the picked corps; the rest they divide into two bodies, the right wing and the left.

8. Polybius *Histories* 10.15–16: How the Romans Sacked Cities (209 BCE)

Introduction

Extreme violence was typical of the Roman sack of cities; see Ziolkowski 1993. The first excerpt depicts the sack of New Carthage by Scipio Africanus and his troops in 209 BCE; the second is Polybius’ description of Roman general practice. Polybius is tendentious in depicting Roman plundering as an entirely organized and controlled activity, and in general idealizes the Roman army.

Document

[10.15] When Scipio thought that enough troops had entered [New Carthage], he sent most of them, as is the Roman custom, against the inhabitants of the city with orders to kill all they encountered, sparing none, and not to start pillaging until the signal was given. They do this, I think, to inspire terror, so that when towns are captured by the Romans one may often see not only the corpses of human beings, but dogs cut in half, and the dismembered limbs of other animals.

Source: Polybius. 1925. *Histories*. Translated by W. R. Paton. Loeb Classical Library. Cambridge, MA: Harvard University Press; adapted by Sara E. Phang.

[10.16] The following is a description of the Roman procedure after the capture of cities. Either a number of men in accordance with the size of the town are assigned to the collection of booty from each manipule or a number of maniples [from each legion] are allotted the task. They never assign more than half of the army to this duty. The rest remain on guard in formation, sometimes outside the town and at times within it at the ready. Their armies usually have two legions, as well as an equal number of allies; rarely, the armies have four Roman legions. Those assigned to gathering the booty take it to their respective legion, and after the booty has been sold the military tribunes distribute an equal share to each soldier, not only to those on guard but also those guarding the tents and to the sick and those on detached duty. I have already written in detail in my section on the Roman constitution about the fact that no one appropriates the booty for himself but keeps faith with the oath they all have sworn when they first assembled in camp at the point when they were setting out on campaign.

9. Polybius *Histories* 6.37, 39, 53: Roman Military and Cultural Practices (Third–Second Century BCE)

Introduction

Besides describing Roman political and military institutions, Polybius also describes cultural practices that motivated soldiers and elite officers, including discipline (depicted as particularly harsh) and military decorations. His account of aristocratic funerals suggests the pressure felt by men of noble families to live up to their ancestors' heroic deeds.

Document

[6.37] If the mistake has been made by a member of the guard, the man in charge of the guard can immediately clear matters up by calling upon his

fellows as witnesses, and he is obligated to do this. If nothing of the kind has taken place the blame comes back upon him. Immediately, a tribunal composed of all the military tribunes is set up. It tries him and if he is found guilty he is beaten with a wooden club. A tribune picks up the club and only touches the condemned with it; then all the soldiers in the camp attack him with clubs and stones. They kill the majority of the condemned in the camp itself, but there is no safety for those who manage to escape. How could there be? They cannot return to their homeland. Would any of their relations dare to take them into their homes? As a result those who have once fallen victim to such misfortune are completely destroyed. The optio and the prefect of the cavalry squadron suffer the same punishment if they do not transmit the necessary orders at the specified time to the guard and to the commander of the next cavalry squadron. It is because the Romans punish so harshly and implacably that their night guard posts execute their duty without fault.

Common soldiers must obey the tribunes and they in turn the consuls. The tribune is also in charge of fines, holding goods as pledges and inflicting beatings, while the prefects do the same for the allies. Beating with clubs is also inflicted on those who steal from the camp, those who give false witness, and young men who are discovered abusing themselves. In addition, those who are convicted of a third offense on the same charge are punished in this way. These offenses are punished as crimes. But the following are held to be cowardly acts and shameful conduct in a soldier: if someone makes a false report to the tribunes of his courage in battle for the sake of obtaining reward; likewise if someone assigned to a reserve unit leaves his post for reasons of cowardice; also if someone throws away any of his equipment in fear. These are the reasons that men in reserve units often face certain death, refusing to leave their post though facing many times their number. Some who have discarded their shields or dagger or some other piece of equipment throw themselves upon the enemy without thought, hoping either to regain what they had thrown away or by dying to escape public shame and the mockery of their relatives.

Source: Sage, Michael M., ed. 2008. *The Republican Roman Army: A Sourcebook*. London/New York: Routledge, pp. 226–227. Used by permission of Taylor & Francis.

[6.39] They also have a commendable way of encouraging the young men to brave danger. Whenever there is a battle and some of their troops have distinguished themselves, the general calls an assembly of the army and brings forward those who he thinks have distinguished themselves. He first speaks in praise of each man's courage and mentions anything else they have done that merits mention. After this he gives a *gaision* to the man who has wounded the enemy; to the soldier who has taken an enemy prisoner and stripped him he gives a *phiale* if he belongs to the infantry, or *phalerae* if he is a cavalry trooper, though originally the award was a javelin. These awards are not made if the enemy is wounded or stripped in the course of a regular battle or in the storming of a city, but for actions in skirmishes or other such occasions when there is no need for single combat. The recipients must engage willingly and deliberately.

They give a gold crown to those who are the first to mount the wall during the capture of a city. In the same way, the consul marks out with gifts those who have shielded and saved the lives of citizens or allies.

Source: Sage, Michael M., ed. 2008. *The Republican Roman Army: A Sourcebook*. London/New York: Routledge, pp. 214–215. Used by permission of Taylor & Francis.

[6.53] Whenever any illustrious man dies, [his body] is carried at his funeral into the forum to the so-called Rostra [the speakers' platform].... Here with all the people standing round, a grown-up son ... or some other relative mounts the rostra and describes the virtues and successful achievements of the dead..... Next after the interment and the performance of the usual ceremonies, they place the image of the departed in the most conspicuous position in the house, enclosed in a wooden shrine. This image is a mask faithfully reproducing both the features and complexion of the deceased. On the occasion of public sacrifices they display these images, and decorate them with much care, and when any distinguished member of the family dies they take them to the funeral, putting them on men [of the family] who bear the closest resemblance to the original [men] in height and build. These representatives wear togas, with a purple border if the deceased was a consul or praetor, whole purple if he was a censor, and embroidered with gold if he had celebrated a triumph or achieved anything similar. They all ride in chariots preceded by the fasces, axes, and other

insignia associated with the magistracies which the ancestors held in their lifetimes, and when they arrive at the rostra they all seat themselves in a row on ivory chairs. There could not easily be a more ennobling spectacle for a young man who aspires to fame and virtue.

Appian (First Century CE)

Appian of Alexandria was a Greek author of the late first century CE who wrote a “History of Rome” that was subdivided into geographical regions, for which the surviving sections are named: *Punike* (The Punic Wars), *Iberike* (Spanish Wars), and so on. Part of this work, termed the *Bella Civilia* or Civil Wars, treated the civil wars of the Late Republic from c. 133 BCE to Actium. Continuous narrative of this period is otherwise unsatisfactory; Plutarch’s biographies survive, but Cassius Dio’s history of the late Republic survives only in summary (see Dio section below).

10. Appian, *Punic Wars* 76, 80–1, 132–33: The Third Punic War (149–146 BCE)

Introduction

In the Third Punic War (149–146 BCE), the Romans laid siege to Carthage (the state of Carthage had been reduced by the First and Second Punic Wars to little more than the city of Carthage) and destroyed it. The description of the initial negotiations illustrates formal elements of the Roman declaration of war, in which representatives presented their demands three ritual times, but also illustrates the cynical attitude of the Romans at this time in making demands they knew the Carthaginians could not meet.

Document

[76] The Senate was convened and it told the [Carthaginian envoys] that if, within thirty days, the Carthaginians gave to the consuls, who were still in Sicily, three hundred children of their noblest families as hostages, and obeyed their orders in other respects, the freedom and autonomy of

Carthage would be preserved and that they would retain their lands in Africa ... [The Carthaginian envoys returned to Carthage and sent the hostages. The envoys returned to the Roman army, now at Utica.]

....

[80–1] Then [consul Lucius Marcius] Censorinus rose and replied as follows: “Why should I tell you the causes of the war, O Carthaginians, when your ambassadors have been at Rome and have learned them from the Senate? What you have stated falsely, I will refute. The decree itself declared, and we notified you in Sicily when we received the hostages, that the rest of the conditions would be revealed to you at Utica. For your promptness in sending the hostages and your care in selecting them, you deserve praise. If you sincerely desire peace why do you need any arms? Bring all your weapons and engines of war, both public and private, and deliver them to us.”

When he had thus spoken the ambassadors said that they would also comply with this order, but that they did not know how they could defend themselves against Hasdrubal, whom they had condemned to death, and who was now leading 20,000 men against them, and was already encamped near Carthage. When the consul said that he would take care of Hasdrubal they promised to deliver up their arms.

[The Carthaginians complied with the Roman orders.]

[Consul Lucius Marcius Censorinus said to the Carthaginian envoys:] “Your ready obedience up to this point, O Carthaginians, in the matter of the hostages and the arms, is praiseworthy. In cases of necessity we must not multiply words. Bear bravely the remaining commands of the Senate. Yield Carthage to us, and go where you like within your own territory at a distance of at least fifteen kilometers from the sea, for we are resolved to raze your city to the ground.” [The Carthaginians refused and war ensued.]

...

[132–33] Scipio [Aemilianus]... beholding [the destruction of Carthage], is said to have wept and publicly lamented the fortune of the enemy.

After thinking by himself a long time and reflecting on the rise and fall of cities, nations, and empires, as well as of individuals, upon the fate of Troy, that once proud city, upon that of the Assyrians, the Medes, and the Persians, greatest of all, and later the splendid Macedonian empire, either voluntarily or otherwise the words of the poet escaped his lips:

The day shall come in which our sacred Troy
And Priam, and the people over whom
Spear-bearing Priam rules, shall perish all.

[Homer, *Iliad*, 6.448–449; from Bryant, W. C., trans. 1870. *The Iliad of Homer*. Boston: Fields, Osgood, and Company.]

Being asked by Polybius in private conversation (for Polybius had been his mentor) what he meant by using these words, [Scipio] said that he did not hesitate frankly to name his own country, for whose fate he feared when he considered the mutability of human affairs. And Polybius wrote this down just as he heard it.

11. Appian, *Spanish Wars* 49–53, 82–83, 84–86: The Spanish Wars (Mid-Second Century BCE)

Introduction

These passages (probably based on Polybius) display the range of Roman motivations for imperialism. The consul of 151, Lucius Licinius Lucullus (an ancestor of the late Republican Lucullus), desired glory and plunder, probably because running for office had left him in debt; since Spain was far from Rome, the Senate could not control his actions. Scipio Aemilianus, a junior officer at this time, fought a duel with an enemy champion (see “monomachy”). The Spanish wars suffered numerous reverses, the surrender of Mancinus (App. Iber. 82–83) being among the most shameful. Now middle-aged and the victor of Carthage, Scipio Aemilianus was elected consul for 134 and sent to Spain to discipline a demoralized Roman army and inflict vengeance on the Numantines.

Document

[49–52] Lucullus desiring glory and needing money ... invaded the territory of the Vaccaeii, another Celtiberian tribe, neighbors of the Arevaci, against whom the Senate had not declared war.... Crossing the river Tagus he came to the settlement of Cauca, and pitched his camp near it. The citizens asked

him what he had come for and why he wanted war, and when he replied that he had come to aid the Carpetani whom the Vaccaeii had maltreated they retired inside their walls, from which they sallied out and attacked his woodcutters and foragers, killing many and pursuing the remainder to the camp. When battle was joined the Caucaeii, who resembled light-armed troops, had the advantage at first, but when they had expended all their spears they had to run away, not being accustomed to a pitched battle, and while forcing their way through the gates about 3,000 of them were killed.

The next day the elders of the settlement came out wearing wreaths on their heads and bearing olive-branches [as conventional suppliants], and asked Lucullus what they should do to establish friendly relations [with Rome]. He replied that they must give hostages and 100 talents of silver, and furnish a contingent of horse to the Roman army. When all these demands had been complied with, he asked that a Roman garrison should be admitted to the settlement. When the Caucaeii assented to this he brought in 2,000 picked soldiers, to whom he gave orders to occupy the walls after being admitted. When this was done, Lucullus introduced the rest of his army and ordered them at the sound of the trumpet to kill all the adult males of the Caucaeii..... Lucullus sacked the settlement and brought infamy upon the Roman name. The rest of the barbarians collecting together from the fields took refuge among inaccessible rocks or in the most strongly fortified towns, carrying away what they could, and burning everything else, to deprive Lucullus of plunder....

[53] There was a certain barbarian remarkable for his splendid armor, who frequently rode into the space between the armies and challenged the Romans to single combat, and when nobody accepted the challenge he jeered at them, made insulting gestures, and went back. After he had done this several times, Scipio [Aemilianus], who was still a young man, felt very much aggrieved, and springing forward accepted the challenge. Fortunately he won the victory over this giant although he was himself a man of small size.

....

[82-3] [The consul Gaius Hostilius] Mancinus had frequent encounters with the Numantines in which he was defeated, and finally, after great loss, took refuge in his camp. On a false rumor that the Cantabri and Vaccaeii were coming to the aid of the Numantines, he became alarmed, extinguished his fires, and fled in the darkness of night to a deserted place

where [Marcus Fulvius] Nobilior once had a camp. Being trapped in this place at daybreak without preparation or fortification and surrounded by Numantines, who threatened to kill them all unless he made peace, [Mancinus] agreed to terms.... To this agreement he bound himself by an oath.

When these things were known at Rome there was great indignation at this most shameful treaty, and the other consul, [Marcus] Aemilius Lepidus, was sent to Spain, Mancinus being called home to stand trial. The Numantine ambassadors followed him there.

....[The Senate] decided to deliver Mancinus to the Numantines for making a disgraceful treaty without their authorization.... Mancinus was taken to Spain by Furius, and delivered naked to the Numantines [as a slave], but they refused to receive him.

....

[84–86].... When [Scipio Aemilianus] arrived [at Numantia], he expelled all traders and prostitutes; also the soothsayers and diviners, whom the soldiers constantly consulted because they were demoralized by defeat. For the future he forbade the bringing in of anything unnecessary, or any victims for purposes of divination. He ordered all wagons and their superfluous contents to be sold, and all pack animals, except such as he designated, to remain. Their cooking utensils were restricted to only a [cooking] spit, a brass kettle, and one cup per man....

Thus in a short time he brought them back to good order....

[Scipio] did not venture to engage the enemy until he had trained his men by many strenuous exercises. He traversed all the neighboring plains, and daily fortified new camps one after another, and then demolished them, dug deep trenches and filled them up again, constructed high walls and overthrew them, personally overlooking the work from morning till night.

12. Appian, *Mithridatic Wars* 51, 94, 96–7: The Mithridatic Wars (88–66 BCE)

Introduction

Rome's wars with King Mithridates VI of Pontus, an energetic ruler who overran Asia Minor and threatened Greece, lasted from the 80s to the 60s BCE. After his first march on Rome in 88, Lucius Cornelius Sulla transferred command of the Mithridatic War to himself and departed with his army to the East, enabling the Marians to take over at Rome (see "Marian-Sullan Conflict"). The Mithridatic Wars appear to have caused an epidemic of piracy in the Mediterranean, to combat which Pompey was voted special imperium in 67 BCE. Pompey was subsequently voted another extraordinary command against Mithridates.

Document

[51] As [Sulla] had no news of Lucullus he began to build ships for himself [for his expedition against Mithridates VI]. At this juncture [Lucius] Cornelius Cinna and Gaius Marius, his rivals at home, declared Sulla an enemy of the Roman people, destroyed his city and country houses, and murdered his friends. This, however, did not weaken [Sulla] in the least, since he had a zealous and devoted army.

[94, 96-7] When the Romans could no longer bear the damage and disgrace [of pirates infesting the Mediterranean Sea], they made Gnaeus Pompey, who was then their man of greatest reputation, commander by law for three years, with absolute power over the whole sea within the Pillars of Hercules, and of the land for a distance of 75 kilometers from the coast.

.... Never did any man before Pompey set forth with so great authority conferred upon him by the Romans. Presently he had an army of 120,000 foot and 4,000 horse, and 270 ships.... He had twenty-five legates ... among whom he divided the sea, giving ships, cavalry, and infantry to each, and investing them with the insignia of praetors, to give each man absolute authority over the part entrusted to him, while he, Pompey, like a king of kings, [oversaw their campaigns]....

Pompey [brought] ... forces of various kinds and many [siege] engines, as he expected to encounter every kind of fighting and every kind of siege against the rock-bound citadels [of the pirates]; but he needed nothing. The terror of his name and the greatness of his preparations caused the pirates to panic. They hoped that if they did not resist they might receive lenient treatment. [The pirates surrendered to Pompey, who burned their war material, confiscated their ships, and freed their captives.]

Thus the war against the pirates, which people thought would prove

very difficult, was brought to an end by Pompey in a few days.....

For this victory, so swiftly and unexpectedly gained, the Romans extolled Pompey beyond measure; and while he was still in Cilicia they chose him commander of the war against Mithridates, giving Pompey the same unlimited powers as before, to make war and peace as he liked, and to proclaim nations friends or enemies as he saw fit. They gave him command of all the forces beyond the borders of Italy. All these powers had never been given to any one general before.

13. Appian, *Civil Wars* 1.57, 95, 100: The Marian-Sullan Conflict (88–82 BCE)

Introduction

The first excerpt below (1.57) describes Sulla's leadership of his army in his first march on Rome in 88; the second passage, after Sulla's second march on and capture of Rome in 82, describes how Sulla proceeded to inflict a purge on his enemies, proscribing them (see "Proscriptions"). The third passage describes Sulla's dictatorship and reform of the Roman state, increasing the power of the Senate and weakening the tribunes and assemblies.

Document

[1.57] ...[Sulla] resolved to decide the question by war, and called the army together to a conference. They were eager for the war against Mithridates because it promised much plunder, and they feared that Marius would enlist other soldiers instead of themselves. Sulla spoke of how Sulpicius and Marius had insulted him, and while he did not openly allude to anything else (for he did not dare as yet to mention this sort of [civil] war), he urged them to be ready to obey his orders. They understood what he meant, and as they feared missing the campaign, they uttered boldly what Sulla had in mind, and told him to be bold, and to lead them to Rome. Sulla was overjoyed and led six legions there at once; but all his superior officers, except one quaestor, left him and fled to [Rome], because they refused to lead an army against their country. Envoys met [Sulla] on the road and

asked him why he was marching with armed forces against his country. "To deliver her from tyrants," he replied.

[1.95] Sulla himself called the Roman people together in an assembly and orated to them, inflating his own exploits and making other menacing statements in order to inspire terror. He finished by saying that he would make changes which would be beneficial to the people if they obeyed him, but that he would spare none of his enemies, but would treat them with the utmost severity. He would take vengeance by strong measures on the praetors, quaestors, military tribunes, and everybody else who had committed any hostile act [against him].... After saying this he at once proscribed about forty senators and 1,600 knights. He seems to have been the first to make a formal list of those whom he punished, to offer prizes to assassins and rewards to informers, and to threaten with punishment those who concealed the proscribed. Shortly afterward he added the names other senators to the proscription. Some of these, taken unawares, were killed wherever they were caught, in their houses, in the streets, or in the temples.... Others were dragged through the city and trampled on, none of the spectators daring to utter a word of protest against these horrors. Banishment was inflicted upon some and confiscation upon others. Spies searched everywhere for those who had fled from the city, and those whom they caught they killed.

[1.100] Nevertheless, by way of maintaining the form of the republic he allowed them to appoint consuls.... But Sulla, like a reigning monarch, was dictator over the consuls. Twenty-four axes were carried in front of him as dictator, the same number that were carried before the ancient kings, and he also had a large bodyguard..... He forbade anybody to hold the office of praetor until after he had held that of quaestor, or to be consul before he had been praetor, and he prohibited any man from holding the same office a second time till after the lapse of ten years. He reduced the [power of tribunes] to almost nothing. He curtailed it by a law which provided that a tribune of the plebs should never afterward hold any other office; as a result, all men of reputation or family, who formerly competed for this office, avoided it thereafter.... To the Senate itself, which had been much thinned by the seditions and wars, he added about 300 members from the wealthiest equestrians, taking the vote of the tribes on each one..... [Sulla] distributed to the twenty-three legions that had served under him a great deal of land in the various communities ... some of which was public property and some

seized from the communities as fines.

14. Appian, *Civil Wars* 1.pr.4, 2.47: Caesarian-Pompeian Civil War (49–45 BCE)

Introduction

The Caesarian-Pompeian civil war (49–45 BCE) and the triumviral wars (44–31 BCE) were afterward considered as one long period of civil war, which the Greco-Roman elite authors believed was driven by the greed of the soldiers as well as the ambition of their generals.

Document

[1.pr.4]... When ordered by the Senate to lay down his command [in Gaul, Caesar] excused himself on the ground that this was not the wish of the Senate, but of Pompey, his enemy, who commanded an army in Italy and planned to depose him. So he sent proposals that either both should retain their armies, so neither need fear the other's enmity, or that both he and Pompey also should dismiss their forces and live as private citizens under the laws. Both suggestions being refused, [Caesar] marched from Gaul against Pompey into Roman territory, entered Rome, and finding Pompey fled, pursued him into Thessaly, won a brilliant victory over him in a great battle [Pharsalus, 48 BCE], and followed him to Egypt. [Pompey was assassinated by the Egyptians.]

[2.47] Caesar's army mutinied at Placentia, reproaching their officers for prolonging the war and not paying them the five minae that Caesar had promised them as a donative while they were still at Brundisium. When Caesar heard of this he hurried from Massilia to Placentia and coming before the soldiers, who were still mutinous, [reproached them, saying: "... Witnessing my previous generosity to you, I shall now execute the law of our country by decimating the ninth legion, where this mutiny began." Straightway a cry went up from the whole legion, and the officers threw themselves at Caesar's feet in supplication. Caesar yielded little by little and so far remitted the punishment as to designate 120 only (the apparent

leaders of the revolt), and chose twelve of these by lot to be put to death. One of the twelve proved that he was absent when the conspiracy was formed, and Caesar put to death in his stead the centurion who had accompanied him.

15. Appian, *Civil Wars* 3.11–12, 4.2, 6, 11, 5.12–13: The Triumviral Wars (44–31 BCE)

Introduction

As Caesar's heir, Octavian took the name Gaius Julius Caesar Octavianus (termed Caesar in Appian's text, but changed to Octavian to avoid confusion) and inherited the loyalty of Caesar's veterans, whose support he drew on in his unprecedented bids for power. Once Octavian, Antony, and Lepidus joined forces as triumvirs (passage 2), they began to purge their enemies (see "Proscriptions"). The decree in 4.11 (third passage) originally gave the prices for heads in denarii. In the fourth passage, Appian explains how the late Republic's warlords and armies were dependent on each other.

Document

[3.11–12] When more accurate information about the murder [of Caesar] and the public grief reached [Octavian], together with copies of Caesar's will and the decrees of the Senate, his relatives cautioned [Octavian] all the more to beware of Caesar's enemies, as he was the latter's adopted son and heir. They even advised him to renounce the adoption, together with the inheritance. But [Octavian] thought that to do so, and not to avenge Caesar, would be disgraceful. So he went to Brundisium, first sending in advance to see that none of the murderers had laid any trap for him. When the army there advanced to meet him, and received him as Caesar's son, he took courage and offered sacrifice.... Directly multitudes of men from all sides flocked to him as Caesar's son, some from friendship to Caesar, others his freedmen and slaves, and with them soldiers besides, who were either bringing supplies and money to the army in Macedonia, or bringing other money and tribute from other countries to Brundisium.

.... Caesar's veterans ... flocked from their settlements to greet the young man. They bewailed Caesar, and cursed Antony for not proceeding against the monstrous crime, and said that they would avenge it if anybody would lead them. Octavian praised them, but postponed the matter for the present and sent them away.

[4.2] Octavian and Antony reconciled their differences on a small, depressed islet in the river Lavinius, near the city of Mutina..... They conferred from morning till night for two days, and came to these decisions: that Octavian would resign the consulship and that Ventidius would take it for the remainder of the year; that a new magistracy for quieting the civil dissensions would be created by law, which Lepidus, Antony, and Octavian would hold for five years with consular power...; that these three would at once designate the yearly magistrates of the city for the five years; that they would divide the provinces, giving to Antony the whole of Gaul except the part bordering the Pyrenees Mountains, which was called Old Gaul; this, together with Spain, was assigned to Lepidus; while Octavian was to have Africa, Sardinia, and Sicily, and the other nearby islands.

[4.6, 11] [Octavian, Antony, and Lepidus] postponed the proscription of most of their victims, but they decided to send executioners in advance and without warning to kill twelve, or, as some say, seventeen, of the most important ones, among whom was Cicero. Four of these were killed immediately, either at banquets or as they were met on the streets; and when search was made for the others in temples and houses, there was a sudden panic which lasted through the night, and a running to and fro with cries and lamentation as in a captured city.

.... Let no one harbor any one of those whose names are hereto appended, or conceal them, or send them away, or be corrupted by their money. Whoever shall be detected in saving, or aiding, or conniving with them we will put on the list of the proscribed without allowing any excuse or pardon. Let those who kill the proscribed bring us their heads and receive the following rewards: to a free man 25,000 Attic drachmas per head; to a slave his freedom and 10,000 Attic drachmas and his master's right of citizenship. Informers shall receive the same rewards. In order that they may remain unknown the names of those who receive the rewards shall not be inscribed in our registers.

[5.12–13] The task of assigning the soldiers to their colonies and dividing the land was extremely difficult. For the soldiers demanded the

cities chosen for them before the war as prizes for their valor, and the cities demanded that the whole of Italy share the burden, or that the cities cast lots with the other cities, and that those who gave the land be paid its cash value; and there was no money....

Octavian explained to the cities the necessity of the case, but he knew that it would not satisfy them; and it did not. The soldiers encroached upon their neighbours, insolently seizing more than had been given to them and choosing the best lands; nor did they cease even when Octavian rebuked them and gave them numerous other gifts, since they despised their rulers in the knowledge that they needed them to confirm their power, for the five years' term of the triumvirate was nearly over, and army and rulers needed each other's services for mutual security. The leaders [of the late Republic] depended on the soldiers for the continuance of their government, while, in order to keep what they had received, the soldiers depended on the permanence of the regime which had given it. Believing that they could not retain [their property] unless the givers had a strong government, the [soldiers] fought for them, from necessity, with good will.

Plutarch (Late First Century CE)

Plutarch of Chaeronea was a Greek philosopher and biographer who lived between ca. 50 and 120 CE. He wrote many philosophical works that have been collected as Plutarch's *Moralia*, but is most famous for the *Parallel Lives*, a large series of biographies of Greek and Roman leaders, pairing those he believed to be most similar in character and accomplishment (e.g., Alexander the Great and Julius Caesar).

16. Plutarch, *Tiberius Gracchus* 9–10, *Gaius Gracchus* 5, *Marius* 9: Excerpts from the Lives of Tiberius and Gaius Gracchus and Marius (ca. 133–100 BCE)

Introduction

To return to the 130s BCE, the wealthy opposed Tiberius Gracchus' land distribution program, which was intended to promote the recruitment of citizen soldiers. Whether there really was a shortage of citizen recruits rests on economic and demographic studies (see "Demography" and Ligt 2012). They may have been impoverished by a growth in the citizen population, as argued by Rosenstein 2004.

*Seeking reelection as tribune, Tiberius was killed in a riot in which he and his followers, preparing to defend themselves, were viewed as aggressors by Scipio Nasica and other senators, who beat the Gracchans to death with whatever was at hand (Plutarch, Ti. Gracchus 19). Gaius Gracchus, whose proposed policies were wider-ranging, was targeted by a more specific decree, the *senatus consultum ultimum* (see entry).*

*Another recruitment crisis supervened in the 110s, with the invasion of the Germanic Cimbri and Teutones into Roman territory. The Romans lost an alleged 80,000 men at Arausio (105 BCE). Marius took the step of recruiting the landless poor (*capite censi*), though exactly when in his string of consulships (107, 104–100 BCE) is uncertain.*

Plutarch's attitude toward the Gracchi and Marius, whose policies benefited the poor, is very disapproving in part because the imperial elite believed that such policies had brought about the civil wars of the late Republic.

Document

[Plutarch, *Ti. Gracchus* 9–10] But they accomplished nothing; for Tiberius, striving to support a measure which was honorable and just with an eloquence that would have adorned even a meaner cause, was formidable and invincible, whenever, with the people crowding around the rostra, he took his stand there and pleaded for the poor. "The wild beasts that roam over Italy," he would say, "have every one of them a cave or lair to lurk in; but the men who fight and die for Italy enjoy the common air and light, indeed, but nothing else; houseless and homeless they wander about with their wives and children. And it is with lying lips that their *imperators* exhort the soldiers in their battles to defend sepulchres and shrines from the enemy; for not a man of them has an hereditary altar, not one of all these many Romans an ancestral tomb, but they fight and die to support others in wealth and luxury, and though they are styled masters of the world, they have not a single clod of earth that is their own."

Such words as these, the product of a lofty spirit and genuine feeling, and falling upon the ears of a people profoundly moved and fully aroused to the speaker's support, no adversary of Tiberius could successfully withstand. Abandoning therefore all counter-pleading, they addressed themselves to Marcus Octavius, one of the popular tribunes.... On this account Octavius at first tried to hold himself aloof, out of regard for Tiberius; but he was forced from his position, as it were, by the prayers and supplications of many influential men, so he set himself in opposition to Tiberius and staved off the passage of the law.... Incensed at this procedure, Tiberius withdrew his moderate law, and introduced this time one which was more agreeable to the multitude and more severe against the wrongdoers, since it simply ordered them to vacate without compensation the land which they had acquired in violation of the earlier laws.

[Plutarch, *C. Gracchus* 5] Of the laws which [Gaius] proposed by way of gratifying the people and overthrowing the Senate, one was agrarian, and divided the public land among the poor citizens; another was military, and ordered that clothing should be furnished to the soldiers at the public cost, that nothing should be deducted from their pay to meet this charge, and that no one under seventeen should be enrolled as a soldier; another concerned the allies, and gave the Italians equal suffrage rights with Roman citizens; another related to the supplies of grain, and lowered the market price to the poor; and another dealt with the appointment of judges. This last law most of all curtailed the power of the senators; for they alone could serve as judges in criminal cases, and this privilege made them formidable both to the common people and to the equestrian order. The law of Gracchus, however, added to the membership of the Senate, which was three hundred, three hundred men from the equestrian order, and made service as judges a prerogative of the whole six hundred.

[Plutarch, *Marius* 9] [Marius] was triumphantly elected, and at once began to levy troops. Contrary to law and custom he enlisted many a poor and insignificant man, although former commanders had not accepted such persons, but bestowed arms, just as they would any other honor, only on those whose property assessment made them worthy to receive these, each soldier being supposed to put his substance in pledge to the state.

Sallust (ca. 86–35 BCE)

Gaius Sallustius Crispus (ca. 86–35 BCE) was a Roman politician and military officer, serving as a legate in Caesar's army and as proconsul of Africa. His political career was spotty and he retired to write history. His *Bellum Jugurthinum* (*The Jugurthine War*) and *Bellum Catilinae* (*The War with Catiline*) survive intact; his wider-ranging *Histories* survive only in fragments.

17. Sallust, *Bellum Catilinae* 29, 37–8; The Conspiracy of Catiline (63 BCE)

Introduction

Sallust depicts the followers of Catiline as including Sulla's veterans from the late 80s; at this time, since soldiers were recruited for shorter service than in the Principate, they might still be relatively young men in 63. Cicero, one of the consuls of 63, persuaded the Senate to take extreme measures and pass the senatus consultum ultimum (SCU) which empowered him to use summary measures in defense of the state. The Catilinarians were arrested. After a debate in the Senate in which Caesar advocated clemency and Cato Minor advocated severity, the Senate voted to put the conspirators to death (December 63). Catiline waited outside Rome with an army; in the spring of 62, the Senate sent an army to fight him, defeating him outside of Pistoia.

Document

[29] When these proceedings were reported to Cicero, he, alarmed by the twofold danger, since he could no longer secure the city against treachery by his private efforts, nor could he find out enough about the size or intentions of the army of Manlius, laid the matter, which was already debated among the people, before the Senate. The Senate, accordingly, as is usual in any crisis, decreed that "let the consuls see to it that the state suffers from no harm." According to Roman practice, the Senate grants this ultimate authority to the magistrate, which authorizes him to raise troops; to make war; to assume unlimited control over the allies and the citizens; to

exercise the chief command and jurisdiction at home and in the field, rights which, without an order of the people, the consul is not permitted to exercise.

[37–8] As for the populace of the city, they had become disaffected from various causes. In the first place, the leaders in crime and profligacy, with others who had squandered their fortunes in dissipation, and, in a word, all whom vice and villainy had driven from their homes, had flocked to Rome as a general cesspool. Furthermore, when they thought of the success of Sulla, which had raised some men from common soldiers to senators, and had enabled others to live in regal luxury and pomp, many hoped for similar results for themselves if they supported a revolt. In addition, young men earning a meager living in the countryside by farm labor, tempted by public and private handouts, preferred idleness in the city to unwelcome toil in the country. To these and all others of similar character, public disorder would furnish subsistence. It is no surprise, therefore, that desperate men, of dissolute principles and extravagant expectations, placed their personal goals above the public interest. Besides, those whose parents had been proscribed by Sulla's victory, whose property had been confiscated, and whose civil rights had been curtailed, looked forward to the event of a war with precisely the same feelings.

Caesar (100–44 BCE)

Gaius Julius Caesar (100–44 BCE) is of course most famous as a politician, general, dictator, and assassination victim. In addition, Caesar was an accomplished writer. His *Gallic Wars* relate the conquest of Gaul in seven books (the eighth was probably written by his subordinate Aulus Hirtius). Caesar's *Civil War* (*Bellum Civile*) narrates his war with Pompey only down to Caesar's arrival in Alexandria after defeating Pompey in the battle of Pharsalus. The other works that finish the narrative of the Caesarian-Pompeian Civil War, the *Alexandrine War*, *African War*, and *Spanish War*, were written by others.

18. Caesar, *Gallic Wars* 2.20–25: Battle of the Sambre (57

BCE)

Introduction

Caesar's army was suddenly attacked by the Nervii, a Gallic people. His depiction of the battle of the Sambre illustrates the role of the Roman general in battle, the use of the standards to guide soldiers, and the emotions experienced in battle. On Caesar's depiction of battle, Lendon 1999; in general Goldsworthy 1996; Sabin 2000.

Document

[20–25] Caesar had to do everything at once—raise the flag, as signal of a general call to arms; sound the trumpet call; recall the troops from entrenching; bring in the men who had gone somewhat farther afield in search of stuff for the ramp; form the line; exhort the troops; give the signal [for battle]. A great part of these duties was prevented by the shortness of the time and the advance of the enemy. The stress of the moment was relieved by two things: the knowledge and experience of the troops—for their training in previous battles enabled them to decide for themselves what needed to be done as readily as others could have shown them—and the fact that Caesar had forbidden the several legates to leave the entrenching and their proper legions until the camp was fortified. These legates, seeing the nearness and the speed of the enemy, did not wait for a command from Caesar, but took on their own account the appropriate steps.

Caesar gave the necessary commands, and then ran down ... to exhort the troops, and came to the Tenth Legion. His speech to the troops was no more than a reminder to recall their ancient valor, to dismiss fear, and bravely to withstand the onslaught of the enemy; then, as the enemy were within missile range, he gave the signal to engage. He started off ... in the other direction to give a similar exhortation, and found them fighting. The time was so short, the temper of the enemy so ready for conflict, that there was no space not only to fit badges in their places, but even to put on helmets and draw covers from shields. In whichever direction each man happened to come in from the entrenching, whatever standard each first caught sight of, by that he stood, to lose no fighting time in seeking out his proper company.

The army was stationed rather as the character of the ground, the slope of the hill, and the needs of the moment required than according to regular

tactical formation. The legions were separated, and each resisted the enemy in a different quarter; while the view to the front was interrupted ... by a barrier of very thick hedges. Supports, therefore, could not be posted with certainty, nor could it be foreseen what would be needed anywhere, nor could all the commands be controlled by one man. Thus, with affairs in so grievous a difficulty, the issues of the day came likewise in varying sequence.

....

After exhorting the Tenth Legion Caesar started for the right wing. There he saw that his troops were struggling, and that the men of the Twelfth Legion, with their standards collected in one place, were so closely packed that they hampered each other for fighting. All the centurions of the fourth cohort had been killed.... The rest of the men were tiring, and some of the recruits, abandoning the fight, fell back to avoid the missiles; the enemy continued to move upwards in front from the lower ground, and were pressing hard on either flank. The condition of affairs, as he saw, was critical indeed, and there was no support that could be sent up. Taking therefore a shield from one of the recruits, as he himself came there without a shield, [Caesar] went forward into the first line, and, calling on the centurions by name, and urging on the rest, he bade them advance and extend the companies, that they might wield swords more easily. His coming brought hope to the troops and renewed their spirit; each man of his own accord, in sight of the commander-in-chief, however desperate his own case might be, strove to do his utmost. So the onslaught of the enemy was checked a little.

Augustus (63 BCE–14 CE)

Augustus was, of course, the first of the Roman emperors (reign 27 BCE–14 CE). See also the encyclopedia entries “Augustus,” “Civil War (II) (44–31 BCE),” “Octavian,” and “*princeps*, Principate.”

19. Excerpts from the *Res Gestae Divi Augusti* 1–3, 6, 15–

17, 25–26 (14 CE)

Introduction

Inscribed posthumously on stone in Latin and Greek versions in various cities, the Res Gestae Divi Augusti (RGDA) narrates Augustus' rise to power and accomplishments as ruler of the Roman world. It is extremely tendentious; his opponents led by Marcus Junius Brutus and Gaius Cassius are labeled a "faction," and Sextus Pompeius and his followers, who pursued a naval strategy against him, are termed "pirates." For recent editions and commentary see "Res Gestae Divi Augusti," Ridley 2003; Cooley 2009. The RGDA's consular dates have been converted to conventional dates.

Document

[1–3, 6, 15–17, 25–26] At the age of nineteen, on my own initiative and at my own expense, I raised an army by means of which I restored liberty to the republic, which had been oppressed by the tyranny of a faction. For which service the Senate, with complimentary resolutions, enrolled me in its order, in [45 BCE] giving me at the same time consular precedence in voting; it also gave me the imperium. As propraetor it ordered me, along with the consuls, "to see that the republic underwent no harm." In the same year, moreover, as both consuls had fallen in war, the people elected me consul and a triumvir for settling the constitution.

Those who slew my father, I drove into exile, punishing their deed by due process of law, and afterwards when they waged war upon the republic I twice defeated them in battle.

Wars, both civil and foreign, I undertook throughout the world, on sea and land, and when victorious I spared all citizens who sued for pardon. The foreign nations which could with safety be pardoned I preferred to save rather than to destroy. The number of Roman citizens who bound themselves to me by military oath was about 500,000. Of these I settled in colonies or sent back into their own towns, after their term of service, something more than 300,000, and to all I assigned lands, or gave money as a reward for military service. I captured six hundred ships, over and above those which were smaller than triremes.

....

In [19 BCE], and afterwards in [18 BCE], and a third time in [11 BCE], when the Senate and the Roman people unanimously agreed that I should be

elected overseer of laws and morals, without a colleague and with the fullest power, I refused to accept any power offered me which was contrary to the traditions of our ancestors. Those things which at that time the Senate wished me to administer I carried out by virtue of my tribunician power. And even in this office I five times received from the Senate a colleague at my own request.

.... In the colonies of my soldiers, [in 29 BCE], I gave one thousand sesterces to each man from the spoils of war; about one hundred and twenty thousand men in the colonies received this triumphal largesse.

To the municipal towns I paid money for the lands which I assigned to soldiers in [30 BCE] and afterwards in [14 BCE]. The sum which I paid for estates in Italy was about 600 million sesterces, and the amount which I paid for lands in the provinces was about 260 million. I was the first and only one to do this of all those who up to my time settled colonies of soldiers in Italy or in the provinces. And later, in [7, 6, 5 and 2 BCE] ... I paid cash gratuities to the soldiers whom I settled in their own towns at the expiration of their service, and for this purpose I expended four hundred million sesterces as an act of grace.

...And in I contributed 170 million sesterces out of my own patrimony to the military treasury, which was established on my advice that from it gratuities might be paid to soldiers who had seen twenty or more years of service.

....

I freed the sea from pirates.... The whole of Italy voluntarily took oath of allegiance to me and demanded me as its leader in the war in which I was victorious at Actium. The provinces of the Spains, the Gauls, Africa, Sicily, and Sardinia took the same oath of allegiance.

I extended the boundaries of all the provinces which were bordered by races not yet subject to our empire. The provinces of the Gauls, the Spains, and Germany, bounded by the ocean from Gades to the mouth of the Elbe, I reduced to a state of peace.

Tacitus (ca. 56–before 120 CE)

A Roman senator and the most famous Latin historian, Cornelius Tacitus lived from ca. 56 to just before 120 CE, and held a suffect consulship and governorship of Asia Minor. His surviving historical works are the *Agricola*, a biography of his father-in-law that focuses on the Roman conquest of Britain; the *Histories*, an account of the civil war of 69 CE; and the *Annals*, a history of the earlier empire from the death of Augustus through the downfall of Nero. Tacitus is noteworthy for his sardonic attitude toward the Principate and his depiction of the corrupting effects of absolute power on emperors such as Tiberius (14–37 CE).

20. Tacitus, *Annals* 1.2–3, 17, 2.55: The Early Principate (14–19 CE)

Introduction

In the first passage Tacitus describes (very cynically) how Augustus consolidated his power and focuses on the problem of the imperial succession. Augustus sought a prospective successor within his family, but the Principate was not a formal hereditary monarchy; he had many choices of successors, all of whom predeceased him, leaving Tiberius (his stepson, a middle-aged man in 14 CE).

Serious mutinies on the Rhine and Danube occurred after Augustus' death in 14 CE, quelled by Tiberius' son Drusus and nephew Germanicus. Assigned greater imperium for a tour of inspection in the East in 18–19 CE, Germanicus quarrelled with Gnaeus Calpurnius Piso, the governor of Syria, and attempted to depose him. Germanicus then died at Antioch of suspected magic/poison and Piso attempted to take back his province by force of arms. Piso was subsequently condemned for sedition and the alleged murder of Germanicus. Tacitus' insinuation that Tiberius and Livia urged on Piso and Plancina to poison Germanicus is not supported by the official SC de Cn. Pisone patre.

Document

[1.2] When the killing of Brutus and Cassius had disarmed the Republic; when [Sextus Pompeius] had been crushed in Sicily, and, with Lepidus thrown aside and Antony killed, even the Julian party was leaderless but for

the Caesar [Octavian]; after laying down his triumviral title and proclaiming himself a simple consul content with tribunician authority to safeguard the commons, [Octavian] first conciliated the army by gratuities, the populace by cheap grain, the world by the amenities of peace, then step by step began to make his ascent and to unite in his own person the functions of the Senate, the magistracy, and the legislature. There was no opposition: the boldest spirits had succumbed on battlefields or via the proscription lists; while the rest of the nobility found a cheerful acceptance of servitude [to the autocracy] the smoothest road to wealth and office, and, as they had thriven on revolution, stood now for the new order and safety in preference to the old order and adventure. Nor was the state of affairs unpopular in the provinces, where administration by the Senate and People had been discredited by the feuds of the magnates and the greed of the officials, against which there was but frail protection in a legal system for ever deranged by force, by favoritism, or (in the last resort) by gold.

[1.3] Meanwhile, to consolidate his power, Augustus raised Claudius Marcellus, his sister's son and a mere youth, to the pontificate and curule aedileship: Marcus Agrippa, no aristocrat, but a good soldier and his partner in victory, he honored with two successive consulates, and a little later, on the death of Marcellus, selected him as a son-inlaw. Each of [Augustus'] stepsons, Tiberius and Drusus, was given the title of Imperator, though his family proper was still intact: for he had admitted Agrippa's children, Gaius and Lucius, to the Caesarian hearth, and even during their minority had shown, under a veil of reluctance, a consuming desire to see them consuls designate with the title Princes of the Youth. When Agrippa died, untimely fate, or the treachery of their stepmother Livia, cut off both Lucius and Gaius Caesar, Lucius on his road to the Spanish armies, Gaius—wounded and sick—on his return from Armenia. Drusus had long been dead, and of the stepsons [Tiberius] survived alone. On him all centred. Adopted as son, as colleague in the empire, as sharer of the tribunician power, he was paraded through all the armies, not as before by the secret diplomacy of his mother, but openly at her injunction.

[1.17] At last, when the [soldiers] were ripe for action—some had now become his comrades in sedition—[the legionary agitator Percennius] put his question in something like a set speech:—“Why should they obey like slaves a few centurions and fewer tribunes? When would they dare to claim redress, if they shrank from carrying their petitions, or their swords, to the

still unstable throne of a new prince? Mistakes enough had been made in all the years of inaction, when white-haired men, many of whom had lost a limb by wounds, were making their thirtieth or fortieth campaign. Even after discharge their warfare was not accomplished: still serving as a reserve force, they endured the old drudgeries under an altered name. And suppose that a man survived this multitude of hazards: he was dragged once more to the ends of the earth to receive under the name of a “farm” some unhealthy swamp or barren mountainside. In fact, the whole trade of war was comfortless and profitless: ten *asses* a day was the assessment of body and soul: with that they had to buy clothes, weapons and tents, bribe the bullying centurion and purchase a respite from duty! But whip-cut and sword-cut, stern winter and harassed summer, red war or barren peace,—these, God knew, were always with them. Alleviation there would be none, till enlistment took place under a definite contract—the payment to be a denarius a day, the sixteenth year to end the term of service, no further period with the reserve to be required, but the gratuity to be paid in money in their old camp. Or did the praetorian cohorts, who had received two denarii a day—who were restored to hearth and home at the end of sixteen years—risk more danger? They did not disparage sentinel duty at Rome; still, their own lot was cast among savage clans, with the enemy visible from their very tents.”

[2.55]... [Gnaeus Calpurnius Piso, the governor of Syria] left Germanicus and completed the journey first. Then, the moment he reached Syria and the legions, by bounties and by bribery, by flattering the lowliest soldiers, by dismissals of the veteran centurions and the stricter commanding officers, whom he replaced by dependants of his own or by men of the worst character, by permitting indolence in the camp, license in the towns, and in the country a vagrant and riotous soldiery, he carried corruption to such a pitch that in popular parlance he was known as the Father of the Legions. Nor could Plancina contain herself within the limits of female decorum: she attended cavalry exercises and infantry maneuvers; she flung her gibes at Agrippina or Germanicus; some even of the loyal troops being ready to yield her a disloyal obedience; for a whispered rumor was gaining ground that these doings were not unacceptable to the emperor. The state of affairs was known to Germanicus, but his more immediate anxiety was to reach Armenia first.

21. Tacitus, *Histories* 1.4, 18, 23–4, 36, 41, 3.33: The War of Four Emperors (69 CE)

Introduction

In the Histories, Tacitus depicts the cyclic process of usurpation and revolt. In the first passage he depicts the deterioration of Galba's relationship with the Praetorians. In his turn Otho exploited his patronage of the Praetorians to build a relationship with them, enabling them to support his coup. Otho's suicide following the first Battle of Bedriacum (April 14, 69 CE) is typical of Roman generals who lost civil wars. Vespasian subsequently revolted against Vitellius in July 69; the Flavian troops, led by Antonius Primus, defeated the Vitellians in the Second Battle of Bedriacum (Oct. 69) but brutally sacked the neighboring city of Cremona. The Histories originally also chronicled the Flavian dynasty, but are not extant after 70 CE.

Document

[1.4] Although Nero's death had at first been welcomed with outbursts of joy, it roused varying emotions, not only in the city among the senators and people and the city soldiery, but also among all the legions and generals; for the secret of empire was now revealed, that an emperor could be made elsewhere than at Rome.

...

[1.18] Before a crowded gathering of the soldiers, with the brevity that became an emperor, [Galba] announced that he was adopting [Lucius Calpurnius] Piso after the precedent set by the deified Augustus, and following the military custom by which one man chose another.... He added no flattery of the soldiers, nor made mention of a gift. Yet the tribunes, centurions, and soldiers nearest him answered in a satisfactory manner; but among all the rest of the soldiers there was a gloomy silence, for they felt that they had lost through war the right to a gift which had been theirs even in times of peace. There is no question that their loyalty could have been won by the slightest generosity on the part of this stingy old man. He was ruined by his old-fashioned strictness and excessive severity....

[Tacitus describes the bold temperament of Marcus Salvius Otho, a much younger man than Galba.]

[1.23–24] On the march, at review, or in camp [Otho] addressed all the oldest soldiers by name, and...called them messmates. Others he recognized, some he asked after and helped with money or influence; oftentimes he let drop words of complaint and remarks of a double meaning concerning Galba, and did other things that tended to disturb the common soldiery. For they were grumbling seriously over the toilsome marches, the lack of supplies, and the hard discipline....

[1.36] When the minds of the soldiers were already inflamed, Maevius Pudens, one of Tigellinus's nearest friends, added fuel to the fire. Winning over all who were of a restless temper or who needed money and were hot-headed for a revolution, he gradually came to the point, whenever Galba dined at Otho's house, of using the dinner as an excuse for distributing one hundred sesterces to each member of the cohort that stood on guard. This was a kind of gift from the state, but Otho added to its significance by secret gifts to individuals ...

[On the day of the coup, some of the praetorians carried Otho off to the praetorian camp and hailed him as emperor.]

[1.41]... [The soldiers] placed him on a platform where shortly before the gilded statue of Galba had stood, and surrounded him with the standards and ensigns.... They seized everyone they saw coming over to them, embraced them with their arms, placed them next to them, repeated the oath of allegiance, now recommending the emperor to the soldiers, now the soldiers to the emperor. Otho did not fail in his part: he stretched out his hands and did obeisance to the common soldiers, threw kisses, and played in every way the slave to secure the master's place.

[Other praetorians carried Galba off and assassinated him.]

... It was near the Lacus Curtius that Galba was thrown from his chair and rolled on the ground by his panic-stricken carriers. His last words have been variously reported according to the hatred or admiration of individuals; some say that he asked in an appealing tone what harm he had done and begged for a few days to pay the donative; many report that he voluntarily offered his throat to the assassins, telling them to strike quickly, if such actions were for the state's interest. His murderers cared nothing for what he said....[They] shamefully mutilated his legs and arms, for his breast was protected [with armor], and in their cruel savagery they continued to

inflict many wounds on his body even after his head had been cut off.

[3.33] Forty thousand armed men burst into the town [of Cremona]; the number of camp-followers and servants was even greater; and they were more ready to indulge in lust and cruelty. Neither rank nor years protected anyone; their assailants debauched and killed without distinction. Aged men and women near the end of life, though despised as booty, were dragged off to be the soldiers' sport. Whenever a young woman or a handsome youth fell into their hands, they were torn to pieces by the violent struggles of those who tried to secure them, and this in the end drove the despoilers to kill one another. Individuals tried to carry off for themselves money or the masses of gold dedicated in the temples, but they were assailed and killed by others stronger than themselves. Some, scorning the booty before their eyes, flogged and tortured the owners to discover hidden wealth and dug up buried treasure..... For four days did Cremona supply food for destruction.

Suetonius (ca. 70–after 130 CE)

Gaius Suetonius Tranquillus (ca. 7–after 130 CE) was a Roman equestrian and high-ranking bureaucrat with access to the imperial archives. His *Twelve Caesars* from Julius Caesar and Augustus through Domitian are topically arranged rather than strictly chronological, and illustrate good and bad examples of imperial conduct.

22. Suetonius, *Iulius* 80–82, *Augustus* 24.1–25.3, 26.1–2, 49.1–2: Julius Caesar and Augustus (44–43 BCE; ca. 13 BCE)

Introduction

These passages describe Caesar's assassination (Suetonius, Iulius 80–82); Octavian's conduct as civil warlord contrasts with the deeds of Augustus, whom Suetonius approves of; Augustus' reorganization of the army, intended to stabilize the imperial system, is described in the last two passages.

Document

Suetonius, *Iulius* 80–82] It was [Caesar's plans to campaign against Persia] that led the conspirators to hasten their plot, in order to avoid giving their assent to this proposal.... Some wrote on the base of Lucius [Junius] Brutus' statue, "Oh, that you were still alive"; and on that of Caesar himself:

"First of all was Brutus consul, since he drove the kings from Rome;
Since this man drove out the consuls, he at last is made our king."

More than sixty joined the conspiracy against him, led by Gaius Cassius and Marcus [Junius Brutus] and Decimus Brutus. At first they hesitated whether to [assassinate him] at the elections in the Campus Martius.... When, however, a meeting of the Senate was called for the Ides of March in the curia adjoining the Theater of Gnaeus Pompeius, they agreed to that time and place.

.... As Caesar took his seat, the conspirators gathered about him as if to greet him, and straightway Tillius Cimber, who had assumed the lead, came nearer as though to ask something; and when Caesar with a gesture put him off to another time, Cimber caught his toga by both shoulders; then as Caesar cried, "Why, this is violence!" one of the Cascas stabbed him from one side just below the throat. Caesar caught Casca's arm and ran it through with his stylus, but as he tried to leap to his feet, he was stopped by another wound. When Caesar saw that he was beset on every side by drawn daggers, he muffled his head in his toga, and at the same time covered his lower body with his toga. And thus he was stabbed with three and twenty wounds, uttering not a word, but merely a groan at the first stroke, though some have written that when Marcus Brutus rushed at him, he said in Greek, 'You too, my child?' [Brutus was probably not Caesar's child; Caesar had become the lover of Brutus' mother Servilia at a later date.]

[Suetonius, *Augustus* 26.1–2] Octavian received offices and honors before the usual age, and some of a new kind and for life. He usurped the consulship in the twentieth year of his age, leading his legions against the city as if it were an enemy, and sending messengers to demand the office for him in the name of his army; and when the Senate hesitated, his centurion, Cornelius, leader of the deputation, throwing back his cloak and showing the hilt of his sword, did not hesitate to say in the Senate house, "This will

make him consul, if you do not.”

[Suetonius, *Augustus* 24.1–25.3] Augustus made many changes and innovations in the army, besides reviving some usages of former times. He exacted the strictest discipline..... After the civil wars he never called any of the troops “comrades,” either in the assembly or in an edict, but always “soldiers”; and he would not allow them to be addressed otherwise, even by those of his sons or stepsons who held military commands, thinking the former term too flattering for the requirements of discipline, the peaceful state of the times, and his own dignity and that of his household....

As military prizes he was somewhat more ready to give trappings or collars, valuable for their gold and silver, than crowns for scaling ramparts or walls, which conferred high honor; the latter he gave as sparingly as possible and without favoritism, often even to the common soldiers.

[Suetonius, *Augustus* 49.1–2] Of his military forces he assigned legions and auxiliaries to the various provinces, stationed a fleet at Misenum and another at Ravenna, to defend the [Tyrrhenian and Adriatic] seas, and employed the remainder partly to defend the city and partly to defend his person.... However, he never allowed more than three cohorts to remain in the city and even those were without a permanent camp; the rest he regularly sent to winter or summer quarters in the towns near Rome. Furthermore, he restricted all the soldiery everywhere to a fixed scale of pay and allowances, designating the duration of their service and the rewards on its completion according to each man’s rank, in order to keep age or poverty from tempting them to revolution after their discharge. To always easily secure funds for maintaining the soldiers and paying their benefits, he established a military treasury, supported by new taxes.

Inscription (128 CE)

**23. *Inscriptiones Latinae Selectae* 2487, 9133–9135:
Emperor Hadrian Addresses the Army (128 CE)**

Introduction

This inscription preserves the text of the speech (adlocutio) of Hadrian (117–138) to his army at Lambaesis in Numidia, North Africa. It displays the close relationship that Hadrian fostered with the imperial army; though he did not make any new conquests for the empire, his close relationship with his soldiers was intended to discourage revolt and usurpation; compare Cassius Dio 69.9, below.

Document

[ILS 2487; 9133–5] Emperor Caesar Trajan Hadrian Augustus addressed his very own Legion III Augusta after inspecting their maneuvers, in the words recorded below, in the consulship of Torquatus for the second time and Libo, 1 July.

To the chief centurions

[] your commander has himself told me on your behalf of numerous factors which would have excused you in my judgement, namely, that one cohort is absent which every year is sent in rotation to the office of the proconsul (of Africa), that two years ago you contributed a cohort and four men from each century to supplement your colleagues in the third legion (III Cyrenaica or Gallica), that many outposts in different locations keep you far apart, that in my own memory you have not only changed camp twice but also built new ones. For these reasons I would have excused you if the legion had been dilatory in its maneuvers for any length of time. But you have not been dilatory in any respect at all [] The chief centurions and the centurions were fit and strong as usual.

To the cavalry of the legion

Military maneuvers have their own rules so to speak and if anything is added or taken away from them the drill is made either less effective or more difficult. Indeed the more complications are added, the less impressive it appears. Of the difficult maneuvers you have completed the most difficult of all, throwing the javelin while wearing metal corslets []. Furthermore, I commend your morale

[To a cavalry cohort]

[Defences which] others build in several days, you have completed in one; you have constructed a wall which requires considerable work and which is normally built for permanent winter quarters in a time not much longer than is usually needed to build a turf wall. For this type of wall the

turf is cut to a regulation size, is easily carried and maneuvered, and is erected without trouble, for it is naturally pliable and level. But you used large, heavy, and uneven stones which no one can carry, lift, or fit in position without the stones catching on each other because of their uneven surface. You dug a ditch straight through hard and rough gravel and made it smooth by levelling it. When your work had been approved you entered the camp quickly and got your rations and weapons, and when you had followed the cavalry which had been sent out, with a great shout as it returned [

I commend [my legate] since he introduced you to this maneuver which has the appearance of real warfare and trains you in such a way that I can congratulate you. Cornelianus your prefect has performed his duties satisfactorily. However, the riding maneuvers do not win my approval [] The cavalryman should ride out from cover and engage in pursuit [cautiously, for if he cannot] see where he is going or if he cannot rein in his horse when he wishes, he will surely be exposed to hidden traps []

[] July, to the first ala of Pannonians

You did everything in order. You filled the plain with your exercises, you threw your javelins with a certain degree of style, although you were using rather short and stiff javelins; several of you hurled your lances with equal skill. Just now you mounted your horses agilely and yesterday you did it swiftly. If anything had been lacking in your performance I should have noted it, if anything had been obviously bad I should have mentioned it, but throughout the entire manoeuvre you satisfied me uniformly. Catullinus my legate, distinguished man, shows equal concern for all the units of which he is in command. [_ _ _] your prefect apparently looks after you conscientiously. I grant you a donative [as travelling expenses (?) _ _ _

To the cavalry of the sixth cohort of Commagenians

It is difficult for cavalry attached to a cohort to win approval even on their own, and more difficult still for them not to incur criticism after a maneuver by auxiliary cavalry; they cover a greater area of the plain, there are more men throwing javelins, they wheel right in close formation, they perform the Cantabrian manoeuvre in close array, the beauty of their horses and the splendor of their weapons are in keeping with their pay. But, despite the heat, you avoided any boredom by doing energetically what had to be done; in addition you fired stones from slings and fought with javelins; on every occasion you mounted speedily. The remarkable care taken by my

legate Catullinus, distinguished man, is obvious from the fact that he has men like you under [his command] _ _ _

Cassius Dio (ca. 155–235 CE)

Cassius Dio was a Greek senator from Bithynia in Asia Minor, whose *Roman History* spanned the early Republic to his own day in the 220s CE. However, Dio's *Roman History* is most valuable for contemporary events from the reign of Commodus (180–192) to the reign of Alexander Severus (222–235). Much of Dio is not extant in its original form, having been summarized by the Byzantine authors Zonaras and Xiphilinus; however, Dio is still a highly valuable source for the late second and early third centuries CE, and for what he believed about the late Republic and early empire.

24. Cassius Dio 52.27, 53.16–17, 56.18–22, 33: The Reign of Augustus (27 BCE–14 CE)

Introduction

Dio 52.27 is part of the fictional speech of Augustus' adviser Maecenas. This representation of the imperial army reflects Dio Cassius' contemporary concerns, but underlines the transition to a professional army. That emperors were autocratic in nature probably seemed more obvious to Dio, writing in the early third century CE, than to Augustus' contemporaries. Dio, who witnessed the renewed outbreak of civil war in 193–197 and 217–222, was highly critical of the emperor's relationship to the army, regarding soldiers as would-be brigands to be kept under strict discipline.

In 56.18–22 Dio vividly depicts the Varian disaster or Germanic revolt, in which three Roman legions were destroyed. Augustus' instructions to Tiberius (56.33) were not to extend the empire further, though emperors after Tiberius disregarded it.

Document

[52.27] ... While in general the men of military age should have nothing to do with arms and walled camps during their lives, the hardiest of them and those most in need of a livelihood should be enlisted as soldiers and given a military training.... Thus the most active and vigorous element of the population, which is generally obliged to gain its livelihood by brigandage, will support itself without harming others, while all the rest will live without risking danger.

[53.16] ... the name Augustus was at length bestowed upon him by the Senate and by the people. For when they wished to call him by some distinctive title, and men proposed one title after another and urging its selection, [Octavian] ... took the title of "Augustus," signifying that he was more than human; for all the most precious and sacred objects are termed *augusta*. Therefore they addressed him also in Greek as Sebastos, meaning an august personage, from the passive of the verb *sebazo*, "to revere."

In this way the power of both people and Senate passed entirely into the hands of Augustus, and from his time there was, strictly speaking, a monarch; for monarchy was the correct name for it, no matter if two or three men later held the power at the same time. The name of monarchy, to be sure, the Romans so detested that they called their emperors neither dictators nor kings ...; yet since the final authority for the government devolves upon them, they are *de facto* kings. The offices established by the laws, it is true, are maintained even now, except that of censor; but the entire direction and administration is dictated by the emperor. And yet, in order to preserve the appearance of having this power by virtue of the laws and not because of their own domination, the emperors have adopted all the functions, including the titles, of the offices which prevailed under the republic and by the free gift of the people, with the single exception of the dictatorship.

[56.18–22] The Romans were holding portions of [Roman Germany]—not entire regions, but the parts that were subdued... and soldiers of theirs wintered there and cities were being founded. The barbarians were adapting themselves to Roman ways ... and were meeting in peaceful assemblages. They had not, however, forgotten their ancestral habits, their native manners, their old independent life, or the power derived from arms. Thus, so long as they were unlearning these customs gradually ... and were becoming different without knowing it. But when Quintilius Varus became governor of the province of Germany, he ... strove to change them more

rapidly. Besides giving orders to them as if they were actually slaves of the Romans, he exacted money as he would from subject nations. To this they were in no mood to submit....

[The Germans, led by the treacherous auxiliary veterans Arminius and Flavus, stage a revolt in a relatively inaccessible area, leading Varus and his army deep into the Teutoburg Forest and ambush the Romans on the march.]

.... For the Romans did not proceed in any regular order, but were mixed in helter-skelter with the wagons and the unarmed, and so, being unable to take up military formation anywhere, and being fewer at every point than their assailants, they suffered greatly and could offer no resistance at all.

Accordingly they encamped on the spot, after securing a suitable place, so far as that was possible on a wooded mountain; and afterwards they either burned or abandoned most of their wagons and nearly all their baggage. The next day they advanced in a little better order, and even reached open country, though they still suffered losses. Upon setting out from there they plunged into the woods again, where they defended themselves against their assailants, but experienced their heaviest losses while doing so. [The Romans could not deploy easily in the woods, and were hampered by the heavy rain.].... Furthermore, the enemy's forces had greatly increased, as many of those who had at first wavered joined them, largely in the hope of plunder, and thus they could more easily encircle and strike down the Romans, whose ranks were now thinned, many having perished in the earlier fighting. Varus, therefore, and all the more prominent officers, fearing being captured alive or being killed by their bitterest foes (for they had already been wounded) ... took their own lives.

[56.33] Four books were then brought in and Drusus read them. The first contained detailed instructions regarding [Augustus'] funeral. The second recorded all the acts which he had performed, which he commanded also to be inscribed upon bronze columns to be set up around his shrine. The third contained an account of military matters, of the revenues, and of the public expenditures, the amount of money in the treasuries, and everything else pertaining to the administration of the empire. The fourth had injunctions and commands for Tiberius and for the public.... [Augustus] advised them to be satisfied with their present possessions and under no conditions to attempt to enlarge the empire. It would be hard to guard, he said, and this would risk losing what they already possessed.

25. Cassius Dio 68.3, 69.9, 20, 74(75).1–2: The Reigns of the “Five Good Emperors” vs. Severus (ca. 98; 117–138; 193)

Introduction

The elderly Nerva (96–98) adopted Trajan (98–117), one of the most highly regarded emperors both for his military conquests in Dacia and the East and for his affable relationship with the Senate. Trajan adopted Hadrian, who did not continue Trajan’s policies of conquest but emphasized the role of emperor as commander. Hadrian in his turn adopted Antoninus Pius (138–161). Dio regarded his own times as “an age of iron and rust,” depicting Septimius Severus in a more negative light. Severus punished the Italian praetorians for assassinating Pertinax in 193, but replaced them with worse Danubians (“barbarous” in this context means “uncultivated”).

Document

[68.3] Casperius Aelianus, who had become commander of the Praetorians under [Nerva] as he had been under Domitian, incited the soldiers to mutiny against him, after having induced them to demand certain persons for execution. Nerva resisted them stoutly, even to the point of baring his collarbone and presenting to them his throat; but he accomplished nothing, and those whom Aelianus wished were put out of the way. Nerva, therefore, finding himself held in such contempt because of his old age, ascended the Capitol and said in a loud voice: “May good success attend the Roman Senate and people and myself. I hereby adopt Marcus Ulpius Nerva Trajan.”

[69.9] Hadrian traveled through one province after another, visiting the various regions and cities and inspecting all the garrisons and forts. Some of these he removed to more desirable places, some he abolished, and he also established some new ones. He personally viewed and investigated absolutely everything, not merely the usual appurtenances of camps, such as weapons, engines, trenches, ramparts and palisades, but also the private affairs of every one, but of the men serving in the ranks and of the officers themselves,—their lives, their quarters and their habits,—and he reformed and corrected in many cases practices and arrangements for living that had

become too luxurious. He drilled the men for every kind of battle, honoring some and reproving others, and he taught them all what should be done. And so that they should be benefited by observing him, he everywhere led a rigorous life and either walked or rode on horseback on all occasions, never once at this period setting foot in either a chariot or a four-wheeled vehicle.... In short, both by his example and by his precepts he so trained and disciplined the whole military force throughout the entire empire that even today the methods then introduced by him are the soldiers' law of campaigning.

[69.20] [Hadrian] spoke to [the senators] as follows: "Nature has not permitted me to have a son, but you, my friends, have made it possible by legal enactment. Now these two methods [of designating a heir] differ—a biological son turns out to be whatever sort of person Heaven pleases, whereas a man adopts a son by deliberate selection..... I have found as emperor...the man [Antoninus Pius] whom I now give you, who is noble, mild, tractable, prudent, neither young enough to do anything reckless nor old enough to neglect anything, who has been brought up according to the laws and who has exercised authority in accordance with our traditions, so that he is not ignorant of any matters pertaining to the imperial office, but can handle them all effectively."

[74 (75).1–2] Severus, on becoming emperor..., inflicted the death penalty on the Praetorians who had taken part in the killing of Pertinax; and as for the others, he summoned them, before he came to Rome, and having surrounded them in the open while they were ignorant of the fate in store for them, denounced them bitterly for their lawless deed against their emperor, and then relieved them of their arms, took away their horses, and banished them from Rome.

....[Severus] ordered that any vacancies [in the Guard] should be filled from all the legions alike. Now he did this so as to have guards with a better knowledge of the soldier's duties, and also offering [promotion into the Guard as] a kind of prize for those who proved brave in war. But, as a matter of fact, it became only too apparent that he had incidentally ruined the youth of Italy, who turned to brigandage and gladiatorial fighting in place of their former service in the [Praetorians]. He also filled the city with a throng of motley soldiers most savage in appearance, most terrifying in speech, and most boorish in conversation.

Herodian (Early Third Century CE)

Herodian was a Greek author, possibly an official in the imperial administration, of which little is known. He wrote a *Roman History* that covered the period from the death of Nerva in 98 to the reign of Gordian III (238). He is important as a contemporary voice depicting the onset of the third-century crisis.

26. Herodian 3.8: Septimius Severus and the Army (197 CE)

Introduction

Septimius Severus had just defeated his rival emperor Clodius Albinus, and decided to reward his army. Soldiers previously had not been permitted legal marriage with women. The description of these policies as harming discipline is a standard elite view that military service ought to entail hardship (thus repressing the army and downplaying the emperor's dependence on the army).

Document

[3.8] In honor of all his victories [Severus] made generous gifts to the people; distributing large sums of money to the soldiers, he granted them many privileges which they had not previously enjoyed. He was the first emperor to increase their food rations, to allow them to wear gold finger rings, and to permit them to live with their wives; these were indulgences hitherto considered harmful to military discipline and the proper conduct of war. Severus was also the first emperor to make a change in the harsh and healthy diet of the soldiers and to undermine their resolution in the face of severe hardships; moreover, he weakened their strict discipline and respect for their superiors by teaching them to covet money and by introducing them to luxurious living.

Inscription (238 CE)

27. *Corpus Inscriptionum Latinarum* III 12336: Military Abuse of Civilians (238 CE)

Introduction

This petition to the emperor Gordian III (238) attests a common type of civil-military conflict, in which soldiers traveling through the provinces demanded goods and services, in particular transport animals, from civilians. Here they also made excessive use of a site with pleasant public baths (fed by the hot springs).

Document

[CIL III 12336] To Emperor Caesar Marcus Antonius Gordian Pius Fortunate Augustus, petition from the villagers of Scaptopara and of Griseia ... We live and have our property in the village mentioned above which is exposed to harm because it has the advantage of hot springs and is located between two of the army camps which are in your (province of) Thrace. Previously, as long as the inhabitants remained undisturbed and free from oppression, they reliably paid their tribute and met their other obligations. But when at times some persons started to become insolent and to use force, then the village started to decline. A famous festival is held two miles from our village, and those persons who stay there for fifteen days for the festival do not remain in the vicinity of the festival itself, but leave it and come down on our village, forcing us to provide them with hospitality and purvey many other items for their enjoyment without payment. In addition, to these persons, soldiers too, who have been despatched somewhere else, leave their proper routes and come to us, and similarly intimidate us into furnishing them with hospitality and provisions, and pay no money. [Rest omitted.]

Ammianus Marcellinus (ca. 325–after 390)

Ammianus Marcellinus was the last great Latin historian, a contemporary witness of most of the events in the extant part of his *Res Gestae* or *History of Rome*, from 353 to 379. He was a high-ranking military officer in the reigns of Constantius II (337–361) and Julian (361–363). He greatly admired Julian. The *Res Gestae* originally spanned the period from Nerva (96–98) through 379, but the earlier part is not extant.

28. Ammianus Marcellinus *History of Rome* 20.4, 31.12–13: The Revolt of Julian; Battle of Adrianople (361; 378 CE)

Introduction

Julian was elevated to Caesar in 355 by Constantius II (337–361) to hold down the German frontier while Constantius campaigned against Persia. Successful in his campaigns against the Germans, Julian was hailed emperor at Paris in 361. The battle of Adrianople occurred in August 378, after the Roman authorities mishandled a migration of the Goths across the Danube River, mistreating the Goths, who revolted and overran Moesia and Thrace. Rather than wait for additional troops sent by his young colleague Gratian, Valens decided to fight the Goths near Adrianople in Thrace. The Roman army was surrounded and two-thirds of it was destroyed.

Document

[20.4] But no sooner had night come on than they revolted openly, and... they turned to arms and action; with mighty tumult they all made for the palace, and wholly surrounding it, so that no one could possibly get out, with terrifying outcries they hailed Julian as Augustus, urgently demanding that he should show himself to them. They had to wait for the appearance of daylight, but finally forced him to come out; and as soon as they saw him, they redoubled their shouts and with determined unanimity hailed him as Augustus.

He, however, with unyielding resolution, opposed them one and all... [arguing] that after many happy victories nothing unseemly should be done, and that ill-timed rashness and folly should not stir up material for discord....

After this the shouts continued none the less on every side, and since all

insisted with one and the same ardor and with loud and urgent outcries mingled with abuse and insults, [Julian] was compelled to consent. Then, being placed upon an infantryman's shield and raised on high, he was hailed by all as Augustus and bidden to bring out a diadem. And when he declared that he had never had one, they called for an ornament from his wife's neck or head. But since he insisted that at the beginning of his reign it was not fitting for him to wear a woman's adornment, they looked about for a horse's trapping, so that being crowned with it he might display at least some obscure token of a loftier station. But when he declared that this also was shameful, a man called Maurus ... a standard-bearer of the Petulantes, took off the neck-chain which he wore as carrier of the dragon [banner] and boldly placed it on Julian's head. He, driven to the extremity of compulsion, and perceiving that he could not avoid imminent danger if he continued to resist, promised each man five gold pieces and a pound of silver.

[31.12–13] ... The army began its march with extreme haste, leaving all its baggage and packs near the walls of Adrianople with a suitable guard of legions; for the treasury, and the insignia of imperial dignity besides, with the prefect and the emperor's council, were kept within the circuit of the walls. So after hastening a long distance over rough ground, while the hot day was advancing towards noon, finally at the eighth hour they saw the wagons of the enemy.... And while the barbarian soldiers, according to their custom, uttered savage and dismal howls, the Roman leader so drew up their line of battle that the cavalry on the right wing were first pushed forward, while the greater part of the infantry waited in reserve. But the left wing of the horsemen (which was formed with the greatest difficulty, since very many of them were still scattered along the roads) was hastening to the spot at swift pace.... [The Romans draw up their battle line, already suffering from heat and thirst.]

... Our soldiers who were giving way rallied, exchanging many encouraging shouts, but the battle ... filled their hearts with terror, as numbers of them were pierced by strokes of whirling spears and arrows. Then the lines dashed together ... pushing each other back and forth in turn, and tossed about by alternate movements ...

And because the left wing, which had made its way as far as the very wagons, and would have gone farther if it had had any support, being deserted by the rest of the cavalry, was hard pressed by the enemy's

numbers, it was crushed, and overwhelmed.... The foot-soldiers thus stood unprotected, and their companies were so crowded together that hardly anyone could pull out his sword or draw back his arm.... But when the barbarians, pouring forth in huge hordes, trampled down horse and man, and in the press of ranks no room for retreat could be gained anywhere, and the increased crowding left no opportunity for escape, our soldiers also, showing extreme contempt of falling in the fight, received their death-blows, yet struck down their assailants; and on both sides the strokes of axes split helmet and breastplate..... Now the sun had risen higher, and ... scorched the Romans, who were more and more exhausted by hunger and worn out by thirst, as well as distressed by the heavy burden of their armor. Finally our line was broken by the onrushing weight of the barbarians, and since that was the only resort in their last extremity, they took to their heels in disorder as best they could.

While all scattered in flight over unknown paths, the emperor ... took refuge with the lancers and the *mattiarii*, who, so long as the vast numbers of the enemy could be sustained, had stood unshaken with bodies firmly planted....

At the first coming of darkness the emperor, amid the common soldiers as was supposed (for no one asserted that he had seen him or been with him), fell mortally wounded by an arrow, and presently breathed his last breath; and he was never afterwards found anywhere.

Synesius (Late Fourth–Early Fifth Century CE)

Synesius of Cyrene was a Greek rhetorician in the early fifth century. His address *On Kingship* was a typical theme of Greek panegyric (praise of important personages, usually Hellenistic kings or Roman emperors).

29. Synesius, *On Kingship* 9–10: Criticism of Emperor Arcadius' Inaction (395–before 408)

Introduction

In a sharp reaction from third and fourth-century practice, the young emperors Arcadius and Honorius did not lead troops in battle or even in the field. Nonimperial commanders-in-chief dominated military policy. The Greek orator Synesius adopts the traditional view that emperors should at least play the role of commanders (compare Hadrian in Cassius Dio 69.9, above). For obvious reasons, it is unlikely that this oration was delivered in the extant form.

Document

[*On Kingship* 9–10] Maybe you resent it that we urge you to toil, but trust me that a king feels toil much less, because toil least of all conquers a man who toils openly. When a king exercises his body, campaigns in the field, and spends his youth in armor ... he draws the eyes of all, and no one can bear to look elsewhere when a king performs bold deeds; every act of a king that inspires a song rings in the ears of all men. Furthermore, this custom fosters loyalty towards him, because the presence of a king [as commander] amazes his troops, and his good will greatly raises their morale.

.... [Imperial] majesty and the fear of being reduced to the level of a human being by frequently appearing in public, has caused you to become cloistered, as it were besieged by your very self, seeing and hearing very little of those things that promote wisdom in action. You enjoy only the pleasures of the body, and the most material of these, all those which touch and taste provide you, and so you live the life of a marine invertebrate.

Zosimus (Late Fifth–Early Sixth Century CE)

Zosimus was a Greek historian who wrote at the end of the fifth century or in the early sixth century (after 498). He is the last pagan historian of note, and employed earlier pagan historians such as Eunapius, who wrote closer to events in the earlier fifth century CE.

30. Zosimus, *New History* 2.34, 4.59, 5.50–1: Constantine; Theodosius Represses Paganism; Prelude to the Sack of Rome (306–337; 394; 410)

Introduction

As a pagan polemic, the New History accordingly treats Constantine I (306–337) harshly as wasting imperial finances on the Church and damaging the army by created a central field army allegedly billeted in towns. In fact, the reorganization of the later Roman army may have taken decades and is difficult to attribute to solely Diocletian or Constantine. Forces stationed near frontiers, the limitanei, still existed. Zosimus draws on stereotypes of undisciplined armies seen in earlier authors (compare Herodian 3.8 on Septimius Severus' army).

In the second passage, Theodosius I (379–395) had just defeated the usurper Eugenius and his general Arbogast (Battle of the Frigidus, 394). Theodosius had already banned pagan sacrifice. He now defunded the pagan state religion; as a traditionalist pagan, Zosimus blames the fall of the Western empire on this policy.

The third passage depicts the Gothic leader Alaric's demands for subsidies from the Roman government. Honorius' commander-in-chief and power behind the throne, Stilicho, had been executed in 408 for suspected treason; Alaric took advantage of the power vacuum and escalated his demands, threatening the city of Rome. Honorius and his officials refused, leading to Alaric's sack of Rome (410).

Document

[2.34] Constantine likewise adopted another measure, which gave the barbarians free access into the Roman dominions. For the Roman empire, as I have related, was, by the care of Diocletian, protected on its remote frontiers by towns and fortresses, in which soldiers were placed; it was consequently impossible for the barbarians to pass them, there being always a sufficient force to oppose their inroads. But Constantine destroyed that security by removing the greater part of the soldiers from those barriers of the frontiers, and placing them in towns that had no need of defenders; thus depriving those who were exposed to the barbarians of all defence, and oppressing the towns that were quiet with so great a multitude of soldiers,

that many of them were totally forsaken by the inhabitants. He likewise rendered his soldiers effeminate by accustoming them to public spectacles and pleasures. To speak in plain terms, he was the first cause of the affairs of the empire declining to their present miserable state.

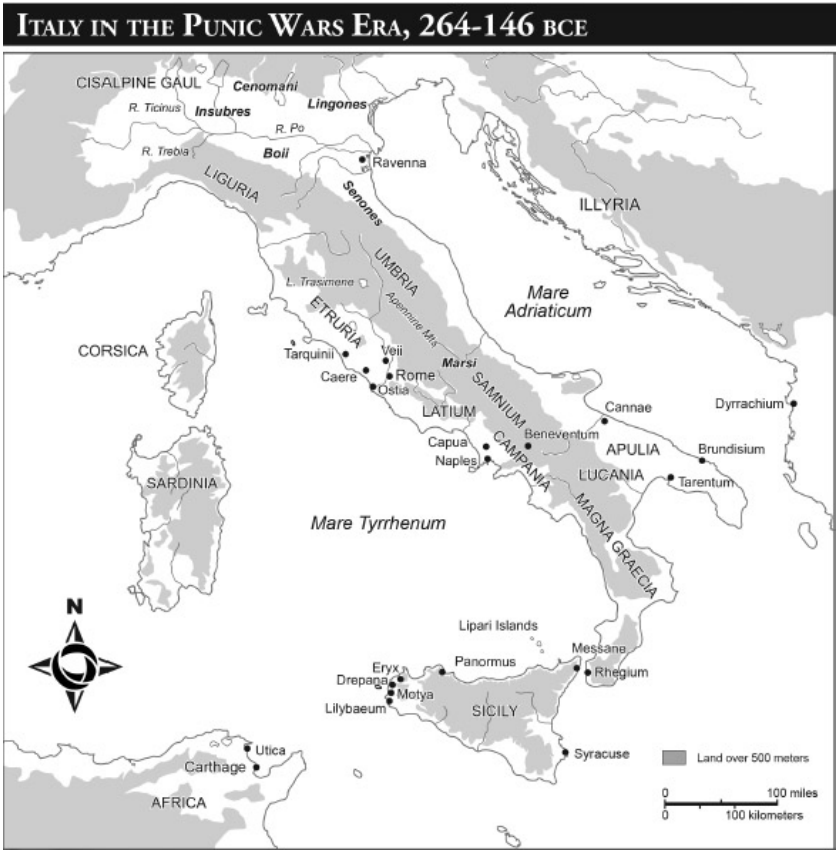

[4.59] Before his departure, [Theodosius I] convened the Senate, who firmly adhered to the ancient rites and customs of their country, and could not be induced to join with those who were inclined to contempt for the gods. In an oration he exhorted them to relinquish their former errors, as he termed them, and to embrace the Christian faith, which promises absolution from all sins and impieties. But not a single individual of them would be persuaded to this, nor recede from the ancient ceremonies, which had been handed down to them from the building of their city.... Theodosius, therefore, told them, that the treasury was too much exhausted by the expense of sacred rites and sacrifices, and that he should, therefore, abolish them.... The Senate in reply observed, that the sacrifices were not duly performed, unless the charges were defrayed from the public funds. Yet thus the [ancestral] laws for the performance of sacred rites and sacrifices were repealed and abolished.... By these means, the Roman empire, having been devastated by degrees, is become the habitation of barbarians, or rather having lost all its inhabitants, is reduced to such a form, that no person can distinguish where its cities formerly stood.

[5.50–1] Affairs having thus been concerted, the emperor [Honorius] called ten thousand Huns to his assistance in the war against Alaric. In order that he might have provisions ready for them on their arrival, he ordered the Dalmatians to bring grain, sheep, and oxen. He sent out scouts to gain information of the way by which Alaric intended to march to Rome. But Alaric, in the meantime, repented of his intention of proceeding against Rome, and sent the bishops of each city, not only as ambassadors, but also to advise the emperor not to suffer so noble a city, which for more than a thousand years had ruled over great part of the world, to be seized and destroyed by the barbarians ... but to prefer entering into a peace on some reasonable conditions. He instructed them to state to the emperor, that the Barbarians wanted no preferments, nor did he now desire the provinces which he had previously chosen as his residence, but only the two [small provinces of] Noricum.... Besides this he only demanded annually as much grain as the emperor should think proper to grant, and would remit the gold. And that a friendship and alliance should subsist between himself and

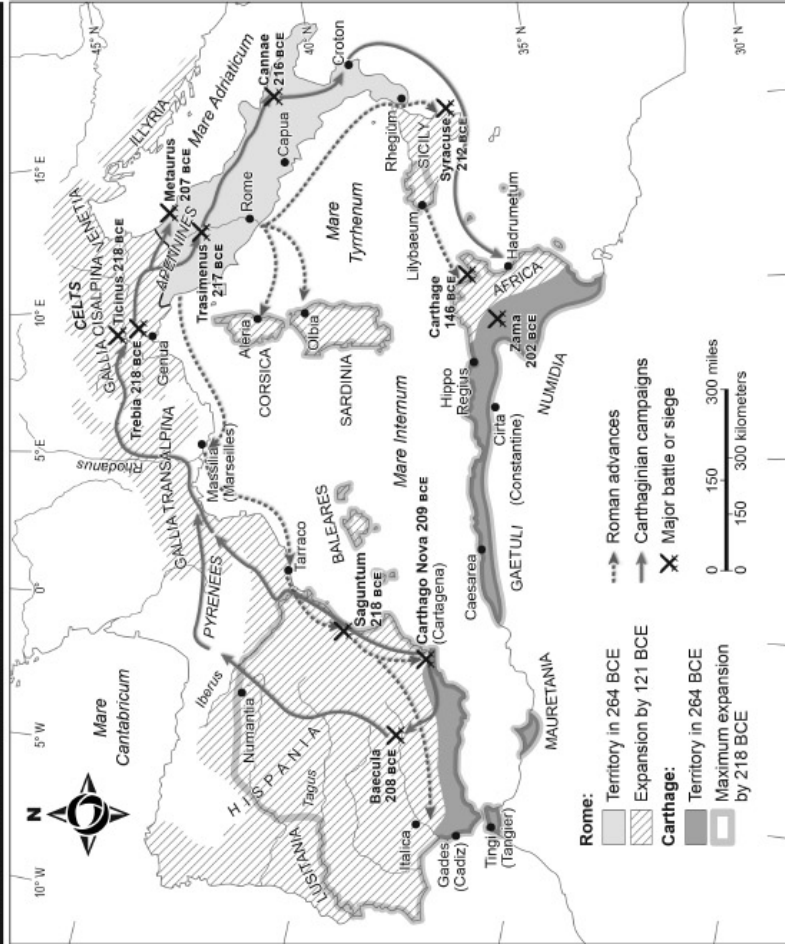

the Romans, against every one that should rise to oppose the empire. When Alaric had made these ... propositions ... Jovius, and the other ministers of the emperor, declared that his demands could not possibly be acceded to, since all persons, who held any commission, had sworn not to make peace with Alaric.

Glossary

This glossary is intended to supplement the entries in the Roman section of *Conflict in Ancient Greece and Rome*, not to replace them; hence, some terms that have their own entries in the encyclopedia are not listed here.

Accession: The formal beginning of a new emperor's reign. Not every accession required acclamation (below) by the troops.

Acclamation: The hailing of a new emperor as *imperator* by the army; a legitimate ruler would also seek formal recognition by the Senate (normal before the third-century CE crisis).

Adlocutio (plural, **adlocutiones**): A formal speech by the emperor to the army.

Aedile: A junior magistracy at Rome, involving oversight of public works, the streets of Rome, the water supply, and the market. Not essential to the *Cursus Honorum*.

Ager Publicus: "Public land" annexed by Rome from conquered communities, chiefly in Italy; might be used (without actual ownership) by citizens.

Allies: Conquered peoples of Italy who formed treaties with the Roman Republic, requiring their contribution of allied manpower for Roman campaigns.

Antiquarians: Latin authors from the late first century BCE to the fifth century CE, who specialized in obscure information related to cult practices (see **Cult**), the Latin language, and so on. They pose problems as a historical source because they quote material out of context.

Augustus (title) (plural, Augusti): The emperors from Tiberius onward used the name of Augustus as a formal title, following their common

names (e.g., Nero Augustus, not Augustus Nero). Under the **Tetrarchy** (293-312 CE), Augustus denotes a senior emperor.

Benefaction: Gift-giving or philanthropy, usually from a leader or wealthy individual to the masses or to show favor to individuals or communities; yielded social prestige for the giver.

Caesar (title): A title given to the emperor's prospective heir; in the **Tetrarchy**, denotes deputy emperors with full powers, subordinate to the Augusti. Must be distinguished from Caesar as a family name of the **Julio-Claudian** dynasty.

Capite Censi: "Head count," the lowest social and economic stratum of the Roman Republic, synonymous with **Proletarii**. Originally excluded from the legions, but enlisted by Gaius Marius ca. 107 BCE.

Capitoline Temple: Temple of Jupiter Optimus Maximus ("Best and Greatest"), Juno, and Minerva, on the Capitoline hill of Rome; burned in civil strife in 83 BCE and 69 CE.

Censor: A senior Roman magistrate elected to take the *census* and evaluate membership of the **orders**. Two censors were elected by the centuriate assembly to hold office for 18 months. Only former consuls could be censors. The censors supervised the "surveillance of morals" (*regimen morum*).

Census: Held every four to five years, a register of Roman citizens determining rates of taxation and eligibility for military service. Held very irregularly in the late Republic and three times by Augustus; ceased to be held after the Flavian dynasty.

Centuria (military): The smallest unit of the Roman legion, usually 60 to 80 men rather than 100.

Centuriation: Land surveying with a right-angled grid pattern, carried out to determine assignment of land in the formation of colonies.

Centurion (Latin, *centurio*; plural, *centuriones*): The lowest-ranking officer in the Roman legion with significant authority; commanded a *centuria*.

City Prefect (Latin, *praefectus urbi*): The emperor's deputy at Rome in his absence; appointed by the emperor. A highly prestigious office held by senators who were former consuls.

Client (Latin, *cliens*; plural, *clientes*): Persons obligated to a **patron** who provides them with gifts, benefits, or other assistance. Unlike slaves and

freed persons, clients were not formal dependents of their patrons, but the social bond was a powerful one; clients were expected to display loyalty to their patrons and aid them if necessary.

Client King or Monarch: A ruler (usually in the eastern Mediterranean) of a region (**Client State**) dependent on Roman political support and military protection; owed tribute and loyalty to Rome.

Client State: A political entity (kingdom or ethnic group) in a patron-client relationship with Rome.

Code of Justinian: Compiled in the 530s CE, a compendium of Roman legal sources, mainly imperial decrees and judgments; in contrast with the **Digest of Justinian**, more of the Code dates from the fourth century and later.

Collegial Principle: The principle that two or more magistrates hold office at a time; best known in the Roman Republic (two consuls, etc.) but practiced by other ancient city-states such as Carthage.

Colonies (Latin, sg. *colonia*; plural, *coloniae*): Urban settlements that were formally founded and settled by emigrant citizens; most Roman colonization of Italy happened in the middle Republic; from the late Republic onward, colonies were founded outside Italy.

Comitia Centuriata: The centuriate assembly or main voting assembly of the Roman Republic; the right to vote was based on property qualification.

Comitia Tributa: The plebeian assembly of the Roman Republic; elected tribunes of the plebs.

Confiscation: Appropriation of an owner's property (movable wealth, land) as punishment or reprisal.

Conscription: A military levy or draft, in the Republic based on status and property qualification; distinct from volunteering.

Constitutio Antoniniana: An edict of the emperor Caracalla in 212 CE conferring the Roman citizenship on all inhabitants of the Roman Empire, except *dediticii*. After 212 most persons with the *nomen* Aurelius (see Nomenclature) can be assumed to have received their citizenship from the Constitutio Antoniniana.

Conubium: The legal right to marry, conferred on veterans of the Praetorian Guard, *auxilia*, and fleet during the empire down to

Septimius Severus' grant of the right of legal marriage to serving soldiers ca. 197.

Cult (Religion): The worship of a specific deity or deities. Does not imply that the worship was novel, bizarre, or illegitimate (connotations of "cult" in English).

Cursus Honorum: The sequence of magistracies held by politicians in the Roman Republic. A *cursus* for patricians might be quaestor, curule aedile, praetor, and consul; a plebeian might be quaestor, tribune of the plebs, plebeian aedile, praetor, and consul. The office of tribune of the plebs was not required by the *cursus*.

Denarius: Pl. *denarii*. A Roman silver coin, equal to 4 *sesterces*.

Dictator: A supreme magistrate of the Roman Republic, traditionally appointed by the Senate and consuls to cope with a crisis and/or for six months at a time; he was singular, with no colleague.

Digest of Justinian: A compilation, made in the 530s, of legal scholarship and imperial rulings that had the force of law. Most of the material in the Digest dates from the Principate. See **Jurists**; **Rescripts**.

Diplomas: Bronze tablets inscribed with the grant of Roman citizenship and other privileges (see *Conubium*) to veterans of the *auxilia* and fleet (also Praetorians and urban cohorts). The diplomas extant today were copies of originals kept in archives at Rome.

Edict (Imperial): A decree of the emperor, intended to be of general application, and thus distinct from a **rescript**, a judgment in an individual case; distinct from *Senatus Consulta* (decrees of the Senate) and from *lex*.

Epigraphy: The practice of engraving inscriptions on stone; also the modern discipline that collects, studies, and publishes such inscriptions.

Epitome, Epitomator: An epitome is a highly condensed or abbreviated historical narrative; its author is an epitomator. It may be original, as with Eutropius' *Breviarium* and Sextus Aurelius Victor's *Liber de Caesaribus* (mid-/late fourth century CE) or an abridgement of a longer work, as with the *Periochae* of Livy's *History of Rome*.

Equites: The social and economic stratum or order just below senators. Originally based on cavalry service in the Roman army, *equites* no longer needed to serve in the army by the late Republic. In the early

empire, *equites* (English: equestrians) had to possess a property qualification of 400,000 HS. See **Order, Ordines**.

Flavian Dynasty: The emperor Vespasian (69–79) and his sons Titus (79–81) and Domitian (81–96).

Forum: A public square in a Roman city; in Rome, the *Forum Romanum*, a major public area with important buildings (the Senate House, temples, etc.).

Games (Latin, *circenses* or *ludi*): These might be gladiatorial games, beast shows (in which animals fought or criminals were thrown to them), or reenactments of battles. First held at aristocratic funerals, games became a major **benefaction** by magistrates, triumphant generals, and emperors.

Governor: In the Republic, the governor of a Roman province might be a *propraetorian* or *proconsular* magistrate, and was elected; in the Principate, governors of frontier provinces had the title *legatus Augusti pro praetore* (though usually of consular rank) and governors of public provinces were titled *proconsuls*. Governors were senator until the mid-third century CE, except for Egypt which had an equestrian governor with the rank of *prefect*.

Honestiores: The “more honorable” upper orders (see **Order, Ordines**), including senators, equestrians, *decurions*, and probably veterans; exempted from degrading capital and corporal punishments except in cases of treason. In contrast, the *humiliores* were not exempt.

Humiliores: The “more lowly” lower *ordines*, including serving soldiers, common people, and slaves. They were subject, especially in the later empire, to degrading corporal and capital punishments, such as condemnation to hard labor or being thrown to wild beasts (Constantine outlawed crucifixion).

Imperator: The title given to a victorious general by his troops; the title of the emperor, who was acclaimed as *imperator* in a continuation of this tradition.

Imperial Cult: The worship of deified (usually deceased) emperors or the *genius* (spirit) of the living emperor. The imperial cult involved reverence of the imperial image (portraits and statues), including imperial images on Roman military standards (see **Standard**).

Invective: A literary genre involving exaggerated negative depictions of personages and their deeds and motivations.

Julio-Claudian Dynasty: The imperial dynasty from Augustus to Nero. Augustus represented the Julian branch; his descendants did not survive. His successor Tiberius represented the Claudian branch, to which Gaius (Caligula), Claudius, and Nero also belonged.

Jurists: Roman experts in legal affairs, who wrote treatises on law and debated specific cases. Their works survive mainly in the Digest and in a textbook, the *Institutes* of the jurist Gaius.

Legate (Latin, *legatus*; plural, *legati*): In the Republic, a legate was the “deputy” (the original meaning of the term) of the consuls, often commanding a legion. In the Principate, legates were governors of provinces (*legatus Augusti*) or commanders of legions (*legatus legionis*).

Lex (plural, *leges*): *Leges* were statutes voted on by the *comitia centuriata* or plebeian assembly. They were named after the *nomen* (see **Nomenclature**) of the magistrate who proposed them, for example, a *lex Sempronia agraria* proposed by Tiberius Sempronius Gracchus (tribune of the plebs in 133 BCE).

Lictors: Attendants of magistrates possessing *imperium*, that is, the consuls or dictator; they carried *fascēs*, bundles of sticks topped with axes, symbolizing the executive magistrate’s power to inflict capital punishment.

Limes (plural, *limites*): A boundary or frontier; the frontiers of the Roman Empire, in archaeology usually referring to frontier works.

Lorica: A cuirass. The *lorica hamata* was chain mail, worn more often in the Republic; the *lorica segmentata* was made from metal strips held together with leather; the *lorica squamata* or scale armor was made from overlapping metal scales.

Lustration: Ritual purification, for example, of weapons and military trumpets. A lustration frequently required a **sacrifice**.

Magistrate: General term for an elected official in the Roman Republic or in other city-states and ethnic groups (some of the Gallic communities had magistrates instead of kings).

Nomenclature (Roman): A Roman citizen traditionally had three names: his *praenomen*, of which there were only a few (the most frequently

encountered are Aulus, Gaius, Gnaeus, Lucius, Marcus, Manius, Publius, Quintus, Sextus, Tiberius, and Titus); his *nomen* or gentile name, which was the name of his family; and his *cognomen*, which originally was an individual nickname but became attached and passed down in some families. In the Encyclopedia, we follow the convention of giving a full name at first instance and then referring to the individual by his most common name, usually the cognomen. The *praenomen* is usually abbreviated. In the later empire these rules ceased to be followed strictly; aristocrats had long strings of names.

Oligarchy: Rule by the few (Greek, *oligoí*); a society with marked socioeconomic and political inequality. The elite of an oligarchy are oligarchs.

Optimates: Latin “the best people”: the faction in the late Republic that represented and sided with the wealthy (oligarchs). “Parties” in the modern sense, which elaborate organization, recruitment, polling, and canvassing, did not exist.

Oratory: The art of making speeches, particularly in a public context (legal or political).

Order, Orders (Latin, *ordo*; plural, *ordines*): Often the group is indicated as in *ordo equester*, the equestrian order or *equites*. Socioeconomic and status-based groups in Roman society, forming a steep hierarchy. Membership was both hereditary and dependent on wealth; culture and codes of behavior also contributed. Membership in the upper *ordines* (senators and equestrians) was surveilled by the censors in the Republic and by the emperors; they could demote individuals (usually for bad morals) or promote them (adlection) to a higher order. The system of orders was thus less rigid than a caste system, but more rigid than modern class systems. Some offices could only be held by senators; others by equestrians. By the late Republic, the distinction between patricians and plebeians in the senatorial order affected eligibility for some magistracies and priesthoods.

Panegyric: An oration praising a ruler (the Roman emperor) or other very important person. One famous panegyric is Pliny the Younger’s *Panegyricus* to the emperor Trajan (98–117 CE). Opposite is **Invective**.

Papyrus: A paper-like writing material made from the inner pith of the papyrus reed, cut into strips, pressed together, and dried.

Patronage: The relationship between a patron (Latin, *patronus*) and a client (see **Client**), in which the patron provides material assistance or benefits and expects the client to provide loyalty in return.

Petition: A document asking for legal or material assistance or redress, submitted by citizens of the empire to Roman governors and emperors; imperial responses on legal issues were treated as sources of law.

Pilum: A javelin, with a wooden shaft and iron spearpoint that bent easily if lodged in an enemy shield, preventing its reuse by the enemy.

Polytheism: The worship of multiple gods, including semidivine entities such as heroes or the living Roman emperor.

Populares: The “popular” faction in Roman politics in the late Republic, favoring the lower strata of society and more democratic policies; opposed to the *Optimates* or oligarchs.

Praetor: A mid-ranking magistrate in the Roman Republic. Praetors held *imperium* but they ranked below the consuls. Praetors might have their *imperium* prorogated (extended), making them propraetors, commanders or governors in the provinces. The urban praetor had a judicial role. Not directly related to Praetorian Guard.

Praetorian Prefect: The commander(s) of the Praetorian Guard in the Principate; there might be multiple prefects (usually two) or only one. The praetorian prefect took on more and more authority, becoming an administrative deputy of the emperor and less and less related to command of the Praetorians. In the Tetrarchy, each of the Augusti and Caesars had his own praetorian prefect. Despite the abolition of the Praetorian Guard after 312 by Constantine (306–337), the praetorian prefecture was preserved as a major administrative division.

Prefect (Latin, *praefectus*): A commander, in the Principate an equestrian commander of an auxiliary unit of cavalry (*praefectus alae*) or infantry (*praefectus cohortis*). Exceptions: *praefectus Aegypti* (the governor of Egypt); praetorian prefect; urban prefect.

Proconsul: In the middle and late Republic, a commander or governor of a province, who had previously been consul and undergone prorogation (the extension of a term of office). In the Principate, governors of “public” provinces were titled proconsuls out of prestige.

Promagistracies. See **Praetor**; **Proconsul**

Prosopography: The study of elite careers (senatorial and equestrian), supplementing literary with documentary sources such as career epitaphs.

Province (Latin, *provincia*): A *provincia* originally meant a military assignment given to a magistrate (consul or praetor); it did not then connote a discrete region to be governed. In the late Republic, the geography of *provinciae* became more defined and magistrates were expected to govern them, adjudicating disputes and collecting taxes.

Quaestor: A junior magistrate in the Roman Republic with fiscal responsibilities. Quaestors usually accompanied consuls (later proconsuls or propraeors) on campaigns to administer pay and the collection and disposal of plunder.

Quirites: Latin synonym for “citizens.”

Requisition: Official demands for food, supplies, lodging, and transport by Roman officials or military personnel; often uncompensated and abused.

Rescript: A response by a Roman emperor (or his legal officials) to a petition requesting legal advice or redress; rescripts were regarded as a form of law and were cited as such by the jurists. See **Digest; Jurists; Petition.**

Romanization: The process of acquisition of Roman linguistic, cultural, and political identity, usually as an effect of colonization. Romanization is now regarded as more problematic than when it was first theorized by Roman archaeologists in the late British Empire. The acquisition of Latin literacy, as seen in **epigraphy** and documents, is a rough index of Romanization.

Sacrifice (religious practice): The killing of an animal (cattle, sheep, pigs, or birds) or the offering of incense, wine, or cakes to a god in polytheistic **cult** practice.

Scribe: A person who wrote for others, whether for the wealthy or for illiterate people. Letters by soldiers may have been dictated by the soldiers to scribes.

Senate, Senator: The deliberative body of the Roman Republic and early empire, staffed by about 300 members of the senatorial order or highest status group. Senators were former magistrates (the lowest magistracy that was required was the quaestorship). They formed a semihereditary

aristocracy. They advised the magistrates but also effectively made many decisions. Certain decrees of the Senate (see ***Senatus Consultum***) had the force of law. In the Principate, the Senate advised the emperors, but had less and less real power. Nonetheless emperors who offended the Senate did not fare well in the historical record.

Senatus Consultum: A decree of the Senate with the force of law.

***Sesterce* (plural, *sesterces*; abbreviation, HS)**: A Roman silver coin. Four sesterces were worth one **denarius**.

Severan Dynasty: The imperial dynasty from Septimius Severus (193–211 CE) to Alexander Severus (222–235), although the connection of Elagabalus (218–222) and Alexander Severus to Septimius and his son Caracalla was not direct.

Standards: Staffs topped with symbols (often animals or eagles) and adorned with banners, carried by Roman soldiers in battle and on parade. At camp the standards were kept in a special shrine. In the Principate, images of the emperor were carried upon standards.

Stoicism: A form of Greek philosophy, developing in the Hellenistic era, that emphasized self-control and resignation to events. In the Principate, Stoicism was adopted by some aristocrats who opposed individual emperors.

Sumptuary Law: A law intended to restrict or regulate the purchase, display, or consumption of luxury goods.

Tablets: A Roman writing material, typically made from wood covered with wax; to write on a tablet, the wax was scratched with a stylus. Tablets without wax have also been found, written on directly with ink.

Tetrarchy, Tetrarchs: The system of four emperors (the Tetrarchs) created by Diocletian (284–305 CE) in 293, with two Augusti (Diocletian and Maximian) and two Caesars or deputy emperors (Constantius I and Galerius). The Second Tetrarchy was formed in 305, when Diocletian and Maximian abdicated, but soon fell into disarray and was abandoned.

Theodosian Code: A collection of edicts and laws mostly from the fourth and early fifth centuries CE, promulgated by Theodosius II (408–450).

Tradition (literary): The dominant and consistent mode of representation of an entity (person, war, nation, idea, etc.) in literary sources.

Tribune (military) (Latin, *tribunus*; plural, *tribuni*): High-ranking legionary officers in the Principate. The senatorial tribune (*tribunus laticlavus*) was a young man of senatorial status, ranking above an equestrian tribunes (*tribunus angusticlavus*). Distinct from **Tribune of the Plebs**.

Tribune of the Plebs (Latin, *tribunus plebis*): In the Roman Republic, a special magistracy held only by plebeians, elected by the *comitia tributa* or plebeian assembly. They had the power to propose and veto legislation.

Tribus: Tribe, a political and geographic subdivision of the citizen body in the Roman Republic; not to be confused with English “tribe” for a prestate ethnic group.

Tribute: Taxation levied upon provincial subjects of the empire. Roman citizens were exempt from *tributum* after 167 BCE.

Triumvir, Triumvirate: A triumvirate is a junta consisting of three members, the triumvirs. The unofficial First Triumvirate of Pompey the Great, Julius Caesar, and Crassus existed from ca. 60 to 53 BCE. The formally constituted Second Triumvirate of Mark Antony, Octavian, and Marcus Aemilius Lepidus formed in 43 BCE and ended in 33 BCE.

Twelve Tables: Usually abbreviated *XII Tables*. The oldest Roman laws; according to tradition, they were formulated by the Decemvirs in 451–450 BCE. They illustrate a rather primitive stage of the law and of society (e.g., the “eye for an eye” principle of retribution).

Tyranny, Tyrant: In Archaic Greece, the regime of a *turannos* or “boss,” not necessarily negative. “Tyrant” developed negative connotations due to the reputation of some of the Greek tyrants.

Urbs (Latin): The City of Rome.

Usurpation: A rival’s seizure of the throne or imperial power from an incumbent king or emperor.

Vestal Virgin: A priestess of the state religion at Rome, dedicated to remain virgin and unmarried.

Vexillation (Latin, *vexillatio*, plural, *vexillationes*): A detachment of legionaries.

Editors and Contributors

Editors—Greek Section

Douglas Kelly, PhD, for many years taught Ancient History at Macquarie University in Sydney and Classics and Ancient History at the Australian National University in Canberra, Australia and published on Greek and Roman military and political history. He died in December 2015 and his final unfinished work, a commentary on Xenophon's *Hellenica*, will be completed by Professor Greg Horsley and Dr. James McDonald.

Peter Londey, PhD, is Head of the Centre for Classical Studies at the Australian National University, Canberra, Australia. Previously for many years he was a historian at the Australian War Memorial. He has published on both Greek and modern military history and commemoration, including *Other People's Wars: A History of Australian Peacekeeping* (2004).

Iain Spence, CSC, RFD, PhD, prior to retirement was head of the School of Classics, History and Religion at the University of New England, Australia. He has published on both ancient and modern military history, including *The Cavalry of Classical Greece* (Clarendon Press, 1993). He is also a Major General in the Australian Army Reserve, and as Head, Cadet, Reserve and Employer Support Division is currently the senior active Reserve officer in the Australian Defence Force.
